During the period occupied by the Companies in making arrangements for the transfer, I believe nearly six months, the whole of the work remained in a quiescent state; thus affording the embankments, in particular, time to attain a more considerable degree of compactness than is usually the case in such undertakings; and as all the cuttings and embankments were made of the extra width required for the Great Western, these circumstances combined must, I conceive, greatly add to the solidity, and tend to render the road more safe for the use of the public.

On examining the Parliamentary section, it appears to me to have been Mr. Brunel's intention to have carried the railway the whole distance from Cheltenham to Gloucester, with an incline of nearly 1 in 300; and had this been the case) the turnpike road at Barnwood (which I shall have to notice hereafter) would have been carried over, instead of, as at present, under the railway.

The following table furnished by Captain Moorsom, the Company's Engineer, shows the gradients of the Railway as they actually exist:—

The following table furnished by Captain Moorsom, the Company's Engineer, shows the Gradients of the Railway as they actually exist:—

From	Length. Feet dec.	Fall. Feet dec.	Inclination.
Grade past Cheltenham Depot to Gloucester Depot.	870	1·69	1-514
	4,000	11·13	1-359
	2,402	8·00	1-300
	3,184	8·86	1-59
	5,514	18·38	1-00
	3,300	11·00	1-300
	7,560	20·54	1-365 14
	1,800	—	level.
	1,900	5·76	1-330
	3,800	12.11	1-130
	330	—	level.

I am quite at a loss to account for this deviation from the original section; and as the present Company have only had to lay down and ballast their rails, I have been unable to obtain any satisfactory information from those I have been thrown in contact with upon the subject.

On examining the state of the turnpike road leading from Gloucester to Cirencester, and which passes under the railway at a village called Barnwood, I found that, in order to get headway under the arch or viaduct, they had been obliged to sink the road for a considerable distance both ways at 1 in 30, thus forming it into a pit or hollow. To carry off the water from this portion of the road, a culvert of more than 1000 feet in length had been constructed; but owing to some mistake in the level, it appeared to be almost useless for the purpose of efficient drainage. I observed, moreover, that the height from the road to the centre of the arch was not to the extent prescribed by the Act.

I availed myself of the opportunity afforded by a meeting of the Directors at Cheltenham, on the 27th October, to bring the subject under their notice through their Engineer, when they immediately passed a satisfactory resolution, which is herewith enclosed; and I have no doubt but the evil will be remedied with as little delay as possible, by removing the present brick arch, and carrying the railway across the road on cast-iron girders, which will enable them to raise the level of the road about two feet, and thus throw the culvert into useful operation.*

I fully explained to the Engineer that, although I considered the above plan as the least expensive mode of remedying the evil, I could in no way divide with him the responsibility of the undertaking; and I would recommend that the Secretary of the Company be instructed to report to your Lordships when the alteration is ready for inspection.

The 28th of October being the day named for the inspection, and as I knew the works were not in that forward state to enable me to form a correct judgment as to the exact time required for their completion, I obtained at the same meeting the enclosed guarantee from the Engineer, sanctioned by the Directors, that the railway should not be opened to the public till both lines of rails were completed throughout. Without this document I should not have felt justified in making the favourable report which I did immediately after the inspection had taken place, meaning thereby to state, that I did not consider your Lordships' interference would be required on the opening of this portion of the Birmingham and Gloucester Railway to the public.

There are also two bridges carried over the railway, the one called the Grotto bridge, leading to Church Down, and the other Hatherley bridge, leading to a farm of that name, the roadways over which are not of the width prescribed by the Act; but as the deviation is not more than a foot, as they are only occupation roads, and appear to answer the purpose for which they were constructed. I did not think it necessary, on the present occasion, to take any step beyond calling the attention of their Engineer to the facts.

The readiness with which the Engineer has attended to my suggestions relative to the repairs of embankments or fencings, has afforded me the opportunity of reporting most satisfactorily upon the works of the line generally.

The fencing is good, the slopes of the cuttings and embankments well formed, the culverts good and ample for the drainage of the adjoining lands, the bridges well and substantially built, and, with the exception of the points to which I have called your Lordships' attention, the provisions of the Act appear to me to have been fully complied with.

The manner of laying down the rail differs materially from any I have yet seen. The ways are first formed by laying down large balks of pine, in lengths varying from 16 to 36 feet, and of an average section of not less than 16 by 7 inches. These are placed end to end, and the butts dowelled together with two strong oaken pins. These balks are then coupled together by ties of timber of 9 by 4 inches in section, and fastened to each balk by two strong iron bolts with nuts and screws. They are then arranged in line so as to take the rails (with a gauge of 4 feet 8½ inches) at near upon the centre of each balk as possible. Whilst underneath each coupling tie is placed a fascine, to prevent any unusual bearing of the railway at these points, and also for the purpose of drainage. The cast iron chairs are fixed to the balks, each by two iron bolts with nuts and screws, and at intervals of not more than 2 feet 2 inches from centre to centre. The rail is then introduced and wedged up with beech wedges, after which it is brought to its proper level and ballasted up.

For a short distance, at the Gloucester terminus, sleepers have been used, which have been laid at 2 feet 2 inches from centre to centre, and the chairs bolted to them, as before explained. The whole of the timber (chiefly pine) used for the railway has been carefully submitted to Kyan's patent, by means of the hydraulic press.

The rail is 15 feet long, of wrought iron, and weighing only 56lbs., but considering the short intervals at which the chairs are placed, and the strength of the balks to which they are fastened, I am of opinion it is strong enough to carry any weight that may be required to pass over it.

The radii of the curves on the line are from 4 to 4½ miles, the curve leading to the Gloucester station has a radius of 1,000 yards, and that leading to the Cheltenham station 528 yards. The whole, including the points, switches, sidings, &c., appear to have been laid down with great care.

The Cheltenham terminus is very well arranged, and the station provided with sheds, offices, and waiting rooms, sufficiently large for the accommodation of the public, and of a very neat and ornamental appearance.

The Gloucester terminus is in an unfinished state, and of a temporary construction. It at present consists of a large shed 200 feet long by 70 feet broad, and some offices and waiting rooms are constructed at the Gloucester end of it. Should it ultimately be decided to make this point the terminus, the Directors will no doubt order such additions and alterations as may be required for the convenience of the public.

Having concluded my observations on the works of the railway, it only remains for me to state my opinion that I consider it may with safety be opened for public traffic, and I shall now proceed to offer such information as I have been able to obtain upon the other points to which your Lordships' instructions have directed my attention.

The times for departure and arrival of trains at the several stations (a copy of which is enclosed) appear to me well arranged to prevent collisions, and the rules laid down for regulating the speed on descending the incline to the Gloucester station (a copy of which is also enclosed) appear to me to show good management on the part of the general superintendent, and to be well calculated to prevent accident.

The carriages appear to be of an excellent construction for the comfort of passengers; the top stands 9½ feet above the level of the rail, the wheels and axles are of the most approved construction, and the former are three feet in diameter. There does not appear to be any means of testing the axles, but as far as I can judge of them, they are well manufactured, and of sufficient strength. I was informed by the inspector, that since the line has been opened there has been no

* The work is in progress, and the Company have given the Board of Trade a positive assurance that it will be completed in the course of two or three weeks.

Digitized by Google

case of fracture, either of an axle or cylinder of a wheel, the latter accident on the other lines not being of very unfrequent occurrence.

At the distance of 31 miles from Cheltenham, at the Bromsgrove station, there is an incline of two miles in length, with a gradient of 1 in 37; and the Secretary having furnished me with a copy (herewith enclosed) of the rules and signals for working it, I have to observe that they appear to me drawn up with great judgment, and to be well calculated to prevent accident; although, in my opinion, the necessity of such a steep incline on the line of any railway is much to be regretted as regards the safety of the public.

In consequence of the incline just noticed, all the carriages, waggons, &c. are much better supplied with buffers and brakes upon this line than upon any other I have yet visited. The brakes, in particular, is of a novel and strong construction. It is worked by a single or double winch, fixed on a spindle at the top of the carriage; at the bottom of the carriage the spindle is fixed in a box, upon the principle of the common screw-jack, and being armed with cogs, acts upon a rack which is attached by a rod of iron to the lever of the brake, and by turning the winch at the top, the brake is applied to all the four wheels of the carriage at the same time; and I should think the power nearly sufficient, if applied by a tolerably strong brakesman, to arrest almost entirely the rotation of the wheels. I am of opinion it would tend greatly to the safety of the public if the use of this description of brake were generally introduced upon all lines of railway. On all ordinary gradients the power would be very great; and had two of the waggons in the late accident on the Great Western been provided with this power, it would most likely have lessened the fatal effects, if not have prevented the accident altogether.

There is a small locomotive engine (weighing 10 tons) of American construction, in very general use in this line; it runs on six wheels, and its tender on four, the latter furnished with a brake on one of its sides, worked by a screw, and braking two wheels at once. The driver wheel is four feet in diameter, and I was informed by Captain Moorsom, that from this circumstance and other combinations of its machinery, the power, as regards moving weights, is nearly in a ratio of 50 per cent. above other engines. They are not so fast as the engines of home manufacture, and the inspector told me he thought in the course of time they would only be used for slow trains with goods, &c., for which they appear to be well adapted.

The other engines on the line weigh 14 tons, and also run on six wheels, and their tenders on four. They are of English construction, and the driver wheel is five feet six inches in diameter.

In an interview I had with the Secretary, Mr. Burgess, who is also the general Superintendent, I elicited from him the following satisfactory information regarding the working of this line of railway:—That there are four inspectors on the line, whose duty it is to note the time of arrival and departure of each train, and to send a daily return of the same to the chief inspector at Birmingham. The inspectors have power to stop a train, if necessary, in order to afford sufficient time between its departure and that of the preceding train. That each train is attended by two guards and a train porter. The senior guard is in charge of the whole, and can order the engineman to stop if necessary. The senior guard does not note his time, but is furnished with a watch and time-table. The clocks at the stations are placed in conspicuous places, and can be seen from the trains. Watches are also ordered, and are to be furnished to each engineman; and a placard having only the time of that particular train marked upon it, is to be placed on some convenient and conspicuous part of the tender or adjoining carriage, so that it may at all times be in view of the engineman.

The Secretary having also furnished me with the enclosed copy of the General Rules and Regulations of the Birmingham and Gloucester Railway Company my attention was particularly directed to the code of signals; and I found, on comparing them with those of the London and Birmingham Company, that a very material difference existed; and as I cannot but consider uniformity on all those points that will admit of its application as highly conducive to the regular and safe working of locomotive power, I was induced to ask the Secretary (in case of my recommending it) whether he would be disposed to adopt the code of the London and Birmingham Company, it being a Company highly spoken of, and whose road had now been for some years in full operation; he said he fully agreed with me in the propriety of, and the advantages that would be derived from, some general code of signals being agreed upon, and that all Railway Companies should be constrained to adopt them; but as he considered his signals more simple, and consequently better than those of the London and Birmingham Company, he should certainly feel disinclined to change until some code had been generally approved and authorised.

A junction of this line with the London and Birmingham is expected to take place in the course of next month, when, unless some alteration should be required under authority, it is evident that a line of railway leading from London to Gloucester will be working with two codes of signals, and which, I am of opinion for the public safety, ought to be prevented.

On presenting myself at the Cheltenham station on the morning of the 31st October, I observed that the Birmingham train, due at half-past 9 a.m., was no less than 22 minutes late, and as the distance does not exceed 40 miles, I considered it was too great an irregularity for public safety; I found on inquiry that the down trains use Birmingham time and the up trains Cheltenham time, and that the clocks of those towns frequently vary from 10 to 15 minutes.

This circumstance led me to have some conversation with the Secretary upon the subject, who appeared perfectly to agree with me in the propriety of establishing some particular time to be observed on all railways, and that such regulation would render the arrival and departure of trains much more punctual, and consequently tend in a great degree to prevent accidents.

I would beg to submit, therefore, for your Lordships' consideration, that—

1st. As I believe it must be generally admitted that punctuality in arrival and departure at the several stations of any line of railway must tend materially to lessen the chance of accidents, particularly those occasioned by collisions, I would most strongly recommend that all the lines of railway leading to London, as well as all branches connecting with such lines, should be constrained to adopt the London time, under the appellation of *railway time*. The change could not in the slightest degree inconvenience the public, as they would soon become acquainted with the fact, that their clocks were so many minutes fast or slow of the railway time, and regulate their arrival at the station accordingly.

2dly. As it must be very desirable that all persons employed on railways should be thoroughly conversant with the signals, and that in case of any guard or engineman changing service from one railway to another, he should not have to study a fresh code of signals, which might at times be productive of confusion, I would therefore decidedly recommend that a code of signals be selected and framed under your lordships' authority, and that it should be rendered imperative on all Railway Companies to adopt the same as their general code of signals; not, however, interfering with such local signals as may be found requisite at certain points of a line of railway, such as at steep inclines, &c.

3rdly. I would further recommend, that a scale, showing the proportion of brake carriages to accompany every train, should also be promulgated under your Lordships' authority; and that any inspector found deviating from it should, on conviction before a magistrate, be liable to a heavy fine.

Before closing my Report, I think it due to the gentlemen of the Birmingham and Gloucester Company to express to your Lordships the attention that has been paid to my wishes by all of them; but most particularly by the chief engineer, who, from the time of my arrival at Cheltenham, has evinced the most praiseworthy anxiety to afford me information upon all points which he thought would lead to the main object of the inspection—the public safety.—I have, &c.

S. C. Melhuish, Capt. R. E.

2.—Report of Lieut.-Colonel Sir Frederic Smith, of the Royal Engineers, on the Great Western Railway, to the Lords of the Committee of Privy Council for Trade.

8th December, 1840.

My Lords,—Pursuant to your Lordships' directions of the 5th instant, I proceeded to inspect that part of the Great Western Railway which extends from the 63rd to the 80th mile from the terminus at Paddington, with reference to the notice of opening this additional portion of the aforesaid railway contained in Mr. Saunders's letter of the 27th ultimo.

The day first appointed by the Great Western Company for this inspection was the 3rd instant; but it was deferred till the 7th instant, at the request of Mr. Brunel, the chief engineer of this line. This gentleman and Mr. Saunders, the secretary and superintendent of the railway, accompanied me in the examination of the works, and afforded me every facility in the performance of the duty entrusted to me by your Lordships.

It will be observed from the annexed detailed Report of the state of the works, that they are still unfinished, and that the line is not sufficiently advanced to be fit for the public traffic; but I am informed, by Mr. Brunel, that it is not the intention of the Company to open it before the 14th instant, and that he feels confident of its being ready by that day.

It is, however, impossible for me to pledge myself that the 17 miles of railway, to which this Report refers, will even then be in so complete a state as to allow of its being worked for the conveyance of passengers; but from what I have seen, on other occasions, of the energy and powers of combination and of arrangement of Mr. Brunel, I have little doubt on the subject, provided the weather should prove favourable for engineering operations.

As the works will, however, in all probability, not be again inspected by an officer acting under your Lordships' instructions, I would suggest that the 17 miles of railway now under consideration should be opened on the responsibility of the Company, the secretary previously acquainting your Lordships that the works, which are now incomplete, shall have been put into such a state as to render it safe to use the line for the traffic of passengers and goods.

In my inspection of this portion of the Great Western Railway, I had the advantage of being accompanied by Mr. Laing, whose presence and co-operation I consider to have been advantageous to the public service.—I have, &c.,

Frederic Smith, Lt.-Col. R. E.

Remarks on the State of the Works of the Great Western Railway between the 63rd and 80th Miles from Paddington.

Embankments.—The embankments are complete and in good working order.

Cuttings.—The cuttings are finished and the slopes trimmed off, with the exception of the centre part of the Marston cutting.

Bridges.—With the following exceptions, the bridges are complete:

At the 66th mile the coping and some other unimportant parts of the bridge are unfinished.

At the 71¼ miles a bridge, which has been pulled down and is now re-building, will still require four or five days for its completion.

The bridge at Hackorn requires a parapet to be formed.

The centres of the bridge at the 74th mile were struck rather prematurely, in consequence of which a slight sinking of the crown of the middle arch has taken place. Struts are now standing under it, and although, with the exception of one only, no weight is at present resting upon them, I would recommend that they should not be disturbed until the spring of the ensuing year.

At the 74½ miles the Wansborough Road Bridge, crossing the Ermine-street or Roman-way, has its centres up, but not much of the arch has as yet been turned.

The bridge over the North Wiltshire Canal requires the flooring to be laid and the parapet to be erected.

Fences.—The fences are within a few yards of being complete on both sides of the railway.

Distance Posts.—There remain about 6½ miles to provide with distance posts.

Signals and Lamps.—The signal disks and lamps, which are of a very satisfactory character on that part of the railway at present opened to the public, have not yet been put up on the new line.

Permanent Way.—With the exception of 130 chains of single line in the Marston cutting, 75 chains of single line upon the Cricklade embankment, and 30 chains of single line upon the Wootton Basset and Swindon-road embankment, the sleepers are laid, and the rails generally screwed down and almost fit for working upon. The ballasting is incomplete for the greater portion of the above-stated lengths of single line, and is rather scanty in some few other places.

Drainage.—The drainage of the line appears to be in a very satisfactory state.

Gradients and Line of Direction.—Slight deviations have been made from the Parliamentary plan and section, which have tended to improve the curves of that part of the line which is now under examination; and although in some few instances the gradients have been increased from six to eight feet in the mile, the general result will be an improvement, by diminishing the inclines on that part of the railway which has still to be formed. I have however, to observe, that at about 21 chains to the eastward of the Swindon central

Digitized by Google

station, a rise of about 24 feet in the mile has been very properly formed for the purpose of checking the trains on arriving from London, and facilitating their departure.

Stations.—Although the Hay-lane station is merely intended as a temporary terminus, the Company are forming it, in regard to sidings, switches, and other mechanical arrangements, in the same extensive and substantial manner as is the ordinary practice at permanent termini .

Gates.—According to clause 105 of the Great Western Railway Act, it is provided that in cases of public highways being crossed on a level, good and sufficient gates shall be erected across the said railway, and that they shall remain closed, excepting at the time of the passing of trains along the railway.

There are two public highways of this description on the line of railway now about to be opened, and I find that the Great Western Railway Company have merely prepared the gates of such dimensions as to close the ends of the highways, and consequently they are insufficient to fulfil the intention of the Act.

I feel called upon to state that a similar provision occurs in most other Railway Acts; but it is one which appears to me to be of a very questionable character, and I think the public safety would be more ensured by having the gates placed across the ends of the highways, and so contrived and of such dimensions as, when thrown open for the passage of carriages or cattle across the railway, to exclude them, by this barrier, from every other part of the line, so that the gates should generally stand across the road, and not across the railway.

FREDERIC SMITH.

Copy of a letter sent to the Great Western Railway Company, relative to the intended opening of a further portion of the line.

Board of Trade, 9th December, 1840.

Sir,—With reference to the intended opening of the portion of the Great Western Railway from the Farringdon station to Hay-lane, I am directed by the Lords, &c. to say that Lieut. Col. Sir F. Smith has reported to their Lordships' that at the date of his inspection, on the 7th instant, several parts of the works were unfinished, and the line was not sufficiently advanced to be fit for public traffic. At the same time, however, he states that he was assured by Mr. Brunel that the line would be completed by the 14th, the day announced for opening, and that he entertains little doubt that, provided the weather should prove favourable for engineering operations, this assurance will be fulfilled.

As a general rule, their Lordships cannot "sanction the opening of a new line without having received a distinct report from their inspector, that it is in a fit state to be opened;" but in the present case, as it appears from Sir F. Smith's Report, that, provided Mr. Brunel's assurances are complied with, there appears no ground to anticipate danger to the public from the line being opened as intended, their lordships, in pursuance of the rule upon which they have invariably acted, of affording Railway Companies every facility in their power, consistent with the due discharge of their duty and the public safety, direct me to say, that provided they receive, on or before the day previous to the opening, a written assurance from Mr. Brunel that the permanent way and ballasting bridges and fences are completed, the signal disks and lamps, and distance posts erected, and the works generally put into such a state as to render it safe to use the line for public traffic, their lordships will not interpose any obstacle to the opening.

Sir F. Smith further reports, that there are two public highways crossing the line of railway about to be opened on a level, and that the Company have prepared gates, which do not satisfy the requisition of the 105th clause of their Act, which provides that in such cases gates shall be erected and remain closed across the railway. Sir F. Smith goes on to state, "that he thinks this provision of a very questionable character, and that the public safety would be more ensured by having gates placed across the ends of the highways, and so continued, and of such dimensions, as when thrown open for the passage of carriages or cattle to exclude them by this barrier from every other part of the line, so that the gates should generally stand across the road, and not across the railway." With regard to this point their lordships direct me to state:—

1st. That they cannot permit gates which do not satisfy the expressed intention of the legislature, on the essential point of being so constructed as to form a barrier across the railway during the passage of carriages or cattle.

2dly. But if the Company choose to erect gates in the manner pointed out by Sir F. Smith in his Report, their lordships, although they cannot dispense with the provisions of the Act, will certainly not interfere to enforce a literal compliance with them; and,

3dly. That they request to be informed what steps the Company have taken or intend to take with regard to these gates.—I am, &c.

S. LAING.

To the Secretary or the Great Western Railway Company.

Copy of Letter sent to the Secretary of the Great Western Railway Company, giving the Company permission to open the line from Farringdon-road to Hay-lane.

Board of Trade, 18 Dec. 1840.

Sir,—I am directed by the Lords, &c. to state, that Mr. Brunel's letters have been referred to Sir F. Smith, who considers them perfectly satisfactory, and that their Lordships see no objection to the public traffic being conducted on the portion of the Great Western Railway between the Farringdon station and Hay-lane.—I am, &c.

S. LAING.

To the Secretary of the Great Western Railway Company.

3.—THE REPORT OF LIEUT.-COLONEL SIR FREDERIC SMITH, OF THE ROYAL ENGINEERS, RESPECTING THAT PART OF THE BIRMINGHAM AND GLOUCESTER RAILWAY, WHICH EXTENDS FROM CAMP-HILL, BIRMINGHAM, TO COFTON.

Royal Engineer's Office, London District, Buckingham Gate, Dec. 12, 1840.

To the Lords of the Committee of Privy Council for Trade.

My Lords,—Your Lordships' instructions of the 9th instant, having directed me to examine that part of the Birmingham and Gloucester Railway which extends between Camp Hill and Cofton, preparatory to its opening to the public on the 15th instant; I have this day completed that duty, and I have the honour to make the following Report:—

The station at Camp-hill, which is constructing under Mr. Dawkes, the architect of the Birmingham and Gloucester Company, was shown to me by that gentleman; and Captain Moorsom, the Engineer of this railway, accompanied me over the line proposed to be opened.

This portion of railway is about eight miles in length, and contains some very heavy works, in cuttings and embankments.

The greater proportion of the rails are laid on longitudinal timbers, to which they are connected by means of chairs and intermediate cast-iron bearers; and the rest of the rails, except on the embankments where cross-sleepers are used, are laid either upon the principle introduced by Mr. Day, or on that recommended by Mr. Reynolds. Neither of these rails, which are laid experimentally, appear to have been adopted by the advice of Captain Moorsom.

I found the station at Camp Hill in a very imperfect state, the buildings being little more than half finished, some of the rails not laid, and neither the signal or lamp posts erected.

The Cofton station is the present northern terminus of the Birmingham and Gloucester Railway, and it is considered sufficient for the existing traffic; but it is understood that this station will be discontinued whenever the trains shall commence running from Camp Hill.

I have to observe, that on the line between these two places there are two heavy cuttings and three lofty embankments, to which I feel it to be my duty to call your Lordships' attention.

As regards the former, which are called the Longbridge and Grovely cuttings, I have to remark that I found them in an unfinished state, the slopes not having been, in either case, trimmed off in such a way as I consider desirable for the safety of travellers; and more especially the Grovely cutting, which is in a rugged and rather precipitous state.

The embankments to which I allude are known by the names of the Witchall and Northfield embankments, and that of the Rae valley. They are all very lofty, and present the appearance of not being, at this moment, sufficiently consolidated for the public conveyance of passengers.

In several parts of the line I found small portions of the permanent rails not laid; but where complete, and with the longitudinal bearing, on the principle adopted by Captain Moorsom, they appear to be in a satisfactory state. On the embankments the rails are laid on transverse sleepers.

It not necessary for me here to discuss the merits of the experimental rails to which I have already alluded. I do not perceive that any danger to the public is likely to arise from the use of either, provided they are carefully watched; but as these rails and their bearers consist of several minute parts, they are more likely to get out of order than the rails and bearers preferred by Captain Moorsom, and therefore it will be more necessary to observe the effect of heavy carriages working upon them than on other parts of the line.

I found the ballasting incomplete in several places between Camp Hill and Cofton. With some few exceptions the fences have been put up, and Captain Moorsom has undertaken to have the deficiencies forthwith supplied.

Having now brought under your Lordships' notice, in sufficient detail, the present state of that portion of the Birmingham and Gloucester Railway which extends from Camp Hill to Cofton, it is my duty to acquaint you, that I cannot take the responsibility of reporting that, at the period of closing my inspection, yesterday, it was fit for the public conveyance of passengers.

I was informed by Captain Moorsom, as well as by the Architect, and some of the Directors of the Company, that it is not intended to open this portion of the line until the 17th instead of the 15th instant, as originally contemplated; but although I am aware that, with Captain Moorsom's able arrangements and energy, a great deal of work may be performed between this and the 17th instant, such as the completion of the ballasting and the laying of the unfinished portions of the permanent way, as well as the removal of the most rugged parts of the sides of the Grovely cutting; yet I would, on account of the state of the heavy embankments, to which I have alluded, recommend a further postponement of the opening, at least for passenger traffic.

Had the permanent way on these embankments been formed with the longitudinal bearing, it might not have been necessary for me to have made this recommendation; but, at this season of the year, and with the obvious necessity of working, with the greatest care and caution, even those lines which are the most consolidated, I think it would be better, in all respects, for the Birmingham and Gloucester Company not to bring this portion of their line prematurely into operation.

Should your Lordships be indisposed to take any further step than that of recommending to the Directors some postponement of their opening, I would suggest, in the event of this recommendation not having the desired effect, that the Company should be called upon to give a pledge that they would not adopt an average speed, exceeding the rate of *ten* miles an hour, between Camp Hill and Cofton, until the line shall have been again inspected, after being open to the public for the space of one calendar month.

Mr. Laing, who co-operated with me in this inspection, meditated, and I trust produced, an amicable adjustment a of difference between this Company and the Trustees of the Turnpike Road, respecting the width of King's Norton bridge.

After completing the inspection, we had a very satisfactory conference with the Chairman and the Superintendent of the Birmingham and Derby Railway, with reference to the accident, attended with loss of life, which occurred on that line on the 2nd instant, these gentlemen having evinced every inclination to adopt the suggestions which we felt it to be our duty to offer to them, respecting such additional precautions as appeared to us to be necessary.

I have, &c.,
FREDERIC SMITH, Lt.-Col. R. E.

Copy of a Letter sent to the Birmingham and Gloucester Railway Company, enclosing a copy of Sir F. Smith's Report.

Board of Trade, 14 December, 1840.

SIR,—I am directed by the Lords, &c., to request that you will lose no time in submitting the enclosed copy of Lieut.-Colonel Sir F. Smith's Report to the Directors of the Birmingham and Gloucester Railway Company.

Their Lordships direct me to state that, under the circumstances detailed in this Report, they are of opinion—

1. That until the essential requisites specified by Sir F. Smith, viz., the completion of the ballasting, the laying of the unfinished portions of the permanent way, and the removal of the dangerous portions of the Groveby cutting, have been fully complied with, and a certificate to that effect transmitted to the Board of Trade, it would be highly improper to open any further portion of the railway.

2. That even if these essential requisites are complied with, it would be more satisfactory, and in the present excited state of the public mind more prudent,

Digitized by Google

for the interests of the Company, if the Directors were to postpone the opening for passenger traffic until the embankments have become more consolidated, and the cuttings and slopes have been finally trimmed and finished off.

3. That if the Directors choose to take upon themselves the responsibility of opening, without regard to this recommendation, the average speed between Camp Hill and Cofton, ought, under no circumstances, to exceed the rate of ten miles an hour, until the line has been again inspected, after being open to the public for the space of one calendar month.

I am further directed to request that you will lose no time in informing their Lordships what course the Directors intend to pursue.

I am, Sir, &c., S. LAING.

To the Secretary of the Birmingham and Gloucester Railway Company.

In reply to Letter from this office, of the 14th December, and enclosing a Report from the Company's Engineer, relative to the further opening of the line.

15th December, 1840.

SIR,—I beg leave to acknowledge the receipt of your letter of yesterday's date, accompanied by a copy of Col. Sir F. Smith's Report respecting the portion of this railway about to be opened to the public.

In consequence of the tenor of this Report, and Captain Moorsom's absence from here, Mr. Hughes, the resident engineer, was instructed to examine the line, and report upon it. I enclose a copy of his Report, by which you will perceive that several of the points alluded to as objectionable in Sir F. Smith's Report have already been obviated. With respect to the station I beg leave to state, that the whole of the roofing is now complete, except that portion which has to be removed from Cofton, and which cannot be put up at present. This omission, however, does not affect the public convenience or safety, but merely the preservation of the Company's stock of carriages. Most of the lamps about the station were put up on the day of Col. Sir F. Smith's visit of inspection; the whole will be completed to-morrow, including the red signal lamp.

With respect to the rails in the station, Col. Sir F. Smith appears to have been mistaken; for, to my knowledge, the whole of the rails in the passenger traffic department were laid many days previously.

Under these circumstances, and also under the fact that in anticipation of the opening of the railway, the Directors have terminated their contract for coaching to Cofton, and in the absence of objection on the part of Col. Sir F. Smith being made to the opening, while here in company with the Directors and Engineer, having put out advertisements, handbills, &c., they cannot consent to postpone the opening of the railway, as it would subject the public to great inconvenience; but they have given directions that the utmost caution shall be used in working it.

Trusting these explanations will prove satisfactory to the Lords of the Privy Council for Trade,

I have, &c.,

WILLIAM BURGESS, Secretary.

G. R. Porter, Esq., Railway Department, Board of Trade.

Birmingham, 15th December, 1840.

GENTLEMEN,—I have this moment returned from the inspection of the railway between Camp Hill and Cofton, which you this morning directed me to make, and I have now the honour to report its result.

The whole of the rails to be used by the trains are laid, and are perfect, as also the engine sidings and turntables at Camp Hill.

The ballast is up to its full height and quantity on all the embankments.

The subsidence of the Northfield and Wytchall embankments has been made good, and the rails are at the proper level.

The Rea embankment has not subsided perceptibly since it was formed, nor is there any probability that it will move, considering the excellent material of which it is composed.

The Longbridge cutting, north (of the Groveby tunnel, has certainly not been trimmed or soiled on the slopes, and there is in course of removal to spoil a quantity of material on those slopes; but there is no reason whatever to apprehend danger to the traffic in consequence. No part of the material is likely to slip before it is removed.

The cutting south of the tunnel is both precipitous and rugged, but the material is hard rock; and I apprehend no more danger from it than from any other deep cutting, all being liable, or I should rather say being within the possibility of slipping, with the advantage, in this instance, as regards material. I should add that the sides are in course of being eased of weight by the removal of a large quantity of material from the top.

To observe the full measure of precaution which you have adopted in all preceding cases, I should recommend that a competent person be stationed to watch each of these cuttings, and I have provided a crossing from one line to the other, at each end; so that, should the barely possible case occur of a slip to interrupt the traffic on one line, the train may be passed on to the other.

I do not report the ballasting as complete, because, in common with all other railways, and conformable with your own experience on the portion of your line already in use, it must continue for some time after the railway is opened to the public, and that whether you open now or not for a twelvemonth.

Finally, I have no hesitation in assuring you that the railway is in a fit and safe state to work at our ordinary velocity.

The station at Camp Hill I did not understand to be included in your instructions, further than I have noticed it.—I have, &c.

(Signed) J. HUGHES, Rest. Eng.

The Directors of the Birmingham and Gloucester Railway.

Copy of Letter sent to the Birmingham and Gloucester Railway Company, in reply to their Letter of the 15th, relative to opening portion of the line.

Board of Trade 16th December, 1840.

Sir,—I am directed by the Lords, &c. to acknowledge the receipt of your letter of the 15th December, announcing that the Directors of the Birmingham and Gloucester Railway Company cannot consent to postpone the opening of the railway between Camp-hill and Cofton, in compliance with their Lordships' recommendation, founded upon Sir F. Smith's Report.

Their Lordships direct me to state that the objections to the opening of the line for passenger traffic at the ordinary velocity, arising from the want of consolidation of the embankments, the consequent looseness and insecurity of a considerable part of the permanent way, and the unfinished state of the cuttings on each side of the Groveby tunnel, remain unaltered; but as the Act for regulating railways gives them no power of enforcing the recommendations which they have felt it their duty to make, they must confine themselves to a repetition of their opinion, that some postponement of the opening of the line, for the conveyance of passengers, would be desirable, and, at all events, that passenger trains ought not to run upon the portion of the line in question at a velocity exceeding that recommended by Sir F. Smith, of 10 miles an hour, until the line has been again submitted to inspection.—I am, &c.

S. LAING.

To the Secretary of the Birmingham and Gloucester Railway Company.

NOTE.—No further correspondence took place. The railway was opened on the 17th December.

To be continued.

FATAL ACCIDENT.—On Tuesday morning a fatal accident happened on the York and North Midland Railway, to a boiler-cleaner named William Richardson, under circumstances of a most deplorable description. From the evidence adduced at the inquest which took place the same day, it appeared that soon after the 8 o'clock luggage train had left the terminus at York, the deceased was observed running ahead of the carriages at the top of his speed. On the train passing him he made a spring to get on to one of them, but unfortunately missed his hold and fell between the rails, and the whole of the carriages passed over his body. The engine was immediately stopped, and he was picked up and conveyed to the station, where he died in an hour after. He stated to the surgeon that being out of employ he came to York, in the hopes of finding employment on the railway, but was informed that there were no vacancies. Having no money to take him back to Leeds, he determined to get a "lift" down by the luggage train, and waited on the embankment down the line till it came up, and in attempting to jump on to one of the carriages fell as above described. He knew the engine-driver of the train, but he had not given him permission to jump on the train. After some observations from the coroner, the jury returned a verdict of accidental death.

GLASGOW AND GREENOCK RAILWAY.

IT is but as yesterday since the world was astonished and delighted by the invention of vessels propelled by steam, and the enjoyment and pleasure which these conveyances have since afforded is incalculable. In no part of the world has this been more particularly the case than in Glasgow—the cradle of the steam boat. We trust it may be long ere we see our beautiful coasting steamers altogether abandoned, but it is impossible to deny that a great change has already taken place, and that the usual facilities, every hour, or half hour, for going down the water, by these vessels, no longer exist. The quay at the Broomielaw Bridge has been a season too late in erecting—and the railway is running off with everything. Nothing will now serve us but speed—and, indeed, when people do undertake a journey, it is always their desire to be at the end of it as quickly as possible—hence the wonderful success that already attends the Greenock Railway, which bids fair to establish the truth of Mr. Loch's prediction, namely, that the railway would beat the river. Our desire is, that there may be trade for both. People cannot all at once forget the many pleasant excursions they have had to the lovely *neuks* in our beautiful river by our steam boats; neither can they forget the uniform politeness and liberality of the proprietors, captains, and generally of all concerned in these modes of conveyance. If they are already destined to be regarded as things that were, we can only say that we shall long retain a pleasant remembrance of their value.—*Glasgow Constitutional.*

PROPOSITION FOR HALF-YEARLY RAILWAY BUDGETS—NO MONEY TO BE EXPENDED UNTIL VOTED BY PROPRIETORS.—Necessary as Auditors are for the due correction of wanton extravagance, and even for the detection of perhaps unintentional errors, they are still only a shutting the stable door after the horse is stolen; they may prevent future sins, but the past is beyond their reach under the present system; what we wish to see, and till it does take place, never will the railway system be complete, is that it shall be a *sine qua non*—that all Boards shall most determinately be obliged to lay before the proprietors, at every half-yearly meeting, a synopsis as full as possible of the next six months' proceedings and outlay. If this had been done all through the construction of these works, how many millions would have been saved to the much suffering proprietors! How many vile jobs would never have been perpetrated, and how much would the dividends now count up to what they do!—*Railroad Monthly Journal*, No. 3.

MATCH BETWEEN STEAM AND HORSE POWER.—We have instances innumerable on record of horses having beaten time, but it has now been found that they are unable to conquer steam. A novel description of match was run, on Saturday afternoon last, between a railway train and a team, or rather, two teams of horses. A considerable wager, we understand, depended upon the event, which was to prove whether a coach, starting from Monk's Ferry, could beat the railway train to Chester. The gentleman who undertook to drive the steeds, eight of which were to do the work (changing at Sutton), was a Mr. Burke, of trotting celebrity; and all the appliances of training were put into requisition to give him every advantage. The coach selected was the *Hirondello*, which was to carry six passengers. The train was to run in the usual manner, with the ordinary stoppages. The wager was to be awarded to the party which first set down the passengers at the White Lion. It was presumed, that the delay at the railway terminus would give the coach and horses an advantage. The result, however, has completely proved the superiority of steam over horseflesh; for the train beat the coach full twenty minutes, with the additional advantage, that the engine of the former was no more distressed at the end of the journey than at its commencement.—*Liverpool Journal.* [We learn from the *Liverpool Standard* that Mr. Burke was subsequently fined by the presiding magistrates at the Birkenhead police-court 5*l.* for "*furious* driving"!].

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY—GENERAL MEETING.

The ninth Half-yearly Meeting of this Company was held at Cirencester on Tuesday; C. F. Sage, Esq. the Chairman of the Directors, in the Chair. The attendance was numerous and influential, and the greatest unanimity prevailed throughout the proceedings.

The Chairman commenced the business of the day by observing that in consequence of the resignation of Mr. Trye, and the resolution subsequently adopted by the Directors, the duty of presiding upon the present occasion had devolved upon him. It would have been much more in accordance with his own feelings had another gentleman been appointed; but he had yielded to the wishes of others, and, having accepted the appointment, he would endeavour to discharge the duties to the best of his ability. (Applause.) He concluded by calling upon the Secretary to read the advertisement calling the meeting, and upon Mr. Lawrence to read the report of the Directors.

The report of the Directors, as also the report of Mr. Brunel, the Engineer, were then read. These, along with the resolutions subsequently passed, will be found in our advertising columns.

Mr. Price, in moving the first resolution, observed that he had pleasure in referring to the last time they had met in the same room, when the sanction of the proprietors was given to the lease entered into on their behalf by the Directors with the Great Western Railway Company; and he could now congratulate them on the near approach of the day when they might expect to realize some of the benefits resulting from that agreement. He could not doubt but that by the next time they met some gratifying intelligence would be given on the subject of a dividend. (Applause.) Much discussion had recently taken place as to the heavy expenditure on the construction of railways; but although he had not had the same opportunity as many then present of going over that part of the line more immediately in question, he would venture to refer any gentleman who might be disposed to urge such an objection, to the nature and condition of the works, as the best answer that could be given to the charge of over-expence. The gratifying results that had attended the progressive openings on the Great Western Railway amply testified that the advantages of railway communication were only beginning to develope themselves, and he trusted that the prospects the Company had now before them, together with their cordial support, would induce the Directors to continue those unremitted exertions which had hitherto been so unsparingly, and he hoped he might soon say, so successfully directed to the furtherance of the undertaking. (Applause.)

Mr. Gregory seconded the adoption of the resolution.

The Chairman said that before putting the resolution he should be glad to hear the observations of any gentleman, or to answer any questions which might be put. This led to a remark by Mr. Rogers, as to the amount of arrears. The Chairman explained that while in the report as printed previously to the meeting 707 shares were said to be in arrear, the arrears on 90 shares had been paid up that day; and it was possible that a still larger number might be redeemed. All that the Company could claim was the debt owing, but the parties in arrear had the power of redemption. If this was not done, the Company could dispose of the forfeited shares in any way they thought proper. The resolution was then put and carried unanimously.

Mr. Ferrabee then moved the second resolution which was seconded by Mr. Shelton.

In connexion with this resolution, the Chairman said, it was possible that when notice of a dividend was given, parties in arrear, might be disposed to redeem their shares. (A laugh.)

In reply to a question from Mr. Mullings, the Chairman stated, that about 25*l.* per share had been paid on all the shares in arrear, the forfeiture of which was about to be confirmed with exception of the 416 shares specially referred to in the report. About 14,000*l.* might be expected to be realized in respect of other arrears.

Mr. Mullings expressed his gratification at the circumstance as protecting the Company against the chance of considerable loss on that head. The resolution was put and carried unanimously.

Mr. R. J. Brown moved the third resolution. As regarded its purport he knew nothing more than he saw in the words of the resolution, but he had confidence in the directors, and was sure they would act for the best. The raising of money by debentures was preferable to making further calls on the shareholders. In the first place there was a large portion of the line—nearly 18 miles—completed, or all but completed, and the proprietors had the cost estimated to within a trifle. Any one who went along the line could satisfy himself as to the very little that was required to be completed. He was pleased to see that the works had been executed at so moderate a cost. He did not think previously that 22,000*l.* a mile would have covered the expense; he thought that 23,000*l.* would have been required. The proprietors, he was sure, would be satisfied with the result, the more so, when the heavy nature of the works between Swindon and Cirencester, was taken into account. One other gratifying consideration was, the shares of the Company were now more saleable. He was satisfied the proprietors would be pleased with the improved prospect before them, and a good evidence of satisfaction was afforded by the unanimity which prevailed that day. (Applause.)

A Shareholder here remarked that he should be very well pleased were the undertaking completed at 22,000*l.* a mile.

Mr. Mullings in seconding the resolution wished to have some information as to the amount of debentures likely to be required. As the line to Cirencester was so nearly completed, he should like to know if anything, and how much would be required for that line.

The Chairman said, that the sum could not be stated with certainty, till the contracts were completed, and the works measured out. As explanatory of the views of the Directors, he could refer to the third paragraph in the Report. The Company had come under certain liabilities, as was there stated, and the Directors considered that the raising of money by debentures was preferable to making calls on the shareholders.

Mr. Mullings said he should be satisfied with the proposal if it could be carried into effect, without endangering the prospects of the Company. It would be satisfactory to know the probable sum that would be required to complete that portion of the line he had referred to. He did not wish a close estimate.

The Chairman said he should have been most happy to have given Mr. Mullings all the information he wanted, had it been in his power. Had it not been for the unfortunate *slip* which had taken place in the works, he should have been able to give a decided answer. As it was, so long as a doubt existed, it was better not to give any statement than one which might turn out to be incorrect.

Mr. Mullings, in reference to the agreement with the Great Western Railway Company, asked if the 17,000*l.* to be paid was a *net* sum, or whether deduction would be made for repairs, officers, &c.?

The Chairman said that the Great Western Railway Company were liable for all the expences on the line coming under the head of wear and tear. If expense should arise from defective execution of the work originally, it would have to be defrayed, of course, by this company. He did not anticipate that any such expense would arise, for he could say, from his own observation, that with the exception of the *slip*, the whole works were in excellent condition. With regard to the expense of officers, it would be kept as low as the wants of the Company would admit.

Mr. Mullings said that his object in asking for the particulars he had done was for the satisfaction of the shareholders, and by way of suggestion to the Directors. He was sure the Directors would do all they could to protect and advance the interests of the Company. In reference to the expense of officers, he wished to know if it would be as large under the arrangement with the Great Western Railway Company, as it was at present; or, would be were the line kept in the hands of the present Company?

The Chairman said that, as far as practicable, the work of retrenchment had been commenced; but under present circumstances, he did not consider it prudent to say how far that retrenchment was to extend, and he hoped the meeting would not raise a discussion on the point, as no good but the contrary could arise out of it. It was not customary to introduce such points into the Report till they were finally resolved upon. Nothing, he could assure the meeting, would be done without giving the proprietors the fullest opportunity of expressing their opinions either personally or by proxy.

Mr. Mullings expressed himself satisfied with the explanations given; and

Mr. Lawrence explained the nature of the contract entered into with the Great Western Railway Company. That Company undertook to bear the expense of wosking the line and keeping it in repair during the lease. No expense would be incurred beyond what was necessarily connected with the original formation of the line, such as would be chargeable to the account of capital, and not of income, if the line were worked by this Company.

Mr. Rogers suggested that the shareholders should be supplied, a fortnight or three weeks prior to the meeting to be called for deciding on the points hinted at in the Report, with a specific statement of what was to be disposed of, so that they might come prepared.

The Chairman could not pledge himself to any decided course. He could assure the shareholders, however, that they would receive every information consistent with the interests of the Company, so that they might come prepared to dispose of the points to be brought forward.

Mr. Rogers referred to the circumstance of notices having been given for an application to Parliament for a further Bill.

The Chairman said that notices had been given at an earlier period than would otherwise have been given, in consequence of some misunderstanding with a landed proprietor. He had no doubt of that dispute being amicably arranged, but to provide for the worst it was necessary that notice should be given.

Mr. Rogers next remarked, that it was said the notices embraced power to borrow money, &c.

The Chairman said it was thought advisable to make the notices as extensive as possible, so that every purpose might be accomplished which future circumstances might require. The notices involved but a trifling expense, and might be acted upon or not to any extent which might be deemed expedient.

In reply to a question from Mr. Rogers as to the manner in which the 17,000*l.* to be received from the Great Western Railway Company was to be divided, the Chairman said that it was a fair question for the decision of the Company, but he thought it would be time enough to take it up when the money was realised.

Mr. Rogers referred to the circumstance of 964*l.* 6s. 3d. being charged against the Company for law expenses, while in the accounts of the preceding half-year only 115*l.* was charged.

The Chairman said, that the small item in the former half-year was the explanation of the larger item in the present half-year, the two sums embraced the charge for the year.

The resolution was then agreed to unanimously.

Captain Pelly moved the 4th resolution, which was seconded by Mr. Mullings.

Mr. Thomas Warner rose to express the great anxiety which was felt as to the future operations of the Directors. He had every confidence in the Directors, and had no wish to embarrass them by asking questions; but still he could not refrain from mentioning the great anxiety which existed as to the steps they might subsequently take.

Digitized by Google

The CHAIRMAN assured Mr. Warner that nothing would be done without consulting the proprietors.

The resolution was put and carried unanimously.

The names of the Directors at present in office were stated to be Messrs. Sage, Cripps, Bowly, Brown, Whitcombe, Agg, Marling, and Lewis.

In reply to a question, the CHAIRMAN stated that the land between Kemble and Gloucester had been all contracted for; and even were the work abandoned no loss would arise, as but little land had been actually purchased. More had been done towards securing the permanent interests of the Company than was generally known or supposed.

Mr. H. CAYLEY, of London, said that it was with peculiar satisfaction he rose to propose the next resolution, the tenor of which was that the thanks of the meeting be given to the Chairman and the Board of Directors. The Report had been unanimously approved of, the explanations requested had been satisfactorily given, and he hoped that the vote he had now the honour to propose would be carried with an equal degree of unanimity; and if the meeting would allow him, he would add the name of a very distinguished gentleman in the meeting, connected with the Great Western Railway Company as well as with the Cheltenham and Great Western Union Railway Company. (Applause.) He hoped his friend, Mr. Brunel, whom he saw on his left, would excuse the liberty he was taking in asking the meeting to include his name in the vote of thanks. To his science and engineering skill a large share of the credit attachable to all engaged in the present undertaking was due; and if not out of order he (Mr. Cayley) would be much pleased if Mr. Brunel's name were added. It was a spontaneous suggestion on his (Mr. Cayley's) part, and he should be glad if it met with the approval of the meeting. (Applause.)

On the suggestion of the Chairman that it was not usual to add any other party to the resolution before the meeting, Mr. Cayley consented to allow the vote of thanks to Mr. Brunel to be expressed in a separate resolution.

Mr. S. H. MURLEY seconded the original resolution, which was carried amid much applause.

The CHAIRMAN returned thanks for the honour conferred on himself and the Directors. He could safely say that they had done their utmost to promote the welfare and interests of the Company, and if they had not been so successful as they could have wished still he would not hesitate to say that their exertions and the results would bear a comparison with those of any other undertaking of the kind. (Applause.)

Mr. WARNER, after paying a high compliment to Mr. Hyett and the other Directors who had retired, for their unwearied exertions in behalf of the Company, proposed a resolution embodying a vote of thanks to them, which was seconded by Mr. Lee and unanimously adopted. The Chairman expressed his hearty concurrence in the vote. As to Mr. Hyett, he regretted exceedingly that ill health should have deprived the Company of his valuable services. They had his best wishes however, and he (the Chairman) was sure that so far as health permitted his best services were at their command when required. The meeting then separated.—*Gloucestershire Chronicle.*

NORTH MIDLAND RAILWAY—SPECIAL MEETING.

ON Saturday last, a Special General Meeting of the North Midland Railway Company, was held at the Station-house, at Derby, at one o'clock, "for the purpose of determining on the measures to be adopted for raising the further sum of money required for the completion of the railway." The meeting was attended by about 50 of the most influential proprietors.

At the hour appointed, GEORGE CARR GLYN, Esq., Chairman of the Company, took the chair, and H. PATTERSON, Esq., Secretary, read the advertisement calling the meeting for the purpose named, agreeably to the provisions of the Act of Parliament.

The CHAIRMAN then explained the object of their assembling. At the last general meeting of the proprietors, authority was given to the Directors to apply to Parliament for further powers to raise additional money for the completion of the railway. This had been intended to be effected in the shape of mortgage on debentures, but in the application difficulties had arisen in the House of Commons, and it had been necessary to get a bill in the usual form for power to create shares, as well as to raise part of the money by mortgage of the Company's tolls. It now, therefore only remained for the Directors to ask the Proprietors to assent to their proposal. An influential proprietor had proposed to the board to create shares bearing a fixed interest at 5 per cent., so as to avoid the creation of shares at the present depreciation in the market price of their property: but, however desirable any mode of raising money might be which produced this result, the Directors, even if they had the power to adopt it, which they had not, saw objections in the way. They therefore gave up the plan offered to them, and he (the Chairman) only then named the circumstance in deference to the high character of that proprietor. There was only one way in which they could act, and that was conveyed in the resolutions which he would read to the meeting, and for the adoption of which he trusted to have their unanimous assent. The sum to be raised by shares under the present Act was 300,000*l.*, and the Directors wished for power to borrow 100,000*l.* more, should they see fit. The shares which it was intended to create would be offered to the present proprietary in equal proportion to the numbers of old shares respectively held by them; and, if they were not all accepted, the remainder would be disposed of to the public for the benefit of the Company. In addition to the above amount the sum of 150,000*l.* would be raised by shares under the former Act of Parliament, and be applied in liquidation of loan notes already issued. It was proposed to issue the new shares at 35 per cent. discount on the 100*l.* share, and to put them in the form of third shares, so that a third share amounting to 33*l.* 6s. 8d. would be obtained by the proprietors for 21*l.* 13s. 4d. The deposit would be 5*l.* now, 5*l.* on 21st July, and 5*l.* on October 21st; no other call being intended to be made during this year. The Chairman said, he regretted to come before the proprietors with the proposition at the present time, when the market price of their shares was so low. As to traffic, from the exceedingly depressed condition of trade in Yorkshire, much of the local traffic in that district had not realized their expectations; but the through traffic was satisfactory, and was daily increasing. The opening of the Great North of England Railway had benefitted the North Midland considerably, and it was right to look to this source as likely for the future to materially assist this Company. He might mention that there was now no excess on the statement made at the last meeting of the proprietors as regarded the amount of money to be raised. The Chairman concluded by reading the following resolutions, and submitting them to the consideration of the meeting:—

Resolved That the Directors be authorised to raise 150,000*l.* under the powers of the Act 2nd and 3rd Victoria, cap. 50, by the creation of new shares, upon such terms and conditions, and in such manner, as to them shall seem expedient, and that they apply the same in liquidation of the loan notes, which have been already issued to that amount.

Resolved—That the Directors be further authorized to raise the sum of 300,000*l.* under the powers of the Act of the present session, by the creation of new shares, upon such terms and conditions, and in such manner, as to them shall seem expedient.

Resolved—That the Directors be further authorised to borrow on mortgage or bond, under the powers of the same Act, the further sum of 100,000*l.* at such times, and upon such terms and conditions as they shall think fit.

Resolved—That the shares to be created under the foregoing resolutions be offered as far as practicable, to the existing proprietors, in proportion to the shares registered in their names this day, and in the event of such shares not being accepted by them, or there being any overplus which cannot be conveniently distributed, that the Directors do dispose of the same for the benefit of the Company in such manner as they shall think fit.

Mr. VICKERS said, the plan proposed by the Directors was, in his opinion, undoubtedly the least objectionable for raising the required money that could be named.

Mr. JACKSON asked why the proprietors had not been called together by circular? Many of them he was sure knew nothing of the present meeting, not having seen the advertisement in the papers.

The CHAIRMAN replied, he was not aware that this was a general practice amongst Railway Companies, particularly in cases like the present, where the terms of a motion to be proposed could not have been stated. He certainly should have felt glad to have seen a larger assembly of proprietors.

Mr. ELLIS said he only heard of the meeting by accident. He held shares in other railways, where a circular was always sent.

The CHAIRMAN said, unless there was some substantive resolution to be made known to the proprietors previous to a meeting, as far as his experience went—and he belonged to six Railway Companies—the practice alluded to was not adopted.

Some slight conversation then ensued on the proceedings in the House of Commons:

The CHAIRMAN said, the clause as drawn was abandoned, power being taken to create part of the money by shares, and to borrow part, as he had before stated.

Mr. JACKSON complained of what he stated was a reckleseness of expenditure in the erection of some of the Company's stations on the line. They were far too ornamental. The station at Swinton, he was told, cost 3,000*l.*, and was morever built on the wrong side of the road. This expense was uncalled for, and unasked to the Company's finances. He was sorry to state this, but he could assure the meeting that this needless expenditure had drawn forth both public and private condemnation. He did not name this circumstance from any other wish than to see the Company prosper, for his interest as a shareholder was small.

The CHAIRMAN said they could not now dismantle their stations of ornament, even if such a proposition were agreed to. However, he thought the impression which that ornament made upon the public, as to expense, was greater than the facts warranted. For his part, he should have been quite contented to have seen their small stations more in the cottage style, although, in reality, the additional outlay was not important, and could not have any ultimate effect upon the success of the railway. With regard to the general question of economy, he (the Chairman) could assure the honourable proprietor that, in all their arrangements, the Directors made it their principal study. In consequence of the state of the traffic, a sub-Committee of Directors had gone through the entire establishment with the minutest care and attention; and if, in the first instance, they had in any case pitched the charges too high, such would not again occur, for a complete investigation of every point in every department had been made, which would have the effect of preventing any just cause of complaint being preferred in future.

Mr. BARTON, in reference to the sum to be raised, said the creation of shares and the proposal to borrow would produce 487,500*l.*

Mr. H. COX asked if it was proposed to raise in all 450,000*l.*?

The CHAIRMAN.—Yes.

Mr. SUTTON wished the hon. proprietor, to whom allusion had been made as having proposed to raise the money by shares paying interest—that interest to be discharged before the other claims on the Company—was present, as he should have felt disposed to have voted with that proposition. If the new shares could be so allotted as to secure their not changing hands, except in case of death, no depreciation in their value could take place.

The CHAIRMAN replied that the project was not within their powers; but the subject had been fully discussed by the Board of Directors. As to issuing the shares so as to compel the parties holding them not to sell them, he thought it would never be agreed to, and, indeed, would be considered very improper.

Digitized by Google

The CHAIRMAN then put the resolutions to the meeting, which were immediately unanimously agreed to.

Mr. VICKERS gave notice that it was his intention at the next half-yearly meeting of the Company to propose, that the rate for passenger traffic be reduced to 1d., 1½d., and 2d. per mile. He considered this change would increase the revenue of the Company.

Some discussion followed on this announcement, and it was intimated, that, as the proposal was a most important one, demonstrative proof of its soundness would be required before the proprietors could be expected to give it their support.

Mr. BARTON thought the present rates fair and proper. The charge for carriage of merchandise was less on the North Midland than on any other railway.

Mr. SUTTON said this was an error. The charge for the conveyance of goods at the present moment from Manchester to Hull was only 10s. per ton.

A PROPRIETOR confirmed Mr. Sutton's statement.

The CHAIRMAN said the reduction for goods from Manchester, to the price Mr. Sutton named, had only taken place about ten days ago. The price of that railway's shares now was 16 discount.

Mr. VICKERS proposed a vote of thanks to the Chairman, whose energy of character and great intelligence, as regarded the North Midland Railway, had laid the proprietors under unusual obligation to him.

Mr. GLYN briefly acknowledged the compliment, and congratualated the proprietors on the unanimity which had characterised their proceedings.

The meeting then separated.—*Derby Mercury.*

RAILWAY PLEASURE EXCURSION FROM GLOUCESTER TO BIRMINGHAM.

(From the *Gloucestershire Chronicle.*

IT is a rare circumstance in the history of holidays to be able to record the occurrence of a day of unalloyed, and what is better, rational gratification; but we believe that we shall not transgress the bounds of sober truth when we state that the trip to and from Birmingham by the special train provided by the Gloucester and Birmingham Railway Company on Monday last, the 3rd of May, for the use of the members and friends of the Gloucester Mechanics' Institution, fully realised such a result as that indicated. The novel character of the excursion, the perfection of the arrangements, the good spirit which animated the whole of the party, and the favourable nature of the weather—that marplot to pic-nics, gipsey parties, and holiday lovers!—all tended to bring about the desired end—"the greatest happiness of the greatest number."

Our readers are already acquainted with the plan of the days proceedings, but we must at the risk of recapitulation give a brief outline at starting. In consequence of the success which has attended the Mechanics' Institution—which may be said to have sprung from youth to vigorous manhood in a few months—it was thought desirable by the Committee and Secretary, to commemorate the anniversary of the establishment in some suitable manner, and the idea of a visit to the "workshop of the world," Birmingham, was suggested. Railways effect marvellous social changes; and a journey which in the middle of the last century, would have occupied the business traveller two days at least, can now be effected if necessary, in less than as many hours. The plan was broached, and "took" amazingly; so much so that it ultimately became necessary to fully double the intended means of accommodation. The advantages of co-operation in an economical point of view, were strikingly manifested; and it was found that persons might be conveyed for the whole trip, both ways, or more than 100 miles, for 7s. 6d. in the first class, 5s. in second class, and 3s. 6d. in the third class or open carriages—which in the last case is at the rate of the third of a penny and a fraction per mile; and this left the Railway Company a handsome profit.

The time fixed for the start was six o'clock on Monday morning, in order to enable the party to enjoy as much time as possible in Birmingham. At an earlier period crowds began to assemble in the vicinity of the railway station, and at the Cross, to witness the members of the Institution walk in procession from their rooms in Bull-lane to the place of starting. A number of the first and third class passengers were at the station and took their places before six; and the procession, accompanied by an excellent band, arrived soon after. The members were arranged in companies, to prevent confusion, and the name of the individual who headed each, was placed on a printed card on the second class carriages respectively under their superintendence.

At last all was ready; the locomotives, which seemed "eager for the fray," gave the sharp final note of preparation—the immense train, as they would say on the road, was "all right," and got under weigh at half-past six. There were 23 carriages, drawn by two locomotives a-head, viz. 5 first-class, 12 second-class, and 6 third-class. The scene when the train steadily moved onward, accompanied by the band, which played appropriate airs, was extremely striking and beautiful. Large crowds of persons, including no small number of the most respectable inhabitants, lined each side of the line for a considerable way from the station, many cheering loudly; numbers were picturesquely grouped along the banks along the curve in the line in proceeding towards Barnwood; and a more animated or pleasing picture of the kind it is difficult to conceive. In the train everybody was charmed, and such a scene was certainly never recollected —we of course speak irrespectively of the railway— in the annals of the "fair city." Well, away we sped, 420 happy human beings—for more than 200 were to be taken up at the Cheltenham and Tewkesbury stations—and it soon became evident that the interest felt was not confined to Gloucester, for the country people were all on the alert to catch a view of the "monster train" with its living freight. At the Cheltenham station a large crowd also assembled, and here we added 123 persons—nearly all members of the Cheltenham Mechanics' Institution we believe—to our strength. The news spread far and wide, and as we went on, "all the country" seemed eager to see us, for every bridge that crossed the line and all the most prominent spots were studded with people. At the Ashchurch or Tewkesbury station, which is distant from that place by branch railway two miles and a quarter, another stoppage took place, and here 83 members of the Tewkesbury Mechanics' Institution and their friends embarked, so that we were now fully 623 strong; but amongst this number was a "sprinkling" of the fair sex. It may be here remarked that had not arrangements been made in the first instance with the Cheltenham and Tewkesbury people, more than 600 tickets could have been easily disposed of in Gloucester, as numbers were disappointed at a late period in their application here. At the Spetchley or Worcester station—which is three miles and a half from the "faithful city"—we stopped to water the locomotives; as we proceeded on, the beautifully proportioned stack or chimney at the Stoke Prior Alkali Works, near Droitwich, the loftiest, we believe, with one exception, in the kingdom, attracted much attention. At last we reached the foot of the inclined plane up the celebrated Bromsgrove Lickey, the natural difficulties of which have been admirably overcome by the Company's Engineer, Captain W. S. Moorsom. At this place the depot for the Company's locomotives, &c. has been most judiciously constructed; the works are extremely well planned, and a number of artificers constantly employed. Here again we were greeted with an animated reception from the people in the neighbourhood; and it really seemed that our example had given rise to a general holiday all along the country adjacent to the line.

It was now deemed desirable to divide the train into two unequal parts; the first, consisting of 14 carriages, proceeded on its way up the incline, drawn by two engines, the pantings of which under their heavy burden—which reminded us of a broken-winded horse—were very perceptible to the party left behind; and almost immediately a third engine which was intended to be used in drawing up the smaller half of the train, was sent for to aid the "team" a-head, by propelling astern. This circumstance necessarily occasioned considerable delay, as the incline is about two miles in length. After waiting for more than half an hour, the engine returned and drew up the remaining nine carriages without additional assistance—a feat worth noting, when the extraordinary weight of the carriages on the present occasion is borne in mind. At the top of the incline the train was again united, and proceeded along a pleasing country to Birmingham. On nearing the station at Camp Hill—the temporary terminus of the line—we perceived that our expected arrival had given rise to much curiosity even in this focus of railways, for a considerable concourse of persons had assembled to greet the strangers. At 20 minutes to 11 o'clock the party proceeded from Camp Hill, which is a suburb rather more than a mile from the centre of Birmingham, the journey by rail having occupied, including all the stoppages, four hours and 10 minutes. To those persons who were unacquainted with the nature of the party, the appearance of so large a body of strangers moving in irregular procession along the streets must have occasioned no little curiosity. On reaching the entrance of New-street—one of the finest streets in our provincial towns—the party divided, one section proceeding to view some of the manufactories, and the other towards the magnificent and classic Hall, which is justly the boast of this immense manufacturing capital, and forms a prominent feature in its scenery. Here a disappointment, which had however been foreseen, took place. The Hall, as our readers are aware, is used for the purposes of the Musical Festivals, and the Committee of the General Hospital —to which institution the profits of the festivals are devoted—have erected an organ, which is, we believe, unequalled, with one or two exceptions, in Europe. The effect of this instrument, in a building so large, is, as may be imagined, sublime, and it would have been the prominent point of interest, with the majority of the Gloucester party, to have heard a performance, however short. The effect of a thunder storm given on the instrument, is vivid and startling. It had been previously ascertained, however, as we are informed, that the exorbitant sum of 10*l.* was required for a performance, which was not acceded to, so the party were obliged to content themselves with admiring the magnitude of the instrument and the structure. The Mechanics' Institution in Newhall-street, which was established in 1826, was next visited. Here a Polytechnic Exhibition of objects illustrative of the Fine Arts, Natural History, Natural Philosophy, Machinery, Manufactures, Antiquities, &c., &c., is arranged and afforded high gratification to the visitors. In the afternoon a lecture on Voltaic Electricity was delivered at the Institution by Mr. George Shaw, which was illustrated by some interesting experiments.—"The lecturer had a very powerful, although small electro-magnetic battery, by which he was enabled to burn a quantity of mercury, and several of the metals were instantly fused and ignited, a splendid volume of light was produced from the voltaic contact of two pieces of charcoal beneath water, and a power of sustaining 10,000lbs. weight, was instantaneously given to a magnet by its momentary connexion with the circuit of voltaic fluid, showing the extraordinary influence of chemical action, and of one state and condition of matter over another."

Several other institutions, exhibitions, and manufactories, were visited by the members in the course of the day—we can only notice a few. At the Philosophical Institution, in Cannon-street, there is a very fine museum, in which the science of geology is illustrated by a series of elaborate diagrams; the object, however, which excited most interest was the Anemometer, an instrument which has the property of self-registering, by means of two pencils on a chart, the exact force of the wind, together with the quantity of rain that may fall. At Messrs. Collis's (late Sir Edward Tho-

Digitized by Google

mason's) superb manufactory in Church-street, a cast of *fac simile* of the celebrated Warwick Vase, was one of the prominent objects of attraction; and a large medal of beautiful execution was struck for the occasion of this visit in the presence of the members. At the Natural History Museum, is a valuable anatomical collection of models and casts, as well as a classified series illustrative of phrenology. At Ledsam's powerful rolling mills in Cambridge-street, a penny was drawn out for the amusement of the visitors into a piece of what we may call "copper tape," twelve yards in length, in about two minutes.

Shortly after three o'clock tea and coffee were provided for such of the party as wished to partake of that refreshment, at the Mechanics' Institution, and others dined at various inns. Six o'clock was the hour fixed for the muster at the Railway Station for the return, but it was not until about half-past six that the train fairly got under weigh.

The descent of the inclined plane at the Lickey occasioned considerable interest, but was managed with the most perfect steadiness and precision. The gliding motion was extremely pleasing; the steam is invariably shut off at a place a short distance from the commencement of the incline, and a little further on the "brakesmen" attached to this part of the line, to use again the language of the road, "drag the wheels." The present was by very far the heaviest train which has ever descended the incline, and the manner in which the transit was performed must remove the apprehensions of the most timid. The inclination, we believe, is a inch in a yard, and it is not by any means so perceptible as many persons who have never travelled on the line imagine. The line it should be explained, runs over the lower part or base of the Lickey. Far above the passenger sees the crown of the hill, over which the formidable old coach road—the "terror of travellers"—was carried only a few years since; a fine obelisk to the memory of Lord Plymouth is erected at this spot.

No accident of the slighest consequence took place on the return trip. At the Ashchurch station, half of our Tewkesbury neighbours had apparently assembled; and the Cheltenham station was crowded with an immense concourse of people; indeed at various points along the line, the interest excited seemed to have increased rather than diminished since the morning. At both the stations named the parties who joined in the morning took their departure.

At about twenty minutes to ten the "fair city" once more came into view, and the travellers were again greeted with the cheers of large crowds:—a procession was formed to the Institution, and the pleasures of the trip—"the longest day has an end"—were brought to a close.

Not the slightest accident, we are happy to say, occurred to any one. The officers of the Railway Company deserve the highest credit for their exertions and arrangements, a remark which must be extended to the zealous and active secretary as well as other parties connected with the Mechanics' Institution. The only casualty, if such it can be called, that took place during the day, was the fracture of one of the chains or links which connect the carriages with each other, which was soon repaired. The Railway Company have received more than 100*l.* for the trip, out of which they have to pay the Government tax on passengers.

We have been thus minute in noticing this excursion, because it forms almost a new era in matters of the kind. The number of passengers conveyed was greater than on any previous occasion, on any railway, that we can just now call to mind. That exception occurred on the North Midland Railway near Leeds, where as far as we can recollect, nearly 4000 persons, members of some large benefit society, and their friends, were conveyed for some eight or ten miles.

It is stated by the contemporary, "that it is in contemplation to get up a railway excursion from Cheltenham before the end of the summer, combining with it the customary amusements of a picnic."

THE PEOPLE OF CONGLETON AND THE DEFUNCT STAFFORD AND RUGBY BILL.

At a meeting of the Congleton Town Council, which took place on Thursday, the 6th instant, the resolution for a petition against the Stafford and Rugby Railway Bill, was read at the suggestion of Mr. Pickford.

The Mayor informed the Council that he had affixed his name to the petition, and that it had been regularly presented.

Mr. Pickford stated, that in furtherance of the resolution, their deputation had gone to town, and he had now to report officially, that the Bill in question was thrown out on the second reading, by a majority of not less than 60: and he did think that as they had confided their petition chiefly to Mr. George Wilbraham, who moved the usual amendment, that it be read a second time that day six months, a vote of thanks ought to be given him on this occasion. Mr. Wilbraham had acted from a feeling of disapprobation at the manner in which the Corporation of Congleton had been treated by the promoters of the Manchester and Birmingham Railway. Though there were many in that Hall who entertained different views of politics from Mr. Wilbraham, he thought they would come to an unanimous vote that he had given the most effectual opposition to a Company who had shown that they only endeavoured to obtain parliamentary powers for the purpose of abusing them. Mr. Pickford then entered intered into a detail respecting the conduct of Mr. Wilbraham on the subject of the railway, and argued that Mr. Wilbraham in 1837 had supported the Crewe line because it was supported by the Corporation and town of Congleton; that in 1839 he had supported the Extension because the Manchester and Birmingham Company's Directors assured them that they would construct a line through Congleton; and lastly, that in 1841 he had given his opposition to the Extension line, because of the bad faith which the Manchester and Birmingham Company had shown to the Council and town of Congleton. He should, therefore, beg leave to propose the best thanks of the Council to Mr. Wilbraham, for his opposition to the Stafford and Rugby Railway Bill.

Mr. Hogg objected to the omission of Sir Philip Egerton's name in the vote of thanks. He had been of great service to them; and although he had paired off at the time when the discussion on the Bill came on, they must recollect that Mr. Wilbraham had also been absent at a very important division.

Mr. Pickford said, Mr. Wilbraham's entire change of sentiment on the subject of the Extension line had had a great influence on the House, whereas Sir P. Egerton had written to him, and stated that he would not undertake to say whether his views were concurrent with those of the Council or not.

The Mayor said, if the vote were on Sir P. Egerton's general conduct, with regard to local matters, certainly Sir P. Egerton would be entitled to it.

Mr. Warrington said, he should have voted for the name of Sir P. Egerton being added if he had not been absent.

Mr. Hadfield seconded the motion of Mr. Pickford, merely as a vote of thanks for a business matter.

Mr. Warrington said if it had been a vote of thanks for general conduct he should have been for both together; but as it was for a particular point, and Sir P. Egerton was not present, he should vote for the motion.

Mr. Hogg said he was satisfied, and the motion was agreed to.

JUNCTION BETWEEN THE LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS LINES.

At the periodical meeting of the Salford Commissioners of Police held last week, the Chairman read the following letter, which had been received in answer to an application directed to be made by the Committee appointed to inquire whether the Liverpool and Manchester Railway Company intended to proceed with the Extension Railway, to form a junction with the Leeds and other lines:—

"Lime-street, Liverpool, 29th March, 1841.

"Sir,—The Directors have instructed me to acknowledge the favour of your communication of the 16th instant, inclosing resolutions of the Commissioners of Police of Salford, directing inquiry to be made whether the proposed railway through the borough of Salford would be commenced or abandoned, In reply, I am requested to inform you that the Directors regret very much that any inconvenience should be felt owing to this Company having been unable immediately to come to a determination on the subject. Various circumstances have prevented the proprietors coming to a decision, but I am instructed to state that the Directors, on their part, and they have no doubt, the proprietors at large, are desirous that there should be no unnecessary delay; and the Directors will have the greatest pleasure in communicating to you at the earliest possible period, the decision of the Company on the subject.—I am, Sir, your obedient servant,

"Henry Booth."

On the motion of Mr. W. Lockett, seconded by Mr. Tinsley, the letter was ordered to be entered on the minutes.

THE CHESTER AND BIRKENHEAD RAILWAY AND THE CHESTER RACES.

The transit on this line has been during the last few days unequalled in the annals of railway travelling in this kingdom. We have taken the following averages from the returns, which are below "the mark," of the number of passengers to and from Chester during the last seven days:—

Saturday, May 1	1480
Sunday	1400
Monday (the Great Race Day)	6443
Tuesday	3080
Wednesday	4250
Thursday	2830
Friday	1950

The utmost exertion has been used by the Directors, and every individual in the service of the Company, to preserve order and accommodate passengers at the station and the ferries; but, in defiance of every effort, on Monday, in consequence of the impatience and determined pressure of the great crowds anxiously waiting at two o'clock to proceed to Chester, their well arranged plans were in some measure disorganised. The train which left Birkenhead at the hour last mentioned, consisted of four engines, forty carriages, and upwards of thirteen hundred passengers.—*Liverpool Standard*, May 11.

The Chester and Crewe and Birkenhead Railways poured in their myriads during the whole afternoon of Monday. But we cannot omit noticing in terms of reprehension, the very inadequate accommodation afforded to their passengers by the latter concern. Hundreds upon hundreds on their arrival at the terminus at Birkenhead, were obliged to give up all thoughts of reaching the scene of action, as an immense concourse were there waiting before them; and the scrambling for places as each train came up was beyond description, the trains not being either half large enough or frequent enough to convey the assembled mass.—*Manchester Courier*.

Maryport and Carlisle Railway.—The "needful" for the formation of this line at the eastern end has been advanced with great promptitude, and in our next we expect to publish the letting of the contracts for the construction of the railway from Carlisle to Wigton. All friends to the improvement of West Cumberland must sincerely rejoice at the successful progress of this undertaking. If scoffs and contempt could have put it down, it would long ere this have been laid in the tomb of the Capulets, but the promoters have proved themselves men of judgment and prudence, and have gone on safely, if not quite so swiftly, as some of their more imaginative friends have at times desired. They have shown their ability to adapt their means to a given end, and in this way they will no doubt proceed until all difficulties are overcome, and the project over which they preside be successfully achieved. Their past good management is a fair guarantee for the future, and therefore we expect that every week will bring new friends to an undertaking which promises both in a pecuniary and a public sense to answer all the objects which its originators proposed to attain.—*Whitehaven Herald*, May 1.

THE BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—I rely on that love of fair play which so eminently characterizes the management of your journal for the insertion of the following strictures, extracted from a Worcester paper, on the commendation bestowed by the *Railroad Monthly Journal*, on the Birmingham and Gloucester Railway, for the judicious and economical manner in which it has been construc'ed—and which commendation you have been pleased, in an approving and concurring vein, to transfer to your own columns—giving to it thereby an extent of circulation, and a stamp of authority, but for which it might have been comparatively innocuous.

I am, Sir, your constant reader,

E. L.

Tewkesbury, 4th May, 1841.

[We readily give insertion to the strictures enclosed in our correspondent's letter; but we must observe that the passage which we quoted with approval from the *Railroad Monthly Journal*, spoke only of the actual cost of the line as compared with the estimated cost, and contained not a word about the manner—"judicious" or otherwise—in which it has been laid down.—ED. R. T.]

BIRMINGHAM AND GLOUCESTER RAILWAY.—The *Railroad Monthly Journal*, speaking of the cost of constructing the Birmingham and Gloucester Railway, says—

"It appears that of the original estimate 80,025*l.* not included has been paid for the Cheltenham and Great Western Railway; nevertheless, only 60,000*l.* additional will be required; or in other words, the line has been made, *not within the Engineer's estimate, but within the original Parliamentary capital.* It is a solitary instance, we believe, and is highly creditable to the engineer, Captain W. Moorsom."

Compare this with the following observations made by a shareholder in the Company, a Mr. Tartt, of Cheltenham, at their last half-yearly meeting, held at Gloucester on the 23rd of February:—

"As regarded the probable cost of the line, he (Mr. Tartt) had been officially informed at the first meeting that including stations, it would not exceed 950,000*l.*; and upon reverting to the same subject the year following, *he was told he was quite safe in saying that the works of every kind connected with the whole establishment would be kept 150,000l. within the powers given by Parliament.* This was exclusive of the additional half of the line between Cheltenham and Gloucester, and without this would have made the whole cost something less than 1,117,000*l.* Six months after the Chairman informed the meeting at Birmingham, that when closely pressed at a previous meeting he had stated there would be a surplus of 100,000*l.*, and it now appeared that (including the line from Cheltenham to Gloucester,) the whole 1,266,166*l.* would be absorbed, while they had just been informed in the Report that 60,000*l.* more would be required."

How does this consort with the exultation of the *Railroad Monthly Journal*, that the Gloucester and Birmingham Railway presents a "solitary instance" of railway construction in which the original Parliamentary estimate has not been exceeded? We are not in a condition to say by how much the Parliamentary capital has been exceeded, though we believe there has been an excess; but it is plain that the est mate of certain official persons has been exceeded 30 per cent. or thereabouts, or Mr. Tartt labours under a mistake, and we cannot find in the report of the proceedings that his statement was contradicted. Mr. Tartt says he was *officially* informed that the whole cost of the railway, including stations, would not exceed 950,000*l.*, while the actual sum at present expended is between 1,200,000*l.* and 1,300,000*l.* It is evident, whether the Parliamentary capital have been exceeded or not, that an estimate made, or at least communicated, by official persons, has been exceeded in the proportion of nearly a third.

Captain Moorsom is now about to turn his attention to the construction of a railway in the West of England (from Exeter to Falmouth we believe) and there can be no harm in our giving him a piece of advice, not to be deterred by conjured up "engineering difficulties" from carrying his line of road at a less inconvenient distance from the towns on the route than he has done that of the Birmingham and Gloucester Railway. Surely never was anything worse contrived for all the intermediate places between Birmingham and Gloucester than this unlucky line. If a passenger desires to go from Worcester to Bromsgrove, he is first conveyed in an unweildy machine to Spetchley, an operation consuming for the most part nearer three-quarters than half an hour. He is then put on board the train, and whisked away to the Bromsgrove station. In something less than forty minutes he his set down there, when he has to get into a coach or other vehicle and travel along a very circuitous but by no means very level road to the town of Bromsgrove, distant a mile and a half. So that more time is positively consumed in travelling between Worcester and Bromsgrove by railway, or rather by coach and railway, than formerly by coach alone. If you take Droitwich instead of Bromsgrove the matter is worse, for you have very nearly half the distance of the former place from Worcester to travel in an exactly opposite direction to your destination before you embark upon the rail, and after this you are set down more than a mile from Droitwich, and must again avail yourself of a coach. If you want to go to Tewkesbury you are transferred at the Ashchurch station, three miles off, to a carriage drawn by a horse on a single line of rails, and when you get to that town you may, if you are cumbered with much luggage, still need a carriage. The station at Cheltenham is two miles from the principal hotels in the town, and here again you are driven to make use of an omnibus, for which you are charged extra, the Company only undertaking to deliver passengers at their station *near* Cheltenham. As regards our own city, the daily inconvenience sustained by persons leaving it or coming into it is immense. You have travelled it may be from Gloucester or from Birmingham with arrow-like rapidity—Worcester is your destination. The train comes to a stand still at Spetchley, and you transfer yourself from the snug easy chair in which you have been lounging in indolent ease, to a lumbering omnibus, into which you and your fellow passengers are crammed side by side. Should you have made the journey in a second class carriage, and the first class passengers fill the inside, you must climb upon the roof of the vehicle, and there in hail, rain, or sunshine, patiently attend its tedious progress towards Worcester. A few minutes ago you might have been tempted to compare yourself to some of the winged denizens of air, for you had been cleaving it with the swiftness of the swallow. On a sudden your comparisons undergo a most unpleasant revulsion —and you can only liken yourself, by contrast, to a snail toiling over the unequal ground at the rate of a few feet in an hour. We have no doubt that the Directors of the Birmingham and Gloucester Railway have ere this deeply lamented the injudicious policy which induced them to carry their line at such a distance from all the towns to which it might have served as the readiest means of conveyance. In not bringing the railway nearer to Worcester than Spetchley, they have fairly, to use a vulgar but expressive proverb, cut off their nose in spite to their face. There cannot be a doubt that the Company have suffered greatly in their revenue by this suicidal policy of their Directors and Managers, and the citizens of Worcester have sustained inconvenience and detriment in an endless variety of ways (which can easily be substantiated) which will tell with damning effect in any proceedings to be taken against the Company at a future day for the recovery of their justly forfeited bond for 70,000*l.*—*Worcester paper.*

ACCIDENT.—A serious accident occurred on Saturday morning, at the Wootton Bassett station of the Great Western Railway, to an engine-stoker named Hale, who, we are informed, sustained great injury in the head by being jammed between the buffers of two engines which met before he had time to get out of the way. The poor follow was conveyed to Reading by the luggage train, and immediately taken to the Royal Berks Hospital, where he is now undergoing medical investigation.—*Wiltshire Independent.*

REFORM IN RAILWAY DIRECTIONS.

To the Editor of the Railway Times.

SIR,—Not to burthen your columns with explanations which would not promote the end I have in view—*efficient and honest Direction*—by which alone the capital we have employed in railways can be worked with the maximum advantages permitted by circumstances, I shall pass by, without attempting a return blow, the bits your correspondent "C. D." fancies he has "put in;" I do this the more readily, partly because he spars in good temper, but more because I am willing to give him credit for desiring the same object as myself.

It is, I find, much easier in argument, to meet an antagonist who denies, out and out, one's premises and conclusions, than to deal with a party who agrees with one in principle, and endeavours to damage one in detail. "C. D." and I equally desire good management, but we are so at issue as to the means of obtaining it, and so wide a difference is there between us, that as I understand his intention of change—his alteration—it would do nothing but confirm present abuses. He would have a small number of highly-paid persons in *permanence*. Now the great, the crying evil, I have all along been trying (and my confidence in succeeding in it, is in no way diminished by "C. D." 's ridicule, for proprietors are awake to it, and late or early, I shall accomplish my purpose) to abate, is *permanent* holding of office, through instant re-election, for, it is through forming connections of friendship, through hanging with each other, each for the advantage of each, through sedulously endeavouring to keep out new persons, through secrecy of action, through combination and union—in forming all of which into a system to the detriment of the shareholder, permanence of office is an essential, if not the only requisite, element—that the manifold vices of Boards have grown up, and now bear fruit.

In forming Railway Boards, I would begin at any chosen letter in the share-lists, and offer a seat to the first person standing alphabetically, the second to him residing near the line, the third to the largest holder, and repeat the process until office had been accepted by eight; and then I would defy any man, though he should intrigue, like Talleyrand, to continue in practice the unholy compacts now existing. At the expiration of the term expressed in the Acts, such Directors should go out in rotation. New blood would thus constantly be infused, and before mischief could arise from the corruption long tenure never fails to engender, new members would be called in to stay and prop up declining virtue. "C. D." says "being an Executive, they should be *few* in number." The term is indefinite. I will be more explicit, and assert five to be *too few*. One man is not enough for a Committee—he may play false with his Manager, and Contractor, or seller. Where few are appointed at high salaries for their whole time, and for unlimited periods, they do it for a living—they come from the "uneasy" class, and a bonus of 500*l.* for a contract, or frequent small presents, *might* be inducements. Besides, under the plan adopted on the Birmingham and Gloucester, to which your correspondent refers, and appears to consider as a model, there are *Managers* of each head of service, whose whole time and best exertions are paid for, and who are permanent unless dismissed for ill conduct. Why, therefore, the line should be taxed with another set of highly-paid officers, with a duplication of expense in fact, for management, I am at a loss to conceive—the more so, as at last the number of Directors is insufficient for efficient check. Another objection I have to the plan in use on that line, since your correspondent quotes it, is that the Chairman takes no defined duty. "General superintendance" sounds fine, but means nothing—or, at best, nothing but walking about—unless the Chairman is *de facto* sole Manager, a plan which has failed in other concerns; and then the four Directors are mere puppets or Chairman's clerks, and in that case a surplusage, if not worse. If four do the business, but four should be paid. But I would have eight, and they should have 1,200*l.* a year; they should not be re-seated for three years at least; and I would do

away with proxies at railway meetings, by which shareholders, when they go to the vote, are sure to be distanced, and by which the holders of United States Bank Stock (I adduce this instance as showing the general effect of proxies) have been *Biddled* out of their money.

The idea that men of property "would breed their sons to the business of Railway Direction"—that is, that Railway Direction would be promoted to the rank of a (learned?) profession—is quite Utopian; and useless, moreover, if my opinions prevail, for I would not employ such.

The term "good management," I interpret to mean the last farthing of dividend that—the public service being well performed—can by Directorial attention and honour be extracted from railway investment. *Pour moi je ne travail pas pour la gloire.* I fag in railway matters, for money—inglorious but honest pelf. I want what I am entitled to, be it little or much, to reach my pocket, not to slip into that of those who have hitherto had the tact to enrich themselves by salary, by patronage, by playing into each others hands, by taking advantage of their own acts to speculate to profit, by clubbing their influence to keep themselves and their connexions in office, by secrecy, and by withholding information when demanded. How this point—the largest possible dividend—(and no man need envy its amount, for upon the sixty millions two per cent. for it, is a large estimate) is to be attained, is the question before the court.

It is because Directors' work has generally been "ill done," or undone—rarely well done—that I seek a change in the mode of doing it. That the objections I have made are valid, in the opinion of the great body of shareholders, is sufficiently attested by the universal desire which prevails for reform; a desire, so strong indeed, as to have forced some Boards to bend to the storm, and to offer, as if voluntarily, a semblance, in hopes it will be mistaken for the reality. Let not shareholders be deceived. The changes made by Directors in Directions, must never be relied on; they are "a tub to the whale," no more. In no instance have they touched the vicious principle of appointment; and the principle being tainted, the working must be unsound.

A re-consideration of the subject induced by your correspondent's statement of the high mental qualities requisite in a Director, leaves me in possession of the opinion, that the best possible railway result may be had, through the agency of eight heads to each line, of dimensions barely respectable in the estimation of Dr. Combe. Your correspondent, in a flourish which, did it refer to me, I should consider rather as satirizing than exalting any office I might hold, asks, when alluding to the buying of coals, oil, tallow, and cotton waste, and repairing engines and roads, "what qualifications do not the latter two demand! What science, what economy, what knowledge of materials of workmen!" &c.; and further he goes on to say, that Directors ought to understand "geology, chemistry, and mechanics." Forgive me if I laugh, for it is amongst my most serious opinions, that my last rightful penny of dividend (*that, I repeat it, is the point at issue*) is to be had, through eight share-list Directors, though they should not know a cylinder from an eccentric, nor silt from sienite, nor a retort from a Leyden jar, nor a lathe from a knife-grinder's wheel. Does your correspondent contend that two Directors in Committee could not preside with effect over the mechanical department, having a professional manager to superintend it, paid for his whole time, and well paid, without themselves being practical mechanics? Why, Sir, he might as well say, "who drives fat oxen, should himself be fat." Granted, were they mechanics, or road contractors, or coachmasters, or carriers, or Chancellors of the Exchequer, by trade, it might make the duty somewhat easier to themselves; but be they what they might, it would be their own fault, if they were not efficient. Give me, in Directors, *attention, attendance, and honour*, and I will not, if drawn, decline the responsibility of management with any seven, of whatever rank, trade, or profession they may be, if taken *from the share-lists in alphabetical rotation, for residence near the lines, and for largest holding*, for the term specified in the acts, being ineligible for re-appointment for three years, with 150*l.* for salary, and serving, as they would do, with a promiscuous party, all probably privately unknown to all. Under these circumstances could any man accept the office with a view to profit, or patronage, or permanence? Would he go to the railway for any purpose but to work it for the general advantage of the proprietary? If he felt himself incompetent, would he accept the office at all? In such case, need less than average sense being brought to railway direction be feared? On the contrary, each man feeling bound by his own immediate interest, and by honour, to exert himself for his short term of service, would gain at the end of it the thanks and gratitude of his co-partners, who in their turn would emulate his conduct, and thus proprietors would soon have that general knowledge of their affairs, which it is now a chief business of Directions to withhold.

Of the two plans, that under which we now "grin and bear," and that (not mine) which has been lately introduced as a reform, I give the preference to the former, from a conviction that a very small number of highly paid Directors appointed practically for life must inevitably lead to mismanagement.

The pleasure I felt at finding that so able a proprietor as C. D. fully coincided with me in opinion as to the appointment of auditors, suffered some diminution from the doubt to which reading a subsequent paragraph gave rise. With a view to dispelling it, and that we may perfectly understand each other, I beg to inquire of him, whether he gives his adhesion to the following method of selection? *Three Auditors to each line taken from the share-lists in alphabetical order, the first to serve* 18, *the second* 15, *the third* 12 *months* (in order that they may not all go out of office together) *and all subsequent appointments to be for one year and no longer; such auditors to have full powers to inspect, examine, inquire and report, and to be independent of the Directions.*

I cannot have the mode of selection blinked. Directors "from the Share-lists"—*all Directors*, whether on the Birmingham and Gloucester or on any other line—must necessarily be so; but to be good for anything they must likewise be taken from the share lists, not by interest or favour, or connection, but for the reasons and qualifications I have stated. Upon this point I will come to no compromise, for not reaching it, all propositions are mere promises to the ear—sheer dupery.

A RAILWAY SHAREHOLDER.

LONDON AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—The following is the weekly traffic on the London and Birmingham Railway for the 17 weeks, ending April 25th, 1840, and April 24th, 1841, respectively, showing an increase in the latter period of 29,771*l.*:—

1840.	£	1840.	£
January 4	9,701	January 2	12,417
" 11	10,921	" 9	12,068
" 18	12,232	" 16	12,424
" 25	10,937	" 23	13,264
February 1	11,000	" 30	13,240
" 8	12,038	February 6	12,704
" 15	11,092	" 13	12,357
" 22	11,077	" 20	12,502
" 29	10,831	" 27	12,845
March 7	11,016	March 6	13,446
" 14	11,552	" 13	13,019
" 21	11,728	" 20	13,518
" 28	12,398	" 27	14,666
April 4	12,125	April 3	14,596
" 11	13,465	" 10	14,331
" 18	14 033	" 17	14,933
" 25	14,120	" 24	17,027
Total	£200,286	Total	£230,057

I have no means of ascertaining the weekly traffic for the same 17 weeks of 1839, but the total amount for the half-year ending 30th June, 1839, being 270,241*l.*, the average weekly traffic will be 10,393*l.*; this, however, takes in the months of May and June, (summer months,) not in the above 17 weeks. The weekly average for the 17 weeks of 1840 is 11,781*l.*, the weekly average for the 17 weeks of 1841, 13,532*l.* Hence we perceive that the present immense amount of traffic on the London and Birmingham Railway has not come upon the line ALL AT ONCE, but on the contrary, by degrees, affording much of hope as regards those railways which have been but lately opened, and have as yet scarcely answered the expectations so confidently entertained of them at one time.

I am, Sir, your most obedient servant,

OBSERVATOR.

May 6th, 1841.

THE OLD COACHMAN'S LAMENTATION.

BY JAMES STONEHOUSE.

Upon the box of the "Orthodox" I sat one summer's day,
The coachman old, as on we bowled, I noted by the way.
His napless hat was broad and flat, his coat was thick and rough,
While round his neck he wore a check of faded woollen stuff.

One nag was white, one brown and bright, the other was a roan—
The fourth was black, save on his back some spots of greyness shone.
Along the road th y bore their load, but at a sluggish pace;
And not a smile came all the while across the coachman's face.

E'en when he spoke, his voice seem'd broke, his words were faint and low;
His nags ne'er knew what they should do, *gee* was so full of *woe*.
He groan'd and sighed, and almost cried, as though his heart was breaking,
The reason's told—lo! and behold! *a railway they were making.*

JEHU LOQUITUR.

These here is times which I am sure I never thought to see!
To find that hosses in this world of no more use will be.
To think that we shall have no *reins*, save such as clouds will put on,
And *bridles* only in the church, and *saddles* but in mutton.
Ah! well the tear may trickle down this weather beaten face;
I know them rails will wipe away of *harness* every *trace*.
In vain you'll look for nags like these, with coats so sleek and airy—
And as for *whips*, you'll get them but in *shops confectionary*.
Ere long 'twill be a sight to see a filly, mare, or foal;
And then, like Captain Ross, we'll go out seeking for *a pole*.
No more will kicking colts delight the travellers' ease to mar;
Like ships in shallows, there will be no *getting o'er the bar*.
We coachmen much *Joe Miller* love, so full of jest and joke—
But drivers at their fingers' ends must always now have *Coke*.
Time was when guards could snatch a nap, and close their weary peepers,
But now they must keep wide awake, because they *run on sleepers*.
In railway trains I'm sore afraid the mode must sure be cruel—
They say that passengers can't stir unless they've got some *fuel*.
We might as well go hang ourselves by rope—for *by this line*
'Twill take *steel bits* from *hosses' mouths*, and *bits of meat from mine*.
To talk of steam! a boiler's but a big-sized iron kettle;
It can't compare with them four nags; an't they *got lots of mettle?*
Who'd care to see an ugly train, loud roaring as it passes,
Full of folk like *boys at school*, in first and second *classes*.
It makes my blood run cold to think of driving such a engin—
I'm bless'd if there won't be some day a scalding and a singeing.
And then to be blown high in air, and then on earth to reel!
You'll find when trains run o'er your *hams, too tough's the tender wheel*.
I think some people in this world in Bedlam we should make fast,
Who want to rise at six, and go a hundred miles to breakfast—
In London lunch—the channel cross—in *Hung'ry* have a dinner;
And then in Pekin sip their tea—ride home in *Coch-in-China*.
My occupation's gone I feel, hot water's now the rage,
I'm afraid I'll have *no benefit when I go off the stage*.

But who would carry passengers,
Who sit at ease,
And give no fees,
And have a precious failing,
That all the way
Tho' civil—they
Can't *travel without railing*.

1. Toll to London and Birmingham 119*l.* 19s. 5d., to be deducted from gross receipts.
2. The receipts are exclusive of those from the Post-office.
5. Receipts include the Northern and Eastern toll, &c.
7. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.
8. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.*
10. The 5,331,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet.
12. The 26*l.* 4s. 10d. from goods, &c. is for toll only.
13. Ten per cent. is the maximum dividend allowed by the Company's Act.
14. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.
17. The capital of 741,000*l.* includes the new capital for London and Brighton station.
18. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.
19. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.
21. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.
22. The 3,096*l.* 16s. 10d. are the receipts after deducting the toll to the North Midland Company.
23. The receipts for goods, &c. include, carriages, 57*l.* 16s. 6d.; horses, 31*l.* 13s. 0d.; dogs, 2*l.* 5s. 6d.; parcels, 224*l.* 11s. 9d.; cattle, 36*l.* 0s. 0d.; corn, 12*l.* 6s. 7½d.; heavy goods, 396*l.* 6s. 0d.; coal, 31*l.* 4s. 3d. Total, 792*l.* 7s. 7½d.
25. Including 12*l.* 15s. 11d., Manchester and Leeds traffic for present week.
26. The receipts stated are after deduction of Liverpool and Manchester toll.
27. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.
28. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.
31. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

A Birmingham and Gloucestershire Shareholder *desires to know "whether it is true that the Company are threatened with legal proceedings by the City of Worcester for the recovery of a penalty to a large amount for the non fulfilment of some contract entered into with that city, and what that contract is?" Our correspondent will find some allusion to the subject in an extract given in another part from a Worcester paper.*

We readily do Mr. Gunston *the justice of stating that he is no longer a Director of "the great corporate misfortune."*

Q. in the Corner *writes us briefly thus: "To be sure I do know all about the 'rumour' of which D. V. speaks; but why should I trouble myself to do justice to a person who has not the spirit to seek justice for himself? He seems to like the scurvy treatment he received; let him by all means therefore enjoy it."*

W. M.—*We have seen sets of tables of the description suggested by our correspondent—one, if we mistake not, which was compiled by Mr. Bidder.*

Hibernicus.—*No such "family" scheme was ever proposed; it is the miserable invention of a very miserable knave.*

Eastern Counties' Railway.—*A Liverpool correspondent writes that "the declaration on oath of the Directors in support of their application for a Criminal Information against the* Railway Times *for an alleged libel that" they never pretended at any time that they were working at a considerable profit" "has completely done for them with the Liverpool public. Prior to that declaration the shares were at 9½, they are now offered at 8¼ and no buyers." How far it is true that they never pretended so, we shall see bye and bye.*

A Railway Traveller—A Wayfaring Man—Explicator—A Shareholder (Eastern Counties')—W. S. M.—*received.*

London and Birmingham Traffic.—*The total receipts last week were as stated, £15 877 4s. 11d., but in summing up the goods' items, that for cattle, £179 19s. was omitted, and hence the discrepancy pointed out by* L. J. S.

F. *on the Cheltenham and Great Western Railway is unavoidably deferred till our next.*

The following Traffic Returns did not reach us in time for insertion last week:—

Week ending.	Total.
May 1. Grand Junction	£8,048 11 3
April 29. Manchester, Bolton and Bury	549 9 3
April 25. Dublin and Kingstown	631 17 5

THE RAILWAY TIMES.

SATURDAY, MAY 15, 1841.

We have transferred to our columns from those of the *Gloucestershire Chronicle*, a very interesting account of a recent railway pleasure excursion from Gloucester to Birmingham. We are satisfied that our readers will require from us no apology, either for directing their special attention to this delightful incident in railway history, or for pausing for an instant, amidst the din of rivalry and the groping fervour of money seeking, to refresh ourselves with a view of the social and moral benefits, which the great mechanical improvements in locomotion have worked, and are working in the world.

But, first, we cannot omit to notice that in this, as in everything else which has been really and greatly successful, even pecuniary consequences follow which were never reckoned on. The Birmingham and Gloucester Railway Company make, in one day, an unexpected profit of 100*l.* less the passenger duty, simply because their line has opened to the mechanics of Gloucester a hitherto inaccessible and untasted source of intellectual enjoyment. It is not only to the plodding trader, or the whisking idler that railway proprietaries may look for their gains: the toiling workman rests now on his weapons of peace to taste distant pleasures which till now he only heard of, but which science and capital, conjoined with the indomitable energy and ready skill of his own caste, have brought (except merely as to the land which lies between) to his own door. We trust that Railway Directors will see the worldly wisdom, as well as the philanthropy, of facilitating these enlivening trips. May the hundreds be many and frequent, which they have yet to glean from this new harvest of general enjoyment!!

It is not a little gratifying, to one who watches and speculates upon the structure and progress of society to observe how, by remote and unexpected means, the evils incident to each stage of its improvement, are checked and counteracted. Freedom and science had given an impetus to enjoyment, and a security in the possession of its means, which soon produced deep and permanent effects on the moral state; but the wants of men ever growing with the means of gratification already possessed, attained a measure which would only be satisfied by cultivating to the utmost, the skill and capabilities of each for one object; and hence division of labour became essential to the supply of our commonest wants. But to the individual man, what is it to be confined for life to one narrow monotonous task? All his life long a man is pointing pins; but beyond feeding his body indifferently, what has his occupation done for him by the end of his days? What for his moral and intellectual improvement? Literally nothing. And yet is this very evil, great as it is, an inevitable consequence of the principles which are carrying the race in general, fast and far in the way of good. But then comes the remedy. The very same division of labour which condemns one man to pointing pins, sets others, after a time, to supply him from afar with the food and exercise his mind requires; books become a pin-cheap manufacture, and the hungering of sociality draws men into clubs to obtain them: mechanics' institutes become a prominent feature of the day, and the high and learned all fall into the fashion of upholding them. On paper, the ends of the world contribute of their variety to lighten the useful monotony of the toiler, and to make him feel that he is a man, and to be intellectually fed upon the beauties, the glories, and the goodness of the universe around him.

Greatly, then, do we prize every means of bringing intellectual treasures within the cheap attainment of those who labour; but still the living reality makes an impression which mere mental apprehension strives for in vain. After all, therefore, which has hitherto been done, we hail with more than common delight this new accession to our means of improvement, and the alacrity with which it has been seized. How shall we estimate the mental expansion, which will follow the cheap though hasty glimpses, the lonely countryman may get of the stir of cities and of the grand results of enterprise and combination! Or those the pent-up citizen may indulge in of the modest though uncouth utility and worth of his rural fellow men, and of the worshipping beauty and teeming quiet of God's own glorious fields! They who deal with the stern and ponderous wonders of Colebrook Dale, and they who fabricate the gossamer elegancies of Nottingham, will interchange their sights and their hospitalities with mutual benefit and delight. The artist who supplies luxurious splendours to stately mansions, if he have the courage, may derive much food for improving and correcting thought from a visit to a coal mine; while the collier may reckon amongst his own, of which he cannot be robbed, the ideal remembrance of the beauties created by the artist. If in enjoying liberality like that which opened the workshops, as well as the institutions of Birmingham, to the men of Gloucester, each were to acquire nothing directly applicable to his own handicraft, he would at least treasure up images which would recur in vivid and invigorating recollection, and see in every other department of labour a useful adjunct in the supply of the general wants, or a necessary part of the system which supplies his own. Many and gratifying will be the revivals of that day's pleasure which will flit across the memories, or occupy the thoughts of the Gloucester travellers.

The moral consequences of the means of easy and extended personal intercourse, as of other physical and mechanical improvements, have, in our view, never been valued at their real worth. To say nothing of that useful though imperfect honesty which depends for its existence on its appreciation by our fellowmen, and which is therefore mainly strengthened by frequent intercourse with those to whom we are personally known, we deem the frequent sight and enlarged circle of friends, the best incidental guards and cherishers of the kindly feelings. The visit to the paternal cottage fifty miles off, brings back through the tangled mazes of rougher habits, the remembrance of childhood's pure and lisping lessons, boyhood's hopes and resolutions, and rising manhood's struggles with temptations. Of early friends, some are found to be pitiable warnings, others show how much may be done by adherence to right principles—some are striving with the world's allurements or repulses, and others are gone the way which reminds us that we each must give an account. The quiet lane once more brings back the days of early affections, the mother's voice once more speaks the tenderness of the mother's heart, and the father's gives falteringly once more the welcome and the parting blessing. The traveller returns to start again, and at advantage, in the sullying strife with the world—remembering as from a fresh epoch the lessons which should guide, and conscious as from a fresh impression, of the feelings which should animate him.

But in the wider range of friendship and the necessarily less vivid attendant emotions, there is much to soften and direct aright the heart. Men were made to act on men; and evil as many of them may be, yet the action is on the whole for good. Kindliness is always better remembered and more frequently imitated than churlishness, and to strangers and visitants it is almost invariably exhibited. Just as on the majority of days we have health, on the majority of visits we have pleasure. The man who for want of locomotive means might have sat alone, gloomy, cramped, and harsh, becomes cheerful by intercourse, modest by opportunities of comparison, and benevolent by expansion of heart and cultivation of sympathy. We say not, that right principles of action can be implanted by any facility or extent of intercourse; but we do say that even right principles degenerate into fanaticism or misanthropy, where their appropriate stimulus, the large

Digitized by Google

and easy correspondence of fellow men is wanting.

Cities and communities afford an instructive history of moral changes. Driven together in the middle ages by common dangers, men seem now to associate for the procuring of common profit, and glad are we to see in this new use of railway travelling a strong tendency to associate in masses for the enjoyment of common pleasures. Contrast the multifarious gatherings of the day—nay, we may say of the present month—with the meetings of the days when every man had his lance and buckler and the herding citizens saw that their watchmen were wakeful and their gates strong to resist the lords of the neighbourhood; when the barons each took thought of his drawbridge for fear of the power of his neighbour and the cities made sometimes truce and sometimes war with each other in their quarrels for a field or a ditch, an image, a relic, or a title; and let us ask, have not the better roads of modern days had much to do with that intertwining of interests and affections—which have of cities and demesnes made one country—of lords, citizens and serfs, one people? When last summer we read of (would that we had seen) the railway visits and return visits, and redoubled visits of the towns of Leicester and Nottingham to each others Mechanics' Exhibitions—when we heard of their rivalry in the extent of their trains and in the elegance and variety of their personal and public courtesies—our thoughts were occupied in thankfulness for the contrast which this age exhibits to those which have gone before; but our reverie was broken by seeing, we think in the very same papers, that two towns in the mountainous north-west of Spain were just then at deadly strife for municipal pre-eminence. If these men, we asked ourselves, saw each other as frequently as do our railway connected inhabitants of Nottingham and Leicester, could they consent to the desolation of each others hearths?

National feelings are made up of individual impressions, and are the causes and aliment of war or peace. Like that of each of the threads which held down the head of Gulliver, the effect of an individual's predilections may be too small to be estimated; but these infinitesimal influences are in their sum the real governors of governments, and directors of the movements of empires. Two nations whose individual members know little of each other—have seen little of each other—are held together, if at all, only by cold and general formalities, or distant casual and sordid interests—may be easily excited against each other, and may soon be made to exhibit that systematized and frenzied hatred which superior spirits may well wonder at, and which we call war. But let many of each nation exchange civilities and reciprocate endearments—let them receive the cordial hospitality of the hearth, and listen to the artlessness of foreign prattle—let them remember the fields where they have wandered with their friends, and the hills and valleys whose beauties have enchanted them—and then say how will you break this band of brotherhood? For how long will your people suffer statesmen or soldiers to pollute those dwellings or these fields, or render wretched these cherished friends. No! we are satisfied that every engine which propels a steamer from our shores is a unit in a mighty bond of peace, and every railway locomotive adds incalculably to its value. As towns, though heretofore hostile have become one nation, so shall nations yet hostile, become eventually one brotherhood—not by craft or by treaty, but by the overruling friendship of their people.

Look for confirmation to passing events. Would the recent political troubles have passed over, fifty years ago, without three or four wars springing out of them? To go no further, should we, under the same circumstances, have been at peace with America? We trow not. Or with France? Still less likely. If in the hurry of business the promoters of the projects which have thus bound nations together can pause for one moment, we would ask them to enjoy the pleasure they may derive from this perhaps unintended but substantial and most momentous result of their labours.

The South-Western Railway is beginning again, with the return of the travelling season, to attract an unenviable degree of notoriety for bad management—casting even those renowned lords of misrule, the Directors of the Eastern Counties', for a time into the shade. Of no line just now do we hear from all quarters so many serious complaints. Fares greatly raised, and raised unequally—least on first class passengers and most on second class, (in the vain hope of adding to the number of the former); but without the smallest improvement, either in the speed of the trains or in the punctuality of their arrivals and departures, and with greater general inattention on the part of the Company's servants (if possible) than ever. The first class trains are advertised to perform the journey in three hours (being at the rate of 20 miles an hour); but of this class there are but two daily (each way), and one only (as we are assured by a correspondent) which keeps time. The mixed trains take generally upwards of four hours, and not unfrequently five—going but little faster than a well-horsed stage-coach.

Of the injudicious rise in the fares, the *Times* of Monday last furnishes the following striking exemplification:—

"A correspondent, who makes a complaint of the charge by the South-Western Railway for second class passengers, compares it with that of the Great Western Company, as regards Chertsey and Windsor. From this comparison it results, that whereas the total charge for performing the journey between the Bank and Windsor, by the Great Western Railway, amounts only to 3s. 6d., the Directors of the South-Western purpose charging for the journey from the Bank to Chertsey—a distance within a fraction the same—the sum of 4s. 5d.; and this extreme difference in the terms of the two railways, far from being counterbalanced by additional speed in the latter, is, on the contrary, aggravated—the total time occupied by the Great Western being two hours, while by the South-Western it is two hours and 49 minutes."

How these high charges bear hardest on the humblest, but at the same time most numerous class of travellers, let the correspondent of another contemporary, the *Dublin Monitor*, attest:—

"The usual effect of all monopolies is developing itself in the proceedings of the Directors of the London and Southampton Railway. They have driven all the coaches off that line of road, and now, having the monopoly in their own hands, they have raised the rate of fares at their pleasure. The rise, as it always happens, is greatest upon the class of carriages used by the middle and lower classes. The first-class carriages have been raised 9 per cent., but the second-class are raised 17 per cent."

Civil treatment might go far to induce people to put up with such inordinate calls on their pockets; but from the following case reported in the *Times* of Thursday last it would seem as if this Company thought that the high hand only, could assort well with high prices.

"Union-hall.—Yesterday James Bourne and William Parrock, were summoned at the instance of the Directors of the Southampton Railway for refusing to pay first-class carriage fare from Kingston to Nine Elms, by which they had incurred penalties of 40s. each.

"It appeared that on the arrival of the defendants at Nine Elms, as passengers in a first-class carriage, they produced tickets for the second class only, and on being requested to pay the difference, they refused, on the ground that the servants of the Company ought to have taken care that they got into the right carriages before starting from Kingston.

"The defendants admitted that they had paid for seats in the second-class carriages, but that owing to the confusion which existed at Kingston, and the great length of the train, and the suddenness of its departure, they were actually pushed into the first instead of the second-class carriages, and under such circumstances they contended that it ought not to be made compulsory on them to pay the demand which was subsequently made upon them.

"The magistrate, however, said that the defendants had rendered themselves liable to the penalty, and that care should be taken at all the stations where the trains stopped, to point out the different carriages, servants being appointed for that purpose; besides, the defendants must have been aware of the difference between first and second-class carriages, the former being enclosed, and the latter open at the sides. The magistrates then inflicted nominal fines on the defendants."

We have not included this case under our customary head of "Railway Offences and Offenders," for we protest that we can see no "offence" in anything the parties complained of did, to justify their being designated as "offenders." On the contrary, we think they have been used most abominably; first, in being pushed into a high price carriage against their will; second, in being called upon to pay for the superior accommodation thus thrust upon them; third, in being dragged from their businesses and their homes, to answer like criminals at the bar of a Police Court, for their refusal to pay what they never bargained for; and fourth, in being fined (no matter in how "nominal" an amount) for a breach of the Company's regulations, of which, so far as *intention* constitutes the essence of *offence*, they were entirely innocent. How the magistrate could infer anything to the prejudice of the defendants, from the circumstance that they "must have been aware of the difference between first and second class carriages, the former being enclosed, and the latter open at the sides," surprises us greatly. No doubt they were at once and well aware of the difference—even in the "suddenness of their departure," and of their being "pushed in," *nolens volens*, into the class they had not paid for, and did not bargain or wish to go by—but suppose they had, after the stopping of the train, bawled out to the guard ever so lustily to let them out, in order that they might shift their quarters, does any one imagine they would have been listened to? His worship treated the defendants as if they had an option in the matter, when in truth they were the victims of an inevitable necessity. They could not help themselves, and *therefore* are they punished! The only and real offenders on the occasion were the Company's servants; and their masters, (if masters they have) instead of proclaiming to the world the extreme want of discipline and good order, which distinguishes their establishment from top to bottom, might have been well content to allow a thousand such *nominal* offenders to go scot free.

Digitized by Google

The more so—that it is, we believe, quite as common a thing for first class passengers by this railway to be pushed into second class carriages, as for second class passengers to be promoted to a place among their betters (a very remarkable case of this kind was noticed lately in the newspapers,) although the Company have never, as far as we have heard, offered in a single instance to make any compensation to a first class sufferer, for having less comfort and lower companionship than he bargained for, thrust upon him. Who knows but that such may have been the case with the very train by which the two second class passengers so unjustly punished were conveyed to town? What indeed more likely than that the first class seats which they occupied were paid for by other parties, who, in the throng and confusion (admitted to have prevailed), had been disposed of some where else? And if the case really were so, where could be the loss sustained by the Company? What the injury done to them, for which they had a claim to redress?

All these things cannot but operate most prejudicially to the financial prospects of this Company, and we do but our duty (by no means a pleasant one) in thus prominently and emphatically presenting them to the notice of the proprietary. The line is a good line—a capital line—and if managed well must yield a very handsome return. But should the present wretched system of management continue much longer, it must as infallibly go to ruin. Of *pleasure* traffic, as long as pleasure is so little consulted, not much can ever be expected; and of the *business* traffic now possessed by the Company, all that derived from the more western parts of England will infallibly take its departure the moment the Great Western Railway is opened the whole way through, and its great speed, cheaper fares, and excellent accommodations are brought into competition with that heavy-van pace, and those lubberly arrangements which the South Western now delights in. The concern does not pay so well now, that the Directors can afford to throw away any source of income, however small, far less such productive sources as these are, or might be rendered. The dividends hitherto paid, as every one knows who is acquainted with the affairs of the Company, have not been scraped together without difficulty, nor without transferring, after the reprehensible manner of the Eastern Counties' people, many charges to capital stock, which ought more properly to have been set against the current expenditure.

The fares, as they stood last year, were quite high enough, to be with good management abundantly remunerative, nor can we discover any good reason whatever, for increasing them. At all events, if increased, they should have been increased in the same proportion for all classes of passengers. To suppose that by pinching the most numerous class of customers, any considerable number of them would be compelled to become first class, and the receipts of the Company be thereby proportionally increased, is a satire upon all railway experience. The more probable effect will be to increase the first class passengers by a very few, and to diminish the second class in a tenfold proportion. The true way to augment the Company's income was to leave the fares as they were, but to go faster and more regularly, and enforce at every point greater attention to the convenience and comfort of their customers.

The grand source of all the mischief is a most inefficient Board of Directors. With a Chairman living two hundred miles off—a deputy too much occupied with carrying on business of his own to have much time to spare to that of the Company—and a lot of ordinary Directors, of whom those who have leisure and inclination to attend to the Company's affairs, are without the talents requisite to enable them to render useful assistance, and those who have the talents lack the leisure and inclination—the downward course to ruin, which things are taking, is just what might have been expected. The shareholders were told at the last General Meeting that the best security they could have for good conduct on the part of their Directors was to be found in the fact that they are holders amongst them of one-tenth of the Company's stock. Of how little real value such a security is, the present wretched state of things bears stringent testimony. People who can afford to be ruined (if we may so speak) are least of all the people to guard against ruin. Give us moderate and intelligent, and active, and earnest shareholders for Directors, rather than your plethoric Millionaires, who care only for the empty distinctions of office and think but little of its duties. A speedy ejection of the entire body of present Directors would probably be the best thing that could happen for the Company, but a thorough expurgation, which should free it from every non-resident member, and every mere idler and hanger-on is essentially—vitally—necessary.

The report of the adjourned meeting of the Chester and Birkenhead Railway Company has reached us at too late a period of the week, to leave us time for more than a brief recommendation of it to the attention of our readers. The sentiments expressed by the meeting—a Liverpool meeting too!—with respect to the traffic in Railway Directions, carried on by certain Liverpool worthies all over the kingdom, and on the subject of non-resident Directors generally, as also on the responsibility of Railway Boards to their constituents, will be read with more than ordinary interest and satisfaction. Although the first meeting of the kind, we quite agree with one of the speakers, that it is by no means likely to be the last. So good an example cannot long be without many zealous imitators.

Notwithstanding the express announcement by Lord Normanby when he obtained the appointment of a Committee to inquire into "Sunday *trading* on canals, navigable rivers, and *railways*," that the government had no intention of "dealing in any respect with *travelling* on the Sunday," we regret to observe that an endeavour is making by the Sunday Observance fanatics to obtrude the subject by means of petitions, addresses, and all the other customary devices of agitation on the consideration of the Committee. We trust the attempt will be firmly resisted. Sunday *trading* and Sunday *travelling* are two very distinct things; and a Committee appointed to inquire into the one has no legitimate business with the other. If the Sunday travelling question must be gone into, let it be by a separate Committee, not by this; and whenever it is made a subject of distinct inquiry, we trust the legislature will have the justice to include Sunday locomotion of all sorts and descriptions, and not confine the enquiry to travelling by railways alone. Should we ever live to see it seriously proposed to lock the gates of all turnpike roads on Sundays, and lay bars across all our harbours and navigable rivers on Sundays, we shall then consent with good will to see railways exposed to the same risk of interference; but as long as a clamour is raised against railway travelling on Sundays exclusively, simply because it happens, or is supposed to be more within the grasp of an intolerant bigotry than any other sort of travelling, we shall not cease to use our best exertions to baffle and put it down.

—o—

The further consideration of the Report on the Railways Regulations Bill stood for Monday last, but was then deferred till Wednesday, when it was again put off till Monday next, all owing to the unparalleled protraction of the debate on the Ministerial budget or free trade question. Should Ministers be forced, by a vote of the House against them, (of which little doubt seems now entertained) to resign, the Conservative party say that the Railways Bill is one of those which would be most certain to be dropped *for the present*: and should they persist in holding office, and have recourse to a dissolution of Parliament, then the Bill would of necessity fall to the ground: so that, in either event, there seems no prospect of any further railway legislation during the present season—or rather, Parliament. The total number of petitions against the Bill, up to the 5th instant, was 43.

RAILWAY OFFENCES AND OFFENDERS.

At a meeting of the bench of magistrates at Edgware, on the 5th instant, a man named Seales, the landlord of a public house called the Queen's Arms, opposite the Harrow Station of the London and Birmingham Railway, was charged with having committed an assault on Mr. M'Cowell, the clerk in charge of that station.

From the evidence adduced it appeared that, a few days previous, two men came to the station and demanded tickets for London, but being in a state of intoxication they were (according to the regulations of the Company) refused. The men left the station very discontented, and went back to the Queen's Arms, where they remained until the afternoon of the following day, at which time they were observed to be still intoxicated. The defendant, Seales, then came himself to the station for two tickets, but as it was known that the men were no yet sober, and as Seales refused to state for whom the tickets were required, they were again very properly refused.

On the following day as Mr. M'Cowell was passing the Queen's Arms he was attacked by Seales in a most cowardly and disgraceful manner, and but for the timely arrival of the Company's police inspectors would no doubt have been severely maltreated.

The magistrates inflicted the full penalty of 5*l. and costs*: passed a high encomium on the Company's arrangements generally, and on their servants at the Harrow Station in particular, for the attention and civility shown by them since the first opening of the Railway; and expressed, at the same time, their determination to support them on all occasions in the performance of their duty.

Another case of equally well merited punishment is recorded by the *Derbyshire Mercury*.

"Mr. Henry Vickers, solicitor, appeared before the Rev. George Chandler, at Treeton, on the 28th ult., to prefer a charge against Charles Pickering, for having on the previous night had a ballast waggon on the North Midland Railway, near Masbrough, without having properly used his signal lamps, contrary to the Company's regulations and Lord Seymour's Act, in consequence of which the night luggage train from Leeds was obstructed. The Company's regulations were produced, with which all the contractors and their foremen were furnished, which contained most explicit directions in regard to the use of signals both by day and night, whenever any re-

Digitized by Google

pairs were required upon the line. Evidence having been given on those points, Mr. Vickers stated that it was the determination of the Company rigidly to enforce the observance of the system of signals, and to bring to justice every person guilty of any neglect. Mr. Chandler convicted the defendant in the penalty of 5*l.* and 2*l.* 7s. 6d. costs, and to stand committed to prison in default of payment."

At the Loughborough Petty Sessions on Thursday the 6th instant, Mr. T. Harriman, a builder, of Hathorn, was fined 40s. for riding in a first class carriage, having only taken a second class ticket, besides being ordered to pay the difference between the fares. The *Derby Reporter*, from which we take this account, does not state whether any intention to defraud the Company was proved against the defendant, and it is possible, therefore, he may have offended through inadvertence or mistake; but whether or no, we must repeat our perfect agreement with the officers of the Board, that to impose a fine in addition to the difference of fare is unjust. "The fines ought as in the bye-laws of the London and Birmingham, and other great lines, to be *alternative* on refusal to pay the fare."

RAILWAY ADJUDICATIONS.

DUNDALK RAILWAY COMPANY *v.* TAPSTAL.

Court of Queen's Bench, Westminster, May 10.—This was an action for calls upon the shares of the Company.

The defendant pleaded, that according to the terms of the Company's Act of Incorporation, he was liable to be sued only in the Queen's Courts in Dublin, if liable to be sued at all. The plaintiff demurred to the plea, and

Mr. CLEASBY addressed the Court in support of the demurrer.

Mr. F. KELLY was heard shortly on the other side, and the Court, upon looking into the Act of the Company, gave judgment for the defendant.

PICKFORD *v.* THE GRAND JUNCTION RAILWAY COMPANY.

Court of Exchequer, May 11.—(*Sittings after Easter Term, before Mr. Baron Parke.*)—This was an action against the defendants as common carriers, in which the plaintiff complained that they had refused to carry certain goods offered to them for carriage, though he had at the time expressed his readiness and willingness to pay for the same, and had offered to do so. To this the defendants demurred, on the ground that the declaration did not allege a tender of the price for the carriage or a dispensation.

Mr. COWLING now, for the defendants, urged, that though the defendants were liable as common carriers to carry everything brought to them, yet the public were bound to tender the price before they could call upon them to carry.

Mr. MARTIN, *contra*, contended that the averments of readiness and willingness to pay alone were sufficient; but that the allegation that the plaintiff had offered payment put the case beyond all doubt.

This was the technical point in this case, but much interest was attached to it, as it arose from a dispute between the plaintiff and the defendants as to the mode of charging for his goods.

The COURT took time to consider its judgment, after a long argument.

PICKFORD *v.* THE GRAND JUNCTION RAILWAY COMPANY.

Court of Exchequer, May 13. — Mr. Baron PARKE delivered judgment in this case. The question was, whether the declaration was sufficient, there being no allegation of a tender of the precise sum payable by the plaintiff, which the defendants contended was a necessary condition, precedent to their obligation to carry goods. His Lordship, after stating the case, pronounced the opinion of the Court to be that the declaration was deficient in its present form; but leave was given to the defendants to amend by pleading to the action, by which means the real point in dispute between the parties would be more substantially raised for the opinion of the Court.—Judgment accordingly.

PERKINS *v.* THE EASTERN COUNTIES' RAILWAY COMPANY.

Ilford Petty Sessions, May 8.—The question between the plaintiff, a nurseryman in the parish of Barking, and whose property is in the vicinity of the Eastern Counties' Railway, and the Railway Company, which has been for some time pending, and which has created a great deal of interest in the parish, came before the bench for its adjudication. It appeared that the Company, in the progress of their works, cut across a lane called "Sandy-lane," adjoining Mr. Perkins' property, and having, for reasons which followed, omitted to set out, and made another way as convenient for passengers as that which they had cut through, Mr. Perkins laid an information against the Chairman and Directors, under the 102nd section of their Bill, to recover penalties for such neglect.

Mr. Clarke, a professional gentleman, appeared in support of the information; and Mr. Duncan, Solicitor to the Railway Company. Mr. Hall (the Managing Director), and Mr. Braithwaite (the Principal Engineer), were in attendance for the defence.

Mr. CLARKE contended, that as the Company had neglected to cause a good and sufficient road to be set out and made instead of the one which they had crossed, within 16 calendar months of such crossing, they had incurred a penalty of 20*l.* a day for such neglect.

Mr. DUNCAN respectfully requested to offer a few observations to the Bench on the subject of the information. It was well known that the Company had never refused to let out and bring the lane which had been crossed into the public road. On the contrary, they were ready to execute it as soon as possible, if necessary; but the fact was, that other arrangements were in contemplation much more calculated for the public convenience of the neighbourhood; and this alone was the cause of the Company not completing the work complained of. With respect to the information itself, it must be dismissed, as it was quite clear that the penalties alluded to only applied to a turnpike road, and therefore the information could not be supported.

Mr. CLARKE argued contra.

After which the magistrates retired, and after a few minutes' deliberation they returned into Court, when the Chairman delivered their unanimous opinion, which was, that the penalties in the clause of the Company's Act, under which the information was laid, applied solely, as Mr. Duncan had stated it, to turnpike roads: and the information was therefore dismissed.

CLAIM FOR COMPENSATION AGAINST THE LANCASTER AND PRESTON RAILWAY COMPANY.—At the County Court, on Wednesday last, an action was tried between Mr. Bamber, cooper, of Friargate, and the Lancaster and Preston Junction Railway Company, before W. A. Hulton, Esq., and a special jury. The action was in the nature of a claim brought by the plaintiff, to recover compensation in damages for injury done to certain premises belonging to him, by the lowering of the pavement and parapets in Lower Pitt-street and Cable-street, and thereby rendering it necessary to fix steps for gaining access to the houses. Mr. Segar ably conducted the case for the plaintiff, and Mr. J. Addison for the defendants. The sum claimed in full for all damages was laid at 245*l.*, and the sum offered by the defendants was 150*l.* After a very long inquiry, during which several witnesses were examined, the jury returned a verdict for the plaintiff for 170*l.* Mr. Haydock, of this town, was Solicitor for the plaintiff, and Messrs. Rawstone and Swainson, of Lancaster, for the defendants. We understand that the plaintiff had endeavoured to get the dispute satisfactorily settled, without bringing it before a jury, but the defendants had treated him, up to a certain period, almost with contempt. The damage sustained by the plaintiff was done at three different times, and the Company offered him the sum of 75*l.*, for the first time; and after damage was caused a second and a third time, they had the liberality to offer him 80*l.*, declaring this to be their final offer for all the injury they had occasioned. After considerable expense had been incurred, they then offered him the sum of 150*l*, in full of costs and injury, and declared this to be the sum on which they would either stand or fall. Mr. Bamber, under these circumstances, determined to go to a jury.—*Preston Chronicle.*

COACH ACCIDENT.—On Sunday morning last, just as the bells were chiming for Divine service at St. Mary's Church, a serious accident occurred to Pugh's Birmingham coach. A car boy in the employ of Mr. Beck, of the Swan Hotel, Warwick, having set down at the Woolpack Inn, was returning down Church-street, and while crossing from Church-street to Castle-street, came in contact with Pugh's coach, which was passing from High-street to Jury-street at the same time. The car boy seeing his danger, flogged his horse in order to avoid collision; the coachman also gave a check to his speed for the same purpose, but, unfortunately, the pole of the coach caught the hind-wheel of the car, and the consequence was, that both coach and car were upset. There were nine outside passengers on the coach, and three inside. The inside passengers escaped unhurt, but the injury sustained by the outside passengers is scarcely yet ascertained; one individual, a Mr. James Meeking, a gold-plater, of Woodstock-street, Birmingham, experienced a bad fracture of the bone of the left arm, near the shoulder, and several bruises on the head. He was immediately conveyed to the Gold Cup public house, close by, where proper attention was paid to him; his wife was with him, but fortunately received little or no injury. Three of the outside passengers who thought themselves but little injured, on reaching Offchurch (whither Meeking and his wife were going to a club), became so indisposed as to be obliged to go to bed. Meeking was conveyed back to Birmingham on the following day; symptoms with regard to him were then favourable. We have not since heard anything with respect to the other sufferers.—*Leamington Spa Courier.*

RISE IN RAILWAY FARES.—The fares between Leeds and York have been raised, since December last, in the first class carriages from 5s. to 6s., and in the second class from 4s. to 4s. 6d. The fares between Hull and Leeds, were increased 1s. in the first class, 1s. in the second, and 6d. in the third class, at the same time. The advance took place after the transfer of the Leeds and Selby line to the York and North Midland Company, and the consequent abolition of competition between the two companies. Passengers are conveyed from Hull to Leeds and also from Leeds to York by a longer route—namely by way of Milford, which route is said to be more pleasant, as the passage through a disagreeable tunnel is avoided. The transfer was expected to be beneficial to both the Leeds and Selby and York and North Midland Companies, and that expectation is now being realized. We do not see any ground for expecting a return to either the the old route or the old fares. The fares between Hull and Selby have not been raised since the opening of the line in July last, nor does any part of the increased proofs go into the revenues of the Hull and Selby Company.—*Eastern Counties Advertiser.*

The remains of the poor fellow Dudley, who lost his life on the Gloucester and Birmingham Railway, the week before last, were interred at Eckington, on Sunday. Upwards of 19 of his fellow servants, the majority of them being like himself guards on the line, attended out of respect to the deceased, the Company having kindly allowed them the use of a special train to bring them from the various stations for the purpose. Dudley was married a short time only before the catastrophe, and leaves no family.—*Worcestershire Chronicle.*

LONDON AND GREENWICH RAILWAY.

To the Shareholders.

LETTER III.

GENTLEMEN,—The same reasoning which applies to the charges to be made in respect of your own passengers is equally applicable to the tolls to be charged by you in respect of passengers from other lines. It is equally desirable for you, that these passengers, whatever they may pay on other lines, should submit to a heavy charge on your line, *if they will*. In other words, it is desirable that the railways which feed your line should charge a low rate of fare in order to induce the advent of great numbers, and that they should allow you to receive a high toll upon these great numbers *if they will*. But such is not likely to be the case with Railway Companies any more than with individuals. These Companies finding that they are paying you a higher rate per mile than they are charging to their own passengers, must perceive that they are working for your benefit instead of their own, which they are not likely long to continue to do; and accordingly we observe, that the Croydon Company has lately raised its fares, and the result is that although this measure has probably checked the natural increase of its traffic, that Company has suffered no actual loss, but has saved what you have *lost*, 500*l.* of toll in six months. Under these circumstances, what is the duty of your Directors? Manifestly to lower the *rate* of toll, for nothing can be more clear than that this rate is too high to be profitable, and that by taking a lower nominal rate you would secure a larger net income.

The Chancellor of the Exchequer has discovered that an increase in the nominal amount of a tax does not produce a corresponding increase of revenue, and, accordingly, in the budget lately introduced, he proposes in almost every instance, to resort to a reduction of duty in order to procure an addition to his income. Is not the same course open to you? Yet you refuse to profit by all experience in such matters, and you go to Parliament for powers to increase a tax already too high to yield you a profitable return—"What then," you exclaim, "are we not to be paid for our enormous outlay?" Again, "Are we not to be remunerated for the 300,000*l.* we are ABOUT to lay out in order to widen our line for the benefit of others?" By all means: but not in the manner you propose: not by a higher rate per passenger, but by a greater number of passengers paying a low rate. "But if we are not to have a higher rate per passenger for our additional outlay, why have we made it?" Because, if you had not made it, great as your original outlay has been, it would have been mostly thrown away, for you would have lost your foreign traffic altogether. Just ask yourselves another question or two, and you will, I think, see your position yet more clearly. Why have not the Croydon, the Brighton, and the Dover lines separate termini of their own as is the more natural course, and why do they prefer running into one another, and into your line for a common terminus? Simply to avoid the great expense of constructing a line of railway in the neighbourhood of a great metropolis. And why have you and the Croydon Company constructed your lines at very great expense in this very neighbourhood, except that you might not only carry your own traffic, but become likewise the trunk for their's, thus securing two or three district traffics instead of one? And do you not perceive that if you seek not only the same rate per passenger as these lines charge, but two or three times this rate upon *each traffic*, on account of the greater cost of your line you will seek to be paid *twice* over for the *same* thing, and will offer to these lines the great temptation, to which some time or other they will most assuredly yield, to obtain another line for themselves? It matters not whether the total charge made by you be large or small with reference to their gross income; the simple question they will ask themselves will be, "can we get this accommodation at a cheaper rate?" and if upon inquiry it be found that you are asking for two profits while they need only pay one, you will certainly lose their custom; and what will then be your position with one mile three quarters of railway which have cost upwards of half a million sterling? I pray you consider well this position; for from the day on which you fixedly determine to exact from tributary lines a higher rate of toll than that which these lines take from their own passengers you may date the ruin of the Greenwich Railway. The traffic once diverted from so short a line can never return. On the other hand if your Directors will bear in mind the adage, that "although one man may bring a horse to the water, nine men cannot make him drink," and will give up the absurd idea in railway traffic, that either Companies or individuals are to be *forced* to come upon a line whether they will or no; and will seriously set themselves to consider how they can make the Greenwich Railway most agreeable and useful to their customers both in accommodation and in price, taking care always to secure their just share, they may induce over this one mile and three quarters of your line such a traffic as the world has not yet seen.

I am, Gentlemen, your friend,

EXPOSITOR.

LONDON AND GREENWICH RAILWAY—HIGH AND LOW FARES.

To the Editor of the Railway Times.

MR. EDITOR,—As one of the public, and a constant reader of your excellent paper, I hope you will allow me to assure you, and your angry correspondent "Verus," that the able articles put forward "through your journal" on the subject of *high* and *low* fares have not been thrown away, and have not left the question "where it was." On the contrary, they have convinced every thinking man that low fares are not only convenient to the public, but are really also expedient for the Companies themselves, and that any set of Directors enforcing HIGH fares are either unequal to the duty, or unmindful of the trust they have undertaken. With the "Croydon officials" and their "assurance," or with the matter, whatever it may be, which is the subject of dispute between them and "Verus," I have nothing to do; but as one of the public, and as an occasional traveller on the Greenwich Railway, I must protest most strongly against the very disrespectful way in which the great bulk of the passengers on that railway are treated by "Verus." As for the *idle threat* of discontinuing the third class carriages, nobody knows better than "Verus" does, that they were resorted to under a painful conviction that the public generally would not pay more than 6d. for a ride of only three miles and a-half; and that but for the ingenious device of third class carriages, the Greenwich Company must have submitted to the humiliating step of reducing their second class fare to sixpence. Discontinue their third class carriages indeed! Let our friend "Verus" only refer back to the columns of your paper, and see how "small and beautifully less" the Greenwich traffic was rapidly dwindling until the sixpenny fare was resorted to. The Greenwich Directors may rhodomontade about their having demonstrated that *low* fares are "productive of absolute loss," but what after all have they proved beyond this, that any given number of eightpences will amount to more than the same number of sixpences, whilst they know at the same time that the same number of sixpences will amount to more than *half* the number of eightpences. The Greenwich *toll* may be, for ought I know or care, (although I doubt the fact,) "the *lowest* in the kingdom," but of this I am certain, that the Greenwich *fares* are about the *highest* in the kingdom.

Your humble servant,

A. B.

London, May 12, 1841.

ENGLISH AND SCOTCH RAILWAYS.

To the Editor of the Railway Times.

SIR,—As an original and somewhat considerable holder of shares in many of the lines of railway, I may be allowed to express my extreme grief that of the 55 English railways quoted in your Share List no less than 44 are at a more or less serious discount; whilst on the other hand, and it is gratifying to perceive it, of the 11 Scotch railways only four are at a discount; and even of these four, two have been for some time gradually rising in the market, and now close approach *par*. The key to this state of things is the extravagant expenditure on all the English lines—25,000*l.* to 50,000*l.* per mile; whilst on the Scotch lines the expenditure has not exceeded generally, from 12,000*l.* to 20,000*l.* per mile. This judicious economy on the part of the Scotch, but shows that they have not yet lost their well-known shrewdness, and will have assuredly this effect, that although their population is but thin, and their traffic inconsiderable in comparison with that of England, still their lines of railway will in general pay the proprietors a better dividend than almost any of the English lines. May we not say, 'fie upon our Railway Engineers,' whose extravagant folly has thus neutralised the natural advantages of our country, and has entirely put a stop to the extension of the Railway System, for where now can be found any one insane enough to subscribe to any new railway project? Thus must Railway Engineers soon reap the fruits of their own misconduct, for they cannot much longer find employment.

I am, Sir, your most obedient servant,

ŒCONOMICUS.

THE TAFF VALE RAILWAY.

To the Editor of the Railway Times.

SIR,—Your having stated in the last *Railway Times* that you would be glad to have some information from Mr. Bush as to the original estimate of the Taff Vale Railway, leads me to address you in order to undeceive you in the idea of its being a cheaply constructed railway.

The original estimate proved by Mr. Brunel in 1836, before Parliament, was 286,000*l.* for the main line and all the branches. The actual cost up to the present moment has been about 500,000*l.* to complete the main line only, and it will take the whole capital of 620,000*l.* to complete the line and branches, exclusive of one branch, the Ely branch, contained in Mr. Brunel's estimate of 286,000*l.*, which is not commenced, and in all probability will never be made. You perceive that the line has already cost 20,000*l.* for a single line of way, and this in a country where the number of bridges is considerably under the average amount on English railways; and the works generally light. The Dowlais branch is not included in the above amount of expenditure, as Sir John Guest has arranged to advance the money, to be repaid in seven years; receiving meanwhile 5 per cent. on his outlay.

I remain, Sir, your obedient servant,

A VISITOR.

Cardiff, May 6, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In my letter of 5th instant, in your last paper, in stating the speed of the Great Western Railway trains, I inserted only one instance of their accomplishing 30 miles per hour, viz. for 11¼ miles between Bristol and Bath. I should have stated that there is also a train between Wootton Basset and London, which maintains that speed, viz.—Departs at 6h. 30m.; arrives at 9h. 10m.; time 2h. 40m. on 80 miles; equal to 30 miles per hour.

Yours respectfully,

F.

Bath, May 11, 1841.

STOKER KILLED.—On Wednesday last, as the luggage train from Leeds was proceeding to Derby, when near Duffield the stoker of the first engine stooped to adjust a chain, and his foot slipping he fell between the rails. The ashes-pan of the second engine completely severed the head of the unfortunate man, who was killed on the spot.—*Derbyshire Mercury.*

Digitized by Google

KELVEDON AND BURY PROPOSED RAILWAY.

To the Editor of the Railway Times.

SIR,—In reference to the remarks which have recently appeared in the *Railway Times* on this proposed line of railway, I beg to inform you that the necessary plans and sections were deposited with the Clerk of the Peace at Bury on the 1st day of March, (whose name by-the-bye, is not "Holmes," as asserted by your veracious correspondent, but "Borton.") Allow me further to say, that not only were the plans and sections deposited with the Clerks of the Peace at Bury and Chelmsford, the county towns, but subsequently on the 1st of April with the parish clerks throughout the district affected by the proposed railway.

I would also further observe, that so far from its being got up hastily for the mere purpose of opposing the East Anglian line, I was employed by Mr. John Braithwaite early last year in examining the county for the measure in question. However you may feel disposed towards the project, I hope in fairness that you will insert this contradiction to the statements which have appeared in your columns.

I remain, Sir, your obedient servant.
PETER BRUFF.

Charlotte-street, Bloomsbury, May 13th, 1841.

[Mr. Borton is the Clerk of the Peace for the county of Suffolk; Mr. Holmes for the town of Bury; and it is with the latter that we understood our correspondent to say, no plans had been lodged. —ED. R. T.]

PARLIAMENTARY PROCEEDINGS ON RAILWAYS.

BRISTOL AND EXETER RAILWAY.

May 7th.—Petitions against the Bill; from Company of Proprietors of Chard Canal Navigation; and Company of Proprietors of the Bridgewater and Taunton Canal Navigation: referred to the Committee on the Bill; counsel ordered.

BELFAST AND CAVEHILL RAILWAY.

May 10.—Petitions against the Bill; from Elizabeth May; and Trustees of certain turnpike roads from Belfast to Antrim, &c.; to lie on the table.

Bill read second time, and committed, and referred to the Committee of Selection.

May 12.—Petition of Grand Jurors of the county of Antrim, against the Bill; referred to the Committee on the Bill; counsel ordered.

EASTERN COUNTIES' RAILWAY.

May 10.—Royal assent given to the Bill.

GLASGOW AND DUNDYVAN JUNCTION RAILWAY.

May 7.—Petition from Calton, in favour of the Bill; to lie on the table.

May 10.—Petition of the Chairman of the Commissioners of Supply of the county of Renfew, against the Bill; to lie on the table.

LONDON AND BLACKWALL (COMMERCIAL) RAILWAY.

May 10.—Royal assent given to the Bill.

LONDON AND GREENWICH RAILWAY.

May 12.—Bill read second time, and committed, and referred to the Committee of Selection.

NORTH MIDLAND RAILWAY.

May 10.—Royal assent given to the Bill.

NORTHERN AND EASTERN RAILWAY.

May 10.—Message from the Lords, that they have agreed to the Bill without amendment.

POLLOC AND GOVAN RAILWAY.

May 7.—Petition from Calton, in favour of Bill; to lie on the table.

Petitions against the Bill; from the Trades' House of Glasgow; Occupiers and Proprietors of Houses and Manfactories in the barony of Gorbals of Glasgow; and, George Lyon Walker; to lie on the table.

Bill read third time; clause (till railway be carried over or under the Glasgow and Paisley Road, by Parkhouse, no part of the traffic to pass across the said road) brought up, and read first time; motion made, and question put,—"That the said clause be now read a second time:"—the House divided; ayes 162, noes 50: clause read second and third time, and added; another clause added; amendment made; Bill passed.

Petition of the Chairman of the Commissioners of Supply of the county of Renfrew, against the Bill; to lie on the table.

RAILWAY TAXATION.

May 11.—Petition of the Chamber of Commerce and Manufactures of Greenock for reduction of the Mileage Duty on passengers; to lie on the table.

May 12.—Petitions to the same effect, from St. Andrew's; and Bolton and Preston Railway Company; to lie on the table.

WISHAW AND COLTNESS RAILWAY.

May 10.—Royal assent given to the Bill.

SHOTTS AND WILSONTOWN RAILWAY.

May 5, 1841.—Report from the Committee on the Bill;

Mr. Bernal reported from the Committee on the Shotts and Wilsontown Railway Bill, that they had examined into the several matters required by the Standing Orders to be proved before Committees on Railway Bills, and had agreed to the following Report:—

1st. The capital of the Company formed for the execution of the project is 70,000*l*., and the amount of loans which they are authorised to raise by the Bill is 23,000*l*.

2nd. The amount of shares which have been subscribed for is 53,250*l*.; and the amount of deposits paid thereon is 4,925*l*.

3rd. The following are the names and places of residence of the Directors of the Company, and the amount of shares taken by each.

Kirkman Finlay, Esq., Castle Toward, Argyllshire, £1,500.
James Donaldson, Thornwood, near Glasgow, £1,000.
Laurence Robertson, Glasgow, £1,000.
James Monteath, Glasgow, £1,000.
Robert Dykes, Glasgow, £2,000.
James Douglas, Glasgow, £2,000.
Alexander Tennent, Glasgow, £2,000.
William Houldsworth, Belvidere, near Glasgow, £2,000.
Andrew Mitchell, Glasgow, £1000.
John Houldsworth, Cranston-hill, near Glasgow, £2000.

4th. The number of shareholders who may be considered to have a local interest in the line is six, and the amount of capital subscribed by them is 12,000*l*.

5th. The number of other shareholders is 34, and the capital subscribed for by them is 41,250*l*.

6th. The number of shareholders subscribing 2,000*l*. and upwards is 13, and their names and residences, and the amounts subscribed for by them, are stated in Appendix (A) hereunto annexed.

7th. The present means of conveyance and communication between the proposed termini of the railway are quite insufficient for manufacturing purposes. The proposed railway is much required for the conveyance of coals, ironstone, limestone, freestone, and other minerals, and of iron and other manufactured articles, from the districts intersected thereby and adjoining thereto, to the Wishaw and Coltness Railway, from whence there are existing railways and canals completing the connection with the city and harbour of Glasgow. For want of such means of communication there is not much traffic at present, nor can the amount of such as exists, or the charges made for it, be well ascertained.

8th. No passengers are expected on the proposed line. The weight and description of goods expected to be carried on the proposed railway are stated in Appendix (B) hereunto annexed.

9th. No income is expected from the conveyance of passengers. The income expected from the conveyance of goods is 6,533*l*., and the goods from which the largest revenue is expected consist of coals, ironstone, limestone, freestone, and other minerals, and of pig iron.

10th. The proposed railway is a complete and integral line between the termini specified.

11th. There are no competing lines of railway now existing, nor in progress or contemplation.

12th. There are no planes on the railway proposed to be worked by assistant engines, stationary or locomotive.

13th. There are no peculiar engineering difficulties in the proposed line.

14th. There are no tunnels on the line.

15th. The gradients and curves in the line proposed are generally favourable for a mineral line. The steepest gradient is 1 in 71, and the smallest radius of a curve is 242 yards.

16th. The length of the proposed railway is eight miles, five furlongs, and 188 yards, and there are no branches.

17th. It is not intended that the railway shall pass on the surface of any turnpike road or highway.

18th. The estimated amount of the cost and other expenses to be incurred up to the completion of the railway is 63,572*l*. 6*s*. The estimates appear to be completely supported by the evidence, and to be fully adequate for the purpose.

19th. The estimated charge of the annual expenses of the railway, when completed, is 782*l*., and the calculations on which the charge is estimated have been sufficiently proved.

20th. The calculations proved in evidence before the Committee have satisfactorily established that the revenue is likely to be sufficient to support the annual charge of the maintenance of the railway, and to yield a profit to the projectors.

21st. The number of assents, dissents, and neuters on the line, and the length and amount of property belonging to each class, are stated in Appendix (C.) hereunto annexed.

22nd. Mr. John Macneil, Civil Engineer, was examined in support of the Bill.

The Committee have further to report, that the proposed line appears to them well fitted, in an engineering point of view, for the intended purposes of it, and there are not any circumstances which, in the opinion of the Committee, it is desirable the House should be informed of.

Mr. Bernal further reported, that they had examined the allegations of the Bill, and found the same to be true; and had gone through the Bill, and made several amendments thereunto.

APPENDIX (A).—Names and places of residence of shareholders subscribing 2,000*l*. and upwards, and the amounts which they have subscribed.

Archibald Douglas Monteath, Glasgow, £3,000.
James Alexander, Glasgow, £2,000.
Robert Dykes, Glasgow, £2,000.
Alexander Tennent, Glasgow, £2,000.
James Douglas, Glasgow, £2,000.
James Black, Glasgow, £2,000.
James Scott, Glasgow, £2,000.
Cole McGregor, Glasgow, £2,000.
Andrew Tennent, Glasgow, £2,000.
William Houldsworth, Belvidere, near Glasgow, £2,000.
Thomas Houldsworth, Manchester, £4,000.
Henry Houldsworth, Coltness, Lanarkshire, £2,000.
John Houldsworth, Cranston Hill, near Glasgow. £2,000.

APPENDIX (B).—Weight and description of the goods expected to be carried on the proposed railway.

	Tons.
Coals and dross	200
Ironstone	61,300
Limestone	16,120
Freestone	100
Iron	7,280
Miscellaneous articles	250
Total	85,250

ACCIDENT NEAR LOUGHBOROUGH.—An accident occurred on the line of the Midland Counties Railway, near Loughborough, on Friday week, to one of the labourers employed on the line. He was proceeding by the train towards Loughborough, to his place of work, about half a mile from the station when he chose rather to run the risk of jumping off, than to walk back that distance, and on doing so, he caught the top of the truck, and his legs slipped under the wheels. He was conveyed to the Loughborough Dispensary, and one of his legs being in a very bad state, the surgeons attended on Saturday for the purpose of amputating it, but the poor fellow would not give his consent. We, however, are happy to state that he is now doing well, and in a fair way of recovery.—*Derbyshire Chronicle.*

ACCIDENTS AT CRICH LIME WORKS.—On the morning of Friday last, at the extensive lime works of Mr. Stephenson, at Crich, two waggons laden with limestone got over the top of the incline, and went down with tremendous speed till they came in contact with a waggon at the bottom. The three waggons were broken to pieces, and the bridge which crosses the canal very much injured, but fortunately no person was hurt. The same afternoon Mr. G. Stephenson and a party of gentlemen went from Derby to Crich Works, in a special train, to examine them; and while they were there a similar occurence took place. The wire chain, which is used to draw the waggons up and down the incline, broke, and two full waggons that were attached to it came tumbling one over the other to the bottom and were both broken to pieces. The men are in the habit of riding up and down, but fortunately no one was on at the time. It is supposed the chain had been partly cut in two by the occurrence in the morning, but had not been perceived.—*Derby Reporter.*

In consequence of the Directors of the London and Birmingham Railway Company having agreed to despatch a special mail train on the York and North Midland line, the passengers from the north of England will now be enabled to proceed throughout in the same carriages, without changing at Rugby.—*Derby Mercury.*

CHESTER AND BIRKENHEAD RAILWAY —GENERAL MEETING.

THE adjourned half-yearly general meeting of the proprietors of the Chester and Birkenhead Railway, was held at one o'Clock on Wednesday, in the Clarendon Rooms, South John-street, for the purpose of receiving a Report from the Committee appointed on the 10th of April, on the working of the ferries and the general arrangements of the Company.

WILLIAM DIXON, Esq., Chairman of the Board of Directors, took the Chair, and called upon the Committee to read their Report.

SIR JOSHUA WALMSLEY then rose, and said that in compliance with a resolution of the last meeting the Committee to whom the proprietors had given the powers to inquire into this, he might say, delicate, onerous, and somewhat unpleasant business, had, with all the ability of which they were possessed, devoted a considerable portion of time, as well as considerable patience, to ascertain the true state of the concerns of the railway. (Hear.) It would be unnecessary for him to enter into particulars, inasmuch as those particulars, so far as the Committee had been able to ascertain them, were committed to writing. He must, however, beg to say, that in conducting the inquiry the Committee had received from the Directors every courtsey and information they were capable of giving, and he trusted that, if in the Report which the Committee had thought it their duty to make, there were any expressions or remarks which might not be entirely pleasing to the Directors, they would not consider the same as applied personally to any one individual of the Board, but that they had been made use of entirely in the strict line of that duty which the Committee had to discharge. The Committee, as proprietors, felt they owed it to themselves, and more especially to the proprietors generally, to offer a fearless and an impartial Report, and such Report they had endeavoured to give. He would, therefore, call on the gentleman who had kindly acted as Secretary during the labours of the Committee to read it, and it would then be for the meeting to say whether they would adopt it or not; but whether it would be adopted or rejected the Committee were satisfied to leave the decision of that matter in the hands of the meeting, assuring them that as proprietors they had given the subject their best attention, and that they conceived it would be the interest of the proprietors generally to give the Report their sanction.

Mr. J. RADCLIFFE, one of the Committee, then read the Report of the Committee, as follows :—

REPORT.

At a meeting of the proprietors of the Chester and Birkenhead Railway, held at the Clarendon Rooms, Liverpool, on Saturday, the 10th day of April, the following resolution was passed:—

"That a committee be appointed with powers to inquire into the circumstances connected with the purchase and present position of the Monks' and Woodside Ferries, as well as other lands held by the Company, and not now wanted; and that the Committee be further authorised to inquire into the propriety of a better arrangement of the two or joint Directors, and such other matters as can be inquired into, without injury to the interests of the Company."

After reciting the names of the Committee, the Report proceeded,

In conformity with this resolution, your Committee having met appointed Sir Joshua Walmsley, Chairman, and agreed upon a series of questions to be put to the Directors of the railway, calculated to obtain the requisite information upon the important matters which they were appointed to investigate. These queries having been laid before the Directors, your Committee were invited to meet the Board, and at this and subsequent meetings, both in writing and verbally, the information sought for was freely given

As it does not appear to your Committee that secrecy or reserve can prove beneficial to the interests of the Company, your Committee now proceed to lay the whole case and their opinions before you, and as a knowledge of the present state of the funds of the Company became, in the course of the inquiry, of great importance, your Committee think it necessary, in the very outset of their Report, to place that information prominently before you.

The actual expenditure by the Company amounts to £517,638*l.*; the liabilities including all the expenditure which the engineer anticipates for the final completion of the present works, 50,425*l.*—making a total of 517,125*l.* The amount of calls and paid and unpaid, the sums obtained on mortgage, and the present value of the land not used for the purposes of the railway, amount in all to about 534,000*l.* leaving a surplus of about 17,000*l.* The several lots of land in the possession of the Company, and which have not been used for the purposes of the railway, and which your Committee believe would sell for more than the original cost, would require to be disposed of, in order to discharge the liabilities of the Company, but your Committee, in the discharge of the trust you have reposed in them, feel compelled to recommend that those pieces of land (with, perhaps, one exception) should not be disposed of until the period arrives when this great undertaking, having clearly developed itself, will have left no doubt as to what portion of the land may be required for the efficient working of the line.

Your Committee give this advice to the proprietors with more confidence from their being convinced that no loss can be sustained by the Company by abstaining from the premature sale of a property which has shown such a decided tendency to increase, even in market value, but when viewed in connection with the future working of the railway, the value of which cannot be accurately estimated.

Your Committee, accompanied by a few of the Directors and the Company's Engineer, passed over the whole line of railway, and it is with pleasure your Committee can Report that, as far as they were able to judge, the whole of the work yet completed has been done in a substantial, workmanlike manner; expense in mere ornament has been avoided, whilst permanence and utility have been kept in view; and your Committee consider it their duty to state their unanimous opinion that, as far as the engineering department is concerned, as much has been accomplished as circumstances would permit.

As an idea has been very prevalent amongst the shareholders that the law charges incurred in obtaining the Act of Parliament, and subsequently to the obtaining of the Act, have been great, your Committee think it proper to state, that the total cost of obtaining the Act of Parliament, including the Engineer's and other expenses, amount to the sum of

	£10,161	13	9
And the law charges subsequently incurred to.....	3,420	2	8
Making a total of	£13 581	16	5

This item of expenditure, though large, may be considered moderate when compared with costs of a similar kind incurred by other Railway Companies, and falls far short of the exaggerated statements which have been current on the subject amongst the proprietors.

Your Committee now beg to lay before you the result of those inquiries into the purchase and present position of the Monks' and Woodside Ferries. It appears from the statements laid before your Committee that the immense sum of 32,000*l.* has been paid for Woodside Ferry and its boats, making the Company subject to an annual rent of upwards of 1,500*l.*, and this for a right which will terminate in May, 1856. The object which the Directors had in view in making this purchase does not appear very clear to your Committee, for previously to its purchase the Directors were aware that by Act of Parliament they were precluded from bringing the line of railway to Woodside Ferry, unless they carried two branches, for which they have no occasion, to Birkenhead and Tranmere. It appears from one account in the possession of your Committee, that from the 6th day of August, 1839, to the 5th August, 1840, this ferry proved a very considerable loss to the proprietors, as it only produced a gross profit of 281*l.* 11s. 3d., whilst the interest of the large capital expended in the purchase, nearly all of which will be lost in 1856, added to the loss which must be sustained by the boats, leaves this affair a drawback of no common magnitude upon the prosperity of the Company. It has been stated verbally by the Directors, that it is now paying better, and an account has been subsequently placed before your Committee, showing that during the last eight months the gross profits may be estimated at 1,039*l.* 12s. 9d.; but as a portion of the prosperity alluded to is more apparent than real, your Committee are compelled to express their disapprobation of this purchase, as being highly improvident, and not calculated to aid either effectually or permanently the well-being of the railway.

The Monks' Ferry was purchased by the Directors, in March, 1840, for the sum of 25,000*l.* The possession of this ferry does not confer on the Company the power of continuing the railway to the waterside. It entails upon the Company an expence in the working of it which is very considerable, exclusive of 1,456*l.* per annum paid for omnibuses to convey the railway passengers from the ferry to the terminus of the railway, in Grange-lane, whilst its gross receipts for casual passengers from the 23rd September, 1840, to the 1st May, 1841, a period of upwards of seven months, are only 96*l.* 17s. 3d.

When the Directors made this purchase they were aware that Mr. Price had succeeded in establishing his sole right to convey passengers from Monk's Ferry to Liverpool. So that the Directors bought this property with a clear understanding that in its purchase they had not obtained any legal right to convey railway passengers to Liverpool, but lest there should be any doubt upon their minds on this subject, Mr. Price caused a notice to be served upon them to discontinue carrying passengers from Monks' Ferry to Liverpool. It appears, however, that as the right of ferry both ways is vested in the Woodside Ferry, now leased to the Company, no interruption to the traffic can take place till the termination of the lease in May, 1856.

Your Committee cannot but disapprove of the purchase of this ferry, because, whilst it does not confer any adequate rights or privileges on the Company, it has caused a great additional annual expenditure, and absorbed a large amount of capital which could have been otherwise profitably employed.

With the Company's property and rights in this imperfect and unsatisfactory position, it became the duty of your Committee to think seriously how this unfortunate state of things could be amended, and having understood that Mr Price was disposed to sell his right of ferry, both as regards Woodside and Monks' Ferries', your Committee urged upon the Directors the necessity and propriety of making immediate application to Mr. Price, and to obtain (subject to the approbation of the proprietors) an offer of his reversionary interest to the Company, and to secure, if possible, his co-operation in carrying their views into effect.

Your Committee have the pleasure of stating, that, with the concurrence of the shareholders, these arrangements may be accomplished. They will give to the Company the right of ferry both ways in perpetuity; and by making their ferry property of permanent value, enable the Directors to secure valuable privileges for the railway, and at the same time give the proprietors power, should they see fit, to dispose of one or both of these ferries to advantage, reserving so much of the privileges which they would obtain as might be needful for the efficient working of the railway.

The Directors having concurred with your Committee in this view of the matter, your Committee agreed to recommend to the proprietors to raise the funds necessary for carrying out these views. Your Committee have no doubts whatever that if the right of ferry is secured to the Committee in perpetuity, and the railway connected with the water side, that the returns for the capital expended upon the undertaking will be ample; but should these most desirable arrangements not be effected, the prosperity of the Company will be indefinitely postponed.

Your Committee therefore recommend that an authority be given to the Directors to apply to Parliament for permission to raise the money which may be required by the creation of quarter shares, in the following manner:—

Each proprietor to be entitled to one quarter share for every share he holds, these quarter shares to be issued in the form of debentures, entitling the holder to 5 per cent. interest on the amount of the money paid up. Each quarter share of £12 10s. to be issued at £7 10s., to be paid by three instalments of £2 each, and one instalment of £1 10s., and in the year 1843 the holder of each debenture to have the option of becoming a holder of a £12 10s. share in the Company, in lieu of his debenture, or of demanding payment of the money he has paid up, in six months from his giving notice of his desire to be paid, the privilege of exchanging the debenture for a quarter share, to be forfeited if each instalment be not paid on the day appointed by the Directors.

Your Committee earnestly recommend to the proprietors to consent to this or some other mode for obtaining funds, which appear to your Committee so necessary for the promotion of the interests of the Company.

Your Committee have abstained from all reference to many important matters connected with the railway in its present state, such as the reasons that could have induced the Directors to consent to the railway being terminated at Grange-lane; to the purchases of the land used for the railway, the prices paid for each lot, the persons from whom each lot was purchased, and the circumstances attending the purchase of each; matters which, however important and interesting to the proprietors, your Committee did not consider as coming within the limits of their instructions.

Your Committee are of opinion, that considerable reductions may be made in the amount of the annual expenditure, by a strict regard to economy in the details, by a more accurate and better arranged division of labour in the several departments, by means of which expensive and superfluous offices (so fatal to the well-being of short lines of railway) may be dispensed with without inconvenience. Your Committee feel assured that it is only necessary to call the attention of the Board to the subject, in order that prompt and effectual steps may be taken to remedy this evil.

Your Committee have not been convinced that the very serious interests which the Company now have in the Woodside and Monks' Ferries should be entrusted to a separate Board of Directors, not appointed by the proprietors, and they recommend that immediate steps be taken to place the whole responsibility attached to the management of this department, as well as all the other affairs of the Company, upon the Board of Directors chosen by the proprietors at their annual meetings; and that the Directors be required, in future, to lay the accounts of the receipts, expenditure, and net proceeds of the ferry properly before the proprietors, in the same manner, time and place as the law requires them to do with respect to the railway.

Your Committee also strenuously recommend that the present opportunity should be taken of making some changes in the Board of Direction; some of the present on the list of Directors are those of persons who have shown so little confidence in the undertaking as to have reduced their shares to the smallest number which would qualify them to hold their places at the Board, whilst others have been most irregular in their attendance. Judgment, energy and attention, on the part of the Directors, coupled with the support and confidence of the proprietors, are imperatively required at the present critical juncture of the Company's affairs; if these are obtained and properly directed, they would, in the opinion of your Committee, soon place your railway amongst the most flourishing in the kingdom, whilst, on the other hand, apathy, irregularity and indifference on the part of the Directors, and a want of perfect confidence on the part of the proprietors, would prove fatal to its present interests and future welfare.

In concluding their Report, your Committee would again venture to impress upon each and every proprietor the great advantages which would result from the Company having the undisputed right of ferry secured to them in perpetuity, and their railway continued to the waterside. When these most desirable things are obtained, the present cumbrous and expensive arrangements will be dispensed with, the accommodation for the passenger traffic rendered complete and satisfactory, and the trade in goods and cattle vastly extended. And whilst, through the medium of the Chester and Crewe, the Grand Junction, and the London and Birmingham Railways, your line becomes one of the termini of the most important line of railway in the kingdom—the formation at no distant period of the Chester and Holyhead line, part of which must pass through land the property of

Digitized by Google

the Company, together with the contemplated branch to Ruabon, will open to the Chester and Birkenhead Railway not only a great passenger traffic from Ireland and Wales, but also that which they have promised to afford; and with an efficient and zealous directory, a well arranged system of business, and the introduction of a searching spirit of economy into every department, your Committee feel assured that the proprietors will ere long obtain as ample a return for the capital they have expended, as their most sanguine hopes could have led them to expect.

JOSHUA WALMSLEY.

May 12, 1841.

The CHAIRMAN said, that as the report just read had not been placed in the hands of the Directors previous to the meeting, they were not able, perhaps, to enter into the particulars of it as fully as they otherwise might. However, they were glad to find that the Committee had recommended a further amount of stock, and they had also recommended, what the Directors originally contemplated, namely, the bringing down of the railway to the water's edge. All the proceedings of the board had been directed to the accomplishment of the latter object, and therefore the Directors certainly could not object to the proposal as made by the committee. In that as well as in other respects the report tended to further the view of the Directors. With respect to the purchase of the ferries, he could state that the purchase had been confirmed by the proprietors, and that no purchase had been made without the sanction of the proprietors. With regard to this fact, it might be necessary perhaps to refer to the minutes of the meetings at which such power had been given by the proprietors to the Directors.

Mr. JACKSON said that the proposal of the Committee, with regard to the purchase of the reversionary interest from Mr. Price, was not a new one, inasmuch as such a purchase had been made from him last May. The Company, however not having funds at their disposal at the time, had been obliged to abandon it; but it had been since renewed, and at present the Company were in a fair way of going on with it. (Hear.)

Mr. MALLABY then read the minutes of a meeting of the Proprietors, held in October, 1838, from which it appeared that the Directors were then empowered to go on with such arrangements with the Woodside Ferry Company as would secure a quick conveyance across the Mersey. He admitted that no previous sanction had been given with respect to the purchase of the Monks Ferry, but the reasons for that purchase had been fully stated to the Committee, and the purchase had been made in accordance with the general view of securing the right of both the ferries for the benefit of the Company. He believed that the Committee had not stated in their report the amount that would be required for effecting the purposes they suggested.

Sir J. WALMSLEY said that when the Committee spoke of creating quarter shares, they meant quarter shares on the whole of the shares, by which means nearly the whole sum would be raised that would be required. He thought the Directors might clearly see that the sum proposed to be raised in that way would carry out a deal of their arrangements; and subsequently, if such portions of the ferries as they might think proper were sold, very considerable sums would be raised which would enable them to pay off their mortgage debt.

Mr. EDWARDS of Chester, asked what the use was of buying the ferries—the Monks' and Woodside?

Mr. MALLABY said it was the opinion of the Committee that any enlargement upon that subject would be much better avoided.

Mr. EDWARDS of Chester, thought the proprietors ought to be made acquainted with the reasons why the Company would be embarrassed with the purchase of the two ferries in question.

The CHAIRMAN said the proprietors had appointed a sub-committee at the last meeting to go into this question, and it was their opinion it should not be publicly stated to the proprietors. The views of the Directors upon that head had been approved of by the Committee; but if it was the desire of the proprietors that the whole matter should be explained—("No, no," from several)—he had no objection to such explanation being given.

Sir J. WALMSLEY said, that although the Committee in their Report had disapproved of the purchases in both cases, yet the proprietors should remember that the ferries were now their property, and that they must make the best of them. (Hear, hear.) The Committee did not, however, think it advisable to have further explanations made, unless they were particularly required. He thought the time would come when the proprietors would be able, with good management, to get rid of one or both the ferries to their own satisfaction, and probably without loss. (Hear, hear.)

Mr. FOSBERRY begged to say, as a working Director, that there was no novelty in the Report of the Committee, and that all the suggestions it contained had previously engaged the attention of the Board. There was, indeed, one novelty in it, inasmuch as he had never heard before that there was apathy among the Directors, or that some of them had been parting with their shares. He thought the names of the Directors to whom the allusion had been made ought to be named.

Sir J. WALMSLEY was willing to afford explanation on any and every part of the Report that might be required. The whole of the queries put by the Committee had been reduced to writing, as also had the conversations which the Committee had had with the Directors. He thought Mr. Fosberry was a little in error when he said that the Report charged the Directors with apathy. It did not state that apathy existed, and therefore Mr. Fosberry must have misunderstood it.

Mr. FOSBERRY said, if he had made a mis-statement he was sorry for it.

Mr. RADCLIFF read a second time that part of the Report which alluded to the attendance of the Directors at the Board, and to their having disposed of some of their shares; upon which

Mr. FOSBERRY said that it was almost impossible any proprietor could leave the meeting after having heard the Report, without feeling that the Directors had been apathetic, and that they had been reducing the number of their shares.

Sir J. WALMSLEY conceived, in consequence of what had been stated in the Report, that it was necessary to read the names of the Directors, their attendances at the meetings, the amount received, and the number of shares they originally held, as well as the number they held at present. (Hear, and cheers.) Personally, he might be permitted to say, he had not the slightest feeling of disrespect to any of them, nor did the Committee wish to cast on them any opprobrium, Sir Josbua then read a tabular statement, from which it appeared that some of the Directors had only attended four times in the year 1840, and that others had decreased the number of their shares. The amount they received for their attendance was, he considered, of no importance, because if Directors were to receive anything at all, the Directors of the Chester and Birkenhead Railway were underpaid. He did not say that Directors had not as much right as other proprietors to sell their shares, but he had read the statement with the view of justifying the allegations made in the Report.

Mr. JACKSON said that if he had not attended oftener in the year 1839 than he otherwise would, it was because he had been seven months that year in Italy.

Mr. MALLABY observed that Mr. Hamilton had been set forth in the statement as possessing sixty-eight shares originally, and with only holding twenty shares at present. The fact was, however, that Mr. Hamilton only held twenty shares at first, that afterwards he had purchased others, and that he had subsequently sold those others in order to place himself on his original standard.

The CHAIRMAN thought it necessary to state that the Directors were divided into different Committees, and that the Road Committee had paid particular attention to their duties. Mr. Fosbery, Mr. Jackson, Mr. Booth, and Mr. Bentham were on that Committee, and they usually went once or twice a-week, and sometimes oftener, over the whole line, although no account of their attendance to such a duty had been mentioned in Sir Joshua's statement. Neither was any mention made in it of the fact, that the Finance Committee met once a week.

Mr. BENTHAM felt it due to himself and others of the Directors to state that the selling of their shares had not arisen from any want of confidence in the undertaking. (Hear, hear.) He had himself, because he found it necessary so to do, having been obliged, by reason of the pressure of the times, to diminish the number of his shares; but he could safely say that his attendance had not been less regular or his exertions less great since he had become a less shareholder. (Hear, hear.)

The CHAIRMAN felt it necessary to state that the Directors were greatly indebted to the Road Committee for their attention to the line, and particularly during the first six months after it had been opened.

Mr. SANDERS asked whether they received any pay for going over the line?

Mr. JACKSON replied. Formerly they did receive pay, but at present they did not.

Mr. SANDERS was glad the system had been abandoned, because it was without precedent. (Hear, hear.)

Mr. FOSBERRY said the Road Committee could not be expected to leave Liverpool one morning, and to return the next evening, without being paid their expenses.

Mr. SANDERS admitted that they certainly could not. It was quite right to pay them their expenses.

Mr. JACKSON said he could assure the proprietors that he had been out of pocket by his attention to the duties of the Road Committee.

Mr. SANDERS never knew a man connected with railways that wasn't out of pocket. (Hear, and a laugh.) He begged to move the adoption of the Report of the Committee by the body of proprietors.

The Report of the Directors, read at the former meeting, as well as the Report of the Committee, were then adopted unanimously.

Mr. MALLABY presumed that, in confirming the Report of the Committee, it was merely intended to confirm the view they had taken with reference to the increasing of stock, with the understanding that a special meeting of the proprietors should be subsequently called, to take the other parts of it into consideration. (Hear, hear.) The next course would be to proceed with the nomination of the Directors. There were four vacancies, one of which had arisen in consequence of Mr. Price having sold his shares.

Sir J. WALMSLEY rose with the desire of proposing a Director, and in doing so, he would propose one who understood the whole of the bearings of the question, and to whom the railway owed a great deal, both as to the getting of the Bill through Parliament, and the management of the undertaking. He begged to propose that Mr. Jackson be re-appointed to his office. (Cheers.)

Mr. JONES seconded the motion, Mr. Jackson being, in his opinion, a most efficient Director. The motion was carried unanimously.

Mr. SANDERS proposed that Mr. John Radcliff be appointed a Director.

Mr. EDWARDS moved as an amendment, that Mr. Uniacke, who had been of infinite service on those occasions when the Company had been before the Houses of Parliament, be appointed a Director instead of Mr. Radcliff.

Sir J. WALMSLEY supported the original motion. He had known Mr. Radcliff a great many years—he thought for ten years—and he did not know in the whole town of Liverpool a man in whom he had more entire confidence, as regarded his honour, his integrity, and his uprightness. (Hear.) Mr. Radcliff was an industrious and an active man who had an interest in the Chester and Birkenhead Railway, probably greater, in proportion to the amount of his property, than many of the Directors. He had, to his (Sir Joshua's) knowledge, served one of the Institutions of the town, when it was at its lowest

Digitized by Google

ebb, for the long period of five years, without charging so much as one farthing for his services. (Hear, and cheers.) He hoped, therefore, that the meeting would unanimously elect him. If they adopted the Report of the Committee, it was as little as they could do to place Mr. Radcliff, who had acted as one of that Committee, and in whom they had the utmost confidence, in the position of a Director. Who was it that had been recommended in lieu of Mr. Radcliff? A gentleman, certainly, whom he (Sir Joshua) esteemed, and had known for many years; but where did Mr. Uniacke reside? Forsooth, in Bath. (Hear.) Perhaps his residence in Bath was looked upon as a sort of recommendation, in order that he should do no mischief. (A laugh.) It was true that if the gentleman's services should be required in parliament, he would be serviceable; but what were the Company going to parliament for? Merely to raise money on quarter shares. They had, therefore, nothing to fear, inasmuch as there was no great thing to be obtained. Under those circumstances, he would unhesitatingly say, that if Mr. Radcliff were placed on the Board of Direction in place of Mr. Uniacke, he would be of equal if not of more service than any man on the Board, and that he would carry out, fearlessly, the views entertained by the proprietors. He felt confidence in Mr. Radcliff's integrity and industry, and he hoped their votes would show that the proprietors also had confidence in him. (Cheers.)

Mr. CHAIRMAN thought it might perhaps be necessary for him to make some remarks. With respect to Mr. Uniacke, he was sure they all knew that gentleman to be one of the most active of the Directors. It was true he did not at present reside upon the spot; but he (the chairman) was still of opinion that his services in going to parliament would be very essential to the Company. (Hear, hear.) He had shown great zeal in the undertaking ever since it was commenced; he had been a member of the Grand Junction board, but had given up that appointment in order to devote his time and attention to the interests of the Chester and Birkenhead Company; and having acted with him, he would strongly recommend his appointment. He (the Chairman) had not the pleasure of Mr. Radcliff's acquaintance. He had never met him except on two occasions, at the board meetings, when he made use of certain observations, not pleasing either to himself or to any of the Directors. He had made use of a personal remark to him (the chairman) which he could not forget. He (the Chairman) had been on the board for some years, and he defied any one to say he had not given every possible attention he could to its interests, or that he had ever turned the holding of shares to his own advantage. (Hear, hear.) It would be much more agreeable to him to work in conjunction with Mr. Uniacke than Mr. Radcliff, as his feelings had been very much hurt by the remarks made by the latter gentleman.

Mr. SANDERS said that some gentlemen had talked of the difficulty of going to parliament, forgetting that there was no difficulty at all. Where was there any interest that would oppose the Company?

Mr. EDWARDS said there was an interest that would give opposition.

Mr. SANDERS denied that there could be any such thing. Opposition was out of the question, and to appoint a gentleman living in Bath upon the board of direction appeared to him to be a most extraordinary proposition. (Hear, hear.)

Mr. EDWARDS said that Mr. Uniacke held one hundred shares in the undertaking.

Mr. SANDERS said he was aware of the fact, but that he nevertheless opposed his appointment.

The CHAIRMAN stated that a week or fortnight never passed without communications being received from Mr. Uniacke, whose hints on various subjects were exceedingly valuable

Mr. EVANS thought that both the gentlemen might be appointed upon the Board of Direction. At present a kind of trick—a regular Newmarket trick—(laughter)—was being practised to get Mr. Uniacke in and Mr. Radcliff out; but the Company might have the services of both.

The CHAIRMAN said it was not agreeable to the wishes of the Board of Directors to have Mr. Radcliff appointed. However, it was for the meeting to say which of the gentlemen they would prefer. He could not forget the remarks which had been made by Mr. Radcliff.

Sir J. WALMSLEY.—What were they?

The CHAIRMAN.—That we were not trustworthy in the management of even the sum of 100*l.*

Mr. ABBOTT said that if the meeting were desirous of seeing the suggestions contained in the Report of the Committee carried out to their legitimate extent, they would elect Mr. Radcliff; if not, they would elect Mr. Uniacke. He asked the proprietors whether they would allow personal feelings to prevail against the election of Mr. Radcliff at such a time as the present, and said that that was really the question they had to decide. For his own part, he had personal feelings, but he willingly waived them in order to promote the general interest.

Sir J. WALMSLEY believed the Directors had made up their minds that, if Mr. Radcliff were appointed, they would not act. He (Sir Joshua) wished to see the Report carried out, but he did not think it would be carried out unless Mr. Radcliff were elected, (hear, hear,) neither did he think that any hasty expressions which might have been made use of by Mr. Radcliff twelve months before should be raked up on the present occasion with the view of preventing that gentleman's appointment.

Mr. EDWARDS thought that Sir Joshua's observations implied a decided censure on the Directors, inasmuch as he seemed to think that Mr. Radcliff was to be the main organ of carrying out the Report.

Mr. JACKSON was proceeding to offer some remarks, when

Mr. EVANS said he thought the Directors should not be permitted to dictate to the meeting. (Hear, hear.)

Mr. SANDERS begged that his proposition might be put.

Sir J. WALMSLEY said he was sure that if Mr. Radcliff were appointed, he would remove from the railway much of what was at present objectionable. For instance, economy ought to have been used, but it had not been used. (Cries of "State.") He (Sir Joshua) was ready to prove the fact. He would ask the proprietors whether they thought, in a railway of something about 15 miles in length, there was any necessity of having 12 or 14 Directors, or any necessity for an Engineer at 500*l.* a-year, a Treasurer at 300*l.* a-year, clerks at 150*l.* a-year, a man in Liverpool at 75*l.* a-year, with an office at 60*l.* a-year—all for a railway of this magnitude. (Hear, hear.) If that were not enough to convince the proprietors of the necessity that existed for economy, he was done. If the Directors had a disinclination to act with Mr. Radcliff, he would say at once to the meeting—"accept their resignations and let them go out." (Cheers and cries of "Let them go out.")

Mr. EDWARDS said he would not retire from the Board, even if Mr. Radcliff should be elected.

Mr. JACKSON said the Chester and Birkenhead Railway might challenge any other railway in the kingdom except one upon the score of economy. The salary of the Engineer had been decreased from 900*l.* to 500*l.* a-year, and the office at this side of the water could not be dispensed with while Mr. Smith's coaches continued to run.

Mr. JONES fully intended not to have said a word on the question before the meeting, and he was sorry to find it taking the turn it had. Had Mr. Radcliff been appointed without any opposition having been offered, he would have rejoiced at his appointment; but when he found the Board of Directors objecting to him, why should the meeting impose him on them? Nothing good could be done, unless the Directors acted harmoniously and unanimously together in carrying out the views of the proprietors. He was surprised at seeing Mr. Radcliff sitting quietly during the discussion, and he thought the gentleman ought to stand up, and say that he would not be one of the Directors. (Uproar, and cries of "no, no.") He (Mr. Jones) was sure that if his name had been proposed under such circumstances, he would immediately resign the appointment, and he was persuaded that if Mr. Radcliff should happen to be appointed, the Directors would not go on cordially together.

Mr. SANDERS said he could not refrain from expressing his surprise at seeing the Directors, who had had the whole of the railway business in hand—and a most wretched concern they had reduced it to—refusing to surrender their personal feelings, and accepting Mr. Radcliff, a gentleman who, though he could not remedy many of the past errors, might prevent other errors from being committed.

The CHAIRMAN said that much of the expenditure with which the Directors had been charged was accounted for by the estimates of the Engineer having been considerably less than the actual cost. The Directors were willing that the present vacancies should be filled up from the Committee who had drawn up their Report, and they had no objection to any gentleman composing that Committee except to the one named.

Mr. FOSBERRY said he had been asked, 100 miles from Liverpool, what mischief the Directors of the Chester and Birkenhead Railway had been doing, or what lands they had been buying.

Mr. EVANS—You bought two ferries. (Hear, and laughter.)

Mr. FOSBERRY—Yes; but with your concurrence.

Sir. J. WALMSLEY said, that the Committee had found the Directors in a fix. (No, no.) He repeated it, that they had found them in a strong fix; for what were the facts? It appeared that they had bought land, that they had made an agreement with Mr. Price, and that they had afterwards been obliged to run off their bargain. Was that a fix? He thought it was. (Hear, hear.) And they had not money at present to carry on what they proposed: so that they were in a strong fix. (Hear.)

Mr. SANDERS said the Directors appeared to be very tenacious, because it so happened that they were the first body of the kind who had been brought up for their conduct; but this was only the beginning of such things. There were many railways in the kingdom where a most searching inquiry would speedily be instituted into the conduct of the Directors, there were Liverpool men connected with the Directorships of some of them, whom he would not trust with management of a common clerkship, and who were continually going out of England, instead of attending to their duties. He thought it an extraordinary circumstance that railway concerns should have such men tied on them like an incubus. (Hear.) He was certain the present would be a prelude to many other inquiries of a like kind, and that some gentlemen who were now connected with other railways would not be so much longer. (Hear.)

Mr. BOOTH presumed that Mr. Sanders had alluded to him. (Great laughter.)

Mr. SANDERS said not in the slightest.

Mr. BOOTH observed that his reason for thinking he had been alluded to was simply because he was in the habit of going to the Highlands of Scotland for three months in the year. During the remaining nine months he was constant in his attendance at the board.

The CHAIRMAN then put the amendment to the meeting, when about sixteen hands were held up in favour of Mr. Uniacke. He then put the original motion, and a great number of hands were shown.

Mr. EDWARDS demanded a poll.

Mr. SANDERS asked what object could be effected by going to a poll? Was it because the sense of the meeting had been against the wishes of the Directors, that the latter had hesitated to declare Mr. Radcliff appointed?

A SHAREHOLDER remarked that he had never seen any body of men in his life express so decided an opinion against the feelings and wishes of the proprietors as the Directors had done that day. (Hear, hear.) He knew not how gentlemen could

Digitized by Google

expect to be allowed to remain on the Directory who had run so decidedly in the faces of the proprietors.—(Hear, hear, hear.)

Mr. EDWARDS said he entertained a personal hostility to Mr. Radcliff, for his conduct on other occasions.

A SHAREHOLDER said, that in such case Mr. Edwards ought to have resigned at once, and not to have braved the feelings of the proprietors after so determined a manner.

Mr. JACKSON said the ground of hostility was simply this—that Mr. Ratcliff had heretofore declared that he would not trust the Directors with 100*l.*, or even 20*l.*, of his property.

Mr. RADCLIFF said he felt very much indebted to Mr. Jackson for having put the question in a tangible shape. He had been sorry to hear observations uttered which did not imply a Christian spirit, inasmuch as certain parties had allowed bygone matters to rankle in their breasts from a long period up to the present moment. But Mr. Jackson having put the question fairly, he was not prepared to disavow anything that he had formerly said —(hear, hear) and he would give his reasons for having made use of the terms stated. In the year 1839 a meeting was held, at which certain queries were put to the Directors, the result of which showed that some underhand proceedings had been going forward about the sale of the Chester and Crewe Railway. (Hear, hear, and cheers.) He saw that a number of gentlemen were on both directions, and that while they were selling the Chester and Crewe, they were not communicating that information to the proprietors of the Chester and Birkenhead line; and it was upon that occasion he had said, that if gentlemen would go on in that way, and sell the rights of the proprietors of the latter Railway, he would not trust them with the management of his property. Mr. R. proceeded to show that the shares of the proprietors had fallen from 57*l.* to 36*l.*; that 60,000*l.* had been foolishly spent in the purchase of ferries, and that the proprietors had not been consulted about the said purchases, and concluded by saying that he considered it a high compliment that a person so insiguificant as himself was likely to make the Directors wince for the next twelve months.

Mr. FOSBERRY denied that he had ever heard of the selling of the Crewe Railway. He knew nothing of it till after the occurrence had taken place.

Mr. EDWARDS—Nor did I.

Mr. JACKSON—Nor I.

The CHAIRMAN said, the remark was intended to apply to him. He could state that no communication on the subject had been made to this Board, and filling the situation he did, of Chairman to the Chester and Birkenhead Railway Company, he did not consider himself justified in attending the Chester and Crewe Committees. (Hear, hear.)

Mr. RADCLIFF denied that he had ever applied any observations personally offensive to the Chairman. He had indeed accused the whole Committee and Directory of not having taken care of the interests of the proprietors, but he had not accused Mr. Dixon personally. (Hear, hear.)

The CHAIRMAN said, it was his wish that the Direction of the Company should be entirely governed by the feelings of the proprietors. He had felt very much hurt at the remarks which had been made by Mr. Radcliff, and which he considered personal, but as that gentleman had now stated that they were not so intended, he accepted that as a sufficient apology. (Hear, hear.) It remained with Mr. Edwards to say whether he would or would not withdraw his amendment, and seeing the feeling which pervaded the meeting he (the Chairman) should not object to having it withdrawn. (Hear, hear.)

Mr. EDWARDS then withdrew his amendment, and Mr. Radcliff was appointed.

Mr. JACKSON proposed Mr. James Lawrence as the third Director.—Agreed to.

Mr. ABBOTT proposed Sir Joshua Walmsley as the fourth Director.—Agreed to.

Mr. SANDERS said, he supported the nomination of Sir Joshua, in the hope that if he got mixed up with the affairs of the Company, he would be kept out of Parliament. (Hear, and a laugh.)

Sir JOSHUA expressed a hope that henceforth they would all go on harmoniously together, that the Report would be carried out, and that the profits of the Company would meet the expectations of the proprietors. (Cheers.) He concluded by moving a vote of thanks to the Chairman.

The motion was carried unanimously; and the meeting separated at ten minutes after three o'clock. —*Liverpool Standard.*

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, "A Shareholder," expresses great surprise at the recent enormous decline in the value of Leeds Railway stock. He is of opinion that it must be caused by "jobbers" speculating for a fall!

Now, Mr. Editor, your correspondent, I will venture to assert, is the only man in England who feels any surprise at the fall in price of the Manchester and Leeds shares. It needed not the exertions of "jobbers" to depress our shares—for our line has cost double the sum per mile we were given to understand it would (58,000*l.* per mile), and the traffic amounts to only one half the sum we were assured by our Chairman, at the September meeting, we might calculate upon.

As the writer of several letters in your paper on the failure of the Manchester and Leeds Railway, I beg to inform your correspondent, "A Shareholder," that I am no "jobber" operating for a fall. During the late fluctuations in the price of our shares, I have neither bought nor sold a single share, nor have I any intention of doing so. Our shares, which were worth 101*l.* in September last, being now only worth 51*l.*, I am at present a sufferer to the extent of 6,000*l.*!!! To me, however, the price of the shares is a matter of indifference. I am a *bona fide* holder on investment, and have no sympathy for those who hold on speculation. What I look to is the weekly receipts from traffic. These have been miserably small—just sufficient to pay interest on loans, without one shilling per share dividend!

I do not, however, despair of the ultimate success of the Leeds line. When I consider the termini of Manchester and Leeds, the enormous population spread along the entire line, and the great number of coaches (117) now or lately running for various distances in the district traversed by our line, I cannot believe but that it will yet pay a handsome dividend, though not certainly until it is properly managed.

The causes of the failure of our traffic hitherto are sufficiently obvious. Our line is *very circuitous*, and our fares *are much too high*. Our Directors were, in my opinion, guilty of an act of suicidal folly in fixing our fares at 15s. first class, and 10s. for second class. There is not a railway in England on which it is so essential to fix the fares at a low rate. Our population is poor, but at the same time dense; and as our line is so circuitous, it is very evident that a low rate of fare *per mile* must be fixed upon if we are to sweep the coaches from the road. From Manchester to Leeds the distance by railway is 60 miles; by the coach road it is only 40 miles. Again, from Manchester to Huddersfield, the distance by railway is 37 miles; by the coach road it is only 26 miles!

Your correspondent, Mr. Editor, says he has consulted a file of the Half-yearly Reports of the Directors, and after having done so he feels great surprise at the recent downward tendency of Leeds Railway stock! If your correspondent will take my advice, he will immediately commit to the flames all those Reports *as worse than useless*—as, in fact, only calculated *grossly to mislead*. I at once, acquit our Directors of any *intention* of deceiving us by their Half-yearly Reports; they are men of honour and principle, and are besides holders of one-fifth of the entire shares. At the same time, it must be granted that each succeeding Report has proved how grossly incorrect was the information given to us unfortunate shareholders in the preceding one. Our Directors, undoubtedly, were as much surprised as the shareholders generally at the enormous cost incurred, but this is but a poor consolation to us!

If your correspondent, Mr. Editor, will only judge for himself—compare the weekly receipts with the cost, &c., he will come to a much more correct conclusion than he is likely to draw from Directors' Reports or Chairmen's speeches.

I too, at one time, paid great attention to such documents, but alas! I soon found out I was leaning on a broken reed. I can recollect, for instance, that at the March meeting in 1838, we were told that the summit tunnel (an object of my especial solicitude) had been let for 105,000*l.* No particular notice was taken of it in subsequent Reports, except that we were told on one occasion that the Contractor had been changed, and on other occasions that it was going on favourably, till the meeting in March last, when, in reply to a question put by a shareholder, our Engineer stated that the summit tunnel had cost no less than 251,000*l.*!

The present state of the Manchester and Leeds line is altogether unprecedented. Our cost per mile is enormous, our traffic receipts are miserably small, and our shares have declined 50 per cent. during the last five months. In September last they sold for 101*l.* (70*l.* paid); they have been sold in Manchester this week at 51*l.*! Under these circumstances, Mr. Editor—circumstances altogether unparallelled in the history of any railway within a few months of the opening throughout—I feel surprised that our Directors do not come forward, and give to the unfortunate shareholders, all the information and comfort in their power. Probably they deem it beneath them to notice this and similar letters, but they may rely on it that a loss of 975,000*l.*, which is the amount of the decline in value of the Leeds shares during the last eight months, is a serious matter to the shareholders, and if they (the Directors) have good grounds for anticipating an early and large increase in the receipts from passenger traffic, now is the time to come forward and state so.

In conclusion, Mr. Editor, allow me to remind my brother shareholders, that we only draw the small sum of 15*l.* per train for passengers—a sum so small, on a line costing 3,000,000*l.*, and boasting of seven towns besides the termini, as to be utterly contemptible! It is, in fact, the mountain in labour bringing forth a mouse. While our weekly receipts are under 5,000*l.*, we may rest assured that "there is something rotten in the state of Denmark."

I am, Sir, yours, respectfully,

A LEEDS SHAREHOLDER.

8th May, 1841.

SPECIFICATIONS OF RECENT PATENTS.

The MECHANICS' MAGAZINE, No. 927, published this day, price 3d., contains abstracts of the following recent Patents:—Duncan's, for improvements in machinery for cutting, reaping, or severing grass, grain, corn, or other like growing plants or herbs; Galloway's, for improvements in propelling railroad carriages; Pumphrey's, for certain improvements in machinery to be employed in the manufacture of wire hooks and eyes; Wimshurst's, for improvements in steam-vessels, in communicating power to propellers of steam-vessels, and in shipping and unshipping propellers; Whitehead's, for improvements in the manufacture of woollen belts, bands, and driving straps; Boydell's, for improvements in working railway and other carriages, in order to stop them, and also to prevent their running off the rails; Orange's, for improvements in apparatus for serving ropes and cables with yarn; Schroeder, London, broker, for improvements in filters; Emmerson's, for improvements in applying a coating to the surface of iron pipes and tubes; Clarke's, for an hydraulic double action lift and force pump; Rapson's, for improvements in paddle-wheels for propelling vessels by steam or other power; Edwards's, for improvements in evaporation.

Also, a description, with engravings, of Hick's patent governor for steam engines and water wheels; Walker's patent universal water elevator; Life and Labours of Telford, No. 8; The Holyhead Road; Urwin's steam-engine improvements; Explosions in coal mines—defects of the Davy lamp; On the superiority of the Cornish single lifting steam-engines, &c. &c. &c.

Published at the Mechanics' Magazine and Patent Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY.—NINTH HALF-YEARLY GENERAL MEETING OF PROPRIETORS.—At the Ninth Half-yearly General Meeting of the Cheltenham and Great Western Union Railway Company, held, in pursuance of the Acts of Parliament, at Cirencester, the 4th day of May, 1841;

CHARLES F. SAGE, Esq., in the Chair;

It was resolved unanimously,—

1st, That the Report now read be received and adopted, and circulated among the Proprietors.

2d, That the forfeiture of the 617 shares, the numbers of which have been read to the meeting, be confirmed; and that the Directors be ordered to dispose of the same, or any of them, when and as they shall see fit, for the interests of the Company.

3d, That the Directors be authorised to raise the additional capital which may be required, by loans, pursuant to the powers contained in the Acts of this Company, in such sums as they may think expedient, and to issue debentures under the seal of the Company, to secure the repayment, at such periods as they may see fit.

4th, That Mr. Sage, Mr. David Bowly, and Mr. T. C. Brown, be re-elected Directors of the Company.

5th, That the thanks of the Meeting be given to the Chairman and Board of Directors for their very valuable services.

6th, That the thanks of the meeting be given to the retiring Directors. C. F. SAGE, Chairman.

REPORT OF THE DIRECTORS.

When the Directors had last the pleasure of meeting the Proprietors, they had every reason to hope that the Railway would have been opened to Cirencester, early in the present year; but the unusual severity of the winter stopped most of the works for a period of two months, which would have necessarily retarded the opening beyond that season. They, nevertheless, depended on accomplishing that object prior to this meeting, until a recent period, when a slip, which had occurred on a portion of the embankment near Swindon, increased to an extent which has occasioned unlooked for delay. The rest of this embankment at either end, which was formed in favourable weather, has stood perfectly well. The Directors were kept out of the possession of the land required for the centre of this embankment for several months, during which it would otherwise have been formed: a very wet season followed which was particularly unfavourable with reference to the nature of the earth employed in its formation; this has been the only misfortune upon the line, all the other works stand well. The Directors have been making, and will continue to use every exertion to get this embankment completed as soon as possible; but although there can be no doubt that the Railway will be opened before the end of this month, the peculiar circumstances of the case render it impossible for them to fix a day, without incurring some risk of disappointment.

Since the last general meeting, the Directors received tenders for driving the headway through Saperton Hill, referred to in their last Report, and for sinking four additional working shafts, which it was reported would greatly facilitate the operation, the whole to be executed within eight months, at the cost of about £9,000. The advantages of getting this work done were so obvious, under every probable contingency that the Directors were convinced of the expediency of effecting them at that moderate expense; they therefore let this work to a very respectable Contractor, on the first day of January last.

The money expended in the purchase of land and in the construction of the railway from the junction with the Great Western at Swindon to Cirencester, and for the depots and stations, including rabbits up to the present time, amounts to £322,170. 1s. 5d. About 20,000*l.* remain due for rails and other materials. As the works, with the exception of the embankments referred to, and some details of little importance, are now complete, the amount yet to be expended cannot be large, but while considerable uncertainty must hang upon the cost of completing the embankment, which cannot therefore be the subject of estimate, the Directors are unable to state the total cost of this portion of the Railway.

The cost, after making a liberal allowance for the works yet to be completed, compared with that of other Railways, containing equally heavy works, and executed as this has been, in the best and most substantial manner, requires little observation.

The execution of the works has been constantly under the personal inspection of the Directors; they have closely watched the expenditure in every department, and they invite an attentive examination of the works, on which it will be seen, that while they are of a substantial and permanent character, nothing has been expended uselessly or in the shape of decoration, and that the Company has full value for the outlay.

The Directors abstain from entering on the question of future operations, until they shall feel prepared to recommend some specific course for adoption, they are decidedly of opinion that the time has not arrived at which they can do this confidently, with satisfaction to themselves, or with advantage to the Company.

They consider that a variety of circumstances will be in course of developement during the ensuing summer, which must have a very important influence on the future proceedings of this Company, and as the ultimate completion of the Railway will not be materially affected by delaying other works during the progress of the headway through the Hill at Saperton, the Directors will not engage in such further works until the Proprietors shall have had an opportunity of considering and determining on the course which may be deemed most advantageous to the Company, at a general meeting at which the Directors will submit such general information as they can obtain.

The Company is now enabled to raise a portion of their capital by the issue of debentures, under the provisions of the Act of Parliament; and it is expedient that the requisite authority of the proprietors be given at this meeting for that purpose.

£9,275 have been received on account of the arrears on calls reported due at the last meeting; 617 shares, upon which it has been found impracticable to recover the arrears due, have been declared forfeit in respect of which your confirmation will be now required. Of these shares, 416 stand in the name of an individual speculator against whom a judgement has long since been obtained, but it appears he has no means of payment. Upon these 416 shares, £3,120 only have been paid. Upon the remaining 201 shares calls have been paid to the amount of £5,932 10s.

The rent of £17,000 per annum, which will commence under the lease granted to the Great Western Company from the day of the opening of this line, will be legitimately devoted as a return upon the capital expended, which will consequently commence within the present year. Though the rate of interest on the whole expenditure will not be great, it must be borne in mind that it is certain, and that it will extend over a large amount of outlay in respect of other portions of the line not yet productive in the way of traffic.

The proprietors will derive material advantage also in the shape of an increased value on their stock; for it will be perceived that the present price of the shares is very disproportionate to the amount which may be safely calculated as the sum divisible on the good shares, about 6,000 in number, from the fixed income of £17,000 per annum.

Mr. Hyett, Mr. Trye, and Mr. Barnard, have retired from the Board, since November last.

The members of the Board who retire according to the provisions of the Acts of Parliament are, Mr. Sage, Mr. David Bowly, and Mr. Thomas Crowther Brown, who are candidates for re-election at the present meeting, for which they are duly qualified.

On the resignation of Mr. Trye, the late Chairman of the Board, Mr. Sage was elected Chairman, and Mr. Raymond Cripps, Deputy Chairman.

ENGINEER'S REPORT.

GENTLEMEN,—Although I have not the satisfaction, which I had anticipated, of being able on the present occasion to limit my report to a simple statement of the works, between Cirencester and the junction with the Great Western Railway at Swindon, being completed, and the railway open to the public, yet this, I am happy to say, is so nearly the case that I have little to report upon beyond referring to the case that I have little to report upon beyond referring to the causes of the delay which have occurred. The difficulties which we have lately experienced, in completing a portion of the Swindon embankment, have arisen from circumstances connected with the original construction over which I had no control; and unfortunate delay in obtaining possession of part of the land required for this embankment postponed the execution of this work until the winter of 1839, and a considerable length was exposed while partially formed, and even in progress to excessive rains of that season. During the following season, however, the work stood well, and even up to last winter, with slight exceptions, there was every appearance of the embankment having consolidated. Since then a considerable movement took place, the lower part of the embankment sliding from under and rooting into the side cuttings from which, it had been excavated; every means that suggested themselves were adopted to remedy the evil, which then extended over a part only of the whole distance which had been formed under the disadvantageous circumstances referred to. Early in the spring, this part appeared in a fair way of being secured; but within these last few weeks, the remainder has also slipped. This is now being repaired in the same way as the former; and although the uncertainty which always attends such operations renders it impossible to fix the day of completion, yet we have at least the satisfaction of knowing that the evil has now extended over the whole of the doubtful part, and that when this last slip shall have been secured, there will be no further cause for anxiety. The necessity of carrying materials along the line to this embankment, and the stoppage of the supply of ballast, which was originally intended to have been brought from the other side, have delayed portions of the ballasting, and the completion of the permanent way on other parts but the whole is in such a state that it can easily be completed as soon as the passage can be effected across the Swindon embankment, one line of rails is complete, and an engine has been at work upon it about 10 days. The materials of the other line are all in place, and a considerable portion is completed.

The stations are nearly finished, and I think there can be no doubt that, in the course of this month, the traffic will be carried on regularly between Cirencester and London.

The heading at the Saperton tunnel is proceeding satisfactorily, and at present holds out every prospect of easy completion, and promises favourable circumstances for the future execution of the tunnel.

I am, Gentlemen, your obedient servant,

I. K. BRUNEL.

SCHEDULE OF ARREARS OF INSTALMENTS, 25TH DECEMBER, 1840.

TO RAILWAY MANAGEMENT.—A Douceur of FIFTY POUNDS or TEN POUNDS per Cent. on Salary will be given on procuring the Advertiser a Situation on a Railway. He has been employed for the last six years in the management of three Contracts on three main lines, and is competent to take the management of a branch line, or a Contract in the hands of a Company under an Engineer. Being acquainted with working prices of all descriptions of work, materials, &c., he considers he should be found an acquisition. References can be given to many Engineers, and testimonials shown from some of the most eminent Contractors in the kingdom.

Letters addressed to E. I., at Mr. Norris's, 33, Great Winchester-street, Broad-street, London, will be promptly attended to; the most inviolable secresy relied upon.

SOUTH-EASTERN RAILWAY.—NOTICE is hereby given, That the Transfer Books of this Company will be Closed on Saturday, the 15th day of May, and will remain closed until Thursday, the 27th day of May instant.

By order of the Directors,
J. S. YEATS, Secretary.

Railway Office, 10, Colman-street, London, May 4.

SOUTH EASTERN RAILWAY COMPANY.—The HALF-YEARLY GENERAL MEETING of the Proprietors will be held at the London Tavern, Bishopsgate-street, in the city of London, on Thursday, the 27th instant, at One o'clock in the afternoon precisely, to elect three Directors in the room of the like number retiring by rotation, and on the general business of the Company; at which Meeting certain resolutions passed by the Board of Directors, on the 21st day of July, 1840, and the 9th day of February, 1841, declaring forfeited certain shares then in arrear by non-payment of the calls due thereon, except in so far as such resolutions relate to shares the forfeiture of which is or shall have been then redeemed by payment of the calls due and interest thereon, will be submitted for confirmation.

T. W. TYNDALE, Chairman.
J. S. YEATS, Secretary.

Railway Office, 10, Coleman-street,
London, May 8, 1841.

SAFETY ROTATION RAILWAY COMPANY, to be incorporated by Act of Parliament. Capital £200,000, in 10,000 shares of £20 each, with power to increase the same. Deposit £1 per share.

AUDITORS.

G. F. Minton, Esq. | J. Finney, Esq.

BANKERS—Messrs. Ladbroke, Kingscote, and Co.

The above-named Company has been formed with a view to introduce to public attention a projected improvement in the construction of railways, from which it is confidently expected that the most important benefits will be derived by the country at large.

It may suffice briefly to state, that the prominent advantages over the prevailing system, which the new principle offers, are—

1. The preservation of life and property from those melancholy accidents which have lately so frequently occurred—combining with facilities for travelling with equal speed, and increased comfort and security, at diminished rates, and

2. A considerable saving of expenditure, inasmuch as a railway, on the plan proposed (which will almost supersede the necessity of tunnelling or embanking,) may be constructed in less time, and at two-thirds of the cost, of one of similar extent now in ordinary use, and the annual charge of repairs be reduced by 70 per cent.

Entertaining a firm conviction that this novel and truly excellent invention is not only eminently adapted to answer the purposes contemplated by the ingenious proprietor, Mr. Rangeley, but to open to capitalists a channel for profitable investment in the promotion of an enterprise of great national interest. The Company propose to prefer the fairest claim to encouragement and support by constructing in the first instance a railway only of sufficient dimensions to enable the public to judge of its efficiency when carried into more extensive operation; and for such purpose to limit the liability of persons desirous of becoming shareholders to a deposit of £1 only on each share taken, beyond which trifling advance no responsibility can be incurred, until the success of the experiment shall have been ascertained, of which no doubt exists.

Models and drawings of the proposed railway may be seen and examined, and prospectuses, containing every requisite information, obtained at the Company's Offices, 1, Walbrook buildings, Walbrook, London, where application for shares may be made.

London, May, 1841.

TO BE SOLD.—A NEW LOCOMOTIVE ENGINE and TENDER of the most approved construction. The Boiler, 8 feet 3 inches long, by 3 feet 6 inches diameter, with copper fire-box. The driving-wheels are 5 feet diameter. Fitted up for a passenger train. The Tender will hold about 900 gallons.

For further particulars apply to the publisher of this paper.—May 11, 1841.

TAYLOR'S PATENT WOOD CUTTING COMPANY.—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

DIRECTORS.

Major Adair, H. E. J. C. S.	Henry Philip Hope, Esq.
F. Roubilliac Conder, Esq.	P. J. Mc Dougall, Esq.
Andrew Drummond, Esq.	George Mackintosh, Esq.
A. Earle, Esq., R.A.	P. Morrison, Esq.
Alex. Galloway, Esq., C.E.	C. Norris, Esq.
John Hamilton, Esq.	William Shaw, Esq.

Solicitor—Edward M. Elderton, Esq., Queen-square, Bloomsbury.

Honorary Manager and Parliamentary Agent—W. S. Northhouse, Esq., 4, Parliament-street.

Provisional Secretary—Lieut. Buckler, I.N.

The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the coopernge in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone; other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act to Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the preemption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton.
Grain, Timber, &c.	55s.
Beer, Hides, Soap, Sugar, &c.	60s.
Raw Coffee, Rice, Earthenware in Crates, &c.	62s.
Bales, Grocery, Oils, Tea in Chests, Wool, Paper, &c.	65s.
Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.	70s.
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company

TO CONTRACTORS AND OTHERS.—FOR SALE, by Private Contract, 50 capital Earth Waggons to carry 1¼ yards, with 2-ft. wheels, of the best construction. Also, a quantity of parallel rails, about 30lb. per yard, with Chairs and Crossings. Three portable Steam Engines, of 8, 10, and 14-horse power respectively. Several powerful Cranes. Two cast-iron Diving Bells, with Air Pumps, and the requisite gear: together with some excellent blocks, chains, &c. The whole conveniently situated for water conveyance.

Apply to Mr. Radford, 87, Upper Ground-street, Blackfriars-road, London.

TAFF VALE RAILWAY.—NOTICE is hereby given, That the RAILWAY is now OPEN from Cardiff to Merthyr for the Conveyance of Passengers and Goods. The times of departure and arrival of the Trains will be as follows until further notice:—

UP.

				M.	M.
From Cardiff—					
8 morning,	arrives at	Merthyr		9	25
11 „	„	„	(mixed train) ..	12	45
3 afternoon	„	„		4	25

DOWN.

				M.	M.
From Merthyr—					
8 20 morning,	arrives at	Cardiff		9	45
11 35 „	„	„	(mixed train) ..	1	20
3 20 afternoon	„	„		4	40

On Saturdays an additional Train leaves Cardiff at 5h. 30m. afternoon, and Merthyr at 6h. afternoon.

The mixed train, for goods and second and third class passengers, at 11 o'clock, from Cardiff, and 45 minutes past 11 o'clock from Merthyr does not run on Sundays.

Goods may be sent from the several stations by the mixed train, provided they are delivered two hours previous to the departure of the train.

GREAT WESTERN RAILWAY.—VERY IMPORTANT TO RAILWAY CONTRACTORS.—Extensive Sale of Railway Plant, now in use on Contracts Nos. 5 and 6, C., near Wootton Bassett and Christian Malford. Mr. HUNT has received instructions to sell by public AUCTION, without the least reserve, about the first week in June, all the very useful and extensive Plant of Railway Materials belonging to the Contractor, who will have completed a distance of seven miles on the above line of Railway, in the course of a few weeks from the date hereof, comprising more particularly 200 Waggons, (half of which are nearly new); 150 tons of Railway Bars; 70 Iron Crossings; 40 tons of Chairs; 10,000 Sleepers; 3,000 Wheeling Planks; 700 Wheelbarrows; 70 sets of Bridge Centerings, of various sizes; 9,000 feet of Legging for ditto; quantity of Timbers such as Uprights, Wall-plates, Sills, &c. &c. Several sets of Materials for Brickmakers' Moulds; 2 sets of Blacksmiths' Tools, complete; 10 Pug Mills, for grinding clay and mortar; a good six-inch wheel Timber Carriage; quantity of Bricklayers' Scaffolding; 100,000 Bricks; 10,000 Pantiles; a large Water-butt; and a variety of other unmentioned effects.

Due Notice of the Sale with further particulars will appear in handbills and future advertisement.

Wootton Bassett, April 17, 1841.

TWENTY VERY SUPERIOR CART HORSES.—To be sold by Auction, by Mr. DIXON, at his repository, Barbican, on Friday, May 21, 1841, commencing at One o'Clock precisely, TWENTY remarkably fine shaped, fresh, young, powerful CART HORSES have been employed on the Eastern Counties Railway and sold in consequence of the Contract on which they have been working being now completed.

Colours—Bays, Blacks, Browns, Roans, and Greys.

The above lot of young valuable seasoned Cart Horses are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, having been purchased at great expence for the above contract, and are now in remarkably fine condition.

On view, and Catalogues had two days before the sale.

A great variety of new and second-hand carriages, of every description, always on private sale at this establishment, remarkably cheap.

THE THAMES TUNNEL IS OPEN EVERY DAY (Sunday excepted), from Nine o'Clock in the morning until dark. Entrance is on the Surrey side of the river, close to Rotherhithe Church. The tunnel and shield are lighted with Gas, and visitors can walk under the entire breadth of the river, up to the shield, which is now advanced as far as the Company's wharf, at Wapping. Admittance One Shilling each.

J. CHARLIER, Clerk to the Company.

Company's Office, Walbrook-buildings,
Walbrook, May, 1841.

N.B. Conveyances to Rotherhithe, by Omnibus, from Piccadilly, Charing Cross, Fleet street, and Gracechurch-street. Also by Steam Boats from Chelsea, Vauxhall, Lambeth, Hungerford, Old Shades Pier and London Bridge, to the Tunnel Pier at Wapping. Books, with plates descriptive of the works, are sold at the Tunnel, price One Shilling.

HANCOCK AND PETTIT'S PATENT RAILWAY CONTROULER.—A Model Railway and Carriages, worked by Steam Power, exemplifying the manner of applying this most effectual method of arresting the progress of Railway Trains, independently of the Engine-driver or Guard, may be seen Daily, between the Hours of Twelve and Four, at the Zinc Works, No. 55, Parliament-street.

"Better calculated to effect the desired object than any other which has come under our notice."—*Railway Times.*

Applications for Licences to use, to be made to Mr. Walter Hancock, Civil Engineer, Stratford, Essex.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's Fleet-street, Middlesex.—Saturday, May 15th, 1841.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 177. Vol. IV.—No. 21.] SATURDAY, MAY 22, 1841. [Price, 6d.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.—Tender for Loans on Debentures.—The Directors of this Company are ready to receive Tenders of Loans of Money on Debentures to be issued under the provisions in the Act of Parliament, and secured on their undertaking, in sums of not less than 200*l.* for terms of four, six, or ten years, on interest at the rate of 5 per cent. per annum, payable half yearly.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's-street, Bank, London, or Cirencester. A limited sum only is required.

By order of the Board of Directors,
A. MERRICK, Secretary.

Cirencester, 5th May, 1841.

There is a net revenue of 17,000*l.* per annum, payable half-yearly, from the Great Western Railway Company, for the use of the line from Swindon to Cirencester, applicable to the payment of the interest on the debentures issued by this Company.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price, and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200. for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

NORTH MIDLAND RAILWAY.—MAINTENANCE of WAY and WORKS.—The Directors will meet at the Railway Station, Derby, at 10 o'Clock, on Saturday, the 5th of June, to receive Tenders for the Maintenance of the Way and Works between Derby and Masborough, being a distance of 40 miles, or thereabouts, divided into five or more separate lengths, for one or more of which parties may tender.

Drafts of the Contract, with specifications of the work, will be ready for inspection on and after Thursday, the 27th of May at the Engineer's Office, in Chesterfield, where parties may obtain orders, allowing them to walk along and inspect the line.

A printed form of Tender may be had after the above date, at the Engineer's Office, in Chesterfield, and no others will be attended to.

The Tenders must be delivered at the office of the Secretary, H. Patteson, Esq., at the Railway Station, Derby, on or before 10 o'clock on Saturday, the 5th of June, under a sealed cover, addressed to the Secretary, and indorsed "Tender for Maintenance of Way and Works," and the parties tendering must be in attendance at the time of meeting.

The parties, whose tenders are accepted, will be required to enter into a bond, with two responsible sureties, for the due performance of their contract, and the names of the proposed sureties are to be specified in the tender.

The Directors will not bind themselves to accept the lowest offer.

Engineer's Office, Chesterfield, 17th May, 1841.

NORTH MIDLAND RAILWAY.—A Special General Meeting of the Company of Proprietors of the North Midland Railway was held at the Station, at Derby, on Saturday, the 8th of May, at 1 o'clock, for the purpose of determining on the measures to be adopted for raising the further sum of money required for the completion of the railway.

GEORGE CARR GLYN, Esq., in the Chair.

The Secretary read the advertisement convening the meeting.

The Chairman read the following resolutions, viz.:—

Resolved,—That the Directors be authorised to raise the sum of £150,000, under the powers of the Act of 2 & 3 Vict. cap. 53, by the creation of new shares, upon such terms and conditions, and in such manner, as to them shall seem expedient, and that they apply the same in liquidation of the loan notes which have been already issued to that amount

Resolved,—That the Directors be further authorised to raise the sum of £300,000, under the powers of the Act of the present session, by the creation of new shares, upon such terms and conditions, and in such manner, as to them shall seem expedient.

Resolved,—That the Directors be further authorized to borrow on mortgage or bond, under the powers of the same Act, the further sum of £100,000 at such times and upon such terms and conditions as they shall think fit.

Resolved,—That the shares to be created under the foregoing resolutions be offered, as far as practicable, to the existing Proprietors, in proportion to the shares registered in their names this day, and in the event of such shares not being accepted by them, or there being any overplus, which cannot be conveniently distributed, that the Directors do dispose of the same for the benefit of the Company, in such manner as they shall think fit.

The Chairman proposed that the above resolutions do receive the sanction of this Meeting.

Passed unanimously.

Mr. Vickers proposed a vote of thanks to the Chairman and Directors, which was seconded by Mr. Barton.

Passed unanimously.

The Meeting then adjourned.

NORTH MIDLAND RAILWAY.—The Public are respectfully informed that on and after Monday next, the Tenth instant, a TRAIN for the accommodation of the Nottingham, Leicester, Derby, Leeds, York, Darlington, Hull, and intermediate traffic, will leave the Euston Station, London, at Nine o'Clock in the Evening; and that a corresponding Train, bringing Passengers, Parcels, &c. from the above places, will leave the Rugby Station at One a.m., arriving in London at about Five o'Clock.

Derby, May 5, 1841.

NORTH MIDLAND RAILWAY.—The Directors of the North Midland Railway Company are ready to receive MONEY on DEBENTURES, under the powers of the Act of Parliament, in Sums of not less than £500, bearing interest at 4 per cent. per annum for periods of 3, 5 or 7 years.

By order,
H. PATTESON, Secretary.

Warnford-court, Throgmorton-street,
May 21, 1841.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad-street, City; 69, Princes street, Leicester-square; Manufactory, Mill wall, Poplar; and also of the following Agents:—

Coates and Young.....Belfast.
James Kibble and Co.....Glasgow.
James Gunn.....Leith.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of eight months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

HENRY CHAPPEL.—If this person, who served his time to a Wheelwright, at Milton, next Sittingborne, Kent, will apply to Mr. John Stevens, No. 6, Featherstone-buildings, Holborn, he will hear of something to his advantage.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

RAILWAY RETURNS.

Returns made to the Board of Trade by the different Railway Companies, under the provisions of the Act 3 and 4 Vic., c. 97, (Lord Seymour's Act.) Printed by order of the House of Commons.

(Continued from page 525.)

4.—THE REPORT OF LIEUT.-COLONEL SIR FREDERIC SMITH, TO THE LORDS OF THE COMMITTEE OF PRIVY COUNCIL FOR TRADE, RESPECTING THAT PART OF THE EASTERN COUNTIES' RAILWAY OF WHICH IT IS PROPOSED TO OPEN THE SECOND LINE.

Royal Engineer's Office, Buckingham Gate, December 16, 1840.

My Lords,—Your Lordships' instructions of the 14th instant having directed me to inspect that part of the Eastern Counties' Railway of which the second, or "up-line," is proposed to be opened to the public, I yesterday performed that duty, and have to submit the following Report:—

A double line of railway extends from the London terminus at Shoreditch to Romford; and from the latter place to the Brentwood station, which is the present temporary Eastern terminus, there is only a single line of rails. This is intended to be the "down," or northern line, and that now proposed to be opened is the "up," or southern line.

In examining this portion of the line I was accompanied by Mr. Braithwaite, the engineer of this railway, who informed me that this portion of the up-line had been in use for the ballast waggons for some weeks, so that it might be considered sufficiently consolidated for the safe working of trains.

There is a considerable embankment on this line, and owing to the severe frost of the last two days, and to the surface being covered with snow at the time of my inspection, I was unable to form so decided an opinion upon this subject as I otherwise might have done; but I could see nothing to induce me to doubt the statement so confidently made by Mr. Braithwaite, and therefore I am prepared to recommend that your Lordships should offer no opposition to the opening of the second line in question, subject to the conditions I have to propose.

On this portion of the line, which is 4¼ miles in length, the Brentwood incline occurs, of 2½ miles in length, and sloping at the rate of 1 in 100.

In travelling down this plane, I found it less smooth than is desirable for the working of such an incline for passenger carriages at a high velocity. The unevenness of surface, I have no doubt, has been chiefly produced by this part of the permanent way having been used, as I have before observed, by ballast waggons, and from the circumstance of the severe frost having prevented the Engineer from packing up his sleepers. Some subsidence has also in all probability taken place since the rails were laid; I would, therefore, recommend that the working down this incline should for the present, and until all appearance of subsidence has ceased, and the rails have become what may be termed *practically* settled, be limited to a speed not exceeding 15 miles an hour.

The Brentwood plane should, in my opinion, be always descended by the force of gravity, even when the line is in the most perfect working order, and with at least one break for every three carriages, the last carriage always having a break.

I found all the slopes neatly and properly trimmed off, and the embankment in a satisfactory condition.

The fences of the line, with few exceptions, are in good order; the stations apparently sufficient for the traffic, and a good system of signals for day and night in the course of general adoption.

Mr. Braithwaite informed me that no train is now allowed either to leave or pass a station until the preceding train shall have left or passed upwards of 10 minutes; and I personally witnessed the satisfactory working of this regulation, the necessity of which, as a general rule on all railways, I have already had the honour of pressing on your Lordships' attention.

It was gratifying to find that Mr. Braithwaite is applying himself sedulously to the discovery of the best means of preventing accidents on railways, and he has, I believe, succeeded in contriving the means of supplying the guards with a whistle (equally as powerful as the engine-whistle), by the agency of an air-pump, to be fixed on the hind carriage of each train. This was a great desideratum, as an effectual means of calling the attention of the engine-drivers.

I found a sufficient police on the line, and the superintendents of the stations and the guards appear to be regular in recording the time of arrival and departure of the several trains.

The works for extending the Eastern Counties' Railway are proceeding, and the earth to be excavated in the cutting of Brentwood-hill is, I find, to be carried down a part of the south line of the inclined plane.

This operation, I am told, is to be performed at night only, so as not to interfere with the passenger traffic; but I submit, that the attention of the Company should be specially called to the necessity of having the points put up for the spoil-bank examined every morning by an inspector, and the switch locked up by him before any of the passenger trains are allowed to come on the line. I have, &c.,

FRED. SMITH, Lieut.-Col. Roy. Eng.

Copy of Letter sent to the Eastern Counties, with Sir Frederic Smith's Report of the 16th December.

Board of Trade, 17th Dec., 1840.

Sir,—I am directed by the Lords, &c., to enclose a copy of Sir F. Smith's Report on the portion of the Eastern Counties' Railway upon which it is proposed to open a second line. Their Lordships wish to be informed whether the Directors will undertake to adopt the recommendations therein contained, viz., to limit the speed down the Brentwood incline, for the present, to a rate not exceeding 15 miles an hour; to enforce as a general rule the descent of this plane by the force of gravity alone, and with one break at least for every three carriages, the last carriage having always a break; and the appointment of an inspector specially charged with the examination of the 'points' put up for the spoil-banks, and the duty of locking up the switches every morning before the passenger trains come upon the line.

Their Lordships are glad to find that the general state of the line and arrangements for working it are satisfactory, and that the attention of the Engineer is directed to the discovery of the best means for preventing accidents. Subject to the conditions above mentioned, they direct me to say that they see no objection to the opening of the second line in question. I am, &c., S. LAING.

To the Secretary of the Eastern Counties' Railway Company.

In reply to Letter from this Department of the 17th December, 1840.

Eastern Counties' Railway, Shoreditch, 26th Dec., 1840.

Sir,—The Directors of the Eastern Counties' Railway Company, in acknowledging the receipt of your letter of the 17th instant, beg to express their thanks to the Lords of the Committee of the Privy Council for Trade, for the copies of the Reports of Captain Melhuish and Colonel Frederic Smith, with which their Lordships have furnished them. And the Directors beg to state for their Lordships' information the steps which they have already taken, or propose to take, in furtherance of the several subjects mentioned in those Reports.

The very full statement of evidence relative to the accident at Bow, on the 15th ultimo, which Captain Melhuish has given in his Report, will place their Lordships in full possession of all the important facts of the case; and concurring as the Directors do in opinion with Captain Melhuish as to the cause of the accident, and the degree of blame attributable to the several parties concerned in it, the Directors had, previous to the receipt of the copy of the Report, or of any knowledge as to the opinion of Captain Melhuish on the subject, adopted nearly the course which he has proposed. Considering that the accident was caused by the gross negligence and disobedience of Edward Hindley, the driver of the Northern and Eastern engine, and the Directors of that Company having refused to dismiss him from their service, the Directors of the Eastern Counties' Railway Company caused their solicitors, on the 4th instant, to proceed against him before the magistrates at Worship-street police-office, under the provisions of Lord Seymour's Act, and he has been held to bail to answer the charge at the ensuing sessions for the county of Middlesex. With respect to their own servant, William Croker, the guard of the train, the Directors considering that he acted on that occasion in disobedience of his instructions, and having had occasion subsequently to be dissatisfied with his conduct, they have dismissed him from their service. Police constable Cooper the Directors have likewise thought it proper to dismiss from their service. The other officers, Serjeant Parker and Serjeant Ottway, the Directors do not consider blameable in the matter; they have been long in the service of the Company, both of them having been promoted to their present rank for good conduct, and have always discharged their duties in a satisfactory manner.

The utility of some method of preventing engine-drivers from quitting the principal station contrary to or without the orders of the inspector, suggested itself immediately after the occurrence of the accident in question; and the Directors have had a barrier placed across the line of rails used by the outgoing engines, just without the station, which is opened only at the order of the inspector, thus preventing the premature departure of any engine whatever.

As regards the recommendation of Captain Melhuish for discontinuing the Devonshire-street and Bow stations, the Directors had, previous to the receipt of the Report, already done so with regard to the station at Bow. The Devonshire-street station, however, has afforded, and is likely to afford, so much convenience to the large and populous district of Mile End, that the Directors are unwilling to discontinue a station in that neighbourhood, except on substantial reasons appearing to render such a course necessary. None such, that they are aware of, have ever been alleged; no accident nor inconvenience of any kind having ever occurred at that station. But in deference to the opinion of Captain Melhuish, the subject will again receive the fullest consideration of the Directors.

The observations made by Captain Melhuish as to the want of uniformity between the Eastern Counties' and the Northern and Eastern Railways, in the mode of noting the time of arrival and departure of trains, appear to arise from misinformation as to the plans adopted. The only difference existing between the two Companies in noting these times is, that with the Eastern Counties' Railway the time is kept by the guards, as well as by the inspector of the station; the former having watches to inform them of the time, and the latter the station clock, which plan obviously gives an additional check. On the Northern and Eastern line the time is kept by the conductors alone, though the Eastern Counties inspectors keep the time of all trains which come to, or depart from their respective stations.

There being so much in the able Report of Captain Melhuish in which the Directors entirely agree, they regret to be obliged to differ completely in opinion from him on the subject mentioned in the concluding paragraph of his Report. Captain Melhuish suggests that all engines should be licensed to draw a certain number of carriages, according to their estimated power; and that Railway Companies should be restricted from employing their engines, as heretofore, according to their discretion. Were the effective power of engines always the same under every variety of weather, and every diversity of gradient of the road, perhaps this plan might be attended with but little practical difficulty, however objectionable such a mode of controlling the most constant of the duties, and fettering the judgment and responsibility of the superior officers of Railway Companies might be. But when it is borne in mind that the power of all locomotive engines varies most materially under every change of weather, under every peculiarity of construction, and every alteration in the gradients of a line, it will be evident, that to render effectual any restriction of this sort, for ensuring greater regularity in the arrival of trains, the maximum limit must be the weight which an engine can always draw under the most disadvantageous circumstances of gradients and of weather. If this were to be the case, the number of carriages which an engine could be licensed to draw, would certainly not exceed three or four; for there are many railways with steep gradients, where even powerful engines, those with 13 in. cylinders for instance, cannot, in certain states of the weather, draw along the entire line without the assistance of another engine more than this small number of carriages; while on other railways, and with more favourable weather, an engine of similar power can easily draw from 10 to 12 carriages, with their full complement of passengers. If, therefore, any system of this kind were adopted, which prevented the exercise of the discretion of the authorised officers of Railway Companies in matters of this kind, the expense of locomotive power would be increased to an enormous extent, without the probability of securing the smallest advantage to the public, either in security or punctuality.

In replying to the several suggestions of Sir Frederic Smith, which, in your letter of the 17th instant, you request to be informed whether the Directors are willing to adopt; the Directors beg to state that the plan of placing breaks on every third carriage (one of such carriages with a break being placed last in each train) is already carried out to the full extent in all trains belonging to the Eastern Counties' Company; and the plan suggested for the regulation of the switches at the turn-out for the intended spoil-bank at Brentwood, is

Digitized by Google

so evidently a desirable one, that the Directors without any hesitation agree to adopt the whole of Sir F. Smith's suggestions relative thereto. But with respect to the plan he proposes, for limiting the speed down the Brentwood incline, at present, to 15 miles an hour, and for enforcing as a general regulation the descent of this plane by the force of gravity alone, the Directors think there are very strong objections; and they doubt not that Sir F. Smith himself will, on re-consideration, be disposed to alter his views on this subject. The rate at which a train of carriages descends this plane, loaded to the same extent as the usual passenger trains from the Brentwood station, has been ascertained by actual experiments to be about 20 miles per hour without the use of steam, after the train has been once fairly started. In order to reduce this speed to 15 miles per hour, extensive use must be made of the breaks, both to the tender and to the carriages; but as an immense preponderance of weight must always be in front of the train, namely, in the engine and tender, it will be impossible with light trains to prevent the whole of the carriages from riding or pressing on the buffer-springs during the entire time of their descent down this plane; and not only will this produce a most uneasy and uncomfortable motion, but it will be attended with a considerable degree of danger to the train, producing a tendency in the wheels of the carriages to quit the rails and run off the line. This effect would be greatly lessened were the last carriages of the train, to which the breaks must of course be applied, heavily loaded; but as this is not the case at present, the Directors are fully of opinion that the plan of descending this inclined plane entirely without the use of steam, in all states of the weather, and with all varieties of load, and with such an extensive use of the breaks as will be necessary to retard the descent to the average velocity of 15 miles per hour, will be attended with considerable risk to the safety of the trains. If, however, the Lords of the Committee are pleased to make this regulation a condition of their sanction to the immediate use of the new line of rails between Brentwood and Romford, the Directors are ready to adopt their suggestion, at the same time begging respectfully to disclaim all responsibility from any consequences that may occur, the plan being considered by them to be objectionable, and if adopted, it will be undertaken solely on the authority of their Lordships' order.

The Directors would be happy, under these circumstances, if Sir F. Smith would again direct his attention to this subject. From his great experience and acknowledged ability in such matters, the Directors feel assured a satisfactory conclusion on this subject will be arrived at; and as the public convenience will be much promoted by the opening of the second line of rails as speedily as possible, the Directors hope their Lordships will favour them with their early decision. —I am, &c.

HENRY BOSANQUET, Chairman.
(By order of the Directors.)

G. R. Porter, Esq., Railway Department, Board of Trade.

Copy of Letter sent to the Eastern Counties', in reply to Mr Bosanquet's Letter of the 26th, relative to opening the Second Line of Rails from Romford to Brentwood.

Board of Trade, 29th December, 1840.

Sir,—I am directed by the Lords, &c., to acknowledge the receipt of Mr. Bosanquet's letter of the 26th instant, on the subject of Captain Melhuish and Sir F. Smith's Reports on the Eastern counties' Railway. With reference to the first, their Lordships would suggest for the consideration of the Directors, whether the case of William Croker, whose disobedience of his instructions is distinctly admitted to have been one of the principal causes of the accident of the 15th November, is not one in which, for the sake of public example, a prosecution ought to be instituted under the provisions of Lord Seymour's Act.

With reference to the subject of Sir F. Smith's Report, Mr. Bosanquet's letter appears to their Lordships perfectly satisfactory, with the exception of that portion of it which relates to the mode of descending the Brentwood incline. Sir F. Smith being absent in Scotland, on the service of the Commission, for reporting on the best line of railway communication with the North, their Lordships cannot, without occasioning considerable delay, postpone their answer respecting the opening of the second line of rails until his return.

Looking at the obvious advantage of not making the safety of the trains dependent in every instance upon the discretion of the engine driver in regulating the supply of steam during the descent of the incline —at the fatal accident of the 10th August, which was occasioned by want of a regulation similar to that recommended—and at the practice of other railways, where no difficulty is found in descending inclined planes by the force of gravity combined with the action of breaks—their Lordships would not hesitate to act upon Sir F. Smith's recommendation, if the legislature had imposed upon them the duty of making regulations for the protection of the public safety. As this, however, is not the case, they cannot interfere further than by pressing an attentive consideration of the arguments in support of Sir F. Smith's recommendation; and should these fail to alter the views of the Directors and their Engineer, their Lordships have no other course to adopt, than that of leaving them to open the second line of rails upon their own responsibility.—I am, &c.

S. LAING.

To the Secretary of the Eastern Counties' Railway Company.

In reply to a Letter from this Department of the 28th December.

Eastern Counties' Railway Offices, High-street, Shoreditch, December 30, 1840.

Sir,—In reply to your letter of the 28th instant, stating that the Lords of the Committee of the Privy Council for Trade wish the Directors of this Company to consider whether William Croker ought to be prosecuted under the provisions of Lord Seymour's Act, I beg to inform you, that on the most mature consideration of the case the Directors consider it is not desirable to do so. A great difference exists between the cases of Hindley and of Croker. In the case of the former, there is a complete chain of evidence, showing a wilful starting with his engine contrary to the order of the inspector; a disregard of the repeated cautions received both previous to starting and during his journey to Bow, and a neglect of the ordinary rules and printed instructions for his conduct during foggy weather. In the case of Croker, the guard, the only charge which can be made against him, is that in a moment of difficulty he yielded to the request of the passengers in stopping the train, without due consideration, and contrary to the regular custom.

This act arose from neither wilfulness nor negligence, and cannot be construed into anything more than an error of judgment. Already has he been punished by dismissal from the Company's service; and the Directors are of opinion that there is not the slightest evidence on which he could be convicted under the provisions of Lord Seymour's Act. The Directors are quite of opinion that beneficial results to public safety will result by adopting proceedings against all persons employed on railways who may become obnoxious to the provisions of this Act; and they are resolved not to screen any of their own servants who may render themselves liable to its penalties.

With respect to the mode of descending the Brentwood incline, the opinion which the Directors have formed on this subject, and which was fully stated in my letter of the 26th instant, is the result of careful and repeated experiments. In those cases where a different mode of descending inclined planes is adopted, as, for instance, on the Euston inclined plane of the London and Birmingham Railway, the circumstances are so wholly different to those of the present case, that what is a very proper course to be adopted in the one case, is extremely inexpedient in the other. And should Sir Frederic Smith, on his return to London, be disposed to join with Mr. Braithwaite, the Company's Engineer, in a further series of experiments on this subject, there is but little doubt he will arrive at the same conclusion which the Directors and their Engineer have already done.—I am, &c

HENRY BOSANQUET, Chairman.
(By order of the Directors.)

G. R. Porter, Esq., Railway Department, Board of Trade.

5. REPORT OF LIEUT.-COL. SIR FREDERIC SMITH, TO THE LORDS OF THE COMMITTEE OF PRIVY COUNCIL FOR TRADE, ON THAT PORTION OF THE LEEDS AND MANCHESTER RAILWAY WHICH IT IS PROPOSED TO OPEN TO THE PUBLIC.

Manchester, December 23, 1840.

My Lords,—Pursuant to your Lordships' instructions, I have this day inspected that portion of the Leeds and Manchester Railway which, according to the notices of the Company, it is proposed shortly to open to the public, and I have the honour to submit the following Report:—

The entire length of this railway between the western terminus at Manchester and the junction with the North Midland Railway at Normanton is about 50 miles.

At this moment two portions of this line are finished and open to the public, viz., from Normanton to Hebden Bridge, being a distance of 20½ miles, and from Manchester to Littleborough, a distance of 13½ miles, making a total length open for the conveyance of passengers and goods of 40 miles, and leaving 10 miles still to open.

In the inspection of this part of the line I was accompanied by Mr. Gill, the Managing Director, and by Mr. Gooch, the Engineer.

For the purpose of making the following description more intelligible, I will divide the portion of railway now under consideration into three sections; first, that which adjoins the station at Littleborough, and extends to the summit tunnel, being a length of about a mile and a half; second, the summit tunnel, which is one mile and five furlongs long; and thirdly, the portion which connects the eastern end of the aforesaid tunnel and the station at Hebden Bridge, being a distance of six miles and seven furlongs.

Mr. Gill and Mr. Gooch, informed me that for the present it is only intended to work over the first section of a mile and a half with goods; I shall therefore merely remark, that I see no objection, provided the permanent way be properly ballasted up, and the obvious irregularities in some few parts of the rails be adjusted.

In regard to the second section, viz., the summit tunnel, I have to state that in consequence of some failure in the invert, it will be necessary to take out a considerable portion of it, and to replace it in a more solid manner, after giving a greater spread of foundation to the side walls of the tunnel. I am of opinion that this part of the work will not be completed for upwards of two months, and should then be again inspected.

It is over the third section alone, viz., from Hebden Bridge to the east end of the tunnel, therefore, that it is now proposed to work passenger traffic.

With some unimportant exceptions, I found the cuttings in excellent order, the slopes having been well formed, and the superfluous earth removed. Mr. Gooch undertook forthwith to remedy the defects which I pointed out to him in this respect, as well as to supply ballast where it appeared to me to be deficient.

In some parts of the line the fencing is incomplete; the distance posts have not been fixed, and the gates for the crossing of occupation and public roads have not been hung; but Mr. Gooch has promised that in all these matters the line shall be ready by Saturday next, the 26th instant. I see no difficulty in his fulfilling this engagment, and if so, the line might without risk to the passengers, be opened to the public on the following Monday. It will, however, be proper that your Lordships' should have from the Engineer or Secretary of the line a certificate that all the particulars specified above, namely, cuttings, ballast, fencing, distance post and gates, have been completed or supplied, before your formal sanction is given to the proposed further opening. As I imagine there will be no difficulty in this, I informed Mr. Gooch that he would probably have, after the receipt of my Report by your Lordships, such conditional permission for carrying into effect the wish of the Company.

The Act of Parliament does not appear to have been departed from, and the deviations from the approved plan and section are unimportant. The only instance requiring particular notice is the abandonment of a tunnel, which owing to a slip in the hill through which it was formed, it would be dangerous to use. This has rendered it necessary to pass round the point of a ridge by a line of double curvature, with very short radii. It will not be safe to work these curves at a speed of above the rate of 10 miles an hour. Mr. Gooch fully admits the necessity of this caution, and the Directors of the Company have also very properly determined on limiting the speed on all the severe gradients on this railway.

I was informed by Mr. Gooch that since the opening of this line, which took place from Normanton to Hebden Bridge, just before the Act for regulating railways came into operation, and between Manchester and Littleborough several months since, not one axle has broken belonging to the Leeds and Manchester Railway. This, in my opinion, is attributable not only to careful driving, but also to the iron being of the first quality, viz., from the Low Moor Works.

I observed, that neither the second-class nor third-class carriages of this Company have spring buffers. I would therefore suggest the propriety of supplying these carriages with such safeguards should be pressed upon the Directors.

I also remarked that there is no police on this line, but I was informed that the whole of the plate-layers and porters of the Company are constables, and that

Digitized by Google

the consequent vigilance resulting from a pride these men take in thus being placed in authority has been found to supersede the necessity of any more expensive system of surveillance.

It is possible that where the traffic is not very considerable this may answer, but I much question its expediency or safety where the trains are very frequent.

I have noticed on this and on former occasions, the desire evinced by the Leeds and Manchester Company to afford the lower classes of the district through which their railway passes the convenience of this mode of travelling, and it appears that they appreciate and avail themselves of it, as the number of third class passengers carried on this line is to the number of second class as 26 to 6, and the comparison between the number of third class and first class is as 26 to 1.

The plan adopted is to run with every train carriages of each class; a practice which appears to me to be very commendable. It is also, I find, in contemplation to run goods' waggons with every train; when this is done the greatest care must be used in the manufacture of the waggons, and all the precautions detailed in my Report on the Hull and Selby lines should there be adopted.—I have, &c.,

FREDERIC SMITH, Lt.-Col. R.E.

Copy of Letter sent to the Leeds and Manchester Railway Company, with a Copy of Sir Frederic Smith's Report.

Board of Trade, December 26, 1840.

Sir,—I am directed by the Lords, &c., to enclose a copy of Sir F. Smith's Report upon the portion of the Manchester and Leeds Railway which it is proposed to open for public traffic. Their Lordships observe that at the date of the inspection the line was in some respects incomplete, but as Sir F. Smith states that he received a positive assurance from Mr. Gooch, the Company's Engineer, that all the particulars specified in the Report should be completed, and that he saw no difficulty in this engagement being fulfilled, their Lordships direct me to say that they are not disposed to raise any objections to the opening of the portion of the line referred to in the Report, viz., from Hebdenbridge to the east end of the tunnel, upon the understanding that a certificate, signed by Mr. Gooch, is to be previously transmitted to the Board of Trade, stating that all the particulars in question are actually completed, and that the necessary precautions have been taken for going round the curves of short radii alluded to in the Report.—I am, &c.

S. LAING.

To the Secretary of the
Leeds and Manchester Railway Company.

Letter from Mr. John Jellicorse, enclosing a Certificate from the Engineer, of the completion of the Works specified in Sir F. Smith's Report as necessary before the opening of a further portion of the Line.

Manchester, December 30, 1840.

Sir,—I am requested by the Directors of this Company to hand you, for the Lords of the Committee of Privy Council for Trade, a certified copy of Mr. Gooch's Report, announcing the completion of the railway, as respects the particulars mentioned in the Report of Lieut.-Col. Sir F. Smith, dated the 23rd instant.—I have, &c.

JOHN JELLICORSE, Sec.

G. R. Porter, Esq., Railway Department,
Board of Trade, Whitehall, London.

Certificate from the Engineer, of the completion of the works on that portion of the Line about to be opened.

To the Directors of the Manchester and Leeds Railway.

Gentlemen,—I beg to state that the works specified in Sir F. Smith's Report as necessary to be done on that portion of the Manchester and Leeds Railway now proposed to be opened to the public, have been completed according to the promise made by me to Sir F. Smith, and that the mile posts are set up, and the necessary precautions taken for passing round the curves of short radii.—I am, &c.

THOMAS L. GOOCH.

Manchester, December 30, 1840.

I certify the above to be a true copy.

JOHN JELLICORSE, Sec.

---

6. REPORT OF LIEUT.-COL. SIR FREDERIC SMITH, TO THE LORDS OF THE COMMITTEE OF PRIVY COUNCIL FOR TRADE, ON THE BOLTON AND PRESTON RAILWAY.

Preston, December 24, 1840.

My Lords,—In conformity with your Lordships' orders of the 21st instant, I proceed to Bolton, for the purpose of inspecting the railway between that place and Preston, previously to its being opened to the public.

I have this day minutely examined the line in question, and have the honour to submit the following Report.

This railway joins the Bolton and Manchester line at its Bolton terminus. It was originally intended that it should have taken a nearly direct course to Preston, and that it should have united with the North Union and the Lancaster and Preston at their common junction; but in consequence of the opposition offered to the Bolton and Preston Company, in Parliament, by the North Union Company, the former were under the necessity of agreeing to a proposal from the latter, to form a junction with their line at "Euxton," by which the North Union Company will derive a tollage from the Bolton and Preston Company; and hence the line, which would have been about 20 miles in length, will be reduced to about 14½ miles.

The part now proposed to be opened is 9½ miles in length, and extends from the junction with the Manchester and Bolton Railway, at Trinity-street, Bolton, to Barton's-lane, in the parish of Standish.

In my examination of the works I was accompanied by Mr. Adie, the Resident Engineer; and I previously had some conversation respecting this railway with Mr. Sinclair, the Secretary of the Bolton and Preston Company. From both gentlemen I understood that at present it is only intended to open a double line for the first three miles from Bolton, and to leave the remaining 6½ miles as a single line until the whole length of the railway shall be completed with a single line, up to the junction with the North Union, at the Euxton station.

In carefully examining the first three miles, I found one line quite complete, and the second, or down line, nearly so. I have no doubt that the rails may be laid throughout this portion of the line, and that it may be properly ballasted up by the 31st inst., the day on which the Company wish to open; but I submit that your Lordships should throw upon the Directors the responsibility of working this part of the line, as well as the six remaining miles of single way, unless all the other deficiencies and defects, which I shall have occasion to detail in this Report, are supplied or rectified.

With the exception of a part of a heavy embankment at Adlington, the formation of the ground may be said to be nearly complete for a double line of way for the whole distance now proposed by the Company to be opened, and there remains little to be done beyond laying the second line of permanent way.

The fencing is of a substantial character, and is complete, with the exception of a few yards; the ballasting of the single line, for the whole 9½ miles, is also nearly complete; the bridges, all but two, are finished, and, as far as inspections of this nature can enable an Engineer to judge of their construction, they appear sufficiently strong for their respective purposes.

There are two station-houses now building, and I have no doubt that, by proper exertions, they may in a few days be rendered convenient for the passengers who require this accommodation.

There are some gates at the ends of occupation roads still to put up. It is of the greatest importance that this should be done before the line is opened.

I saw neither signal nor lamp posts at any of the stations on this line. This deficiency should be forthwith supplied: because, although in the first instance the locomotive power and the carriages will be hired by the Bolton and Preston Company from the Bolton and Manchester Company, and only a few trains will be run in the course of the day, so that collision can hardly be expected from any want of punctuality arising from the delays of one train and the excessive driving of another, still the effect of commencing with a lax system of discipline or incautious management may give the servants of the Company careless habits of performing their duty, which may eventually lead to serious accidents.

I believe the superintendence of the line will be left with Mr. Sinclair, the Secretary of the Company; and from his experience and judgment, and his practical knowledge of the working of other lines, much may be expected, in respect to adopting such regulations as may insure the public safety; but I think your Lordships should press upon all Companies, however short and however small the traffic, such a system of police, signals, and such regulations as regards punctuality in working the trains, as is found essential on railways of greater importance.

Every station should have its clock, even on the shortest lines, and should have signal flags, or balls, or disks by day, and lamps by night; and no train should after dusk be run without red tail-lamps and white head-lamps. The want of the latter was one of the causes of the loss of life on the Lancaster and Preston Railway, respecting which accident I shall shortly have the honour to submit a Report to your Lordships.

It is intended to employ the contractors, in forming the double line after the single line is opened. This arrangement your Lordships, I believe, are not authorised to prevent; but if such powers had been vested in your Lordships, I should have recommended its exercise on all occasions of the same nature as that under consideration; for whatever may be the care of the servants of a Company, it is difficult for them to check the irregularities of those of the contractor.

Mr. Sinclair, the Secretary, and Mr. Adie, the intelligent engineer of this line, are fully impressed with the necessity of the care that will be required in running their trains while the contractor's work remains unfinished; but they assure me of its being the intention of only allowing the contractor's people to be upon the line after the last train in the evening, and before the first in the morning. This precaution, if duly attended to, added to the placing of careful men at the points, may be sufficient to ensure the public safety.

In conclusion, I beg to recapitulate that the works which should be finished before the line should open are as follows:—The complete ballasting and fencing of the lines intended to be used; the finishing of the bridges near Adlington and Horwich station; the putting up of signal-posts and lamps at the stations; and the hanging and properly securing the occupation-road gates.

The completion of the stations, though desirable, is not so urgently necessary.—I have, &c.

FREDERIC SMITH, Lt.-Col. R. E.

Copy of a Letter sent to the Bolton and Preston Railway Company, with copy of Sir F. Smith's Report.

Board of Trade, December 28, 1840.

Sir,—I am directed by the Lords, &c. to enclose a copy of Sir F. Smith's Report on the Bolton and Preston Railway, for the consideration of the Directors. Their Lordships direct me to say that under no circumstances ought the opening to take place until the essential requisites stated in the concluding paragraph of the Report have been fully complied with, and a certificate to that effect transmitted to their Lordships. Even if these requisites are complied with their Lordships consider that it would be more desirable to postpone the opening until the second line of rails is completed; and they cannot give their sanction to an arrangement which, as a general rule, appears so objectionable as the opening of a single line of rails for passenger traffic, while the formation of the double line is proceeding. If under these circumstances the Directors think proper to open the portion of their railway in question, they must do so on their own responsibility, and on the distinct understanding that the arrangement is not one of which their Lordships can signify their approval.—I am, &c. S. LAING.

To the Secretary of the Bolton and Preston
Railway Company.

Transmitting Report from the Company's Resident Engineer, on various points noticed by Frederic Smith, &c.

Bolton, February 1, 1841.

Sir,—In reply to your letter of the 28th December last, I now beg to send herewith the certificate of Mr. Adie, the Resident Engineer of the Company, in regard to those points in Sir F. Smith's Report on the line which were particularly urged by him as requiring completion previous to the opening of the line for the use of the public. These things might have been completed, as Sir Frederic stated, in the course of a few days after his inspection, but circumstances having induced the Directors to postpone the opening of the line, I have not sooner troubled you.

With regard to the second line of rails on that portion of the railway on which a single line only has been completed, I beg to state that it is not the intention of the Company to lay the second line, under any circumstances, until the whole line through to the junction with the North Union Railway be nearly complete, which may be a year and a half or two years from that time; and as it is the intention of the Company, in the mean time, to employ only one engine on the line, and no other moving power, there will be no risk of collision.

I trust that with this explanation their Lordships will give their sanction to the opening of the line in its present state, which opening is now intended to take place on Thursday next, the 4th instant.—I am, &c. PETER SINCLAIR.

S. Laing, Esq. Board of Trade.

Digitized by Google

Report of the Company's Resident Engineer, on those points noticed by Sir Frederic Smith.

Bolton, February 1, 1841.

Sir,—In compliance with the instructions in your letter of the 28th December last, I have now to certify that those parts of the works of the Bolton and Preston Railway which were unfinished when Sir F. Smith passed over the line, have since been completed, with the exception of two of the parapets.

The fencing is now entirely complete; the ballasting of that part of the line about to be used is also finished; it will, however, require more to be added from time to time to keep the road in repair.

The parapets of the three-arch bridge at Hayton, forming at that part the fence of the railway, are finished, but there are still a few cope stones wanting on the parapets of two other bridges; these, however, carry roads *over the line*, and the workmen, in completing the parapets, will of course work on the roads, and quite above the railway; their operations cannot, therefore, in the most distant degree interfere with the safety of the working of the line. This work would, however, have been completed since Sir F. Smith's inspection, but that the frost rendered it inexpedient, with a view to the ultimate strength of the masonry.

The Adlington station is complete; that near Horwich is not to be used for passengers at the present.

The signal posts and lamps are ready, and will be put up to-morrow.

All the gates for the occupation roads and crossings on the line have been put up, and those which were defective in the mode of hanging have been repaired. —I am, &c.

ALEX. J. ADIE, Resident Engineer.

S. Laing, Esq.

Copy of Letter sent to the Bolton and Preston Railway Company, giving permission to the Company to open the line on the 4th.

February 2, 1841.

Sir,—In reply to your letter of the 1st instant, I am directed, &c. to say, that Sir F. Smith, to whom Mr. Adie's certificates were referred, being of opinion that they are perfectly satisfactory, their Lordships do not, under the circumstances detailed in your letter, see any objection to the opening of the Bolton and Preston Railway taking place on the 4th instant.—I am, &c.,

S. LAING.

To the Secretary of the Bolton and Preston Railway Company.

7.—REPORT OF LIEUT.-COLONEL SIR FREDERIC SMITH, OF THE ROYAL ENGINEERS, OF HIS INSPECTION OF THE GLASGOW AND GREENOCK RAILWAY, PREPARATORY TO ITS BEING OPENED FOR THE PUBLIC TRAFFIC TO THE LORDS OF THE COMMITTEE OF PRIVY COUNCIL FOR TRADE.

Board of Trade, January 18, 1841.

My Lords,—Pursuant to your Lordships' orders, I availed myself of the opportunity afforded by my being at Glasgow on other duties to inspect the Glasgow and Greenock Railway, preparatory to its being opened for the public traffic, and I have the honour to submit the following Report for your Lordships' information.

This Railway Company was incorporated in the year 1837, under the title of "The Glasgow, Paisley, and Greenock Railway Company." The work of construction was commenced in the autumn of 1838, and the Engineers of the line expect that it will be ready for the public traffic in the course of the ensuing month.

Mr. Locke is the chief Engineer of this railway, and Mr. Errington is the Resident Engineer. The latter accompanied me over the works, and afforded me every facility to obtain such information as I required.

From a careful examination of the various unfinished portions of this railway, I am of opinion that it will not be ready for the public traffic of passengers much before the beginning of March, notwithstanding the great exertions which are now making to complete it at an earlier period. Under these circumstances, I can only express my opinion of this line in general terms, by acquainting your Lordships that I consider it to be of a very satisfactory character. The Greenock, Paisley and Glasgow Railway may be sub-divided into two sections; first, that portion of it which is common to the Ayr, as well as to the Greenock line, and extending from Glasgow to Paisley; and, secondly, that portion which connects Paisley with Greenock, passing through Port Glasgow.

The former portion, which is styled the "joint line," has been opened to the public traffic since the 14th of July last, and is worked independently of the line from Paisley to Ayr, which is also open.

The management of the joint line is vested in eight Directors, four selected from the Ayr Railway and four from the Greenock Railway, the Chairmen of these Companies being alternately the Chairmen of the joint line.

The length of the joint line from Glasgow to Paisley is 7 miles; the length of the Greenock line from Paisley will be 15¼; making a total for the Glasgow, Paisley and Greenock line of 22¼ miles.

The length of the Ayr line from Paisley is 33 miles, which, added to the 7 miles from Glasgow to Paisley, make the whole distance to Ayr from Glasgow 40 miles.

The greater part of the line from Paisley to Greenock is complete, with a double line of rails, and the opening is almost entirely delayed by the unfinished state of that portion of it which extends for a distance of 2,300 yards from the village of Blackstone to Old Bishopton House, the property of Lord Bantyre.

A tunnel is now forming through whinstone rock, in the ridge which intervenes between these two places. There remains about 11,000 cubic yards to remove, and as there are at present nearly 1,000 men employed on this part of the work, it is reasonable to expect that the excavation will be complete in about six weeks from this time. In the mean while, such of the other operations as are still in progress may be much forwarded, if not completed.

In the present state of the works, it would be superfluous to enter upon a detailed statement of all the minute parts that are unfinished, and I will confine myself to observing that the mile-posts and signal-posts have not yet been put up, nor the station-houses built, excepting at Paisley and Greenock, and in some parts the ballasting and fences are not quite complete; but I have no doubt that all these matters will receive the full attention of the Directors and engineers, as I find the finished portion of the work in excellent order, and laid with rails weighing 75lbs. per yard, on blocks or sleepers with 4 feet bearings.

The line is inclosed partly by strong stone walls and partly by three rail wooden fences, and, in the latter case, preparation is making for planting rows of quick to succeed the wood fence when it falls into decay.

I have not observed that there has been any infraction of the Act of Parliament for this railway, unless the matter referred to in the enclosed letter from Mr. Errington, the resident engineer of the line, can be so considered.

I am of opinion, that when the trains pass through Port Glasgow they should be limited to the speed of eight miles an hour, both on account of the curves on that part of the line, and from the fear of accidents occurring to persons who may be trespassing thereon, and may not observe, in sufficient time to avoid accidents, the approach of a train moving at a higher velocity.

It is my duty to remark, that at the Paisley junction the goods trains coming up from Greenock will cross both the up and down lines of the Ayr Railway. This arrangement will, in my opinion, be attended with danger to the public, and I therefore beg to suggest that the attention of the Directors of both Companies should be specially called to this subject.

In the cuttings through rock on the Greenock line the faces of the slopes have not yet been finally trimmed off; this is more particularly the case at the deep cutting through the Bishopton ridge. I have also to remark, that the tunnels on this part of the line are not supported by brick-work or masonry; but as both the cuttings and tunnels occur in whinstone rock of extreme hardness, I do not conceive that any apprehension need exist on this account. I would, however, recommend, that before the opening of the line the slopes in question and the tunnels should be carefully examined, and a Report sent to your Lordships from the Greenock Company, containing the opinion of their engineer as to the state of completion and safety of the works. This in the present case will I think give a sufficient guarantee for the safety of the public, and will supersede the necessity of another inspection of this railway.

I cannot conclude this Report without observing, that I have seen a copy of the code of regulations, prepared by Mr. Errington, about to be established for working this line, and it appears to me to be drawn up in so able a manner that I am disposed to think that, with such modifications only as local circumstances may render imperative, it might be taken as the general form for the guidance of the Companies in this part of the country, where I find very discordant systems in operation.

I have been informed, and I have no doubt of the truth of this statement, that in cutting through the Bishopstone ridge no less than 300 tons of gunpowder have been used in blasting by the miners engaged in that operation.—I have, &c.

FREDERIC SMITH, Lt.-Col. R. E.

Glasgow, Paisley, and Greenock Railway.

Carlisle, 6th January, 1841.

Sir,—By the clause in the first Act, we are empowered to cross Bogle-street, in Greenock, on the level, at a slow rate of speed.

By a clause in the second Act, we are further empowered to shut up Bogle-street, on constructing a foot-way arch of prescribed dimensions, and forming a street below the mansion-house in place of Bogle-street. Owing to delay in obtaining the land, the new street is not formed, and therefore until it is, we intend to work our line, at its first opening, under the clause in the first Act, and to comply with all its stipulations —I have, &c.

J. C. ERRINGTON, Engineer.

Sir F. Smith, &c. &c. &c.

Copy of Letter sent to the Secretary of the Glasgow and Greenock Railway Company in reply to a Letter of the 14th instant, relative to opening the line from Paisley and Greenock.

Board of Trade, 20th January, 1841.

Sir,—With reference to your letter of the 14th instant, announcing the intention of the Glasgow and Greenock Railway Company to open the portion of their line between Paisley and Greenock on the 20th February, I am directed, &c. to enclose a copy of Lieut.-Colonel Sir F. Smith's Report, and to inform you that in conformity with the opinion expressed in that Report, their Lordships will not consider another inspection of the line necessary previously to its being opened for public traffic, provided the following conditions have been complied with on the part of the Company:—

1. A Report from the engineer, transmitted to the Board of Trade, to the effect that the tunnel has been completed, and its security properly tested; the slopes of the cuttings trimmed off; the permanent way, ballasting and fencing completed; the mile-posts and signal-posts erected, and the works of the railway in all respects in a fit state for opening.

2. An assurance from the Directors that the speed of the trains shall be limited in passing through Port Glasgow to the rate recommended in the Report; and that the speed in crossing Bogle-street, in Greenock, shall be limited, so as to remove all apprehension of danger.

3. A Report of the arrangements made with the Ayr Company for working the Paisley Junction, especially with reference to the goods traffic.—I am, &c.

S. LAING.

To the Secretary of the Glasgow and Greenock Railway Company.

(To be continued.)

RAILWAY POST-BAG ACCIDENT.—A strange sort of accident occurred at Rainhill, near Prescot, on Saturday last. The London mail train, which arrived there about half-past five o'clock, carrying the bag for the Prescot post, which happened to be very large that morning, and which had been given to the engineer, by the guard, for him him (as it is customary) to throw it off the engine to the postman, who was waiting to receive it. The engineer did so, but the bag unfortunately caught against the flag-post, and rebounded against the engine, and caught on one of the wheels, which dragged it upwards of forty yards before the engine could be stopped, and it was then found that the bag was nearly cut in two, and newspapers, letters, and small parcels were scattered about in 'pleasing confusion' with an appearance as if they had been in a chopping machine; several articles had dropped out of the letters, chiefly small articles belonging to watchmakers, which were collected, and on the bag being opened at the Post-office, many of the letters were found in such a shattered condition that it was with great difficulty that their intended destiny could be traced out. It is supposed, however, that the whole of the articles, or nearly so, enclosed in the letters, have been found.—*Liverpool Standard.*

The Eastern Counties Railway Company are about to commence operations at Colchester. The contractor for the works at that end of the line arrived there last week, with a considerable number of labourers.—*Essex Mercury.*

PROPOSAL TO FORM A RAILWAY INSURANCE FUND.

OBSERVATIONS.

On the opening of the several lines of railway, a considerable number of officers are required to superintend and carry on the various duties in the Secretary's, Locomotive, Coaching, and other Departments of each Company. These individuals are engaged as the *permanent staff* of the respective lines, and therefore it cannot be deemed other than a matter of interest to the Directors, as well as of great anxiety to the parties themselves, how this large class of officers shall be provided for, when age, accident, or other casualty may render them unfit for continuing in the performance of their several required duties.

In the various Public Departments, a regulation has been for some years in operation, which *compels* each clerk and other officer therein engaged, to subscribe a certain portion of his income, annually, towards the support of funds, out of which are granted superannuation, widows, and other allowances. In some of the offices, a general plan for insurance of life, purchase of annuities, &c., is superadded; and to each of these, a considerable sum is annually awarded by Government. These institutions have been, and still are, the means of conferring important advantages and benefits on the individuals employed in the offices under the control of Government; every officer holding an appointment, becomes entitled, by virtue of his subscription, to a certain allowance, when incapable of further active service; in the event of death, a pension is also secured to his widow, or, under certain circumstances, to another dependant relative; added to which (in some of the offices) a fund is in existence, out of which sums of money are awarded as benevolent grants, in cases not entitled to relief from the superannuation and widows' funds. The necessity of petitioning for aid in the time of adversity, which was formerly necessary, is thus entirely obviated, and each individual receives as a right, that which in the absence of the regulations before alluded to, he would have to seek as a boon or favour.

Government also derives great advantage from lending its aid and co-operation to these establishments; for not only is it spared the pain of refusing relief to the many applications from decayed servants and their dependant relatives, which the want of such a fund rendered absolutely necessary; but it effects, also, a considerable saving,—the amount it subscribes to the several funds yearly, being much less than was originally granted upon the petition of the various claimants. Two great objects are thus most satisfactorily attained—First, by a small annual deduction from the salary received during the years of health and activity, each officer becomes entitled to an allowance for himself or his widow, in cases when the income depended on for support ceases; and, Secondly, —the Government has the satisfaction of seeing old and faithful servants, and their dependant relatives, duly cared for, at a comparatively trifling charge upon the public revenue.

The necessity for establishing some such regulations as the above in the case of Railway Companies, as well for the benefit of the officers employed, as to render unnecessary any appeals hereafter to the liberality of the several Directions must be sufficiently obvious to all parties concerned. As time advances, and old age, accident, and other casualties render their servants incapable of performing active duty, the Companies will, in all probability, be frequently called on to extend their aid both to individuals in their employment, and, in cases of death, to any surviving relative dependant on their exertions for support; these applications may eventually become so numerous, that notwithstanding the urgency of a case, and the disposition on the part of a Direction to grant the required relief, it would still be found impossible to comply with the requests of all claimants; and, as in instances of refusal, great privation and suffering would necessarily ensue, it becomes of much importance to make such arrangements at the outset, as will enable every officer to secure some provision both for himself and family, on the occurrence of any of the contingencies before alluded to.

The following outline of a plan is therefore submitted for the consideration of the Boards of Directors of railways—and if the several Companies will cordially unite and co-operate in carrying out the propositions contained in it, an institution will be called into existence which will materially benefit those employed in railway undertakings, while it will secure the proprietors against any ulterior expense and responsibility in having to provide for those of their servants, who, from long service or other cause, may be entitled to consideration and pecuniary assistance; —moreover, while the officers are shown that their well-being is consulted, they will feel additionally bound to serve the proprietors honestly and zealously, and the Directors will have the satisfaction of knowing that an object so desirable as the making efficient provision for faithful services has been secured by a comparatively trifling charge upon the funds entrusted to their management.

PLAN.

It is proposed to form a society upon the principle of mutual insurance, with a capital stock, for the purpose of enabling the Officers of Railway Companies to make some provision for themselves and families, under the circumstances referred to in the foregoing observations. The society may be called "The Railway Insurance and Benevolent Fund," and may be enrolled under the Acts of Parliament appertaining to friendly societies. Its proposed intentions are as follows:—

To enable parties to ensure—

1. A superannuation allowance or deferred annuity, payable at the ages of 55, 60, and 65.
2. An annuity payable to a nominee at the death of the party insuring, and to continue for the life of the party nominated.
3. A capital sum of money payable at death.
4. The creation of a fund out of which the Directors of the society for the time being shall be enabled to grant sums of money for the relief of distressed members under certain circumstances, which will be detailed in the Rules and Regulations of the society when established.

For the three former purposes, tables with rates of premium will be established.

The first proposal will enable a party to provide an income for the period of old age.

According to the second, a pension may be secured for a widow, child, &c.

Under the third—a capital sum, payable at death, may be insured, which may be applied in any way that may be directed by the will of the party entitled to the amount.

The benevolent fund, will grant relief under various circumstances, principally, however, in cases where from any affliction a party is rendered incapable of active service before the period arrives at which the superannuation he may have insured for becomes payable; and in the event of death, to relatives left in destitute circumstances. The sums from time to time granted must depend of course entirely upon the state of the funds subscribed for the purposes of this particular department of the society.

FUNDS.

Capital Stock.—As the establishment of the society will prevent the necessity for any future appeal to the Directors of any Company on the part of its officers, it is suggested that each railway shall, at the commencement, vote a certain sum of money, the amount of which may be hereafter determined on. The money thus raised, shall be invested, and be considered the capital stock of the society, and rendered liable only when the funds appropriated to meet demands which may arise upon the insurance fund shall be insufficient to satisfy the claims made.

Insurance Fund.—The amount accruing from the premiums paid by parties insuring, will form the general fund, to satisfy all claims made on account of insurances effected.

Benevolent Fund.—The resources for the purposes of the benevolent fund, it is proposed, shall be raised as follows:—By an annual subscription from all railway officers, of one penny in the pound on the amount of their respective salaries; and, by each Company subscribing, on the part of the proprietors, an equal amount to that accruing from the payment of poundage on the part of its officers. To these subscriptions may be added, the interest accruing from the investment of the capital stock, together with any voluntary contributions which may from time to time be made.

MANAGEMENT.

The affairs of the society may be placed under the control of a Board of Directors, composed of Directors of Railway Companies, and a Committee of Management, to be selected from amongst the principal officers of the various Companies. Trustees, Auditors, a Consulting Actuary, and a Secretary will also be necessary; the services of the whole of these to be gratuitous, with the exception of the Actuary and Secretary, who, together with any necessary assistant, may be awarded such salaries as the Board may direct.

Certain rules and regulations will guide the Directors, and Committee of Management, in ordering the affairs of the society. In these, provision will be made for a periodical estimate of the liabilities of the Insurance Fund, when the whole of the profits, after deducting the expenses of management, will be divided amongst the assured, and be applied, either to reduce future premiums payable, or be added to the principal insured.

A clause may also be inserted, to provide that, if the Benevolent Fund should ever exceed a certain amount, the surplus shall be applied for the benefit of insurers under the tables; and for this purpose will be taken into account at the times the estimate before spoken of is made.

The tables will be calculated by an eminent actuary; and the rates of premium adopted will combine economy with security.

It may be asked, since the proposed plan does not differ materially either in principle or object from existing public Assurance Offices, to which any railway officer disposed to effect an assurance, or purchase an annuity, for the benefit of himself or family, may resort if he think fit—why seek to erect a society for the exclusive benefit of individuals connected with these particular undertakings?

The following considerations may be advanced in answer to such an objection. By confining the society to the officers of Railway Companies, an expensive establishment of Directors, clerks and agents will be avoided, as the necessary business with the different Companies may be easily transacted by corresponding with one officer in each Company appointed for the purpose. In consequence of these advantages a lower rate of premium can be established, as the per centage for expenses of management, superadded to the actual rate of premium required for security against risks, would be materially below that required in public assurance offices.

In addition, however, to advantages of a purely economical nature, which the proposed plan would give to the assured, it is confidently hoped that a society established for the benefit of a distinct class of individuals, would possess powerful inducements for every member of that class to avail himself of the benefits of life insurance; since, but for the existence of such a society, many would in all probability never assure their lives at all, or think of making provision for their families at their decease.

Upon this last consideration, the propriety and value of the proposed plan might be allowed to rest; it being considered that the moral duty, and happy results of providing for a family by means of life insurance, would be presented to the minds of a large and important body of men, under circumstances and auspices which would strongly recommend it to their favour and adoption.

But there are considerations of a general character to be noticed. It is evident that it would require a long term of years before the periodical payments of premium could accumulate at compound interest, to the respective sums which they assure, but when such assurance is effected all risk is immediately removed, and the assured has the consoling reflection, that whether he live a month, a year, or many years, he has secured a definite sum for his family at death, together with such an accumulation as may arise from sums avoided to the policy by way of bonus. Moreover this is the cheapest way of obtaining security against calamity, and, consequently, peace of mind: for by uniting with others in the fulfilment of intentions, which are guaranteed almost to a mathematical certainty, the assured from the day of his enrolment becomes possessed of a vested right, which at his death becomes the indisputable property of his family.

GLASGOW AND DUNDYVAN JUNCTION RAILWAY BILL.

[The following Case of the opponents to this Bill, which has occupied so prominent a place in the Parliamentary Railway proceedings of the present session, may serve to explain what the contest has been all about. The recommittal of the Bill was negatived on Friday last by a majority of 70 to 40. Ed. R. T.]

Case of the Proprietors and Occupiers of Lands, Houses, and Buildings, affected by the Bill, *against* the motion for re-committal.

The extraordinary attempt to have this Bill re-committed, is just another effort to perpetuate the enormous grievance complained of in the Polloc and Govan Railway Bill.

The two Bills, in fact, are parts of the same measure.

The preamble of this Bill sets forth the advantages of opening up several districts and places, and of gaining "certain and expeditious communication to the city and harbour of Glasgow.

It was admitted, that access could only be had to the harbour of Glasgow by means of the Polloc and Govan Railway, and that the two Companies had entered into an arrangement to carry out the project.

The Polloc and Govan Railway Company, it is well known, persisted strenuously in crossing on the level a great leading turnpike road and several streets in a populous district, to permit which would have been a great destruction to property as well as dangerous to human life.

But, in the meantime, Parliament most wisely added clauses to the Bill, prohibiting all traffic on this railway from passing the road and streets, until the railway should be carried over them by a viaduct, or under them by a tunnel.

The effect, therefore, was at once to destroy the very essence of the preamble of the Glasgow and Dundyvan Bill; for the Polloc and Govan Company, having no powers to make a viaduct, could not possibly do so without giving fresh notices and obtaining a new Act; and, therefore, the traffic of the Dundyvan could not reach the harbour of Glasgow.

It is only by making a viaduct or other works that the traffic on either railway can reach the harbour of Glasgow by railway. There was no notice given under this Bill for any such works, and access to the harbour being the avowed and main object of the Bill, it necessarily fell to the ground, when that could not be accomplished.

The Honourable Committee at once saw this defect in the measure, and, on the promoters' own shewing, (for the petitioners against the bill led no evidence,) they arrived at the conclusion, by a large majority, that the preamble was not proven—the selected Members being unanimous.

But other most serious objections to the bill appeared in evidence.

The want of access to the river by railway would have led to the formation of an extensive depot for coal in the neighbourhood of valuable building ground, laid out for villas, from which there would have been a constant cartage to the river. This cartage of coal on the streets of Glasgow was proved to be a great nuisance. The same nuisance, increased tenfold, would have been transferred to the streets of Gorbals—and all this would have been attended with great loss and inconvenience to the proprietors and the public in that locality.

Either this would have been the result, or one more serious would have happened, of which something also transpired. It appeared to be the intention of the Polloc and Govan Railway Company to withdraw their Bill, and so get free from the protecting clauses in favour of the public. In fact, there can be no doubt this was the intention, and the consequence clearly would have been, that the whole traffic of this Dundyvan Railway, to the enormous amount of 4,000 tons per day, would have crossed the road, and crossed and passed along the streets—on the level. Nor was there any mode by which this could have been effectually prevented, for any protective clauses that could have been inserted would as easily have been evaded.

Such being the state of matters, the measure was obviously incomplete. The Committee could not protect the public under it. The preamble was distinctly negatived, and the impracticability of the scheme, in its present shape, shown by the promoters' own evidence, and therefore the Committee had no alternative but to reject the Bill.

It is impossible, therefore, to conceive that this desperate attempt to re-commit the Bill, under such circumstances, can receive any countenance. To entertain the proposal, indeed, would be to overturn all those judicious arrangements recently made for the conduct of private business, and would lead to endless toil and confusion.

EXTENSION OF THE MIDLAND LINE OF RAILWAY COMMUNICATION NORTHWARD FROM DARLINGTON TO NEWCASTLE, CARLISLE AND EDINBURGH.

A meeting, consisting of deputations from the Great North of England, the York and North Midland, the North Midland, the Birmingham and Derby, the Midland Counties, the Brandling Junction, and the Newcastle and Carlisle, Railways, took place at Newcastle-upon-Tyne, on the 30th ult. The deputations consisted of the Chairman and some of the Directors of each of the above Companies.

George Hudson, Esq., the Chairman of the York and North Midland Railway Company, was called to the Chair. He stated that the objects in view in calling this meeting were twofold—first, to consider how far they might be able to facilitate or expedite the traffic on the present line of railway between Rugby and Darlington; and secondly, the best means of continuing forward the line northwards from Darlington to Newcastle. With regard to the first object, he might state that the railway route by Derby, York, Darlington, and Newcastle, was the nearest for passengers from the south and west of England to Edinburgh and the whole of the east of Scotland. This was the route for traffic when stage coaches were in existence, and must continue to be so now that the line of railway is completed to Darlington. Amongst other improvements that might be named, he thought they might increase still further the dispatch of the mails. He was of opinion that with proper arrangements they might expedite the arrival of the mail in Edinburgh by two hours. In addition to having a separate train out of London for the mail bags, he thought that some further time might be gained on some of the lines. He felt quite sure that they had it in their power to convey passengers from London or Gloucester, to Newcastle in one day; and that passengers to and from those places would thus avoid the fatigue and inconvenience of being out all night. By adopting the most complete and efficient arrangements, he believed they must necessarily have all the traffic to Edinburgh and the eastern part of Scotland; and they might perhaps calculate on a portion of the western traffic also, as passengers from London to Carlisle, going by Lancaster, had nearly seventy miles to travel by coach, whilst those who went by Darlington had little more than thirty. With regard to the second object proposed for the consideration of the meeting, they all knew that the Great North of England Company had an Act for making their railway to Newcastle; but that portion of it north of Thrislington, (a place about twelve miles north of Darlington) would be very expensive information. By diverting the line at Thrislington, and taking a new route for about six miles and a half, a junction could be effected with the Durham Junction Railway, and an uninterrupted line of communication would then be complete (through the medium of the last-named railway and the Brandling Junction) to North and South Shields, Sunderland, Durham, and Newcastle; and by means of the Newcastle and Carlisle Railway to Carlisle. Plans had already been lodged for the proposed diversion of the line from Thrislington, so as to enable an application to be made next Session for an Act. The diverted line, he had been informed, would not cost more than 120,000*l.* or 130,000*l.* He thought the raising of this capital deserved the serious consideration of the Shareholders of the different companies, represented at this meeting. He was quite sure that it would be highly advantageous to all these companies that the line should be continued forward to Newcastle; and where there were so many influential parties interested in promoting this extension, he could feel no doubt but it would be accomplished. An animated discussion took place on the two subjects proposed to the meeting. The greatest cordiality and good feeling prevailed, and several resolutions were passed, embodying the views contained in Mr. Hudson's address. From the spirit and energy displayed by the gentlemen present, it is obvious that the lines of railway from London to Newcastle and Edinburgh, by way of Derby, York, and Darlington, will be the most efficiently conducted in the kingdom. The Directors appeared determined to spare neither trouble nor cost to render them so; and from the resolutions come to, we shall expect shortly to see still further facilities offered to travellers, although those already afforded are such as to have deservedly obtained for the respective Companies a large portion of commendation from the public. *Leeds Mercury.*

Accident on the Eastern Counties.—On Sunday evening, at 10 minutes before 5 o'clock, an accident of a serious nature, by which an engineer on one of the trains received great injury, occurred on the line of the Eastern Counties Railway, and which, as too often happens in such cases, was occasioned by extreme negligence. The following particulars our informant received from the injured party:—His name is William Cox, and he is 26 years of age. The up-train left Brentwood at 4 o'clock, on its way to London; it arrived at Ilford about 10 minutes to 5, when, owing to the points of the rails at the station not being properly shifted, the engine ran off the rails, and at the same instant the foot-plate, as it is called, on which Cox was standing between the engine and the tender, owing to the violent jerk it received, rose out of its place, and the poor fellow's right foot and leg were jammed between the foot-plate and tender with great violence. Fortunately the steam of the engine was immediately turned off, or the calamity must inevitably have been more frightful; but as it was no other person was injured. Poor Cox was placed on a litter and conveyed by the train to the Mile-end station, and thence he was carried to the London Hospital, where his leg was found to have been so dreadfully injured, that it is feared amputation will be necessary. Two or three pieces of bone were extracted from his leg at once. When the same train went down to Brentwood about an hour and a half before, the points of the rails were shifted in the direction in which the train was then proceeding, and not afterwards reversed, as they should have been in readiness for the trains return. This neglect on the part of those whose duty it was to see the points right led to the accident.—*Times.*

RAILWAY ADJUDICATIONS.

PARKS v. THE GREAT WESTERN RAILWAY COMPANY.

Court of Common Pleas, May 18.—*(Sittings at Nisi Prius, at Guildhall, before Lord Chief Justice* TINDAL *and Common Juries.)*—In this case Mr. Serjeant LUDLOW and Mr. GURNEY appeared for the plaintiff, and Mr. PLATT and Mr. WHATELEY represented the defendants.

It appeared that the plaintiff, who had been employed by the Great Western Railway Company to execute part of the works along the line of the railway, had entered into a contract with them prior to the 8th of July last year, for the excavation and preparation of ballast for the surface of the railway, which he was to dig from the quarry at Hardwell, near Compton, in the Shrivenham district, and convey it thence to the place where it was to be stacked, a distance of about two miles. The chalk-stone which was furnished in pursuance of this contract not being exactly suited to the purpose for which it was intended, the Company made another contract with the plaintiff on the 8th of July, according to the terms of which he was to be paid 3s. 9d. instead of 3s. 5d. per yard for the ballast, he providing 800 yards of ballast per week, and screening the ballast to the satisfaction of the Engineer. The defence was, that the ballast was not screened properly.

The Jury, however, found a verdict for the plaintiff for the full amount claimed—viz. 67*l.* 18s.

MANCHESTER AND SHEFFIELD RAILWAY.

Borough Court, Monday, May 10.—*(Before D. Maude, Esq., and C. J. S. Walker, Esq.)*—Mr. Charles Thomson, late Secretary of the Manchester and Sheffield Railway Company, was brought up charged with forgery. Mr. Brandt appeared for the prosecution, and Mr. Greene attended for the prisoner.

Mr. BRANDT, in stating the case, said that he appeared on behalf of the Manchester and Sheffield Railway Company, who made this charge against the prisoner with great regret. The prisoner had held a responsible situation, and had had the confidence of the Company; but when these facts were brought to their knowledge, they had no alternative. The prisoner was charged with forging a receipt for a sum of money from Messrs. Taylor and Co. The prisoner was the Secretary to the Company. It was customary for all the accounts to be submitted to him in the first instance, and he examined them to see if they were correct. They were then submitted to the Committee; and, after they were found correct, an order was given that they be paid, and a cheque was given to the Secretary for the account. It appeared that there were two accounts due to Messrs. P. Taylor and Co., for ropes. One of them was for 53*l.*, and the other for 25*l.* An order was made in the usual manner for the payment of the accounts, which, after deducting the discount, amounted to 75*l.* 10s.; but, instead of paying the party by a cheque, he gave them a bill. The Directors were not at all aware that the prisoner was paying their accounts with bills, until it was discovered by accident—one of the Directors happening to open a letter which, in due course, would have been received by the prisoner, and which stated that a bill had been dishonoured, and called on the Company for payment.

Mr. John Taylor, of the firm of Peter Taylor and Co., of Hollingwood, then made his affirmation. He stated, that the Company were indebted to the firm of which he was a partner in the sum of 94*l.* 13s. 7d. They had not been paid, excepting by bills. The receipt produced [which was in the following form, "Received, P. Taylor and Co."] was not his writing, to the best of his knowledge and belief; and he was quite positive it was not that of any of his partners. He never gave any receipt in that form, when he had received payment by a bill; but he should say, "Received by bill."

Cross-examined.—I have in one instance only received payment in cash. It is quite possible I may have given a receipt; but, if I had been paid by bill, I should have stated so. I consider it safest to say, to the best of my knowledge, it is not my writing. I will not undertake to say positively it is not, but it is like my writing.

William Scott, a book-keeper in the employ of Messrs. Taylor and Co., stated, that he was positive that the receipts produced were not in the handwriting of any of the firm; he was enabled to speak positively, from being constantly in the habit of seeing their signatures.

Inspector M'Mullen stated that he apprehended the prisoner at his office, on Saturday. He told him that he was charged with forgery, that it was a serious case, and he need not say anything; and the prisoner replied, "It's of no use to add lies to crime: I mean to plead guilty." Witness showed him the two invoices produced, and asked him whose writing that was, pointing to the receipt; and he said, "That writing is mine: I wrote Peter Taylor's name myself."

Mr. David Waddington, one of the Directors of the Company, stated that he remembered the prisoner being paid a cheque, drawn in favour of Taylor and Co.

Cross-examined.—He never drew a Bill with the authority of the Company; and we never knew of it till about a month ago.

Mr. GREENE then addressed the Court for the prisoner. He said, this was not an offence for which the prisoner could be tried at all. This receipt was given without a stamp.

Mr. MAUDE said, he thought an instrument of this kind was sufficient: and asked Mr. Waddington if he had known of these bills having been given before.

Mr. Waddington said, they never knew till about a month ago, when they discovered that a bill had been given in payment of an account, when they had given him cash, upon which they discharged him. That bill was taken up, but not by the Company.

Mr. BRANDT said, he might state, that in Taylor's case one or two bills had been taken up.

Mr. MAUDE said, this was not a receipt by which he obtained the money.

Mr. BRANDT said, but it was a document affecting the interests of Mr. Taylor. If on a bill of exchange the name of a third party were introduced, though there was no intention to injure him, and the party inserting the name intended to take up the bill, it had been decided that that was forgery.

Mr. MAUDE said, this was forging a voucher. He had entertained some little doubt about it; and his first impression was that the prisoner should be charged with stealing the cheque.

Mr. BRANDT said, he should prosecute for the forgery, or not at all.

Mr. GREENE said, the question was whether the prisoner had not a right to take up the bill.

Mr. BRANDT said, the object of the prisoner was to gain the use of the money for four or five months, and by his doing that Mr. Taylor was prejudiced.

Mr. MAUDE said, he thought a sufficient case of fraud had been made out against the prisoner, and he must be committed to the assizes for forgery.

The prisoner was then removed from the bar.—*Manchester Courier.*

COMPENSATION CASES.

BRISTOL AND EXETER RAILWAY.

An inquiry was holden at Taunton, on Friday, the 14th inst. before Edward Coles, Esq., the Under-Sheriff of Somersetshire, and a special jury, to assess the compensation to be paid to the Reverend Henry Cresswell, the patron and incumbent of the vicarage of Creech St. Michael, in respect of his vicarage house and outbuildings, and about 9 acres of glebe land, consisting of gardens, orchard and meadow contiguous to the house, which the Railway Company were obliged to purchase under the provisions of their Act of Parliament, in consequence of the site of the house and a portion of the land (in the whole not exceeding 2 acres) being required for the works.

The jury awarded Mr. Cresswell 2,450*l.* for the value of his premises, and 200*l.* for his personal damage; total 2,650*l.*

We understand the reverend gentleman had sent in a claim to the Company of 4,400*l.*, and had refused to accept their offer of 3,150*l.*

GLASGOW AND AYR RAILWAY.

On Tuesday, Sheriff Eaton held a court in the Town Hall, Kilmarnock, for the purpose of determining the remuneration that should be awarded to James Dunlop, Esq., of Annanhill, for that portion of the lands of Bonnington taken up by the transit of the railway through that farm.

Patrick Robertson, Esq., advocate, Edinburgh, appeared for the proprietors of the Glasgow and Ayr Railway Company—Mr. D. J. Bannatyne, agent. John Cowan, Esq., advocate, Edinburgh, appeared for Mr. Dunlop—Messrs. Douglas and Hamilton, town-clerks, Kilmarnock, agents.

A jury of 15 gentlemen were selected, who left court and proceeded in custody of the Macer of Court, accompanied by the Sheriff-Substitute, to view the grounds in dispute, after which they returned. Several witnesses having been examined as to the estimated amount of damage, the Sheriff said he left the case entirely in the hands of the Jury, who retired, and, after an absence of more than half an hour, returned a verdict, giving for the land 541*l.*; intersectional and other damages, 249*l.*; total, 790*l.*; which, as being more than offered by the Railway Company, the expenses of the trial fall upon the latter.

On the next day, Wednesday, the following case came to be determined in the Court House, Irvine, before Sheriff Eaton and a jury. John Blair Hyndman, Esq., of Springside, claimed 26*l.* for an acre and three quarters of ground, situated on Lugton River, near Fergushill, to be appropriated by the Glasgow and Ayr Railway Company, in making the Kilmarnock branch. The Company had offered 15*l.*, which the claimant refused. After an examination of witnesses, the Jury unanimously awarded 14*l.*, which being less than offered by the Company, the claimant, by the Company's Act, is bound to pay one-half of the expenses incurred by the trial. The valuations of the witnesses examined for Mr. Hyndman varied from 17*l.* to as high as 39*l.*; whilst those for the Company varied from 10*l.* to 12*l.*—*Glasgow Courier.*

NEW AND RAPID LINE OF COMMUNICATION BY RAILWAYS AND STEAMBOATS, BETWEEN LONDON, AND SCOTLAND, AND IRELAND.

It will be seen from advertisements in another part of our paper, that the prospects so long held out of an independent steam communication between Fleetwood-on-Wyre and Scotland, Ireland, the Isle of Man, and the Lakes, are now about to be realized. Saturday last being the morning appointed for testing the capacities of Port Fleetwood in respect to receiving and berthing afloat at low water first-class steamers—the "Fire-King," Captain Ewing, started from Ardrossan at a quarter-past five, p.m., on Friday, with 40 cabin passengers, most of them destined for London. At 5h. 45m., a.m., on Saturday, Captain Denham, the Harbour Engineer of Port Fleetwood, boarded her about six miles N.W. of Port Wyre, and piloted her through his new channel to abreast of the wharf by a quarter-past six. The passengers were landed in time to breakfast at Vantini's splendid and magnificently conducted hotel, to take a glance at the various improvements in progress, and depart by the day train (quarter-past eight) for London, Manchester, Liverpool, &c. &c. Thus, in twenty-seven hours, the cheapest and least fatiguing transit ever yet attained has been realised, and is to be continued to and fro, four times a week, between London, North Lancashire, and Glasgow. The journey by railway from Ardrossan to Glasgow, occupies only an hour and a half, so that under favourable circumstances passengers may calculate on reaching Glasgow in about 14 hours, from Fleetwood, being several hours less than the mail through Lancaster, and

Digitized by Google

only one-fourth of the expense. Another fine steam ship, the *Victoria*, will commence plying between Fleetwood and Belfast throughout the course of the ensuing week, and from what we have heard of her qualifications, we have no doubt that those who prefer a visit to the green isle will have every reason to be satisfied. The *Express* steamer has also commenced her operations between Fleetwood and Bardsea (Ulverston), and the Lakes. Thus, whether summer tourists wish to visit our own beautiful Lakes, the favourite retreat of the classical Wordsworth and Southey, or desire the savage grandeur of the lochs and mountains of Scotland, (the birthplace of Burns is but half an hour distant from Ardrossan), they will have equal facility by these various modes of conveyance. At ten o'clock on Tuesday night, after embarking the day train passengers from London, Captain Denham conducted the *Fire King*, by the harbour lights, to sea, on her return to Ardrossan, where she would arrive at half-past nine the following morning,—the speed of the *Fire King* being the fastest on the seas, fourteen and fifteen miles per hour. Whether the peculiar fact of a steamer of such a scantling being actually at Fleetwood-on-Wyre enhances the effect of this vessel, or that her cost of 24,000*l.* has been dedicated most strikingly to symmetry and elegance, we certainly never saw or heard of a more perfect vessel. It is richly worth while to go and look at her, and truly so to spend 15*s.* to take a peep at the "land o' cakes" by her. The fact of such a vessel holding regular intercourse with, and being accommodated at, Fleetwood-on-Wyre, must be considered as in some degree an answer to the scepticism which has arrayed itself against this most patriotic, and as we are informed, decidedly prosperous enterprise.

In the course of the present week we have had the pleasure to visit M. Vantini's magnificent new hotel at Fleetwood. We have no hesitation in pronouncing it to be one of the most splendid establishments in England—perhaps in Europe. The immense building is yet unfinished, and the only index of what it will ultimately be is presented in the central portion of the superb fabric, which is now open for the reception of visitors. We cannot attempt anything like a description of what M. Vantini's enterprise has already effected, still less of what he has in embryo. The town itself has risen up, from the sterile warren, like a magic city, but for the gorgeous palace called the "North Euston," we were utterly unprepared. The fact is, the whole affair is a wonder, and cannot but be regarded as a splendid monument to the ingenuity, liberality and enterprise, which has designed it, and carried it into effect. At present we cannot enter into further details, but we intend shortly to lay before our readers a circumstancial catalogue of all the marvellous things which comprise this superb concentration of elegance, magnificence, and every thing constituting adaptation for the comfort, enjoyment, and convenience of all classes of society.—*Preston Chronicle*, 8th May.

HORSE RAILWAYS.

Once on a time there was a certain ancient vender of fish who was in the habit of tramping from place to place, carrying his merchandise on an ass with a couple of panniers, into one of which the old codger used to pack his fish, while in the other, by way of counterpoise, he would stow an equal weight of stones. One day, a neighbour, who had some brains in his head, remonstrated with our itinerant hawker of marine merchandise on the absurdity of his conduct, and endeavoured to prove to him that it would be much better to put fish into both panniers and dispense with the stones altogether, as his ass would then be able to carry twice the quantity of fish, or the same quantity with twice the ease. The fishmonger, who was a great stickler for good old customs, and had a profound veneration for the wisdom of our ancestors, either could not or would not comprehend the logic of his reforming neighbour, and told him that his plan might do for any thing he knew, but that his father and grandfather used to carry fish in one pannier and stones in the other, and he was determined to do the same as long as he lived, as he hated all new-fangled notions as he hated the devil.

We have often been reminded of this story, on witnessing the dogged obstinacy and infatuation with which people are apt to cling to old and absurd usages, and to resist the adoption of simpler and more effectual methods of accomplishing their purpose. The effect of iron rails, or of stone ways, in reducing the friction of carriage wheels, has been known for half a century, probably much longer; and yet even on long lines of road, where there is a dead level, carriages continue to "drag their slow length along," at the rate of five or six miles an hour, when, by the simple application of rails, they might with equal ease double the speed with four times the load.

Since the vast advantage of rails has been so triumphantly proved on that admirable line of road between Liverpool and Manchester, one would have thought that rails would long since have been laid down on common roads wherever the line was adapted for the purpose, and yet we are not aware that there is a single turnpike, or other road, on which the experiment has been made. Can it be possible that at this time of day men who have an interest in turnpike roads are ignorant of the wonderful advantage in power and speed which a horse derives from travelling over a road where iron or stone tracks are laid down?

In the Library of Useful Knowledge, there is a separate treatise on the subject of the horse, in which it is stated that, on a railway, the animal will draw a load ten times heavier than what he can move on a common road; and in the Sporting Anecdotes, an instance of the power of draught on the rail is recorded which is so remarkable that we shall here transcribe it entire.

"An unparalleled instance of the power of a horse, when assisted by art, was shown near Croydon. The Surrey iron railway being completed, and opened for the carriage of goods all the way from Wandsworth to Mertsham, a bet was made between two gentlemen, that a common horse could draw *thirty-six tons* for *six miles* along the road, and that he should draw his weight from a dead pull, as well as turn it round the occasional windings of the road. A number of gentlemen assembled near Mertsham to see this extraordinary triumph of art. Twelve waggons loaded with stones, each waggon weighing above three tons, were chained together, and a horse taken promiscuously from the timber-cart of Mr. Harwood, was yoked into the team. He started from near the Fox public-house, and drew the immense chain of waggons with apparent ease to near the turnpike at Croydon, a distance of six miles, in one hour and forty-one minutes, which is nearly at the rate of four miles an hour. In the course of this time he stopped four times, to show that it was not by the impetus of the descent that the power was acquired; and after each stoppage, he drew off the chain of waggons from a dead stop. Having gained his wager, Mr. Banks, the gentleman who laid the bet, directed four more loaded waggons to be added to the cavalcade, with which the same horse again set off with undiminished power; and still further to show the effect of the railway in facilitating motion, he directed the attending workmen, to the number of about fifty, to mount on the waggons, and the horse proceeded, without the least distress, and, in truth, there appeared to be scarcely any limitation to the power of his draught. After the trial, the waggons were taken to the weighing machines, and it appeared that the whole weight stood as follows:—

	Tons.	Cwt.	Qr.
12 waggons first linked together.....	38	4	2
4 waggons afterwards attached.....	13	2	0
50 labourers, suppose.....	4	0	0
Total.....	55	6	2"

Some of our readers may think it strange that, in treating of the subject of railways on turnpikes and common roads, we should have made no allusion to any of the numerous projects for the introduction of steam-carriages on such roads. Our reason for the omission is our thorough and long-entertained conviction that locomotive steam-carriages, without guiding rails, will never succeed, as they will necessarily be attended with the most imminent peril to passengers and to the public. We have often avowed this opinion, and we have seen no reason to change it.

Such carriages would require the most unremitting care and attention on the part of the director, as the most momentary neglect on his part might prove fatal, as the carriage, if moving at a considerable rate, would be off the road in the twinkling of an eye. Locomotive carriages on railways are admirable contrivances, but without rails they would, in our opinion, be attended with the most disastrous and fatal consequences; and truly sorry are we that we can arrive at no other conclusion, as we should be delighted with the substitution of steam and iron for the muscles and sinews of that noble and much-abused animal, the horse.—*Liverpool Mercury.*

PETTIT'S PATENT ANTI-FRICTION RAILWAY.

In bringing my new system of railways before the public, allow me to give a brief statement of some of the main features of my invention; in the first place, the railway controller, which enables the officers on the line to turn the steam off from the cylinders, and pass it through the whistle, and bring each break into action; a pair of folding doors are at the same time thrown open in front of the engine, and being lined, form a sort of box which collects the air and so becomes a great impediment or retarder of the engine. But when their bevelled edges are brought too, they form a very sharp entrance for the engine; the self acting breaks may be made to act very powerfully without straining the axles, they also act upon all the wheels throughout the train simultaneously, so that a stop is soon produced—by this means the speed may be kept up until very near the stations. The wheels may be perfectly plain, without flanges, and run upon their axles the same as any other wheels; they may be large and light, having nothing to contend with but the weight they have to carry, the mode of guidance being quite different to that now in use; by which mode of guidance, all friction is done away, except that which will always remain, namely, that between the axles and boxes of the wheels, and also when the breaks come into action; and this is reduced as much as possible by certain contrivances, so that much less power will be required to propel the train, and the axles not having to turn with the wheels, a circle is easily performed in connection with the mode of guidance without producing friction—by this means hills and valuable property may be escaped where new lines are not yet laid down, and all the principal towns may be taken in the route, without the inconvenience that now exists in making angles, and at much less expense.

There are four different modes of railways shown in my plan all of which render it next to impossible for the train to get out of its proper course, thereby preserving the property and lives of Her Majesty's subjects, and bringing railways more into repute, by reducing them to that true simplicity and safety which ought to take away the timidity of the most timid. By introducing one of the above plans the bottoms of the coaches are brought a foot or more below the surface of the ground; the second plan allows them to run just so as to clear it; the third and fourth plan raises them a few inches above the earth. There are other features in this system which would require many words to describe, but a sight of the models when in action will at once strike the sense.

The models will be exhibited for a few days at the Office of the *London Journal of Commerce*, 1, White Hart Court, Lombard Street, to which the favor of a personal inspection is respectfully solicited.

R. PETTIT,

P.S.—The cutting off the steam from the cylinders and passing it through the whistle, and laying on the breaks, is also made exclusively to suit the system of railway now in use, which part only of my patent is disposed to by licence of Mr. W. Hancock.

Cases relating to Railways and Canals, argued and adjudged in the Courts of Law and Equity. By HENRY ILTID NICHOLL, THOMAS HARE, and JOHN MONSON CARROW, Barristers-at-Law, Vol. I, complete; and Part 1, Vol. II; royal 8vo., pp. 214: MAXWELL.

WE have already repeatedly recommended this collection of cases to our railway readers, and every new part which comes out presents us with additional reasons for wishing to see it on the shelves (or *tables* rather) of all Railway Boards. Sure we are, that were the numerous lessons of justice and wisdom which it teaches, more familiar to Railway Directors and officers, the item of "law expenses" would not figure so prominently as it has hitherto unfortunately done in most railway balance-sheets. The reports of adjudicated cases which appear in the newspapers (our own not excepted), though they commonly embody tolerably correct notices of the general bearings of each, being those of ear-witnesses merely, and generally drawn up in haste, are of too apocryphal a character to be much relied upon for practical guidance; but in the collection before us—compiled, as it has been, at leisure, and with the help of the original pleadings and notes of counsel (possibly of judges also) to refer to—the information supplied is in every case, not only of a most satisfactory fulness and completeness, but of perfect authenticity. To give our readers a taste of the quality of the work—of the very curious and useful information which it contains—we subjoin a few of the marginal epitomes which, after the usual fashion of law books, are given alongside the fuller Reports.

COMPULSORY POSSESSION AND DEVIATION.

Payne v. *the Bristol and Exeter Railway Company.*—"By the Bristol and Exeter Railway Act (6 & 7 Wm. 4. c. 36. s. 25.) it was enacted, that if any person should for twenty-one days' after notice in writing, neglect or refuse to treat or not agree with the Company for the sale of his estate or interest in land required by them for the purposes of the Act, they might issue their warrant to the sheriff of the county to summon a jury, to assess the sum to be paid for the purchase of such lands, and that fourteen days' notice of the time and place at which such jury was summoned should be given to him. Section 242 provided, that the whole capital (1,500,000*l.*) should be subscribed before any of the powers of the Act, as to the compulsory taking of land should be put in force. An inquisition taken under section 25 recited, that notice in writing had been duly given to C. H. P. by the Company, that his land was required; and that he had not within twenty-one days' after such notice, agreed with them for the sale therof, and that fourteen days' notice of the time and place of holding such requisition, had also been given to him. The land being afterwards taken by the Company under the Act, an action of ejectment was brought by C. H. P. for their recovery.

"*Held*, that the inquisition set out in form sufficient to give the sheriff jurisdiction, and that the provision of section 242, being in substance a defeazance of the compulsory power of the Act, need not be set out, should come by way of answer from C. H. P.

"By section 57, the lands to be taken for *the line* of the railway are not to exceed twenty-two yards in breadth, except in places required (*inter alia*) for embankments and cuttings; and section 59 (which gives the power to deviate in the *line* and *section*), limits the deviation *from the line delineated on the plan* deposited with the clerk of the peace to 100 yards, and provides that it shall not *extend into the* lands of any person not mentioned in the Book of Reference, unless omitted by mistake, and so certified.

"Held that the same powers are incidental to the deviated as to the original line, and that therefore *the Company were not limited* to 100 yards in these places on the deviation, *required for embankments and cuttings*, but only on the actual line of the railway.

"And that it was not competent to C. H. P. to object that lands of K. not mentioned in the Book of Reference, were taken for such purpose.

"And that the line or centre from which measurements are to be made is the *medium filum* of the twenty-two yards of land to be taken, and *not of the space between the two rails.*

BLANK TRANSFERS.

Hebblewhite v. *M'Morine.*—"The London and Brighton Railway Act (1 Vict. cap. 119, sec. 155), provides that the form of conveyance of shares shall be by writing duly stamped, under the hands and seals of the parties, and that on every sale the *deed* or *conveyance* shall be kept by the Company, and an entry of the memorial of such transfers and sale shall be indorsed on the said *deed* of sale or transfer. Section 157 provides against any transfer of shares until all the calls are paid.

"The plaintiff in September having agreed to sell to the defendant 50 shares to be delivered on 1st March, bought of R. W. P. (through brokers) fifty shares to be delivered on 15th December next, on which day R. W. P. delivered to him fifty certificates and three transfers for shares with blanks for the purchaser's name, the consideration, and the date. On 1st March the defendant tendered these certificates and transfers to the defendant who refused to accept them; at that time there were some calls due but that objection was waived.

"To an action brought to recover the difference of price between December and March, the defendant pleaded (amongst others) 1st, That the plaintiff was not ready to transfer the 50 shares to him, nor offered to execute to him or his nominee a *legal transfer* of them. 2nd, That the plaintiff was not at the time of the agreement the proprietor of the 50 shares, and had no good right or title to execute a legal transfer of them. 3rd. That at the time of the said contract the plaintiff was not possessed of or entitled to, nor had entered into contract for the purchase of, nor had any reasonable expectation of becoming possessed of or entitled to any such shares otherwise than by afterwards purchasing them. (This last plea was held bad on general demurrer.)

"*Held*, that the form of conveyance required by the statute is a *deed*, and that in instrument of transfer executed by the owner of the shares, *with a blank for the name of the purchaser*, and delivered to the plaintiff, (by whom, on the sale of them, the name of the purchaser was to be inserted,) *was void.*

"*And*, that the non-payment of the calls would have been a valid objection, but that a waiver of it by parol was sufficient to remove it.

"*Semble*, that the plaintiff could not give the defendant an implied covenant for title, R. W. P. being the actual owner of the shares.

SHARES PERSONAL PROPERTY—PAROLE BARGAINS TO SELL GOOD.

Humble v. *Mitchell.*—"Shares in a Company are not an interest in land nor goods, wares and merchandise, within 17th section of the Statute of Frauds, (29 Car. 2, c. 3,)* and therefore a contract for the sale of such shares is not required to be by note in writing, &c., as provided in cases within the said section.

"*Semble.* There is a distinction between these words of the Statute of Frauds and the words 'goods and chattels,' used in the Bankrupt Act. (6 Geo. 4, c. 16, s. 72.)

EQUALITY OF FARES.

The Derby and Midland Counties' Competition Case.—"The Birmingham and Derby Junction Railway, commencing at Derby, communicates with the London and Birmingham Railway at Hampton-in-Arden. The Midland Counties' Railway forms a communication between Derby and the London and Birmingham Railway, at Rugby.

"The Birmingham and Derby Railway Act empowers that Company to receive from passengers conveyed by the Company's carriages, tolls not exceeding a specified amount.

"A subsequent Act, for authorising an alteration in the line of the railway, provides that the charges by the first Act authorised to be made for the carriage of passengers, goods, or other matters or things, shall be at all times charged equally and after the same rate per ton per mile, in respect of all passengers and goods of a like description, and conveyed or propelled by a like carriage or engine, passing on the same portion of the line only, and under the same circumstances, and that no reduction or advance in any charge for conveyance by the Company, or for the use of any locomotive power to be supplied by them, shall be made either directly or indirectly, in favour of or against any particular Company or person travelling upon or using the same portion of the railway under the same circumstances.

"After the opening of the Midland Counties' Railway, the Birmingham and Derby Junction Railway Company charged passengers conveyed by their carriages from Derby to Hampton-in-Arden 8s., while they charged other passengers proceeding from Derby to Hampton-in-Arden and thence to London, only after the rate of 2s. between Derby and Hampton-in-Arden.

"An information was filed, praying an injunction to restrain the imposition of an unequal charge between the termini at Derby and Hampton. It was admitted by the information, that the charge of 8s. did not exceed the rate allowed by the Act.

"*Held* by the Lord Chancellor on a motion for an injunction, that the clause above set forth was only meant to prevent the exercise of a monopoly, to the prejudice of one passenger or carrier and in favour of another. That even if this Court had jurisdiction in such a case it would not interfere, unless it were clear that the public interest required it, and that in this case it being admitted that the higher charge was not *more* than the Act permitted, it did not appear that the public were prejudiced by the arrangement. The motion was refused, with costs."

The present collection is stated in the title to embrace both "Railway and *Canal*" cases; but the number of railway cases preponderates greatly—in the proportion of at least ten to one.

On the Subject Matter of Letters Patent for Inventions. By THOMAS WEBSTER, Esq., of Lincoln's-Inn, Barrister-at-Law. 8vo. pp. 43. Crofts and Blenkarn, 1841.

OF all the existing branches of English law, perhaps the youngest, is that relating to the rights of inventors—Patent Law. Legislation on other subjects consists chiefly of the application to new cases of principles, which, whether true or not, are at least old, and have been long discussed and acted on. It is not so however with patent law. Invention was anciently a matter which occurred too rarely, and seemed to the Atlasses who staggered under the weight of State affairs, a matter too trivial to attract much attention as to the rights it originated or the protection due to it; it begged for shelter under the feigned and odious name of *monopoly*, and the hapless appellation has stuck by it to this hour.

When, however, the Statute of Monopolies abolished the crying grievances which had gathered under that name, an exceptive and almost casual paragraph gave respite to the genuine interests of inventors which had unfortunately been mixed up

* Which enacts that "no contract for the sale of any *goods, wares*, or *merchandise*, for the price of 10*l.* sterling, or upwards, shall be allowed to be good, except the buyer shall accept part of the goods so sold, and actually receive the same, or give something in earnest to bind the bargain, or in part of payment, or that some *note or memorandum in writing* of the said bargain, be made and signed by the parties to be charged by such contract, or their agents thereunto lawfully authorised."

Digitized by Google

with them; but whether from a sense of justice or the hope of gain this advantage was accorded does not clearly appear.

Since that day, however, the world has seen strange and goodly things come forth of the brains of men, and wondrous effects have followed; and slowly it has been suspected, though it is hardly yet believed, that with the mind, even as with the hands, that which a man produces it of his right to enjoy.

If we reflect for a moment, may we not think it strange that a doubt should ever have existed on this point? Does law—or what is much more—does mankind's common sense of justice, say, "we permit a man to rest safely in the house he has built, and reap the harvest for which he has laboured, because we think that on the whole it is most politic to do so:" Does it not rather rouse itself indignantly against every spoiler as against the perpetrator of a wrong? And what is there in the building of a house or the tilling of a field to give origin to "property," which there is not in the nobler and severer labours of the mind? Yet law says, and public feeling is but slowly learning better than to say, "we abstain from plundering the author and the inventor because we think, perhaps, on the whole, we get the most by abstaining."

Slowly as it may be, it is however surely, that the juster view is taking its proper place. Almost from the days of James I. to the present time, a pent-up and unacknowledged sense of right has been gradually stretching the meaning of the terms of the Statute, until practically, hardly anything can be devised now-a-days which is not capable of protection by patent. If we have still to wish that clearer views had led to more consistent legislation, we have at least the satisfaction of seeing that all argument (except, indeed, that of the barest law), and now almost all legal proceedings proceed, though in name, on the supposition that the patentee has received a favour from the crown, yet, in fact, on that of his being the creator and owner of a right.

In this struggle of an innate sense of justice with an unsound but binding legal theory, it cannot but be that doubts and discordances should arise. Plain men—and inventors are commonly such—need a safe and intelligible guide in the intricacies of this mistaken and tortured law. And it renders the matter more perplexing, that in fact the great mass of patent law lies not in a statute, easy to be found and read, but in great numbers of judges' decisions, given in innumerable cases, and scattered through many volumes.

We are glad to be able to say that Mr. Webster's book is a valuable addition to our previous means of information on these subjects. It is a clever and somewhat successful attempt to clear away the obscurities and contradictions which, after many labours still rest on this branch of law. The author has recently given to the world a treatise on the "Law and Practice of Letters Patent for Inventions," in which he confined himself to matters known and established. His design in the book now under notice is well expressed in the following extract from the preface:—

"It has appeared to me that much of the difficulty supposed to exist in the law of patents, might be removed by a somewhat different mode of treating the subject from that usually adopted, especially by a careful analysis of the subject matter of the invention, with the view of ascertaining the peculiar circumstances of the case from which the law is derived, or to which it is about to be applied. The application of principles of law without due regard to such circumstances, and a want also of proper attention to the precise words of the statute, and of the practical forms employed in soliciting letters patent, and of the letters patent themselves, have combined to prevent that uniformity and consistency in opinions on the subject, which might otherwise have been attained, and which, as I trust, the following pages will show, really belongs to this branch of the law."

Our previous remarks will show that we look for eventual improvement in patent law, to the establishment of the principle that invention creates a right to the thing invented; in the mean time a treatise like the present which, though founded on other principles, is a safe and luminous guide in the existing state of the law, and evidently aims, though under other views, to promote justice to the inventor, deserves and has our hearty commendation.

The author has evidently spared no pains in collecting and comparing authorities and cases; indeed the book throughout bears abundant marks of being the product of extensive and original research; and, notwithstanding its small price, the inventor will find in its pages a sufficient illustration of every point in patent law with which he need be acquainted, before he reaches that stage in his progress which requires professional aid.

THE GLASGOW TUNNEL.

[From the *Glasgow Herald.*]

We had an opportunity a few days ago of passing throughout the great tunnel situated at the Glasgow end of the Edinburgh and Glasgow Railway, immediately adjoining Queen Street, and we can safely say that it is one of the most stupendous works of the kind which we have ever witnessed. Although a free current of air now passes from end to end of the tunnel, it is not to be supposed that it is yet opened upon the level. At some points, it is true, it is opened to the full extent of 26 feet in breadth by 22 in height, but at others the opening is so narrow that we were required to creep almost on our hands and knees over the jagged surface of recently blasted rock, along which the water was oozing in large drops, and with the darkness of midnight, excepting so far as relieved by a miner's lamp, the scene was sufficiently awe-striking and horrible. The men are working in numerous parties upon various flats; some have excavated and blasted almost to the level upon which the rails will be laid, while others are working, as it were upon a story or elevation right above the heads of the others, and daily making larger apertures, which as yet will do little more than admit the body of a man. In coming upon a gang of workmen, they are first discerned by the flickering of their tiny lamps, which in the distance resemble vivid stars forcing their light through the gloom of a December sky. Ever and anon the ear is saluted by the loud report and crash of the gunpowder rending asunder the solid rock; the vapour from the explosion is felt with sickening effect, and altogether it requires no slight exercise of nerve to endure an imprisonment in such a place for however short a time. We were not a little surprised to be informed by the contractor that the day previous to our creeping through the tunnel, two young ladies had been conducted through it from end to end, and displayed as much courage in the route as the workmen who daily work within its precincts. This is saying a great deal, for some of the narrow and rugged galleries of the tunnel are sufficiently alarming in appearance to "make the boldest hold their breath for a time" and the alarm is not lessened by the consciousness that you are forcing your way through a rat-hole, situated 200 feet below the surface, and where the bursting in of any portion of the unbuilt rock would be fatal.

The length of the Glasgow contract, which includes the tunnel, is 2,200 lineal yards. The tunnel extends to 1250 lineal yards, divided by two eyes of 40 feet each in length, by from 70 to 90 feet in depth; and this leaves 950 lineal yards of open cutting. The tunnel is carried through a variety of strata, consisting of free-stone, lime-stone, fire-clay, faikes, and black-blaze. When completed there will have been removed from the tunnel 114,383 cubic yards of material, and 135,289 cubic yards from the open cutting, consisting of rock, blaze, clay, &c. The stuff excavated from the tunnel is lifted from eight-shafts, exclusive of the two ends by six steam-engines, and two horse-gins. On an average there are employed on the contract above 100 masons, 50 quarrymen, 16 wrights and blacksmiths, 350 miners, &c., with 20 horses and carts. The men employed within the tunnel-work in three shifts of eight hours each, making up the day of 24 hours; and as it is not every one who is competent to work within the tunnel, even though they may be good ordinary out-of-doors workmen, the wages are proportionally high running according to ability from 21s. to 24s. per week, for the shift of eight hour each day. The men are only allowed 15 minutes in each shift for refreshment or relaxation, and thus the work while it lasts is particularly severe. We belive this will be the last contract in its completion throughout the entire line; but no blame attaches on this account to Mr. Marshall, the contractor, who has driven the work forward in a most satisfactory and spirited manner. He only commenced in June, 1839, but a considerable portion of the plan was not placed in his hands till May last year, from the delay in effecting a settlement with the respective proprietors along the line. Even with all these difficulties, Mr. Marshall expresses his confident opinion, that, should no unforeseen obstruction arise, he will finish during the month of August next, and indeed, he has not the slightest fear of any delay beyond that period. In some portions of the tunnel the arch is thrown over by solid blocks of white freestone, and in others it is of brick but in both the workmanship appears to be of a first-rate description; and as from its close proximity to Glasgow, it will be quite easy to to light it up with gas, should the Directors so resolve, the tunnelled pathway into the city will not only be a handsome one, but divested of all the gloom which many timid people complain of in their passage through long tunnels.

We observe, too, that the buildings connected with the public offices for the Edinburgh and Glasgow Railway, at the station in North Queen-street, are advancing rapidly to completion, and the same may be said of the erections to the right and left of the entrance to the tunnel. When completed, this entrance will be a very imposing piece of architecture indeed. The arch at this place will be 60 feet in width, surmounted with an ornamented parapet, and forming the south boundary of Bath-street. At Cowlairs station, where the fixed engines, workshops, &c. are to be situated, the work gets rapidly on; and the contractors on all these works appear to be using every exertion for keeping faith with the public in reference to time.

1. Toll to London and Birmingham 119*l.* 15s. 7d., to be deducted from gross receipts. The receipts are exclusive of those for the mails.

2. The receipts are exclusive of those for the mails.

5. Receipts include the Northern and Eastern toll, &c.

7. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

8. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.*

10. The 5,331,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet.

12. The 33*l.* 19s. 11d. from goods, &c. is for toll only.

13. Ten per cent. is the maximum dividend allowed by the Company's Act.

14. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

17. The capital of 741,000*l.* includes the new capital for London and Brighton station.

18. Capital of 993,800*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

19. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

21. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

22. The 3,092*l.* 19s. 1d. are the receipts after deducting the toll to the North Midland Company.

23. The receipts for goods, &c. include, carriages, 54*l.* 8s. 6d.; horses, 45*l.* 15s. 6d.; dogs, 17. 7s. 0d.; parcels, 187*l.* 17s. 1½d.; cattle, 36*l.* 15s. 6d.; corn, 11*l.* 5s. 7d.; heavy goods, 468*l.* 16s. 9d.; coal, 48*l.* 0s. 7d. Total, 854*l.* 6s. 6½d.

25. Exclusive of proportion of Manchester and Leeds traffic, and conveyance of malls.

26. The receipts stated are after deduction of Liverpool and Manchester toll.

27. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

28. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

31. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Mr. Cabry *will please accept our best thanks for the valuable documents he has kindly sent us.*

Mr. Edmondson's Ticketing System.—*We know of no reason why it should not be universally adopted, and the ingenious inventor handsomely rewarded. We agree with* Victor, *that "it is a shame to see the slovenly manner in which the delivery of tickets is managed at some offices as compared with others."*

Q. in the Corner *reached us quite too late for insertion this week. Without fail in our next.*

The York Station *belongs, we believe, jointly to the York and North Midland and Great North of England Railways.*

B. P.'s *notice is an advertisement, for which we should be liable to the duty.*

Mr. Montgomery's *papers shall have our early attention.*

Teddy the Tyrant.—*From what* Emeritus *states, it would seem that the Cardigan school is not the only one in which Absolutism and Injustice are the order of the day. We do not see, however, how we can at present interfere to any good purpose.*

Communications received from E. A.—Ranger.—One of Your First Subscribers—A Foreigner—Mr. Ap Morgan—Amicus.

T. F. *we think misunderstands Mr. Elliott's argument in both the instances he criticizes.*

THE RAILWAY TIMES.

SATURDAY, MAY 22, 1841.

THE proceedings of the Chester and Birkenhead Railway Company, which were reported in our last, and to which we then briefly adverted, are of importance to persons interested in railways generally, for three things—first, the bold stand successfully made by a body of shareholders, resolved to look into their own affairs and think and act for themselves, against an inefficient (if not incompetent), an extravagant, and most overbearing Board of Directors; second, the strong disapprobation expressed by a large majority of those present of the system so unhappily prevalent, of placing persons on the Directories of railways, living far away from them, and ignorant of the peculiar habits, interests, and feelings of the localities which they traverse, merely because they happen to be large or considerable shareholders; and third, the spirited denunciation by one of the speakers greeted as it was with general cheers, and dissented from by none, of the class of guinea-hunting Directors, who make a regular business of Railway-Directing, and care not where a railway may be situated so that they can but get themselves appointed on its Board of Management, nor how many Railway Boards they are members of, so that they do all but pay well.

We hinted in our last that the example set by the meeting was the more worthy of note that it was a *Liverpool* meeting; and our reason was simply that Liverpool is notoriously the head-quarters of the three great railway enormities, levelled at by the resolutions passed and sentiments expressed on the occasion—Directorial Irresponsibility, Directorial Non-Residence, and Directorial Guinea-hunting, including in the last all the well-known evils of pluralism and sinecurism.

The Chester and Birkenhead Directors made a stubborn but vain effort to withstand the flood of reform which had set in against them; and though they gave way at last, it was with so little grace, that their yielding had all the appearance of a most ignominious defeat. Sir JOSHUA WALMSLEY and Mr. RADCLIFFE, the authors (as we infer from the proceedings) of the very able Report of the Committee appointed to inquire into the state of the Company and conduct of the Directors, appear to have been literally lifted on the shoulders of the proprietors into the Board-room, *in spite* of its previous occupants—nay, in the very teeth of a general determination to *resign*, should one of these gentlemen (Mr. RADCLIFFE) be thrust upon them. Mr. RADCLIFFE *has* been thrust upon them—yet, strange, or rather *not* strange, to say, we hear *now* of no resignations!! Honour to the men who, despising all threats, stood so manfully true to their colours.

Mr. SANDERS suggested that the perverseness of the Directors might, in a great measure, be ascribed to the circumstance that "they were the first body of the kind who had been *brought up* for their conduct." Perhaps so; and to such sympathy as they may deserve for being the first singled out, where there are many no better than themselves, we make them freely welcome. Most assuredly, as Mr. SANDERS went on very pithily to observe, "this is *only the beginning of such things*." "There were many railways in the kingdom where a most searching inquiry would speedily be instituted into the conduct of the Directors. There were Liverpool men connected with the Directorships of some of them *whom he would not trust with the management of a common clerkship*, and who were continually going out of England, instead of attending to their duties. He thought it an extraordinary circumstance that *Railway concerns should have such men tied on them like an incubus*. He was certain the present would be a prelude to many other inquiries of a like kind, *and that some gentlemen who were now connected with other railways would not be so much longer*."

Now that the Chester and Birkenhead Board has had its infusion of new blood, and that there seems a fair prospect of the necessary reforms recommended in the Report of the Committee of Investigation being zealously and unsparingly carried out, we share in the confidence expressed by the Committee that this railway must ere long rank "among the most flourishing in the kingdom." It is excellently situated for local as well as through traffic, and wants only to be judiciously and economically conducted to be eminently productive.

THE extension of the Railway System, wholly unparalleled as it is for rapidity and magnitude, has necessarily brought into operation principles which have hitherto been but imperfectly understood, or at least has so complicated them with new elements as to require that they should be newly disentangled and again discussed. We apprehend it is particularly so with the considerations which affect the rate of fares. The outlay of capital on the formation of railways has, both because of its vast amount abstractedly considered, and because of the wonderment and anxiety with which it has filled men's minds during the months and years of its expenditure, acquired extreme prominence in all related questions; but it may perhaps be found on further inquiry that for the very purposes of the solicitude which it occasions, this prominence does not logically belong to it; and it adds much to the chances of mistake, that in scarcely any other instance has the capital which formed the road been supplied by the parties who carried passengers and goods upon it.

Time, experience, and reflection, will no doubt gradually rectify the confusion still incident to this and kindred subjects. In the mean time we have the satisfaction of remembering that we have from the first (though guided certainly more by general impressions and principles than by any particular investigation of the case in hand), zealously and consistently contended for that moderation of charge, which more rigorous investigation seems likely to establish as the best for the proprietors as well as for the public. We have felt, or perhaps we have instantaneously summed up our experience to the effect, that of two systems, that which reckoned for its success on the more general use and the wider support had the greatest chance of ultimate and permanent success. The difficulty with which we have been pressed is as to *the extent* to which reduction could safely be carried. Nothing could deserve more highly of the railway public, than investigations which would determine this point, without incurring the ruinous consequences of long years of objectless, unguided, and erroneous experience.

The first thing obviously to be done is to determine what are really the elements of the reckoning, but with respect to this much misapprehension we conceive has prevailed. It is one thing to reckon beforehand what a railway will pay to those who propose to make it; it is a very different one to ascertain, when it has been made, how the greatest profit is to be derived from it. In the former reckoning the first cost is a most material item: the latter depends upon the price the public are willing to pay under present inducements for the use of it, and the current cost to the Company of supplying that use; the difference between these two items is the profit on the original outlay, and the only profit to be permanently relied on. Whether this difference, constituting the profit, is greater or less than the projectors of the road originally expected, is nothing to those who have the option of using or not using it.

We readily confess that it has cost us some effort of thought to free ourselves entirely of the remains of an error which seems to rest on nearly the whole railway public, and to exist in principle to a greater or less extent in every department of commerce, namely, that prices should at all events be such as to furnish protection and indemnity for first cost. And yet we never could contend, nor we hope be understood to contend, for the absurdity that a Railway Company, or any other supplying party, could *compel* the taking of their supply at higher prices than those it was worth the while of consumers to give. Neither would we be thought inclined—seeing how Railway Companies have been empowered for the general good, to invade ancient properties and disturb established interests—to hold them morally justified in the assertion of the right to make the greatest amount of profit they possibly can. To

Digitized by Google

repay themselves with liberal advantage is all they can justly claim.

In the absence of clearer demonstrations of their real interest in moderate fares, it may be doing a real service to Companies, who are too fond of high charges, to remind them that their monopoly exists only during good behaviour: it has no foundation in law, in contract, or in moral obligation. If the day should come when the public voice shall call for the necessary restraint of competition, it will be no defence to show that they have gained nothing by their enterprise; the sound and ready answer will be, that if they had acted liberally towards the public, they would have acted wisely for themselves. Nothing can avert the execution of such rival projects but a belief widely diffused, that the Directors of the existing lines are animated by a desire to render the benefits of cheap locomotion, as extensive as is consistent with the just interests of the proprietary body.

It is early enough, it is true, to talk of rival lines. Many questions have yet to be practically settled, which occupy too large a share in the reckoning, to allow us as yet to acquit or condemn the management of many of the lines which already exist. But the day of enquiry will come; and nothing but the most careful investigation, and the most untiring diligence, *now*, will prepare Railway Boards for the ordeal they must pass through *then*. Now that the public have scarcely recovered from their first wonderings at the new celerity of travel, and are feeling its advantages by fresh comparison with recent slowness, many matters may pass which, when a few years of use have rubbed away the glare, will come into view, and be made subjects of scrutiny. We accuse none; in these remarks we have no thought of accusing any; we would caution and incite all.

With these views it will be easily understood why we have zealously opposed the Manchester and Birmingham Extension line; we deem it premature. The day may come when it will be our duty to take a different course; that will depend on what may hereafter appear to be the wants of the public, and what the probility, that those wants will be fairly, judiciously and liberally supplied by existing lines. The day for allowances on the score of inexperience will pass away, and the real tendency of men and their measures will be left bare for inspection.

While so much obscurity prevails respecting the true principle of charge, and most Managers of railways are cautiously debating with themselves where the line of demarcation lies —on what side the gain, and on what the loss— the Directors of the Southampton have made a leap in the dark, which, for its singular boldness, deserves here our particular notice. Ought we not to compliment these Directors on their public-spiritedness in undertaking so large a risk for the mere purpose of supplying an experiment in railway management? Is it not patriotic and self-denying, voluntarily to get the discredit of breaking faith with the public, by raising their fares so much beyond their original promises, just that we may see what is the effect of enhancing a tariff? Should it not add fervour to our thanks, that they have braved all the risks of this trial, without having the softening plea to urge of a line enormously expensive, or estimates of cost trebled, like the Birmingham and Great Western? And shall it not still further stimulate our gratitude to the Directors, if, through their eagerness to contribute to railway experience, the receipts and dividends should fall short, and their ears, in consequence, come into danger with the shareholders? What if, as "vaulting ambition" sometimes "o'erleaps its *saddle*" (the true reading, we believe), they should overleap theirs? We trust, at all events, the results of this precious experiment, will be very carefully preserved for the public good.

Joking and Southampton apart, however, we wish to point out the extreme importance of carefully and systematically collecting, tabulating, and comparing the experience of different lines. To wait for the results which one line could furnish during a cycle of serious and diverse changes, each of sufficient length for accuracy, would require years upon years of patience—and both to the line and to the country it traversed, might involve years upon years of loss. To deduce a general law requires a comparison of many particulars; yet without some tolerable approximation by this means to the *law* of *locomotiveness*, the fixing of railway fares must be mere guess-work or chaffering. That such a law does exist in every given and constant state of society seems to us to admit of no doubt; and we think it equally indubitable that it ought to form the primary element in these fundamental calculations. To its discovery then every available effort should be directed; and conceiving that the word "impossible" is well nigh forgotten by those who have accomplished the marvels of steam travelling, we expect ere long to see it fully developed and applied. We need not say, our columns will gladly be made subservient to this purpose.

If any hesitate to join us in our expectations, we need only point to the facts, that as little was once known of the average numbers of fires, births, deaths, marriages, &c. &c., as is now known of the numbers and conditions of those who travel, and that not a tithe of the opportunity of observation has ever existed in one case which now exists in the other. What the labours of observers and mathematicians have done, and are yet doing, in the former subjects, they may do with as great certainty and benefit in the latter. The constancy of the results too which have every where followed the introduction of railway travelling, strengthens the assurance that such a law does exist and may be found.

Perhaps the first, certainly the most important single step in this as in every analogous process, is the formation of a *theory* composed of probable suppositions and their necessary consequences. We thus obtain a standard, though but *an imaginary* one, with which we may compare observed facts and views—under which we may arrange and classify them—and which may be time after time corrected until it becomes a representative of the whole case, and when the various, and seemingly discordant observations, being set in order and easily consulted, may furnish instances from which to judge how to apply the general rule to each affair in hand. In this view, we think we can scarcely recommend too strongly a careful study of the paper of Mr. Ellett, which we gave from the *Franklin Journal* in our number of the 24th ult.; and we press this recommendation on account of its intrinsic merits and practical value, although it is not improbable we may have to dissent from some of its positions. To this subject it will be our duty frequently and anxiously to return: no other so greatly affects railway interests, and none requires greater pains or more extensive inquiry for its elucidation.

Since the above was written, we have received the letter of "Another Leeds Shareholder," which will be found elsewhere. Impressed with the importance of obtaining by any possible mode some tolerable measure of the effect of the amount of fare on the number of travellers, we cordially welcome his suggestion that a Company, with this object in view, should make for a time *one cheap day in every week*. Although the result might not represent exactly what would take place under a general system of low fares, it would at least furnish a means of judging how numerous that class is, to whom the difference of the fares is of greater consequence, than to have choice of the day on which they shall travel. In a question whose solution requires a comparison of so many facts, any additional mode of trial is likely to assist materially in finding out the truth.

We willingly give insertion in another part to a "Proposal to form a Railway Insurance Fund," and we cordially wish success to the attempt it announces. That it will be more than countenanced by the different Railway Boards, we cannot permit ourselves to doubt. To say nothing of kindly motives, there is abundant reason for their active patronage in the fact, that habits of forethought and their natural consequence, present prudence, tend strongly to improve the trustworthiness and general efficiency of those who foster them. There is another principle which, though too often lost sight of, operates strongly in fitting a man for laudable activity. A mind well at ease on great points, and which has adjusted its daily matters into something like order, will be found to accomplish much more than can be done by one oppressed with anxiety for the future, and vexed with little grating disturbances about the present. To encourage therefore this praiseworthy tendency to lay up regularly and safely for the future, will, we believe, work as well for the employer as the employed. It adds not a little to the probability of advantage, that in the majority of cases the power to keep up the payments necessary to secure the provision to which the assured is looking forward, will depend on the continuance of his employment—that is, on his good conduct. We would only suggest, that if doubt attach to the legal power of Directors to contribute to such an object from the funds of Companies, such doubt should be removed by votes of the shareholders, or by such other step as in each case may seem meet.

It may be asked, why should not these persons insure in the existing offices? It is sufficient to answer, that each class of the community has peculiarities as to the probabilities of the future wants of its individuals, and that most men will readily fall into measures proposed in, and appertaining to, the body to which they belong, although they would pay no attention to the very same measures, however advantageous, if the matter were left to their solitary thought. It seems probable, therefore, that among railway officers life insurances will be both more numerous, and better effected, than they would be but for the aid of this institution.

We understand that it is intended to admit all above the class of workmen. Is it not very desirable that some such institution should be formed for the benefit of the excepted class? Their well-known and commendable readiness to club their shillings for each others temporary relief, might surely be converted with little trouble into a desire to provide upon

Digitized by Google

system for the necessities which are certain to overtake, and the casualties to which their calling unavoidably exposes, them. Heartily wishing well to the present project, we shall be glad to see it followed by one of the character we have just pointed out.

We have received a copy of the Report on the Railways of Belgium, presented in February last to the Legislative Chambers of that country by the Minister of Public Works. It appears to contain, besides other valuable information, full details and a careful analysis of the expenses and receipts of the working of completed lines, and a summary of the cost of their construction. The late period of the week at which this important document came to hand, prevents our going at present more particularly into its contents: we expect, however, to have to refer to it frequently in illustration of many points which will necessarily come under discussion.

We have also seen a document recently published under the authority of the Belgian Government, which specifies the fare which is to be charged in future from each town to every other on the existing and intended lines. As a sample, we may just state, that the fares from Ostend to Ans (Liege), 124 miles, are as follows:—

	F.	C.	s.	d.	
Diligence	17	20	= 13	9	English.
Char-a-banc	10	75	= 8	7	"
Waggon	6	5	= 5	2	"

The great difference between these and our English rates of fares is very striking. We understand besides, that the three classes of carriages are *all* covered in and provided with cushions. Another remarkable contrast to our English pig-stye accommodations for the poor and humble.

—o—

While Government Commissioners have been employed in investigations to ascertain the shortest and best line for a railway communication between London and Edinburgh and Glasgow, and all the world has been wondering where the money is to come from, to make any line that might be selected for the purpose, it is a remarkable fact—such a fact indeed as perhaps no other country save England could furnish—that the enterprise of a single private individual (Sir Hesketh Fleetwood, Bart.,) has all at once opened up a line of communication between the metropolis and Scotland, which in respect of celerity and, we believe, of cheapness also, really leaves but little to be desired. A person may now leave London at daybreak, and proceeding by railway to the new port of Fleetwood, embark there in a noble steamer, in time to breakfast next morning at Edinburgh or Glasgow! How much *more* can any reasonable man want? Were he to travel the whole way by railway to either place, at the rate of 20 miles an hour, he could but arrive two or three hours sooner,—before breakfast were ready or anybody up to bid him welcome. We have extracted in another part from a local paper some interesting particulars of this new line of transit, and its grand and chief feature, the new port and town of Fleetwood—a right legitimate offspring of the railway system—for which we can run no risk in predicting a career of great and early prosperity.

—o—

Mr. Hodgson Hinde has given notice of a motion for a Select Committee to "inquire into the present arrangements for the transmission of the mails between London and Edinburgh, with a view to ascertain whether greater expedition cannot be effected, and increased accommodation afforded to the correspondence of the intermediate districts."

—o—

The consideration of the Report on the Railways Regulation Bill stands once more deferred till Monday next.

—o—

A return has been ordered on the motion of Mr. Gillen, "of the amount of mileage and composition for duties on railway and stage carriages respectively, in the years ending the 5th of January, 1839, 1840, and 1841.

RAILWAY OFFENCES AND OFFENDERS

The most serious case of offence which has come under our notice since our last, occurred on the Eastern Counties' line on Sunday. The person whose duty it was to see to the proper arrangement of the switches at the Ilford station, having *only an hour and a half* to adjust them between the passing of a down and an up train, left them as they were, after the passage of the down train, the consequence of which was, that on the arrival of the up train the engine was thrown off the line and the engineer nearly killed. Had the accident not occurred at a station, on approaching which the speed of the train was reduced to a very slow rate, the consequences might have been vastly more disastrous. We quote the following details of the accident from the *Times*:—

"On Sunday evening, at 10 minutes before 5 o'clock, an accident of a serious nature, by which an engineer on one of the trains received great injury, occurred on the line of the Eastern Counties' Railway, and which, as too often happens in such cases, was occasioned by extreme negligence. The following particulars our informant received from the injured party:—His name is William Cox, and he is 26 years of age. The up-train left Brentwood at 1 o'clock, on its way to London: it arrived at Ilford about 10 minutes to 5, when, owing to the points of the rails at the station not being properly shifted, the engine ran off the rails, and at the same instant the foot-plate, as it is called, on which Cox was standing between the engine and the tender, owing to the violent jerk it received, rose out of its place, and the poor fellow's right foot and leg were jammed between the foot-plate and tender with great violence. Fortunately, the steam of the engine was immediately turned off, or the calamity must inevitably have been more frightful—but as it was, no other person was injured. Poor Cox was placed on a litter and conveyed by the train to the Mile-end station, and thence he was carried to the London Hospital, where his leg was found to have been so dreadfully injured that it is feared amputation will be necessary. Two or three pieces of bone were extracted from his leg at once. When the same train went down to Brentwood about an hour and a half before, the points of the rails were shifted in the direction in which the train was then proceeding, and not afterwards reversed, as they should have been, in readiness for the train's return. This neglect on the part of those whose duty it was to see the points right, led to the accident."

May we presume to ask what has been done with the offending party? We have not as yet seen any notice of his having been either fined, imprisoned, or dismissed. Is it true, as we have been told, that he is but a lad under twenty years of age? And that he has been already twice suspended since he has been in the Company's service, and once actually discharged from it? What can be the superlative merits of the lad that he should in spite of all these antecedents, have been reappointed to a situation of such trust and importance, that the lives and limbs of whole trains of passengers, are dependent on his care and attention? Is any mere lad, with the thoughtlessness common to mere lads, fit for such a situation? We regret to be under the necessity of asking two or three questions, more which are founded on information supplied to us of a character too authentic to permit of our leaving them unasked. Is not the offending party a protegé of one of the Directors? Has he not been indebted to the friendship of that Director for his repeated restorations to office and salary? Is he not the son of the housekeeper or landlady of the said Director? And is not that Director Mr. Charles Hood?

Next to the preceding case, we must rank the following, which is reported of the Manchester and Leeds Railway Executive in the *Manchester Courier*:—

"At the police-office, Rochdale, on Tuesday last, Thos Metcalf and wife, two aged and very respectable persons, were brought up by two of the Manchester and Leeds Railway constables, from Blue Pitts station. Metcalf stated that he came from Tottington Lower End, but he and his wife had been to Todmorden, on Sunday, to the funeral of his mother, aged 82 years, and on Monday they paid 3s. each at Todmorden to go by the railway to Heywood: they arrived at Blue Pits at 10 o'clock at night, and were turned out, with orders to walk on the road while the conveyance came up. They were followed by a constable, who demanded their tickets, which they refused until they got to their destination, upon which the railway constables had put them into the lock-ups. Mr. Hunt, solicitor, appeared for defendants, and produced the tickets. The magistrates dismissed the case, and found great fault with the railway authorities. Mr. Hunt stated he would enter an action against the Railway Company."

We are not sufficiencly acquainted with the provisions of the Manchester and Leeds Act, or with their *legalised* bye-laws, to be able to say whether the constable was legally justified in subjecting this aged and very respectable couple to "durance vile" for refusing to deliver up their tickets till they had got their tickets' worth; but of this we are quite certain, that there is extreme danger of an English jury having the greatest possible inclination in the world to award the sufferers heavy damages for the harsh—indeed cruel—treatment they received. The Manchester and Leeds Railway Directors have hitherto maintained a high character for active and discreet management (their excessive fares always excepted), and if they would preserve that character they must make good provision against the recurrence of any more such cases of *innocent offenders*.

At the Justice Room, Hemsworth, (May 13,)—

"Joseph Marples, of Eckington, carpenter, was charged by one of the police-officers on the North Midland Railway with trespassing on the line on the 17th day of April last. It appeared that Marples was found on the railway in a state of intoxication, and on being remonstrated with used abusive language. He was convicted in 10s. penalty and 12s. costs."

The only thing at which one is startled in this case is the amount of the *costs*. Penalty, 10s! costs, 12s.!! Penalty 100! costs of recovery 120!!! It is a shame to England that even *criminal* justice should be so dear.

The following case is furnished by the London Police Reports of the week. It relates to the South-Western Railway, and contrary to what recent experience would lead one to anticipate, the Executive of that concern do *not* seem, in this instance, to have been at all to blame.

"Union-Hall.—Yesterday Mr. Charles Goode, a member of the United Service Club, was charged with causing a disturbance at the terminus of the South-Western Railway, and obstructing the officers in the execution of their duty.

"Mr. Davis, the superintendent of the carriage department, stated that on the preceding evening, on the arrival of the last tram at Nine Elms, a considerable disturbance was created by the conduct pursued by the defendant, who had come up in one of the carriages from the Wimbledon station. When he got out of the carriage, he wanted to force his way into an omnibus, and although informed by the conductor that it was full, the defendant still persevered in trying to obtain a seat, and when one of the passengers interfered and remonstrated with him, he was spit upon by the defendant, who was at length dragged out of the vehicle by the conductor. When his (Mr. Davis's) attention was called to the spot, he was threatened to be reported to the Directors by the passengers for permitting such conduct on the part of the defendant, and when he remonstrated with the latter on the impropriety of his conduct, he was informed that he should have an action brought against him—and an individual who accompanied the defendant expressed his determination to call on Mr.

Digitized by Google

Easthope to represent his (the superintendent's) conduct, and have him discharged from his situation. The complainant added, that the defendant's behaviour throughout was of such a nature that he was compelled to give him into the custody of one of the railway policemen, and that the disturbance he occasioned at the terminus was an impediment to the business then going forward.

"The conductor of the omnibus in which the defendant insisted on having a seat, confirmed Mr. Davis's account as to the offensive conduct pursued by the defendant. The witness added, that he heard the defendant, on being remonstrated with by one of the passengers in the "bus," spit at him, and use very improper language when told that there was no room for him.

"The defendant denied that he was the aggressor, and said that he was most rudely treated when he got into the omnibus by one of the passengers, who attempted to eject him, and in doing so struck him on the breast. At the time he first got into the vehicle he was not aware that it was full, and in making his way to the other end of it he experienced the treatment described, and on attempting to resent which he was most unceremoniously dragged out by the conductor, and afterwards given into custody by the superintendent, and detained some hours, until he procured the requisite bail for his appearance. He added, that he considered that he was extremely ill-used, and that the passenger in the omnibus who assaulted him was the aggressor.

The defendant then called a witness to confirm his account of the transaction; after hearing whom the magistrate said, that however blamable the conduct of the passenger in the omnibus might have been to the defendant, yet that the offence with which the latter was charged, namely, causing a disturbance at the railway, was made out.

"The Secretary of the railway said, that the Directors did not want to press for any penalty on the present occasion, and if the defendant expressed his regret for his conduct on the occasion, they would be satisfied.

"The defendant having complied with the required suggestion, was discharged.

We close our weekly list with a case from "over the border," which presents a striking contrast to that of the Eastern Counties' Railway, before animadverted upon:

"The Directors of the Joint Line of Railway between Glasgow and Paisley, on Thursday morning, apprehended David Dickson, one of their servants, whose very responsible duty it was to take charge of the points near the Glasgow station, and who had been absent without notice or leave, and without justifiable cause. He was, on Thursday, summarily tried and convicted of the offence, before the sheriff as one of the justices of the peace for the county, under Lord Seymour's Act, and being unable to pay a fine of 5*l.*, which the sheriff imposed upon him, he was sentenced to 30 days' imprisonment. We believe this is the first conviction in this county, under the above Act; and we are glad to see that our authorities show themselves so much alive to the responsibility which attaches to railway servants, and that they are determined to support the Railway Companies in their endeavours to enforce discipline."—*Glasgow Courier.*

The *Scotch* switch-tender is imprisoned for 30 days for being simply absent from his post without leave, without any damage ensuing to anybody; but the *English* switch-tender, who neglects his duty to an extent which has nearly cost one man his life, and placed many more in extreme jeopardy, is—What?—For anything that has yet come to our knowledge, not punished at all!

PARLIAMENTARY PROCEEDINGS ON RAILWAYS.

BELFAST AND CAVEHILL RAILWAY.

May 20.—Petitions against the Bill from George Augustus Chichester May, Esq.; Grand Jurors of the county of Antrim; Robert Thomson, Esq.; and Trustees of certain Turnpike Roads leading from Belfast to Antrim, and to the Copeland Water; referred to the Committee on the Bill; counsel ordered.

GLASGOW AND DUNDYVAN JUNCTION RAILWAY.

May 14.—Bill reported; motion made and question put "That the Bill be re-committed;" the House divided, ayes 40, noes 70.

Petition of David Robertson, praying that the Bill may not be re-committed; to lie on the table.

LONDON AND GREENWICH RAILWAY.

May 20.—Petition of Commissioners for paving the East Division of Southwark, against; referred to the Committee on the Bill; counsel ordered.

MANCHESTER AND LEEDS RAILWAY.

May 18.—Royal assent given to the Bill.

NORTHERN AND EASTERN RAILWAY.

May 18.—Royal assent given to the Bill.

SHOTTS AND WILSONTOWN RAILWAY.

May 18.—Report further considered; amendments agreed to; other amendments made; Bill to be engrossed.

SOUTH-WESTERN RAILWAY (No. 2.)

May 20.—Reported; to be engrossed.

WEST DURHAM RAILWAY.

May 14.—Lords' Amendments agreed to.
May 18.—Royal Assent given to the Bill.

DUKE OF CORNWALL'S HARBOUR AND LAUNCESTON AND VICTORIA RAILWAY COMPANY—ADJOURNED MEETING.

The adjourned meeting of this Company was held at the London Tavern, on Thursday last. John Ramsbottom, Esq., M.P., in the Chair.

The Secretary (Mr. Dyson) read the advertisement calling the meeting.

The Chairman stated that it had been expected the arbitrator in the long pending dispute between the Company and their late Secretary (Mr. Ross), would by this time have pronounced his award, but that such not being the case, he believed there was no business to bring before the meeting.

The Chairman further stated that as the next half-yearly meeting, under the Company's Act, must take place in the course of July next, and that was close at hand, it would not be necessary to make any further adjournment of the present meeting.

The meeting than broke up. The half-yearly meeting will, we understand, take place on the 29th of July.

LINES WRITTEN ON THE OPENING OF THE GLASGOW, PAISLEY AND GREENOCK RAILWAY.

Hark! hark! what is that in the distant plain
Careering in thunder along?
'Tis that fleet, fleet horse, with his railway train,
Unerring, gigantic, and strong.

Untired he approaches, unspurred he moves on,
Though he sweats, pants, and puffs all the way;
No storm can o'erpower him, his strength is unknown,
And he needs no repose night or day.

On, on to the goal, over valley and mound,
How wondrous and rapid his race,
Afar as he speeds, rock and river resound,
'Neath the tread of his fire-brightened pace.

His rival the ship, with stern, rudder and sail,
Now lashing along in her pride,
He leaves far behind to the sport of the gale,
And the surge of the billows and tide.

To-day in his triumph, on summit and tower,
To welcome him, wait the gay crowd;
He comes in the pride of his beauty and power,
Saluted with cheers long and loud.

Encircle his brow with a branch of Green-oak,
Let a statue of Watt him bestride;
To the bright car of commerce the gallant steed yoke,
And with him round the world we'll ride.

W. M'O.

Paisley, 30th March, 1841.

Galloway's Improvements in Propelling Carriages on Railways.—On the middle of the axle of each pair of running wheels a small double flanged wheel is placed in contact with a moving rail in the centre of the line of railway, supported on anti-friction wheels. Motion is given to this rail by a stationary engine, which propels the carriages by contact with the small wheel. The claim is to the mode of propelling carriages on railways by the application of a moving rail or bar, acting against a wheel or wheels, of different diameter to the other wheels of the carriage, by which means carriages can be propelled on railways at a much greater velocity than the speed of the moving or propelling rail or bar.—*Mechanics' Magazine.*

—o—

Midland Counties' Railway.—An accident occurred on this line near to Barrow-upon-Soar, on Friday. A glazier, of Sileby, named Anthony Sewell, together with his son, went to the station at Barrow, and on the arrival of the train the engine ran against the father and forced him against the wall, from which he rebounded on the rails and was run over, suffering such injury in his person as to cause his death the following morning. At the inquest before Mr. Gregory, on Saturday, it was conclusively proved that no possible blame was imputable either to the engine-drivers and conductors, or to the station master, and the persons in waiting there. The unfortunate deceased while waiting for the train had left the platform, and crossed the lines; on his endeavouring to recross to the platform, the train was slowly approaching, and although loudly called out to, and most earnestly entreated either to stand still or go back, he persisted in his course, and was struck down by the engine. Every assistance was rendered, but the injuries were of such a nature that it was unavailing.—Verdict, "Accidental death."—*Derby Mercury.*

Market Weighton.—It is stated that a very strong disposition is manifested amongst the agriculturists and others of Market Weighton and its surrounding neighbourhood for the formation of a railroad from that place to the Howden station, on a plan similar to the Pickering and Whitby establishment, for the transit of corn, bricks, tiles, lime, and various other articles, which have now to be sent by a tedious and expensive canal conveyance; and there appears little doubt, should the proposal meet with the co-operation of the Hull and Selby Railway Company, that both parties would be mutually benefitted.—*Hull Times.*

Hint to Railway Secretaries.—When you have occasion to communicate to the Lords of Trade and Plantations the smashing to death of two or three of her Majesty's liege subjects, and the grievous maiming for life of a dozen or so more, don't say, "I have the *pleasure*," or "the *honour*," to inform you, &c. It looks funny—as if you were *clerk of the shambles* to some Great Slaughter Company.

The Manchester and Birmingham Railway.—The works on this railway beyond Stockport are progressing rapidly, and there is no doubt that the whole line to Crewe will be ready for public traffic early in the next year. The distance to London by this line will be 12½ miles less than by the Grand Junction. We understand that the following are the stations at present proposed to be made:—

Manchester to Rushford	2 miles
Rushford to Stockport	3 ,,
Stockport to Cheadle Hulme	3 ,,
Cheadle Hulme to Handforth	2 ,,
Handforth to Wilmslow	2 ,,
Wilmslow to Chorley	1¾ ,,
Chorley to Chelford	3 ,,
Chelford to Holmes Chapel	6 ,,
Holmes Chapel to Sandbach	3¾ ,,
Sandbach to Crewe	4¼ ,,
Crewe	30¼

—*Staffordshire Gazette.*

The Lancaster and Preston Railway.—We have much pleasure in perceiving that the traffic on this railway is rapidly increasing, which is especially the case in the carrying of goods. A very long train started on Tuesday last from Mr. Hargreaves's warehouse, consisting of thirty carriages, besides a number of empty coal trucks. It contained about eighty head of fat cattle for the Manchester Wednesday market, and also a number of sheep, and a great weight of heavy luggage. They were all drawn by one of Mr. Hargreaves's powerful engines.—*Lancaster Guardian*

Token of Respect.—Messrs. Hawthorn, of Newcastle, and Mr. Stephenson, of Darlington, in conjunction with the contractors lately engaged in the formation of the Great North of England Railway from Darlington to York, have decided on presenting T. Storey, Esq. (chief engineer in the construction of the line), a dinner service of massive silver plate, the value of which is about 400*l.*—*Newcastle Chronicle.*

PREVENTION OF RAILWAY ACCIDENTS —CLAIM OF PRIORITY OF INVENTION BY PROFESSOR Mc GAULEY.

To the Editor of the Railway Times.

SIR,—I think it right to trouble you with a few lines, with reference to the apparatus for preventing accidents on railways.

Justice to myself requires me to state, that I communicated to the public gratuitously the principle, and some contrivances, for stopping trains perfectly independent of the driver, by means of very simple apparatus fixed to the engine, and between the rails. Most assuredly, if priority of publication gives me a right to be considered the inventor, that right is rendered stronger, by my looking for no remuneration, in any way, for a contrivance, which promised so much advantage to the public.

Two patents have been taken out founded on a principle thus publicly made known by me, one of them by Mr. Birch, dated November 12, 1840, the other by Mr. Walter Hancock, dated November 26th, 1840. Now, my letters to several Railway Companies, communicating the principle and a sufficient number of details, were dated *November 2nd*, 1840, and the answer received from the London and Birmingham Railway Company was dated November 4th, 1840, one from the Great Western, November 6th, 1840, and one from the Dublin and Kingstown, November 9th, 1840.

I used, besides, every other mode in my power of giving publicity to the invention.

I trust, Sir, that I need not apologise for trespassing on your attention on so important a subject.

The insertion of these few lines in your valuable publication will greatly oblige, your obedient servant,

JAMES WILLIAM Mc GAULEY,
Professor of Natural Philosophy to the National Board of Education.

Office of Education, Dublin, May 15th, 1841.

RAILWAY TIME TABLES.

To the Editor of the Railway Times.

SIR,—I observe that the Directors of the Croydon Railway have advertised in their last notice that they will make no alteration in future in the times of starting their trains except on *the first day of the month*. Now I cannot help thinking that this arrangement would conduce greatly to the convenience of the public, if it were universally adopted on all railways. Then if all notices were dated, a passenger would be sure to know whether he had got the last notice in his hand, and a greater degree of usefulness would be given to two excellent publications which I have lately seen, "Bradshaw's Time Table" and "Gadsby's Railway Companion," each published monthly at 3d., and containing the times of starting of all railways.

I am, Sir, your obedient servant,
A RAILWAY TRAVELLER.

May 12, 1841.

FARES ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—In a recent number of your paper, you reviewed an American work on railways, which you pronounced to be "a very masterly performance—the results approximating in every instance so nearly to the truth as to be of the utmost practical value," and you state the general result to be this, that "there is in the case of every railway a certain constant quantity which may be safely added to the actual cost of conveying each passenger wholly irrespective of the cost of construction."

Now, as I am a plain man and no mathematician, I am unable to follow the author through such elaborate calculations, but am obliged, if I accept the conclusions at all, to take them on trust, provided they are not inconsistent with the results of experience." Will you have the goodness, therefore, to inform me if these results have been confirmed by the experience of those railways who have hitherto paid no dividend? Or have they given the scheme a fair trial? For instance, the Croydon Railway announced in their last Report, that their receipts were not adequate to make a dividend, nor even to pay the interest on their bonds: in other words, their receipts were just equal to the cost of conveyance. Now, as the public are accustomed to regard the managers of that concern as some authority on these subjects, I think it would be conferring a great benefit on the railway public, if you would inform them whether that Company have given in their adhesion to this principle; or whether the raising of their fares last year, was in consequence of adopting it? You state that, "so important is the least deviation from that constant quantity that the loss increases merely in the square of the deviation from it." Perhaps, in this case, a loss may arise from a deviation on the side of excess. At all events, if the plan has been tried, it would be very interesting to know the results; and particularly so to all those who, like myself, are disposed to judge by results being.

Mr. Editor, your obedient servant,
A WAYFARING MAN.*

London, 13th May, 1841.

RUSTING OF RAILS.

To the Editor of the Railway Times.

SIR,—Perceiving, in your last paper but one, that you are at a loss to understand why the iron bars of a railway that are regularly used do not rust, whilst those that are only occasionally used do rust: and the reasons that you have assigned being to me unsatisfactory, I will venture to demonstrate the cause. Every carriage upon a railway is acting as an electric machine; the journels of the axletrees rubbing on the surface of the bearings, although lubricated with grease or oil, from the high velocity at which they travel, generate or collect electric fluid—the axle and wheels being good conductors, convey the electric fluid on to the rails, and prevent the oxygen of the atmosphere combining with the iron, and so long as a sufficient quantity of the electric fluid can be kept in contact with the rails no oxidation will take place. I may also add, that when the axle is inclined to heat, the quantity of electric fluid is considerably increased, and should the bearings on the axle grind or cut, every particle of iron cut off is highly magnetised.

Had I time to go further into this interesting subject, I would venture to define the cause of the electric current issuing from the aperture of a high-pressure boiler—a subject that has already caused considerable discussion, but not yet been satisfactorily explained.

A. Z.

May 18, 1841.

[Our correspondent evidently understands science better than jocularity. If he will refer again to what we said, he will see that we did not seriously offer to explain the phenomenon alluded to, though after all it does happen that his explanation, practically resolves itself into ours. *As long* as the rails are in use *just so long* will there be his supply of electric fluid, &c.—ED. R. T.]

BRISTOL AND EXETER RAILWAY.

To the Editor of the Railway Times.

SIR,—From the impartial manner in which your publication seems to be conducted, by admitting free discussion on all practical matters connected with railways, I am induced to say a few words in furtherance of the views of your Bath correspondent, "F." relative to that uncontracted portion of the above railway between Taunton and Exeter. Having some local knowledge of the country through which it must pass, but no immediate interest in whatever line it may take, I in common with my neighbours, cannot be persuaded but that the Parliamentary line (from a spot near to where the tunnelling is to commence, until it reaches within four miles of the terminus at Exeter) is the very worst that could have been selected. The western mouth of this tunnel will, it is imagined, be 500 feet above the terminus, whereas by keeping to the right, following very nearly the direction of the Great Western Canal, in no case will it be necessary to ascend more than 230 feet—which is somewhat about the altitude of the canal above the sea at Exmouth. This plan would bring the railway to the same point as the one intended at Sampford Peverell. From thence two ways would suggest themselves, different from the one contemplated:—The first, by the valley of Halberton and Butterleigh to the river Exe, between Bickleigh and Rewe, where it would again reach the original spot intended; the other, with a saving of a branch of three miles, would be to proceed from Sampford to Tiverton, and follow down the Exe valley to the terminus.

I am aware this detail is more adapted for the consideration of the Engineers employed than for your general readers; but I fear unless the recommendation for an alteration of any kind, comes with an impetus an individual cannot give, it will receive but little attention from Directors, and those about them, who have formed pre-conceived notions of the superiority of their own plans to all others.

It may be, that the reading of these remarks shall induce some shareholders, largely interested in the success of this railway, to inquire further about the tunnel, and the possibility of avoiding it altogether.

I am, Sir, your very obedient servant,
M.

Devonshire, May 15, 1841.

KELVEDON AND BURY PROPOSED RAILWAY.

To the Editor of the Railway Times.

SIR,—You were quite correct in stating that the necessary plans and sections for this scheme were not (and are not *now*) deposited with Mr. Holmes the Clerk of the Peace for Bury Saint Edmunds.

If Mr. Bruff would trouble himself to inspect the plans and sections deposited with Mr. Borton the Clerk of the Peace for Suffolk, he would be convinced that they at least were got up *hastily*, part of them being on tracing paper and the whole in so sketchy and unfinished a style as fully to warrant in my opinion, the statement "that they were got up hastily for the mere purpose of opposing the East Anglian Line," a statement which is borne out by the fact that at the time the plans and sections were left with Mr. Borton, a complete book of reference was omited to be left with him, as is required by the Standing Orders of Parliament; it is true an additional book was filled upon the 3rd April, but this was more than a month too late.

These omissions are I apprehend fatal to the scheme, and no doubt are intended by its concoctors (who well knew the consequence of their neglect) to be used as an excuse for not persevering therein, after it should have answered the intended purpose of shelving the East Anglian line—a purpose which I rejoice to say is not at all likely to be effected, as I understand that line is rapidly making its way, and acquiring an almost unprecedented share of local support in the districts through which it is intended to pass. I beg to subscribe myself,

Your obedient servant,
Q.

Bury St. Edmunds, 17 May, 1841.

EFFECTS OF THE RAILWAYS.—Worksop and the neighbourhood is likely to be benefitted to a certain extent by the opening of the main lines of railways. There are at the present time no less than 22 coaches and mails passing through the town, to and fro, every day. Some few years ago, it was with the greatest difficulty that a coach could be maintained on the road between Worksop and Sheffield, and now there are three running daily.—*Derby Mercury.*

* The reader will find the subject of the proper rate of fares treated of in one of our leading articles.

Digitized by Google

CHELTENHAM AND GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The recent report of the Cheltenham and Great Western Union being more explicit than usual has certainly placed the affairs of the Company in a much more favourable point of view than could previously have been taken of it.

The result is that the cost of the 17 miles about to be opened will be rather under 22,000*l.* per mile, and that on 25th December, 1840, they possessed resources exceeding 400,000*l.* without further calls, or 660,000*l.*, excluding calls yet unmade, placing against which 600,000*l.* for the remaining 24 miles, there would exist a surplus of about 60,000*l.*, being nearly sufficient for the requisite payment to the Birmingham and Gloucester Company, on resuming one moiety of the line between Cheltenham and Gloucester. Details in explanation of these results are subjoined.

This is supposing, however, that the proposed route and gradients by Saperton tunnel and Stroud valley be persisted in. If on the contrary so expensive a plan can be avoided by adopting the system of Capt. W. Moorsom, recommended for the Devon and Cornwall Railway, viz., a governing gradient of 88 feet per mile and a minimum radius of curvature of one quarter of a mile, with a single line of rails, at first costing only 12,623*l.* per mile, there would be a surplus of above 250,000*l.* According to this system a speed might still be maintained of 16 miles per hour with slow trains, 20 with passengers, or on urgent occasions, such as Government despatches, 26 miles per hour.

There is a strong impression that a much less expensive but practicable route could be found which, though rather disadvantageous to Stroud, would be favourable to both Gloucester and Cheltenham; and whilst the Directors might reserve themselves as much as they please as to the course ultimately to be adopted, and however reluctant they may now feel to adopt any great alteration of their plans, it is certainly incumbent on them at least to obtain and communicate needful information on this point, which they can do without much expense and without loss of time, whilst their further operations are suspended. It is desirable to know how practicable and cheap a line can be found from Kemble or Cirencester to Gloucester, making cheapness the paramount consideration, and giving that object a preference to easy gradients, directness of line, or any special consideration for any one of the principal towns in particular; for instance, it might be more advantageous on the aggregate not to pass the main line through Stroud, but to approach it by a branch not of very objectionable length.

There is also a mode whereby the call for funds might be alleviated, which has before been adverted to, viz., an agreement with the Bristol and Gloucester or the Birmingham and Gloucester Companies for them to make that part of the line between Barnwood and Stonehouse, consisting of about seven miles. It is presumable that this might be easily negociated without delay on fair terms, as those Companies have so great an interest in having this link in the chain of railways between the northern and south-western parts of the kingdom rendered continuous throughout at as early a date as possible. Let them have a lease of it for seven years, taking as their remuneration the traffic, with perhaps a condition that any surplus therefrom, beyond 7½ per cent. on their outlay, should be equally divided. Such an arrangement would be fair and advantageous to all parties, and very probably be consented to. The Great Western might have the option of making it on the same terms; or, as they are deeply interested in preventing delay in the completion of all parts of the line, they might undertake some other portion of it.

It being announced that the first 17,000*l.* rent will be wholly divisible on the shares not in arrear, and that future expenditure will (very properly) be considered as chargeable on the further parts of the line, there is now a certainty of income to commence within this year, at the rate of not less than 2*l.* 9s. per share per annum, on 6883 shares, supposing all arrears to be paid up except on the 617 shares forfeited.

No further calls can be wanted for a long time, and before they are required much valuable information will have been obtained, so that considerable reliance can be placed on estimates for the future, as regards both expenditure and receipts.

The causes of the hitherto depreciated value of these shares have been the pressure of calls and the want of explicit information at the general meetings of the Company. Both these evils, it is hoped, have now terminated for ever.

Referring to the revised estimate of November, 1838, of the expected traffic, it was taken at—

Gross	£169,228 6 1
Expenses, one-third	56,409 8 8
Net	£112,818 17 3

equal, if the whole 1,000,000*l.* were expended to above 11¼ per cent. per annum; or on 43½ miles to—

Gross	£3,890 per mile per annum.
Net	2,593 " "
Gross	3,254 per week.
	74 per mile per week.

and no reason has yet been produced why a traffic equal to this should not still be anticipated as the ultimate result.

With these facts and prospects, this railway is now surely entitled to hold rank amongst those of the highest reputation.

Yours respectfully,

F.

Bath, May 12, 1841.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

To the Shareholders.

GENTLEMEN,—At the recent half-yearly meeting, the accounts submitted to you were unanimously received and adopted. Did you so, merely in compliance with the customary forms; or was the balance-sheet such as you really could understand and approve of? For my part, being a shareholder resident at a distance, I was not at the meeting, but I have since received a copy of the Directors' Report and statement of accounts; and, whether it be from stupidity on my part, or from obscurity in the accounts themselves, I confess that I cannot understand them.

The accounts are divided under two heads, viz.—"Statement of Accounts," and "Statement of Receipts and Expenditure." I always thought, that accounts were for the express purpose of showing the receipts and disbursements, and am, therefore, at a loss to perceive from what difference the distinction is here made.

In the "Statement of Accounts," the receipts are put down at 452,887*l.* 7s. 0d., and the expenditure at 437,939*l.* 12s. 0d., leaving a balance in hand of 14,947*l.* 15s. 0d. But, in the "Statement of Receipts and Expenditure," the receipts are put down at 359,537*l.* 18s. 5d., and the disbursements at 344,590*l.* 3s. 5d., leaving a like balance of 14,947*l.* 15s. 0d. How is the discrepancy of 93,349*l.* 8s. 7d., between the two statements, to be accounted for? I have carefully looked over the balance sheet, and can meet with no satisfactory explanation.

It is obvious, that the Company can have received only one amount. The two statements cannot, therefore, be both correct; and unless they are both false, the one only can be true. Now, which is that one? I cannot suppose that the accounts were intentionally made to mislead; the discrepancy, then, must be the result of carelessness in not making the statements sufficiently explanatory. Be the cause, however, what it may, the effect is the same—that the distant shareholder, after reading the document in question, is as much in the dark as to the Company's financial position as ever, unless, perhaps, the item of 93,347*l.* be considered too trifling for the notice of a Company in our present flourishing condition, with arrears of 139,950*l.* on a paid up capital of 328,799*l.*, or about one-third!

I shall be glad if any shareholder who attended the meeting will favour me with an explanation on that point; and, if possible, explain why, in the one statement, the amount received from the Birmingham and Gloucester Company is put down at 77,500*l.*, and in the other at 97,500*l.*, although both statements are made up to the same period—the 25th of December.

I would here beg to suggest, that the half-yearly meetings be held about the same time as on other railways. Why should more than four months be suffered to elapse between the date of making up the accounts and the time of submitting them to the proprietors?

Compared with many other railways, our prospects, though not what we originally anticipated, are yet such as to remove all just cause for despondency. Should the portion of the line from Cirencester to Swindon cost 400,000*l.*, the income of 17,000*l.* per annum, from that portion, will yield dividends at the rate of 4¼ per cent., on the capital invested in the works. Our shares, therefore, with 62*l.* 10s. paid, ought to be worth, at the present moment, 53*l.* each at 20 years' purchase.

It is to be hoped, then, that none of the proprietors will sacrifice their shares at the present ruinous discount, but hold on with confidence.

Let us also delay the execution of the other portions of the line; for it is obvious, that with our present proprietary, there would be no likelihood of getting the calls paid up. The consequences might be fatal to our existence as a Company, were the attempt made. But, let us rather defer for the present the further prosecution of the works till more accurate estimates can be laid before us of the cost of the remaining portions of the line. We can, then, either carry out the design as originally intended, or adopt some modification proportionate to our means and suited to the exigencies of the occasion.

I remain, Gentlemen, your obedient servant,

CYMRO.

NORTH MIDLAND RAILWAY.—The contract for forming the Northwingfield branch railway was let last week, at Derby, to Mr. Radford, of Alfreton. The sum tendered for was 5,500*l.*—*Derby Mercury.*

RAILWAY DIRECTIONS.

To the Editor of the Railway Times.

Sir,—"A Railway Shareholder" differs from me so entirely (as he himself observes) on the proper qualifications of Directors, and the system which should be adopted with regard to them, that we shall hardly agree about the means of reform. We agree in these two points only, viz. that the state of things is decidedly bad, and that shareholders are become aware of the necessity of some considerable change. On the present system, however, or any similar one, his constitution of Directors is as good as any other—perhaps the best. It may have the good effect of saving some useless salary, breaking up cliques, and preventing a few "unholy compacts;" but effective Direction it cannot in the nature of things give. Directors as they are, or as he would have them, will still be nearly useless—or worse—and any modification of the class will be little better. The magic number of "eight" inefficients will not make one efficient any more than as many bad sixpences would make one good one. Directions without Directors—the nominal ones instead of directing others, being directed by them—led by the nose—that noble organ. *Lucus a non lucendo.*

Rather too literally does he adopt Dr. Franklin's maxim that "in the affairs of this life men are not saved by faith [credulity] but by the want of it." He calculates, it would seem, on his Directors—even the "eight"—being all rogues or becoming so. This feeling or opinion should prevent him from employing any servants, or at least from placing confidence in them. But there is a cure, and a very curious one for this roguish tendency of mankind. One Director is to be taken almost at random from the share-list, then another for his holding, and a third for residence near the line—the process to be repeated *pro re natâ*. Neither is one in any case to be trusted by himself; another rogue is to be set to watch him.

But there are, it seems, "Managers," (Oh! oh!) who really do the work, devote their whole time to it and are adequately paid. And then it is triumphantly asked, "Why should the line be taxed with another set of highly-paid officers?" These "Managers," I suppose, are a sort of "Viceroys over the kings," whose "new blood" might be likely to run riot in their novel office and brief authority. Instead of two sets of highly-paid officers all along I have declared that there should be *one* only, and that one set truly efficient. The Director, the *bona fide* head of his department. Much rather would I be altogether without Directors than have such as a "Railway Shareholder" offers me, for then would these "Managers" become really responsible to the proprietors.

With "glory" I labour not to cover the shareholders any more than your correspondent; with "butcher's meat and flannel" I had much rather provide them. And his conclusions as to "pelf" I fully adopt. His Directors I object to because they know not how to procure me "the largest possible dividend." That is indeed "the question before the Court."

Notwithstanding "A Railway Shareholder's" reconsideration of the subject, "and his philosophical views," I must maintain all my opinions on the qualifications of Directors, more especially as to roads and engines. I still think that a much better chance of success exists in employing accomplished men, than in drawing names from a hat or an alphabet, or any similar source. Road-making, though treated with so much levity, has, I beg to remind you, Sir, been in all ages a very difficult operation, and has put in requisition the resources of the ablest men. Napoleon, no mean judge, was particularly careful in selecting his "road-makers." His success was in proportion, and it has been often said that his roads give him as good a claim for immortality as his battles. Macadam again has acquired a European reputation by his road-making. A verb even has been formed from his name in many of the modern languages of Europe. If indeed I was disposed to make "a flourish," it would be easy to do so by pointing to the ways constructed by the ancients—Appian, Æmilian, Egnatian, &c. &c., which have conferred immortality on their makers, and existing portions of which are still eminently beneficial to the countries they traverse. Our own island derives no slight memorials of the Romans from their roads. The construction of the Appian way is most ingenious, and well deserves to be studied by all concerned in such matters. Then as to the "inglorious materials of pelf," perhaps economic and mercantile ability is hardly more displayed in anything than in the providing and purchase of them.

The mode of appointing Auditors recommended by "A Railway Shareholder" seems unobjectionable, care of course being taken that the individuals were acquainted with business generally. In your last number, Sir, appears a proposal for holding half-yearly audits and publication of accounts, which is well worthy of attention. "A Railway Shareholder" concludes with insisting on the qualifications of his Directors being observed; but what qualification does he acquire beyond a place in the share-list? All the rest, it seems, "is sheer dupery."

Without repeating what has appeared in former letters, I may observe, that the origin of the present admitted evil is to be found in shareholders having adopted erroneous views on the nature of the mode of direction required for these undertakings. They supposed, that if some opulent proprietors in whose integrity they had confidence were appointed Directors, the service was then sufficiently provided for; but such persons (with respect be it spoken) are not equal to the duty. Still the public looks to the Directors—clamours against them when things go wrong—and meanwhile the real agent escapes notice, and consequent responsibility. So the result is, there is neither direction nor responsibility. The Director cannot manage what he does not understand—cannot know when his subordinates are going wrong—nor have, practically, any authority over them. He is made aware of their ill doings only when they become manifest to all the world. The subordinate again is too obscure to be responsible to the shareholders. So when any mishap occurs—small or great—(as a line costing 58,000*l.* a mile, while the estimate was about half as much,)—they well knowing that the Director cannot help himself, content themselves with a little angry talk, or a few letters in your journal, while the real offender keeps within the shade and escapes by his obscurity. Observe the difference in the case of the engineer. He is made indeed to answer for the deeds of his employers, and no shuffling off the responsibility can avail in his case. Again, men in office for a year or so only, cannot exert themselves with effect, even if by chance capable and desirous to act, and they have besides little motive to do so.

An active revolution in the matter is called for—organic changes—something more than reform. Why should not young men be bred to the business of railway direction, as well as to engineering? What is there "Utopian" in this. The real Utopian is he who expects that incompetent, unpaid, often changed, men on the one hand, linked on the other with adroit irresponsibles, should well conduct any affairs. Direction requires as high qualifications as engineering, and would be equally remunerated.

We hear much of the spread of scientific knowledge. To railways it is peculiarly applicable and valuable. Some persons on the line must possess a certain portion, and if the Directors are themselves unprovided, on others must they be wholly dependent. The Director should be the head of the employés in his department, and the able well-qualified head. Do you seriously expect this from one whose previous pursuits have no relation hardly to railway work, who is turned out in a year, and then liberally presented with 150*l.*?

Directors, as they should be, would have the means of conducting the work well, and would be influenced by far higher motives to good conduct than the mere expectation of a dividend. They would have before them the hope of keeping their places—their existence—the fear of being driven from them with disgrace and ruin. Such men would ferret out abuses, break up "unholy compacts," introduce economical methods, and improvements generally, much sooner than "eight," often somnolent shareholders dozing among their money-bags. They would have reputation, preferment, advancement, all in view.

Shareholders should adopt the common sense principle of obtaining the services of competent persons to perform their business, of rewarding them liberally, and of retaining them when found. This is the only remedy—not the pitiable contrivances about drawing names from share-lists.

Without full acquaintance with railways and their adjuncts—without devoting their whole time and powers to them—men cannot be fit for Directors. But can this be expected from shareholders, who have often other matters to attend to, who are neither fitted for the office nor the office for them?

I am, Sir, your obedient servant,

C. D.

18th May, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—In confirmation of the statement of your correspondent, "A Leeds Shareholder," that the Manchester and Leeds coaches are still running, notwithstanding the opening of the railway, I find an advertisement in the Manchester papers of Saturday, announcing the hours of arrival and departure from *one* coach office, (the Royal Hotel) of not fewer than two mails (the Manchester and York morning and evening mails,) and four Leeds and Manchester stage coaches, besides one stage coach between Manchester and Huddersfield. I think there can be little doubt that the reason for these coaches still obtaining support on the old route, is to be found in the high fares by the railway; and therefore, whilst I am disposed to place more confidence in the zeal and business habits of the Directors than "A Leeds Shareholder" seems disposed to do, I must join him in inviting their prompt and serious attention to the propriety of revising their scale of charges to passengers.

It is to the superior cheapness as much as to the superior speed of railways, that our leading lines owe the great traffic which they have already secured. Rapid transit and low fares induce those to travel who formerly never dreamt of venturing beyond the boundaries of their own parishes, and those who were previously in the habit of travelling now take two, or three, or four trips, where in old times they would have rested content with a single journey. The facility of locomotion, and the moderate charges which most railways offer, create, in fact, new tastes in the surrounding population, and convert the *adscripti glebæ* into citizens of the world. When, however, these two great reasons for rambling—speed and cheapness—are absent, the ordinary coach traffic is not increased at all by the railway, but is divided between it and the vehicles previously on the road. This appears to be the position of the Manchester and Leeds Railway. The London and Birmingham, with comparatively low fares, has at least trebled the number of passengers travelling between its termini; the Manchester and Leeds, with high fares, does not seem to have increased the number of passengers at all. Let our Directors, then, follow the example of the London and Birmingham, and see what can be done by coaxing the locomotive propensities of the public into action.

I know the hazard of alterations of this description, and the difficulty of retracing a false step once taken; but there could be little risk of *loss* in announcing a *cheap day* once a week, or even two days—say Sunday and Monday—for three or four successive weeks, by way of experiment. Begin with charging 2d. per mile first class, and in proportion for second and third class, for all places distant from each other more than ten or perhaps fifteen miles, leaving the shorter distances at 3d. for the present. This would be strictly equitable, for it should be remembered, that our charge of 3d. per mile on the through journey

Digitized by Google

from Manchester to Leeds is, in consequence of the circuitous route, equal to a charge of nearly 4½d. per mile on the actual distance between the two towns. If this plan should be found to answer expectations, then the arrangement might be rendered permanent and extended to the whole week and to all the stations; if, on the contrary, it were proved to be based on false premises, it might be abandoned without inconvenience to the Company.

Or suppose the Directors were to reduce the fares to passengers going to and returning from long distances on the line on the same day. This might encourage pleasure trips, and be productive of beneficial results to the treasury.

With "A Leeds Shareholder," I agree in thinking that our line is a good one. The present complete prostration of trade is very much against it, passing as it does exclusively through the distressed districts; but ultimately, with proper management, there can, I think, be no rational doubt of its prosperity.

I know, Mr. Editor, the value of your space, and, therefore, having briefly thrown out my hints, I shall no farther intrude on your columns, than to subscribe myself,

Your very obedient servant,

ANOTHER LEEDS SHAREHOLDER.

London, 15th May, 1841.

P.S. Can any of your subscribers furnish a complete list of the coaches now running between Manchester and Leeds and the intermediate towns, with the fares? How does the negociation for carrying London passengers progress? And is it true that the Midland Counties' Directory and the London and Birmingham oppose it? The York and Manchester mails are to be discontinued after the first of June—What does the Post-office give for the conveyance of the letters? And how many passengers will it bring on the line? Are any other mails, the Leeds for instance, carried on the railway?

THE SOUTH WESTERN RAILWAY.

To the Shareholders.

GENTLEMEN,—The consequences of evils I have so long vainly endeavoured to avert from you, by pointing to them in time, are now beginning to show themselves. The Editor of the *Railway Times* too, more alive to your interests than yourselves, has told you what should be done. It is really lamentable to see a good line, with a capital of 2,500,000*l.* at stake, going fast to ruin through your own apathy. When will you think the time is come that justice to the public—since your private welfare is no motive to you for interference in your concerns—requires that you should throw aside your habits of indolence, and become useful members of society?

All Surrey and Hampshire are in arms against the stupid or wicked conduct of the managers of the Southampton Railway. They do not keep time, be it fast or slow; they even, to prevent complaint at their being *any time* in performing the journey have discontinued mentioning, in their time bills, any hour of arrival; and the result is, as the Editor truly states, that the travelling is little faster than by a horse coach; they have increased fares in some cases 50 per cent., which were before fixed at a moderate and fair price; there is neither order nor method: in short, your line, from incapacity—an attempt at exaction—a stupid and low indifference to public opinion—is in a pitiable condition. And that it is so, is your own fault alone; you permitted a Manchester Chairman to foist upon you an increase of Directors, when all other Companies are reducing the number of those officers, that increase being made up of private friends of the Chairman—men moreover utterly ignorant, from their distance from your line, of the wants of the South Western, and who without thinking of the convenience of the traveller, or conciliating your customers, have unnecessarily raised your prices and created universal disgust. You may or may not, for a month or two, profit by this unwise proceeding, but you may be assured that its ultimate effect will be the same as that of the silly fellow who killed his goose to get the golden egg.

The only hope there is of your property not being ruined, is for you to change the Directors who are perfectly incompetent. You are in that situation that nothing is risked by change—*any* change cannot place your affairs in a worse position, and now, therefore, is the time for trial of a new plan. Call then, without delay, a special meeting, and appoint *eight new Directors, taken from the Share-lists in alphabetical order, for residence near the line, and for largest holding*; they can but be incompetent, and I will answer for it, they will not have the assurance to go to Parliament for new Acts without consulting you, nor enter into ten years' contracts by private agreement, nor pay dividends out of capital to keep shares at a false price, nor leave the whole management to clerks and porters, nor seek to repair the errors of their direction by taxing the traveller with excessive fares. Ponder this well, for it is worthy your attention; and having resolved, act with promptness and decision.

A RAILWAY SHAREHOLDER.

THE SOUTH WESTERN HIGH FARES.

SIR,—The public is already indebted to you for the exposure of many abuses by which they suffer on the different railways, and I trust you will not overlook the extortion practised by the South Western Company, in their late advance of fares. It is impossible to say how often this experiment may be repeated, now that they have succeeded in driving away all competition, except in the short distances from London, and our only protection is in the public press, which I am sure, as far as you are concerned, will not be called upon in vain.

If some increase of the fares was necessary, what can be said of the arbitrary and unjust scale which has been adopted, and particularly as respects Weybridge, whence I am in the habit of constantly travelling? The second-class fares at this station are raised just 50 per cent., while those to Southampton are raised only 16 per cent., to Woking 14 per cent., and to Farnborough 10 per cent. Coming nearer to town; at Walton they are raised only 25 per cent., and for the shorter distances—Kingston, Wimbledon, and Wandsworth (where, be it observed, the coaches continue to run!) there has been no advance at all. Thus, Weybridge has been singled out as the highest point of the ascending and descending scale, and the innkeepers in the neighbourhood have assured me that it will be almost their ruin, if the whole increase is persisted in. Had the advance been from 2s. to 2s. 6d., as at Walton, I do not think there would have been any complaint, though it would still have been hard that the shorter distances should be excepted altogether, but a rise from 2s. to 3s. is surely unreasonable. I have already addressed a temperate appeal to the Directors upon the subject with my name, and as I have been in the habit of paying them 7s. or 8s. a day, I thought my remonstrance might at least have been honoured with a reply. I can only suppose they have received so many letters upon the same subject, that they find it impossible to answer all; but if this be their excuse, it only confirms the magnitude of the evil complained of.

I am, Sir, your faithful servant,

—*Times.* A HEAVY SUFFERER.

THE SOUTH WESTERN ACCOMMODATIONS.

SIR,—It is now some time since a small colony of those active little animals, known to entomologists by the appellation of *pulex irritans*, and to the vulgar by the name of *fleas*, established itself in the first class carriages of the Southampton Railway. These fleas were at first temperate in their habits and moderate in their exactions on the public, only levying contributions when hunger and necessity compelled them to do so. By degrees, however, as their numbers augmented, feeling that they had acquired a certain position in society, and growing more and more bold as their depredations were visited with no other punishment than the passing curse of the unfortunate traveller on whom they fed, their audacity had reached to such a pitch that, like another set of rapacious blood-sucking animals now feeding on the public, whom they resemble in more points than one, they are become a perfect pest to society; and it is impossible to travel in the same train with them with anything like comfort, and without losing one's temper and patience, as well as a certain quantum of blood.

No later than last Saturday, coming by the night train from Southampton to town, my fellow-travellers and myself were prevented enjoying one moments rest by the constant attacks of these carnivorous little kangaroos. As this is not the first time I have experienced the annoyance, and as the nuisance seems likely to increase in the same ratio as the propagating powers of these tormentors, which are known to be very great, I think it only right that the attention of the directors or managers of the railway should be called to the subject of complaint.

I am, Sir, your obedient servant,

—*Times.* A VICTIM.

EDINBURGH AND GLASGOW RAILWAY

To the Editor of the Railway Times.

SIR,—The whisper is that a flag of truce is now really flying to try and effect an adjustment of the Directorial differences in this great undertaking. The Edinburgh Directors did serve an interdict (equivalent to your Court of Chancery injunction *ex parte*) on their Glasgow brethren, which of course, till removed, stops all procedure on the resolutions passed on 22nd February. It is said, the Glasgow Directors, in place of meeting this question before the judge, have very properly suggested a reference to some person of character; this you will, I dare say, recollect was thrown out as a suggestion a good bit since, but, as we say in the north, "it is good that comes of evil," and I cannot for a moment doubt that both parties will accede to the proposal. The shareholders in general will have a salutary lesson read to them by what has taken place in this matter. It ought to teach them not to place too much reliance on Boards of Direction; one and all of them are improved by a course of drilling. It will teach Boards too, not to place too much reliance on their own absolute wisdom.

A SHAREHOLDER.

May 15, 1841.

IMPROVEMENTS IN RAILWAY MACHINERY.

To the Editor of the Railway Times.

SIR,—In trespassing on the pages of your ably conducted journal, I being a mechanic, more accustomed to wield a hammer and chisel, than the pen, would humbly beg your and the public's indulgence for all grammatical errors and faulty style of writing. I have been induced to address myself to you, in the hopes of claiming the honour, though I may not reap the benefit of some new improvements in railway machinery, which I think will be of service to the public.

It is now six years since some, and eight to ten years since others of the inventions, a description of which I transmit you, have been in my possession, though only part has been in full operation, yet the rest I have so matured in my own mind, as to be perfectly satisfied of their efficacy in suiting their intended purposes. Had I been a manufacturer of steam engines or otherwise placed in a position to enable me to introduce those improvements practically to work, the public might have been in possession of them years ago, but such not having been the case, and as there is no likelihood of my ever being able to bring them forward, I now send them to you for publicity.

I am, Mr. Editor, your obedient servant,

WM. ANDREWS.

Great Western Railway Terminus, Paddington, March 2nd, 1841.

Digitized by Google

Improvements in Railways, and the Wheels of Locomotive Engines and Carriages.

In the first place,—the leading and trailing wheels of locomotive engines, either with four or six wheels, would work better, were each wheel to be keyed upon a separate shaft so as to revolve independently. This may easily be done in the following manner:—Let the wheels be keyed upon their respective shafts in the usual way, with either outside or inside bearings, which ever may be the most convenient, and let the shafts have middle bearings to meet in the regulating line common to all. If the wheels and axles are made in this way, the wheels on the outside rail would revolve quicker than those on the inside, and would allow the engine to find its own bearings. This would be particularly evident in going round curves, and would be the means of preventing many accidents, engines being very liable to be thrown off the rails on those parts according to the present system.

In the second place,—it is proposed, that each of the leading and trailing wheels shall be keyed upon a hollow shaft, in the usual way; these shafts to have no external bearings, but to be bushed with brass, bored to fit the solid shaft or spindles, which will be [illegible]ed to work into them. The solid shafts to have a bearing at each end, and one in the middle if required. This plan will allow the outside and inside wheels to revolve independently on the curves, or otherwise, and will also prevent them wearing irregularly. Should any obstacle be thrown in the way of the engine, the wheels revolving separately would prevent it from coming off the rails, as the wheels would act as a check to each other, or as a complete check or guard rail on any part of the line, as hereafter explained.

Thirdly.—The wheels to be made of either wrought or cast iron, (the latter would be preferable) and to have a flange on each side, by which plan they would not be required so strong as those now in use, because they would take the lateral concussions or side jolts more equally than the present kind. Should the engine be thrown to one side, both wheels would take an equal share of the strain or jolt, whereas in the present system the wheels on one side take the whole strain. This properly adjusted, the conical wheels may be dispensed with, as well as the check or guide rails upon the whole line, which latter checks are a great nuisance. In the plan thus proposed, the rails would be laid level, or horizontally across, and not at an angle as at present, and the wheels would have to be the segment of a circle upon the face, in place of being conical. Each wheel would thus act as a check rail for the other, during the whole of the journey.

Should the rails be out of gauge, so as to cause the wheels on one side of the engine to mount upon their flanges, and throw the train off the rails, (as is very often the case with the present system,) the double flanges would obviate this evil, and keep the engine in its proper course until the wheels again found their places on the rails. The switches will remain without alteration, but the points may be altogether dispensed with. By this method of working there will be a great saving in the wear and tear of the engines and rails; it will reduce the cost of keeping the engines and road in repair, and lessen the friction as well as the quantity of fuel, with all other expenses in like proportion. In constructing the permanent way much time might be saved, as no attention will be required in laying the rails to an angle, as they would then be horizontal where the road itself was straight. Giving to the outside rail the proper rise in the curves, the angle of the two rails will incline both one way, and not reverse to each other as at present. This will afford the engine another mechanical advantage on the curves, giving gravity a much greater opportunity of acting against the momentum of the machine. The engine will thus be kept in its proper course in the curves much more forcibly than is afforded by the present method of laying railroads, as by the present system h angles of the two rails are acting against each other, the outside of both being higher than the insides, and causing a great friction upon the axles, brasses, wheel and rails. This, the proposed alteration, will entirely obviate. All the conical wheels now in use, squeeze out on one side, through concussions and constant rolling upon the rails. No conical wheels retain their proper form much longer than two months, if daily at work, and each wheel causes the flanges of the opposite wheel to act with great force on the inside of the rails, and *vice versa*.

The large hollow fillet that is left in the angle of the flanges of the wheels crushes down the inside angle or corner of the rails. All these the proposed wheels would obviate; besides the weight of the vehicle would be also much better distributed over the surface of the rails. This alone is a great inducement to the introduction of double flanged wheels on loose axles, as the rails would last *double* the length of *time*. To recur to squeezing. The double flanges would prevent this, for the wheels seldom squeeze out on the side next the flange, and they being all made of cast-iron, would offer still greater resistance to that evil. The longitudinal shake or clearance that is generally given to the axles in their brasses will not be required as the action of each being entirely in itself, and inclosed in brass will retain the oil much longer, and not want that attention which the present do. Were the engine and carriages made according to this arrangement, the loss of power in the curves would not exceed 10 per cent. above that used on a straight line, always of course depending on the radius of the curves.

In the fourth place. The whole of the engine and tender wheels, should be furnished with double flanges, the latter to be of different diameters; causing thus different depths from the face of the wheel to the tops of those flanges. The reason of this will be easily explained.

Railways at present are nothing but a series of complications of curves, all differing in intensity. To carry engines round those continually changing curves without trailing and great friction, would require wheels of greater and less diameters, and this difficulty I propose to surmount by means of those flanges, which will become *bona fide* for the time the wheels of the machine. To enable me to make use of the above arrangement, I propose to have radiated plates or segments put down on each side of the main rail, at such a depth from its face as to cause the wheel to be lifted from the rail, and allow the flange to act on those segments; the machine rolling at one time on the large flange, at another time on the small, and from hence on the face of the wheel—those alternations, of course, depending on the nature and radius of the curve. The length and position of those segments would be found by a calculation depending on the intensity of the curves.

Were engines, carriages, &c., &c., provided with such wheels, and the railways with segments to suit, it would be next to impossible for the train to leave the line of road. For, even supposing the whole of the tyres on one side were to come off, the train would be kept in its course by the double flanges of the wheels on the opposite side. At present, if a single tyre comes off, the engine is precipitated from the rails—and if without any more serious result, the train is detained till the arrival of another engine, train, or other means of locomotion.

I may in addition mention, that the fatal accidents arising from furious driving, which is more or less practised on all lines, and is a terror to all travellers who have not iron nerves, would be altogether prevented. For, not even the velocity of 100 miles per hour could force the engines or carriages off the line, so firmly would the wheels be bound to the rails, and so sweetly would they glide round the curves, if made on the above construction.

With many apologies for intruding my ideas on your acquaintance,

I am, Sir, your obedient servant,

WM. ANDREWS, Engineer.

Paddington Station, March 2, 1841.

RAILWAYS IN AMERICA.

[From the *New York Expres*.]

A late English publication states that about 1,100 miles of railways are already completed and in operation in Great Britain and Ireland: nearly the same number of miles are in progress, and will probably soon be completed—making a total of 2,200 miles, principally on the island of Great Britain, there being but few miles of these works as yet attempted in Ireland. The capital invested in the British railways amounts to over sixty millions of pounds sterling, or 288,000,000 dollars, and the average cost per mile exceeds 20,000*l*., or 96,000 dollars. The cost of the London and Birmingham Railway, 112 miles long, was 242,000 dollars per mile, or more than ten times the average cost per mile of railways in the United States. The last summary we have seen of railways in the United States showed, that at the end of the year 1839 there were completed and in operation 3,332½ miles, besides 1,707½ miles graded and ready for the superstructure. The amount of capital then expended was 97,630,449 dollars, and the average cost per mile was 18,351 dollars. When we take into consideration the fact that the system of railways has been introduced into the United States since the year 1830, we cannot fail to be surprised at the rapid progress of this class of internal improvements, and its triumphant success. It is probable that at least 3,500 miles of railway are now in operation in the United States, and about 1,500 miles more in progress, most of which will be completed within two years from the present time. When the different lines of railway in progress on the Atlantic coast are completed, they will present a continuous chain (with perhaps some short steam-boat routes) from Portland, in Maine, to New Orleans, a distance of over 1,500 miles. Indeed, more than half of the distance between these two cities is now traversed by railways. The object of greatest interest, however, in internal improvements are the connection of the Atlantic ports by canals and railroads with the Western Lakes and the Valley of the Mississippi. Of the principal of these improvements, completed or in progress, the following is a rapid sketch, sufficiently correct for our present purpose. Commencing at the south, a chain of railways from Savannah in Georgia, to extend to Knoxville on the Tennessee river, a distance of 455 miles, is in progress, and a large portion completed. From Charleston, S. C., to the same point on the Tennesse river, is about 470 miles,—and railways now extend for about 260 miles from Charleston to the interior of Georgia. The railway from Wilmington, N. C., and Norfolk, Va., to the Roanoke river, we may consider as part of the line of communication along the Atlantic coast. The same may be said of the lines running from Petersburg, Richmond, and Fredericksburg. The James river and Kanhawa canal is to extend from Richmond to the Ohio river, 425 miles. It is now done as far as Lynchburg, about 100 miles west of Richmond. This improvement was commenced some years since by the state of Virginia, and its completion is considered of great importance by the people of that State. It is probably that a railway will be constructed from Lynchburg to the Tennessee river, through south-western Virginia. The Baltimore and Ohio Railway was one of the earliest enterprises of the kind undertaken in the United States, but the progess of the work has been slow; about 84 miles from Baltimore have been completed for five years. The length of the road from Baltimore to Wheeling or Pitsburgh will be 280 miles. The Chesapeake and Ohio canal, which is nearly parallel with the last mentioned railway, should here be noticed. About 100 miles have been completed and navigated for several years, namely, from Georgetown, District of Columbia, to Harper's Ferry. This canal was originally intended to extend to the Ohio river. The Baltimore and Susquehannah Railway connects Baltimore with the Pennsylvania improvements.—From Philadelphia the communication with the Ohio river is 118 miles by railways, and 276 miles by canals, terminating at Pitsburgh—

Digitized by Google

total 394 miles. There is also (including the Columbia Railway) a chain of railroads extending to Chambersburgh, 162 miles west from Philadelphia—about half the distance to Pitsburgh—by a surveyed route, for a continuous railroad. From the city of New York, by the Hudson river and Erie canal, to Buffalo, on lake Erie, is about 510 miles; by the chain of railways, from Albany to Buffalo, nearly parallel with the Erie canal, the distance will be reduced about 40 miles, making the journey from New York to lake Erie 470 miles—being just about the same distance from this city to Dunkirk, on lake Erie, by the New York and Erie Railway. The Haarlem and Albany and New York Railways combined will be about 146 miles in length. From Boston to Albany, by the Worcester, Western, and West Stockbridge Railways, will be about 200 miles, or 520 from Boston to lake Erie, at Buffalo. The Norwich and Worcester, New Haven, Hartford, and Springfield, and the Housatonic Railways, may be considered as branches of the Massachusetts Railways; these branches extending from the latter to the waters of Long Island Sound. The above sketch of the principal communications between the Atlantic coast and the West, shows the importance to this city of the rapid completion of both the New York and Albany and New York and Erie Railways, to enable us to compete with our numerous rivals for the trade of the West. The report of the New York and Erie Railway Company, which we published a few days since, presented a mass of facts and considerations which have opened the eyes of many, heretofore blinded by Loco Focoism, or the want of knowledge on the subject. This road being built in the most substantial manner for the transportation of heavy freight, as well as passengers, and passing along the Alleghany, within 200 miles of Pittsburgh, will possess immense advantages over any other route from this city, both to the lakes and the valley of the Ohio.

HOULDSWORTH'S IMPROVEMENTS IN RAILWAY CARRIAGES.

(From the *Mechanics' Magazine.*)

This invention comprises two objects; firstly—to combine in some degree the pleasure of outside with the comfort of inside travelling; and secondly, to economise the space occupied by seats, where space is an object, and to protect out-door seats from the weather.

The first of these objects is accomplished by covering the carriage either wholly or in part with metallic wire gauze, cloth, or net, of a texture sufficiently close to break the force of the wind, and destroy the violence of the currents produced by rapid motion through it; and also to impede the entrance of the particles of coke-dust emitted by the locomotive engine chimney, and yet not materially to obstruct the view of external objects.

The second, by the use of seats constructed so as to turn or fold up of themselves when not in use, by the action of springs or weights. A railway carriage is described, in which the lower frame of the carriage, the springs, axles, wheels, &c., are the same as in the ordinary railway carriages; the dimensions are eighteen feet long by seven feet nine inches wide, and seven feet nine inches from the floor to the highest part of the arched roof. The side panels are carried up about three feet above the floor, and terminate in rails extending the whole length of the carriage, and morticed on to the tops of the upright framing posts. The ends of the carriage are framed and carried up to the height of the roof, and are circled to correspond with the arched covering. From the uprights of the side framing, which are two feet apart, brackets project outwards about six inches, from which spring a series of arched ribs, forming the framing for carrying the wire gauze covering, and the roof. In the centre of the carriage, an upright pillar from the floor to the ridge-pin of the ceiling forms a further support for the roof. At each side of the carriage, at opposite diagonal corners, are the doors. Along the upper part there is a boarded water-tight roof, 5 feet 9 inches in width, and on each side of it extends a string rail for leading the rain water down grooves into small pipes which convey it to the ground. In addition to the covering of wire gauze, over the upper compartments on either side of the boarded roof, are placed waterproof curtains, mounted on suitable rollers, so as to be rolled or unrolled at pleasure by the persons in the carriage, the wire gauze recommended, is of copper wires $\frac{1}{100}$ of an inch in diameter, woven with about thirty wires to an inch; sometimes brass wire, or brass wire coated with platinum may be used, and are claimed for this purpose. The carriage described is intended to accommodate thirty-two passengers; seats for sixteen are arranged on a stage three feet six inches wide, extending lengthwise of the carriage, and raised one foot above the floor, so as to form a convenient depository for small articles of luggage, and to enable the parties occupying these seats to have a good view of external objects. The other sixteen seats are disposed down the sides and at the ends of the carriage. These seats are constructed so as to fold up the moment they are unoccupied, by the action of weights or springs. Two modes of construction for effecting this object are shown, as also a retarding apparatus, but the patentee does not confine himself to any particular arrangement for accomplishing this object. The application of the same principle to garden chairs is also shown. The patentee describes the chief feature of his invention to consist in the application of the principle, that in the passage of air through wire gauze, hair cloth, or other interstitial materials, the violence of the current is destroyed by their resistance; and that adopting this principle he covers, or partially covers carriages used for the conveyance of passengers on railways, with wire gauze, hair cloth, or other interstitial fabrics or minutely perforated metals, which protects passengers from the force of the wind, and currents of air produced by rapid motion, and also serves the important purpose of preventing the entrance of coke dust emitted by the locomotive engine, without materially impeding the view of external objects; and claims, generally, the use or application for the purposes hereinbefore specified, of wire gauze, hair cloth, perforated metal plates, and other interstitial or perforated fabrics.

The patentee does not confine himself to the use or application of these materials to the covering or partial covering of carriages, or as a substitute for, or in addition to glass, in such carriages only as are in accordance with the foregoing description; nor to the materials mentioned. Neither does he confine the use of the seats to railway carriages only; but to conveyances of every description—to steamboats, sailing packets, and in every situation where seats are used, and economy of space is an object. He also claims their application to garden-seats, and wherever seats are exposed to the weather, so as to protect them therefrom.

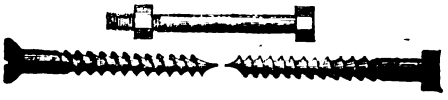
An invention has lately been patented by Mr. Boydell, of Cheltenham, for "improvements in working railway carriages, in order to stop them, and also to prevent their running off the rails," of which the following is a brief description:—For the purpose of stopping a railway carriage, a projection is affixed beneath it, carrying the axis of a break lever, the lower end of which is enlarged, and embraces the rail, being lined with wood to create friction. Whenever it is desired to stop the carriage, the break is brought in forcible contact with the rail by means of a second lever and connecting links. In order to prevent carriages running of the rails, there are two bars placed beneath each carriage extending from opposite corners and crossing beneath the centre of the framing, from which they are suspended by a pin passing through a slot in the middle of each bar, and having sufficient play to permit the train to move easily over the usual curves. The ends of the bars, are connected by pins to those of the carriages before and behind, thus forming a continuous line of bars, which will in most cases keep the carriages on the rails; or should one carriage get off the rail it will be prevented from running at any great angle with them.

Birth by Railway.—On Thursday, as the six o'clock down train was on its road to Hull, when between Castleford and Selby, a poor woman, third class passenger, was safely delivered of a child. She was left at Selby, where we understand that herself and offspring are doing well.—*Hull Paper.*—We beg to suggest that the young stranger should be called *Railway Times.*

Projected Railway to Salisbury.—It is confidently reported that the proprietors of the South Western Railway have taken up the subject of a railway to Salisbury, from a conviction of the necessity of so doing, to protect their own interests against the Great Western line. It is said to have been resolved to form a branch from Salisbury, to join the branch-line between Southampton and Gosport, at a point near Southampton; and thus form a direct railway communication between these three important places, and also between our city and the metropolis. The share-list is stated to be already filled, without any assistance from Salisbury.—*Salisbury Journal.*

Great Western Railway.—We have heard that the enormous sum of 800*l.* has been given for an acre of land adjoining the town of Swindon, for building purposes. A very large number of houses is now in course of erection in the vicinity of the junction station.—*Wiltshire Independant.*

TO RAILWAY COMPANIES and OTHERS. A Gentleman used to Railway Accounts is anxious to obtain an appointment in a locomotive or other office.



First-rate references (and Security if required).

Address, (post paid,) "W. G. B.," at Mr. Rowbottom's, Bookseller, Derby.

CENTERING.—A quantity of Ribs for Centering of Elliptical form, well framed, to be disposed of. The dimensions of the Span and Rise (not including thickness for laggings) are as follows:—

	ft.	in.		ft.	in.
No. 9 Ribs	24	6	Span	7	2 rise
„ 6 Do.	29	10	Do.	5	10 do.
„ 5 Do.	27	3	Do.	6	6 do.
„ 6 Do.	32	0	Do.	6	2 do.
„ 6 Do.	31	6	Do.	6	7 do.

Application, if by letter (post paid), to Mr. Barnes, No. 26½, Abchurch-lane, City.

T. H. RYLAND AND CO., Oozell's Street, Broad-Street, Birmingham, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic pistol, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

Planing machine; works by hand, will plane 5 feet by 18 inches.

TO RAILWAY CONTRACTORS.—To be Sold 140 2½-yard capital EARTH WAGGONS, 30-inch wheels, 3½ inch axles, 4-feet 8-inch gauge, of the very best construction.

The above are lying near the Great Western Railway, and the Wilts and Berks Canal, Uffington, Berks.

Apply to Mr. M. C. S. Medley, Farringdon.

PATENT MANUFACTURE.—An excellent opportunity offers itself to any person disposed to embark in the Manufacture, under Patent, of an article in extensive demand, the present cost of which will be reduced by the patent process upwards of 50 per cent. For the purchase of the entire Patent Right, and the fitting up of the requisite manufacturing machinery, £5,000 will be required.

Letters from principals to be addressed to M. M., care of Mr. Robertson, Patent Agency Office, 166, Fleet-street.

LONDON and BRIGHTON RAILWAY COMPANY.—To Coachmasters and Others.—The Directors of this Company are desirous of receiving PROPOSALS for the CONVEYANCE of PASSENGERS from Hayward's Heath, near Cuckfield, to Brighton, a distance of about 15 miles, and from Brighton to Hayward's Heath, in four-horse coaches and omnibuses, at a price to be named per coach per journey, from and after the 28th of June next. The proposals to be sent in on or before Tuesday, the 1st of June next.

By order,
THOMAS WOOD, Sec.

London and Brighton Railway Offices,
10, Angel court, Throgmorton-street,
May 20, 1841.

MANCHESTER AND BIRMINGHAM RAILWAY.—CONTRACT FOR WORKS.—Notice is hereby given, that the plans, specifications, and draft contract, for the erection of the Station at Manchester, for passengers and goods, with the approaches thereto, are now ready for inspection at the Engineer's office, in Manchester; and notice is hereby also given, that the Directors will meet at their offices, No. 43, Piccadilly, Manchester, at twelve o'clock at noon of Saturday, the 29th of May instant, and not on the 22nd, as previously announced, to receive Tenders for the same. Abstracts of the quantities of work, and printed forms of tender, will be furnished.

Tenders must be sent in by 12 o'clock on the 29th of May, after which no tender will be received. They must be under a sealed cover, addressed to the Chairman, and endorsed "Tender for works," and no tender except upon the printed form will be attended to.

The Directors do not bind themselves to accept the lowest tender, and they require the parties tendering to attend personally, at noon, on the above named day of meeting.

THOMAS ASHTON, Chairman.

Railway Office, Manchester, May 20th, 1841.

NORTHERN AND EASTERN RAILWAY.

NOTICE is hereby given, That a Special General Meeting of the Proprietors of this Company will be held at the London Tavern, Bishopsgate-street, on Wednesday, the 16th day of June next, at One o'Clock, precisely, for the purpose of confirming the Declaration of Forfeiture made by the Directors on the 11th day of March last, of certain Shares in this Company, on which the calls due had not been paid; and to consider certain Bye-laws to be then submitted.

WILLIAM CRAWSHAY, Chairman.
WM. BOURNE, Secretary.

London, Shoreditch, 20th May, 1841.

TO THE SHIPPING INTEREST.—The attention of the Shipping Interest, Steam Navigation Companies, Agents, and other parties engaged in this description of business, is directed to the MIDLAND COUNTIES HERALD, a Journal published weekly at Birmingham, and most extensively circulated in that important town and in the adjacent populous commercial towns in Warwickshire, Staffordshire, and Worcestershire, as well as throughout the Midland District generally, the weekly circulation being at the present time Five Thousand Six Hundred Copies.

The HERALD is regularly supplied to the merchants, factors, manufacturers, Iron Masters, and other classes of men extensively engaged in business in the districts above named. Copies are also forwarded to the News Rooms and principal Inns in the Midland Counties, as well as to those in Birmingham and the neighbouring towns; and the HERALD possesses considerable interest for the Working Classes, in consequence of the numerous advertisements for workmen in its columns.

The estimation in which the HERALD is held in Birmingham and the Midland Counties is fully shown by the great number and varied character of the advertisements which weekly appear in its columns, and from the nature and extent of the circulation, it offers a most desirable and valuable medium for the publication of advertisements relative to the sailing of vessels to all parts of the world, the rates of freight, and other particulars.

These Advertisements have hitherto been principally confined to the London, Liverpool, and Bristol Journals; but when it is considered that the circulation of these Papers in Birmingham and the neighbourhood is necessarily *exceedingly limited*, the importance of publishing the SHIPPING LISTS in a Paper well known and referred to for all business appointments throughout so extensive, populous, and important a district, appears to be obvious.

In addition to the Advertisements it contains, THE HERALD is much referred to for its Commercial Information, as well as other Intelligence interesting to Men of Business.

WRIGHT and DAIN, Proprietors.

MIDLAND COUNTIES HERALD OFFICE,
Birmingham, May, 1841.

*** The Proprietors would have pleasure in receiving *Sailing Bills* at their Offices, for the information of parties who call respecting this description of business.

BREWERY PARTNERSHIP.—WANTED in an old established Brewery, situated near and in connection with the line of the Great Western Railway, a Partner who can command a capital of from 4 to 5000*l*. Apply to A.B., care of Beale and Kind, Hop Merchants Montague Close, Borough.

THE MINING JOURNAL of this Week will be accompanied by an extra Sheet, without additional Charge, and contain Papers on drawing Coals by Tubs and Cages, with some Account of the progressive Improvements to the present Time (with Engravings) on the Nature and Properties of Coal of the South Wales District—Geological Notes of the Forest of Dean (with Engravings)—Continuation of the curious Ancient Report on Mines in Cardiganshire, with Estimates and Valuations—Geology of Scotland—Continental mode of Boring by Application of the Rope—On the Properties and Uses of Zinc—On the Employment of the Safety Lamp in the Coal Mines of Germany—On the Employment of Slaves in Foreign Mining Establishments—On the sinking of Artesian Wells—On the Changes which the Surface of the Earth has undergone from Volcanic Agency — Carbonate of Baryta—On Mine Surveying—Detailed Report of the Arguments and Judgment in the Important trial for alleged Infringement of Mr. Neilson's Patent for the Application of Hot Blast to Furnaces—Llangain Coal and Iron Company — Parliamentary Returns of the Imports and Exports of Copper and Tin for the year ending 5th January, 1840—The Collieries and Manufactories of Belgium. Together with its usual Contents, which consist of Reports of the Proceedings of all Public Companies—Intelligence from the English and Foreign Mining Districts—Scientific Meetings—Money Market and City Intelligence—Authentic particulars of every occurrence during the Week interesting to the Capitalist and Shareholder—Prices of Mining and Railway Shares—Railway Traffic and Returns—Sales and Prices of Metals—Sales of Copper Ore and Block Tin—Specifications of recent Patents; with a variety of Miscellaneous Scientific Intelligence, &c.

The Advertisements inserted in the *Mining Journal* being confined to Prospectuses of New Companies, Notices of Meetings, Calls, and Dividends, Sales of Mineral Property, or other matters immediately connected with the interest of the Capitalist and the Proprietor in Joint Stock Companies, forms an interesting feature in its columns.

The *Mining Journal* is published every Saturday afternoon, at 2 o'clock, at the Office, 37, New Broad street, price Sixpence, and may be had of all Booksellers and Newsvenders in town and country.

Mining Journal Office, 37, New Broad-street.

LONDON AND BIRMINGHAM, GRAND JUNCTION, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.—In connection with the above lines of railway, places can be secured by Mails to

Edinburgh,	Stratford-on-Avon,	Shrewsbury,
Holyhead,	Carlisle,	Lichfield,
Newcastle-on-Tyne,	Bangor,	Brackley,
Banbury,	Leamington,	Warwick.

Cross Keys, Wood street.
Spread Eagle, Regent's-circus.
Golden Cross, Charing-cross.
George and Blue Boar, Holborn.
Griffin's Green Man and Still, and
The Euston Station.

HORNE AND CHAPLIN, Agents.

Parcels for 8½ p.m. Mail Train, viz. Boxes, Trusses and General Merchandise, received at the above Offices until 7 p.m.; Solicitors' and light Parcels until 7½ p.m.

Omnibuses to and from every Train, Fare 6d.

Post Horses for hire may be had on application at the above Offices, to convey Carriages to or from the Railway and any part of London (within 5 miles) including the driver, 10s. 6d. each pair.

TO RAILWAY COMPANIES, CARRIERS, AND OTHERS.—RICHARD PARKER (late of Hambro' Wharf), having taken the New Inn Yard, Old Bailey, London, which is very spacious and in the Heart of the City, is desirous to form a Connection with one or more Railway Companies or Carriers, to deliver, receive, collect, and draw their Goods to and from the Railway Station or Stations, and to attend to all matters that may be required: and having had considerable experience as a Carrier, he does not hesitate to pledge himself to transact all such Business equal to any establishment in London, and upon moderate terms.

N. B.—He would not object to take a Share in any respectable concern.

RAPID STEAM COMMUNICATION between Glasgow and Manchester, Birmingham, London, &c., in connection with the Glasgow and Ardrossan, and the Preston and Wyre Railways.—The celebrated Steam-ship, FIRE KING, ROBERT EWING, Commander, sails from Fleetwood, every Tuesday and Thursday as early as possible after the arrival of the railway trains (at 8) evening, which leave London at 9 and 9½ morning, Manchester at 5 afternoon, Liverpool at 4½, and Preston at 7½. The passengers are conveyed from Ardrossan to Glasgow by the railway, in 1½ hour.

The FIRE KING will leave Ardrossan, for the port of Fleetwood, every Wednesday and Friday afternoon, at Five o'Clock, to meet the railway trains which start from Fleetwood every morning at 8½ for London, Manchester, Liverpool, Bolton, &c.

Cabin Passage, 15s.; Steward's Fee, 2s.; Deck, 5s.

For further particulars apply, in London, at the Office of the Preston and Wyre Railway, Harbour, and Dock Company, 11, King William Street; and in Glasgow, to Messrs. J. Martin and J. G. Burns, or to Charles Morison, at Fleetwood.

SPECIFICATIONS OF RECENT PATENTS.

The MECHANICS' MAGAZINE, No. 928, published, this day, price 3d., contains copious abstracts of the following recent specifications:—

Mannoury's, for improvements in wind and stringed musical instruments; Gwynne's, for improvements in the manufacture of candles, and in operating on oils and fats; Paterson's, for improvements in curvilinear turning—that is to say, a rest adapted for cutting out wooden bowls, and a self-acting slide rest for other kinds of curvilinear turning; Clark's for an improved method of preparing tallow, fats, and oils, for various uses; by purifying them, and depriving them of offensive smell, and by solidifying such as are fluid: and giving additional hardness and solidity to such as are solid; and also by a new process of separating stearine, or stearic acid, from the elaine, in such substances; Simpson's, for a machine or apparatus to be used as a moveable observatory or telegraph, and as a moveable platform in erecting, repairing, painting, or cleaning, the interior or exterior of buildings, and also as a fire escape; Kurtz's, for a certain improvement or certain improvements in the construction of furnaces; Halpin's, for improvements in applying air to lamps; De Bergue's, for certain improvements in machinery for making reeds used in weaving; Crofts's, for certain improvements in machinery for the purpose of making figured or ornamental bobbin-net, or twist lace, and other ornamental fabrics, looped or woven; Dodd's, for improvements in pianofortes; Donisthorpe's, for certain improvements in machinery, or apparatus for combing and preparing wool and other textile substances; Shaw's, for certain improvements in discharging ordnance, muskets, fowling-pieces, and other fire-arms; Birch's, for improvements applicable to railroads, and to the engines and carriages to be worked thereon; Jones's, for improvements in the manufacture of copper tubes and vessels; Heaton's, for improvements in dressing yarns of linen or cotton, or both, to be woven into various sorts of cloth; Annes's, for a new and improved method of making paint from materials not before used for that purpose.

Also descriptions, with engravings, of Salt's improved vase filter; Cheverton's Electrotype busts; Mr. Armstrong's proposed improvement in condensing smoke; Original Papers on Perkins's system of warming by hot water; Warming and heating—Arnott's stoves, &c.; On the prevention of collisions on sea and land; The crank considered; Mr. Stevens in Reply to Captain Carpenter, on propelling—steam boat race; On the calculation of life annuities; Solution of a mathematical question, &c. &c.

Published at the Mechanics' Magazine, Patent, and Designs Registration Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

Agents for Dublin: Machin and Co. Paris: W. and A. Galignani. Hamburgh: W. Campbell and Co.

A COMPLETE REGISTRY of PATENTS, from the earliest period (A.D. 1617, 15th James 1st) to the present time (the only perfect one extant) is kept for reference at

MR. ROBERTSON'S

PATENT AGENCY OFFICE, 166, FLEET STREET, LONDON.

Also, a COMPLETE REGISTRY of DESIGNS enrolled under the 2nd of Victoria, cap. 17.

Searches made in either of the above Registries, on written statements being furnished of the information required. Charges according to the period for which search is made.

PATENTS SOLICITED, by Mr. Robertson, for England, Scotland, Ireland, and all Foreign Countries.

Specifications prepared or revised, Designs Registered, Caveats lodged, and all other Patent and Registration Business transacted with economy and dispatch.

MECHANICS' MAGAZINE, PATENT, AND REGISTRATION OFFICE,
166, FLEET STREET, LONDON.

RAILWAY SUPERINTENDENT OF POLICE.—WANTED on a London Line, a Superintendent, none but persons who can produce unexceptionable testimonials as to qualifications, fitness, and character, need apply, and a person having filled a similar situation would be preferred.

Applications to be made by letter only, post paid, stating full particulars of age, qualifications, and last employment, addressed to A. Z., care of Messrs. Smith, Elder, and Co., Cornhill.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company.

GREAT WESTERN RAILWAY.—VERY IMPORTANT TO RAILWAY CONTRACTORS.—Extensive Sale of Railway Plant, now in use on Contracts Nos. 5 and 6, C., near Wootton Bassett and Christian Malford. Mr. HUNT has received instructions to sell by public AUCTION, without the least reserve, about the first week in June, all the very useful and extensive Plant of Railway Materials belonging to the Contractor, who will have completed a distance of seven miles on the above line of Railway, in the course of a few weeks from the date hereof, comprising more particularly 200 Waggons, (half of which are nearly new); 150 tons of Railway Bars; 70 Iron Crossings; 40 tons of Chairs; 10,000 Sleepers; 3,000 Wheeling Planks; 100 Wheelbarrows; 70 sets of Bridge Centerings, of various sizes; 9,000 feet of Legging for ditto; quantity of Timbers such as Uprights, Wall-plates, Sills, &c. &c. Several sets of Materials for Brickmakers' Moulds; 2 sets of Blacksmiths' Tools, complete, 10 Pug Mills, for grinding clay and mortar; a good six-inch wheel Timber Carriage; quantity of Bricklayers' Scaffolding; 100,000 Bricks; 10,000 Pantiles; a large Water-butt; and a variety of other unmentioned effects.

Due Notice of the Sale with further particulars will appear in handbills and future advertisement.

Wootton Bassett, April 17, 1841.

TAFF VALE RAILWAY.—NOTICE is hereby given, That the RAILWAY is now OPEN from Cardiff to Merthyr for the Conveyance of Passengers and Goods. The times of departure and arrival of the Trains will be as follows until further notice:—

UP.

	H.	M.
From Cardiff—		
8 morning, arrives at Merthyr	9	25
11 „ „ „ (mixed train)	12	45
3 afternoon „ „	4	25

DOWN.

From Merthyr—		
8 20 morning, arrives at Cardiff	9	45
11 35 „ „ „ (mixed train)	1	20
3 20 afternoon „ „	4	45

On Saturdays an additional Train leaves Cardiff at 5h. 30m. afternoon, and Merthyr at 6h. afternoon.

The mixed train, for goods and second and third class passengers, at 11 o'clock, from Cardiff, and 35 minutes past 11 o'clock from Merthyr does not run on Sundays.

Goods may be sent from the several stations by the mixed train, provided they are delivered two hours previous to the departure of the train.

RIBBLE NAVIGATION COMPANY.—*To the Editor of the Railway Times.*—Sir, Having observed in your last week's paper, that you published the proceedings of a recent Meeting of the Directors of the Preston and Wyre Railway Harbour and Dock Company, containing, in the opinion of the Directors of the Ribble Navigation Company, a variety of false and unfounded statements respecting the Ribble Navigation, I beg to state, for the information of your readers, that at the last Meeting of the Directors of the latter Company, they passed a resolution which has led to the following correspondence:—

At the Office of the Ribble Navigation Company,
6th May, 1841.

Mr. Haydock in the Chair.

The *Railway Times* of the 1st of May instant, containing a report of the proceedings of the Preston and Wyre Railway Harbour and Dock Company at their Half-Yearly General Meeting, held at the Company's Offices, King William-street, City, on the previous Monday, Sir P. H. Fleetwood, Bart., in the Chair, was produced, wherein the following question by a Shareholder, and answer by the Secretary, are reported:—

"A SHAREHOLDER asked if there had not been some attempts on the part of another Company to rival that Company with respect to the harbour.

"The SECRETARY—Yes, there was at Preston; but the parties admitted themselves that they had now done all they could do, and had failed. All that could be done by them was, that on the top of the spring tides, which only occurred during three or four days a fortnight, they could only get vessels of from 90 to 110 tons to come up; this was accomplished with the greatest danger to the shipping, in consequence of the sand-banks and shoals, and therefore it was a fallacy to suppose that goods could be delivered so cheap as they could by being taken in at Wyre, and transmitted per Railway to Preston."

Ordered—that our Chairman be requested to transmit a copy of the above extracts to the Secretary of the Wyre Harbour Company, (Mr. Power,) and desire to be informed whether it is a correct report of what he is stated to have said at the meeting, and to request he will name the parties he states to have made the admission alluded to.

Sir,—As Chairman of the Ribble Navigation Company, I have been requested at the meeting of the Directors, held this day, to transmit the annexed copy of a resolution passed at their meeting, and shall feel obliged by your early answer.

I am, Sir, your obedient servant,
P. HAYDOCK.

Preston, 6th May, 1841.

J. Power, Esq., Secretary of Preston and Wyre Railway Harbour and Dock Company, Fleetwood.

Fleetwood, 11th May, 1841.

Sir,—I have been prevented by the great press of my engagements just now from replying sooner to your letter of the 6th instant. It is impossible to charge my memory with the exact words I used at the meeting, but I certainly did not say what the Report of the *Railway Times* contains. The purport of my observations was, that the only effect of the improvements made in the Ribble had been to enable vessels of 90 to 110 tons to come up to Preston for a few days on the top of the spring tides, instead of vessels of 60 or 70 tons as formerly, but that the Ribble was so proverbial for its shoals and sands that it could never compete with Fleetwood. I send you herewith a copy of the *Railway Magazine*, which you will perceive gives a different version of my remarks.

I am, Sir, your obedient servant,
JOHN POWER.

P. Haydock, Esq.

Extract from the *Railway Magazine* referred to—

Mr. WAILES—May I ask if there has not been some great effort going on in the Ribble to make improvements and alterations.

The SECRETARY—Nothing has been done farther than making the river more navigable for vessels of 90 to 110 Tons to come up to Preston on the top of the spring tides.

In requesting you to publish the above, the Ribble Navigation Company have no wish to be considered rivals of Fleetwood, they only desire that that Company in puffing off their great exploits will let them alone, and not do so at the expence of the Ribble, the merchants themselves are generally considered the best judges of their own interests, and no doubt will resort to the port that is the best and the cheapest for them; and so far the Ribble Interest has had no reason to complain of the merchants.

In taking leave of the subject, the Directors wish it to be understood, that their efforts will not cease until they have a good navigation to Preston, not for vessels of 110 tons burthen only, but for vessels of five times that burthen, and that too, as has been done in the Clyde, at all tides.

I am, Sir, your obedient Servant,
P. HAYDOCK, Chairman.

Preston, 13th May, 1841.

HANCOCK AND PETTIT'S PATENT RAILWAY CONTROULER.—A Model Railway and Carriages, worked by Steam Power, exemplifying the manner of applying this most effectual method of arresting the progress of Railway Trains, independently of the Engine-driver or Guard, may be seen Daily, between the Hours of Twelve and Four, at the Zinc Works, No. 55, Parliament-street.

"Better calculated to effect the desired object than any other which has come under our notice."—*Railway Times.*

Applications for Licences to use, to be made to Mr. Walter Hancock, Civil Engineer, Stratford, Essex.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £300 each, and for a term of not less than Three Years, and to Grant Mortgages of the Tolls and Works of their Undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan is made, payable half-yearly, on the 1st January and 1st July, at the Company's Bankers in London and Birmingham, will be delivered to the Leader with the mortgages.

The Tenders are to express the sums, and the term of years for which they are proposed to be lent; and are to be addressed to the Secretary, at the Company's Office, in Waterloo Street, Birmingham; to H. Putteson, Esq., at the Office of the North Midland Railway Company, No. 6, Warnford Court, Throgmorton Street, London; or to Messrs. Laurence, Cazenove, and Pearce, Auction Mart, London.

By order,
THOMAS KELL, Secretary.

Dated this 14th day of March, 1841.

TO ENGINEERS AND OTHERS.—A Young Man of respectable connections, just returned from an engagement of superintending the erection of Steam Engines and Machinery ABROAD, and who is well acquainted with practical Engineering, and has a knowledge of the Spanish language, is open to a similar ENGAGEMENT, or one as Superintendant of Works in an Engine Manufactory. Respectable references can be given as to character and abilities.

Address, G. J. R., Box No. 86, Post Office, Birmingham.

TO BE SOLD, A SHARE in a most important Invention, connected with Railroads, and secured by Letters Patent. The purchaser must be able to command the sum of 2,000*l.*, must be of active business-like habits, with leisure and ability to attend meetings of Directors, Engineers, and others.

For further particulars apply personally between Eleven and One, to Mr. W. Meyrick, 4, Furnival's Inn.

TO GAS COMPANIES.—A Person aged 30, who has been for several years practically engaged in the Gas Manufacture, has erected and superintended Gas Works, both at home and abroad, and is now Manager of a considerable Gas establishment in an English country town, is desirous of removal to a similar situation in any of the larger towns, as Liverpool, Manchester, Bristol, Bath, &c. Satisfactory testimonials and references. Apply by letter, addressed to P. B., care of Mr. Robertson, *Mechanics' Magazine* Office, 166, Fleet-street.

THE BRIGHTON RAILWAY.—The Official Map and Section of this line is now published price 3s. on a large sheet coloured; folded in a cover 4s.; on linen for the pocket 6s.; and on rollers 5s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 8, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Litts, Royal Exchange, and at the Office of the Railway Times.

TO RAILWAY DIRECTORS, ENGINEERS, CONTRACTORS, &c.—A Young Man from Scotland, of respectable connections, who has been employed as Assistant Engineer in the construction of a Railway recently completed, is desirous of forming a new engagement as Assistant to an Engineer or Contractor, or as Superintendent of a Railway Station. References to Engineers of eminence.

Apply by letter, addressed to P., care of the Publisher of the *Railway Times*.

THE HULL ADVERTISER.—Established for a century, the HULL ADVERTISER has attained a circulation equalled by few weekly newspapers in England, while by a new and original mode of distribution, it secures to advertisements a degree of publicity equal to an absolute circulation of twelve thousand copies each impression.

Parliamentary Return for the quarter commencing on the 1st of January and ending on the 1st of March, 1840.

Hull Advertiser	78,000
Hull Packet	10,000
Hull Times	15,000
Hull Rockingham	10,000

With the commencement of the next July quarter, it is intended to enlarge the ADVERTISER, in order to provide for the influx of advertisements, and to make the journal, as an organ of commercial and agricultural intelligence, worthy of the resources of the wealthy district the sphere of its local circulation, and of the rapidly increasing importance of the port of Hull, which will soon be connected by railway with Leeds, Manchester, Liverpool, and London.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, May 22nd, 1841.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 178. Vol. IV.—No. 22.] SATURDAY, MAY 29, 1841. [Price, 6d.

NORTH MIDLAND RAILWAY.—MAINTENANCE of WAY and WORKS.—The Directors will meet at the Railway Station, Derby, at 10 o'Clock, on Saturday, the 5th of June, to receive Tenders for the Maintenance of the Way and Works between Derby and Masborough, being a distance of 40 miles, or thereabouts, divided into five or more separate lengths, for one or more of which parties may tender.

Drafts of the Contract, with specifications of the work, will be ready for inspection on and after Thursday, the 27th of May at the Engineer's Office, in Chesterfield, where parties may obtain orders, allowing them to walk along and inspect the line.

A printed form of Tender may be had after the above date, at the Engineer's Office, in Chesterfield, and no others will be attended to.

The Tenders must be delivered at the office of the Secretary, H. Patteson, Esq., at the Railway Station, Derby, on or before 10 o'clock on Saturday, the 5th of June, under a sealed cover, addressed to the Secretary, and indorsed "Tender for Maintenance of Way and Works," and the parties tendering must be in attendance at the time of meeting.

The parties, whose tenders are accepted, will be required to enter into a bond, with two responsible sureties, for the due performance of their contract, and the names of the proposed sureties are to be specified in the tender.

The Directors will not bind themselves to accept the lowest offer.

Engineer's Office, Chesterfield, 17th May, 1841.

NORTH MIDLAND RAILWAY.—The Directors of the North Midland Railway Company are ready to receive MONEY on DEBENTURES, under the powers of the Act of Parliament, in Sums of not less than £500, bearing interest at 5 per cent. per annum for periods of 3, 5 or 7 years.

By order,
H. PATTESON, Secretary.

Warnford-court, Throgmorton-street,
May 21, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £500 each, and for a term of not less than Three Years, and to Grant Mortgages of the Tolls and Works of their Undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan is made, payable half-yearly, on the 1st January and 1st July, at the Company's Bankers in London and Birmingham, will be delivered to the Lender with the mortgages.

The Tenders are to express the sums, and the term of years for which they are proposed to be lent; and are to be addressed to the Secretary, at the Company's Office, in Waterloo Street, Birmingham; to H. Patteson, Esq., at the Office of the North Midland Railway Company, No. 6, Warnford Court, Throgmorton Street, London; or to Messrs. Lawrence, Cazenove, and Pearce, Auction Mart, London. By order,

THOMAS KELL, Secretary.

Dated this 14th day of March, 1841.

SOUTH-EASTERN RAILWAY.—To CONTRACTORS, TIMBER MERCHANTS, &c.—SLEEPERS.—The Directors of this Company will meet at their Office, No. 10, Coleman-street, on Tuesday the 1st of June, at half past One o'Clock in the afternoon precisely, to receive Tenders for the supply of Eighty Thousand Sleepers according to Specifications and Specimens, which will be ready for inspection on and after Monday next, the 24th inst., in Coleman-street as aforesaid.

By order,
J. S. YEATS, Secretary.

Railway Offices, 10, Coleman-street,
21st May, 1841.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad-street, City; 69, Princes-street, Leicester-square; Manufactory, Mill wall, Poplar; and also of the following Agents —

Robertson and Co., 12, Goree Piazzas	Liverpool.
Mathias Dunn	Newcastle upon Tyne
Joseph Bothway	Plymouth.
John Thompson and Co.	Wigan.
J. T. Tregellas	Truro.
Thomas Mooney and Son	Dublin.
Coates and Young	Belfast.
James Kibble and Co.	Glasgow.
James Gunn	Leith.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of nine months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

BREWERY PARTNERSHIP.—Wanted in an old established Brewery, situated near and in connection with the line of the Great Western Railway, a Partner who can command a capital of from 4 to 5000*l*. Apply to A.B., care of Beale and Kind, Hop Merchants, Montague Close, Borough.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

BOLTON AND PRESTON RAILWAY.—TO RAILWAY CONTRACTORS.—The Directors of the Bolton and Preston Railway Company will meet at their Office in Bolton-le-Moors, Lancashire, on Thursday, the 3rd day of June, 1841, to receive TENDERS for the following Contract:—

Tunnel Contract.—To make and maintain that part of the railway, which passes through a tunnel 552 yards long, with all the necessary works and shafts for making the tunnel, and supplying all the requisite and necessary tools and materials.

The Contract commences in a field No. 24 on the Parliamentary Plan of the Extension from Chorley to Euxton, and terminates on the westerly side of the road from Chorley, to Preston, in a field No. 10 on the said Parliamentary Plan, near to a place called Hartwood Green, about half a mile from the town of Chorley.

The Draft of the Contract, with Plans, Sections, and Specifications, and printed forms of Tender, will be ready for inspection on and after the 26th day of May, at the Company's office, in Bolton-le-Moors aforesaid.

Parties tendering must attend at the Company's Office, and the person whose tender is accepted will be required to enter into a bond with two sureties to the extent of 10 per cent. on the amount of the contract. The Directors do not bind themselves to accept the lowest tender.

JOHN HARGREAVES, Chairman.

Bolton le-Moors, May 18th, 1841.

TO RAILWAY COMPANIES, CARRIERS, AND OTHERS.—RICHARD PARKER late of Hambro' Wharf, having taken the New Inn Yard, Old Bailey, London, which is very spacious and in the Heart of the City, is desirous to form a Connection with one or more Railway Companies or Carriers, to deliver, receive, collect, and draw their Goods to and from the Railway Station or Stations, and to attend to all matters that may be required: and having had considerable experience as a Carrier, he does not hesitate to pledge himself to transact all such Business equal to any establishment in London, and upon moderate terms.

N. B.—He would not object to take a Share in any respectable concern.

LLANELLY RAILWAY AND DOCK COMPANY.—The Annual General Meeting of Proprietors will be holden at the London Tavern, Bishopsgate-street, in the City of London, on Monday, the 7th of June next, at half-past twelve for one o'clock precisely.

By order of the Committee of Management,
JOHN BIGG, Sec.

59, Old Broad street, London, May 7, 1841.

THE BRIGHTON RAILWAY.—The Official Map and Section of this line is now published price 3s. on a large sheet coloured: folded in a cover 4s., on linen for the pocket 6s.; and on rollers 5s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 9, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Letts, Royal Exchange, and at the Office of the Railway Times.

RAILWAY RETURNS.

Returns made to the Board of Trade by the different Railway Companies, under the provisions of the Act 5 and 4 Vic., c. 97, (Lord Seymour's Act.) Printed by order of the House of Commons.

(Concluded from page 539.)

BRANCH III.

COPIES of all Bye-Laws which have been disallowed or modified by the Committee of Privy Council, together with an Rules or Regulations which may have been by them suggested for adoption by Railroad Companies.

1.—ARBROATH AND FORFAR.

Bye-laws and Regulations, enacted by the Arbroath and Forfar Railway Company (in conformity with the Act of Parliament, 6 Wm. 4, c. 34), dated 10th June, 1839.

[We give those only which are referred to in the subsequent communications from the Board of Trade.]

II. No person shall cross or enter upon the said railway, at any crossing or road on the level, on foot or with any carriage, or horse or other animal, while a train is approaching to, and in sight at, such crossing or road, and every offender against this rule shall forfeit a sum not exceeding 5*l*.

* * * * *

VI. Every person by whom or under whose orders, or for whose use, or under whose charge, any waggon or other carriages shall be left at any offset or branch railway, in order to the loading or unloading of any stones, pavement, lime, timber, manure, grain, potatoes, or other agricultural produce, or other goods or merchandise, or for any other purpose, shall keep such waggons or other carriages in such place and position, that they shall all be clear of the engines or carriages passing along the main line; and every such person shall properly adjust the switches or shifting rails of the offset branch or passing place; and every person offending against this rule shall for every such offence forfeit and pay, not only the amount of damage caused by neglect, but also a sum not exceeding 5*l*.

* * * * *

VIII. Every person altering any switch or shifting rail without being properly authorised to do so, shall for every such offence forfeit and pay not only the amount of the damage or injury which may be caused by such act, but also a sum not exceeding 10*l*.

Copy of a letter sent to the Arbroath and Forfar Railway Company, confirming their Bye-laws provisionally.

Board of Trade, 15th September, 1840.

Sir,—With reference to your letter of the 1st inst., enclosing copy of the bye-laws of the Arbroath and Forfar Railway Company, and stating that there is reason to apprehend that such bye-laws will shortly become inoperative unless confirmed by the Board of Trde, I am directed by the Lords, &c., to confirm them provisionally, in order that the Company may not be deprived of the protection of bye-laws during the interval which must necessarily elapse before a complete revision of the bye-laws of Railway Companies generally.

At the same time there are some points suggested by a consideration of these bye-laws to which my Lords direct me to draw your attention as having immediate reference to the public safety.

The importance of preventing persons unconnected with the railway from trespassing upon the line is attested by the frequency of the accidents which have occurred owing to neglect in this particular. By the 16th section of the recent Act for regulating railways, (3 and 4 Vic., c. 97,) ample powers have been given to Railway Companies to prevent trespassing, and a heavy responsibility will attach to any Company on whose line accidents occur owing to any neglect on their part to enforce these powers.

With reference to the second bye-law, my Lords, while entirely approving of it, direct me to observe, that it does not extend to exonerate the Company from the responsibility of having proper gates and policemen at the different crossings, so as to prevent, as far as possible, the possibility of any person attempting to cross the railway when an engine is approaching.

With reference also to the 6th and 8th bye-laws, my Lords direct me to call your attention to the importance of having the switches placed under proper and efficient care, and to warn you that these bye-laws do not exempt the Company from the responsibility of employing servants of their own to see that the switches are properly adjusted, and the line in good order and free from obstructions.—I am, &c.,

S. LAING.

To the Secretary of the Arbroath and Forfar Railway Company.

2.—BIRMINGHAM AND GLOUCESTER.

Bye-Laws.

1. No person will be allowed to travel upon the railway without first having paid his fare, and received a ticket, to be delivered at his destination.

Passengers at road-stations will be only booked conditionally, that is to say, in case there shall be room when the train arrives.

Those passengers booked for the longest distance to have the preference.

2. If any passenger shall refuse to produce or deliver up his ticket when required to do so by the guard or other attendant on the train, he shall be chargeable with the fare from the place whence the train originally started, and be liable to a penalty not exceeding 40*s*.

3. Passengers travelling by first-class carriages will be allowed 100lbs. weight of luggage; by second class carriages, 60lbs.; by third-class carriages 30lbs., If exceeding that weight they will be charged 1*d*. per pound for any distance not exceeding 20 miles, and 1*d*. per pound exceeding 20 miles.

4. No dogs will be permitted to accompany passengers in the carriages, but will be conveyed separately, and charged for.

5. Smoking is strictly prohibited both in and upon the carriages or upon the Company's premises; any passenger persisting in smoking after being warned not to do so, will be subjected to a fine not exceeding 40*s*.; should he persist after a second warning, if travelling, he will be removed from the Company's carriage at the next stopping place, and forfeit his fare; or if not travelling, he will be removed from the Company's premises.

6. Any person being in a state of intoxication, committing any nuisance, wilfully interfering with the comfort of other passengers, or obstructing any of the Company's officers in the discharge of their duty, or not attending to the instructions of the guard in cases where the personal safety of himself or other passengers is concerned, will be immediately removed from the Company's premises on the train stopping, and shall forfeit his fare.

7. If any passenger shall wilfully damage any part of the Company's carriages, stations, or other property, he shall be fined not exceeding 5*l*., over and above the cost of repairing such damage; and all accidental damage shall be paid for by the party doing the same.

8. If any passenger shall be found in or upon any of the carriages, or shall force his way into a carriage, without having previously procured a ticket, or shall occupy (without permission) a carriage of a superior class to that for which he has obtained a ticket, or shall proceed beyond the place to which he has paid his fare, he shall be liable to a fine not exceeding 40*s*. in addition to the full fare for the entire journey.

9. No fee or gratuity will be permitted to be taken by any of the Company's servants, under pain of immediate dismissal.

Copy of Letter sent to the Secretary of the Birmingham and Gloucester Railway Company, relative to the Bye-laws of said Company.

Board of Trade, 23rd September, 1840.

Sir,—With reference to your letter of the 26th August, enclosing a certified copy of the Bye-laws of the Birmingham and Gloucester Railway Company, and to your letter of the 19th instant, desiring to be informed whether the bye-laws of the Company have been approved of, I am directed by the Lords, &c., to state that these bye-laws appear to them objectionable in several respects.

The second bye-law imposes a penalty of 40*s*., in addition to payment of the whole fare upon passengers who are unable to produce their tickets. This is evidently unjust. The fine ought, as in the bye-laws of the London and Birmingham and other great lines, to be alternative on refusal to pay the fare.

The same objection applies to the eighth bye-law with reference to some of the cases included in it, such as the accidental loss of tickets, and the case of a passenger who, having taken out his place to a certain destination, afterwards wishes to proceed further. With reference to all cases of this description in which no intention exists to defraud the Company, their Lordships are of opinion that fines are altogether misplaced, and that payment of the fare is all that the Company can have in any instance the right to demand. The evidence upon this subject before the Select Committee on Railways, shows strongly the impolicy, with reference to the interests of Railway Companies themselves, as well as to the public convenience, of enforcing even the limited power of requiring payment of the fare, in all cases in which the ticket cannot be produced, more rigorously than is indispensable for the protection of the Company against fraud and abuse. Upon this point, my Lords direct me particularly to draw your attention to the evidence of Mr. Baxendale, General Superintendent of the London and Birmingham line, who states, (Second Report, p. 68, Query 2605,) "That the tickets are occasionally lost, and when they are lost that vexation necessarily arises when the passenger is asked to pay his money again; that this rule was strictly acted up to, but that he had been very determined in breaking through it, and that whenever a ticket is lost, the principal officer at each station has the power to use his judgment, and not to require the repayment of the fare."

The 6th and 8th bye-laws are open to a different objection. The case of persons obstructing the officers of the Company in the discharge of their duty, or traspassing upon the railway (under which are clearly included the cases specified in the 6th and 8th bye-laws of persons not attending to the instructions of the guard in cases where the personal safety of themselves or other passengers is concerned, or forcing their way into or upon any carriage of the Company after being warned to desist,) is now provided for by the 16th section of the recent Act for regulating railways (3 & 4 Vict. c. 97). This being part of the general law of the land, all bye-laws inconsistent with its provisions are null and void; and the proper course would be to expunge them, and substitute a notice to the public of the punishment to which they will render themselves liable by committing any of the offences specified by the Act.

In these and other respects, as in mixing up classes of offences totally distinct under the name of prohibition and penalty, the bye-laws of the Birmingham and Gloucester Railway Company appear to their Lordships defective and objectionable; but although they cannot allow them to pass under their notice without comment, they do not, in the present instance, feel disposed to exercise the power of disallowance vested in them by the Act. Considering, on the one hand, the importance of acting upon an uniform system with reference to the bye-laws of all Railway Companies, and of not deciding points of great consequence to the railway interest generally without mature deliberation; and, on the other, the difficulty in which the Birmingham and Gloucester Railway Company will be placed if left without the protection of bye-laws during the interval which must elapse while these questions are under consideration; their Lordships direct me to say, that they are disposed to confirm provisionally the bye-laws now submitted to them, in the expectation that at the next general meeting of the Company they will be remodelled, so as to obviate the objections to them in their present form; and that in the meantime the Directors will attend to the above suggestions, and give instructions to prevent any of their regulations, and especially those relative to tickets, from being enforced in an arbitrary manner towards the public.—I am, &c.

S. LAING.

William Burgess, Esq., Secretary of the Birmingham and Gloucester Railway Company.

3.—HARTLEPOOL.

Copy of Letter sent to Thomas Fenner, Esq., relating to the Bye-Laws of the Hartlepool Docks and Railway Company.

Board of Trade 10th October, 1840.

Sir,—With reference to your letter of the 9th inst., relative to bye-laws of the Hartlepool Docks and Railway Company, I am directed by the Lords, &c., to say—

1st. That such bye-laws as relate to the management of the docks are not within their jurisdiction.

2nd. That the bye-laws made at the general meeting of August, 1838, do not, in terms of the Act for regulating railways, require any confirmation in order to obtain force; and that my Lords, feeling, on the one hand, the importance of acting upon an uniform system towards all railways; and on the other, the necessity of proceeding with due deliberation, where such important interests are concerned, postpone any observations upon those bye-laws until they shall have had further time to consider the question of bye-law legislation generally.

3rd. The additional bye-laws having been made subsequently to the passing of the 3 and 4 Vict. c, 97, have no force until confirmed by the Board of Trade. This confirmation my Lords, actuated by the views above mentioned, direct me to give provisionally, in

Digitized by Google

order that the Company may not be deprived of their protection during the interval which must elapse before the general question of bye-laws is fully considered, subject, however, to the following observations: the 14th additional bye-law subjects persons using carriages deemed unsafe by the Engineer of the Company to a penalty, in the event only of "damage arising from such cause." This is inconsistent with the 12th additional bye-law, and the 3rd bye-law of 1838, and with the spirit of the 34th section of the Hartlepool Railway Amendment Act, 4 Will. 4, c. 56.

It should be distinctly understood that the responsibility rests with the Company of not allowing anything of a dangerous construction to travel along their railway, and that it is their duty at once to put a stop to anything which their Engineer pronounces dangerous. My Lords, therefore, cannot allow the 14th additional bye-law, and they desire me to add that all the precautions suggested by it ought to be strictly enforced under the 12th.

With reference to those bye-laws which relate to obstruction and trespassing, I am directed to call your attention to the 15th and 16th sections of the 3 and 4 Vict. c. 97, which give additional powers for the prevention of these two causes of accident. These powers being part of the general law of the land, of course supersede the powers confirmed by the bye-laws and Acts of Incorporation of the Company; and it is the duty of the Company to see them strictly enforced, and to give notice to the public of their intention to do so. These bye-laws, therefore, can only be confirmed, even provisionally, upon the understanding that they are not to interfere with the enforcement of the Act 3 and 4 Vict. c. 97, in all cases in which the Directors deem it necessary for the public safety, and that instructions to this effect shall be issued to the servants of the Company, and due notice given to the public. —I am, &c.

S. LAING.

Thomas Fenner, Esq., 16, Cannon row.

The additional bye-laws particularly referred to in the preceding letter are these:—

12. Any person sending an engine, waggon, or other carriage upon the railway, after notice shall have been given to him of the insufficiency or insecurity of such engine, waggon, or other carriage, shall forfeit a sum not exceeding . . £5 0 0

14. Owners of waggons or other carriages refusing or neglecting to have fixed to their waggons or other carriages such brakes, centre chains, side chains, centre bars, or other fastenings as in the opinion of the Engineer of the Company are of a sufficient strength and proper construction, shall, in case any damage arise from such cause, in addition to full satisfaction or compensation for such damage, forfeit a sum not exceeding 2 0 0

4. ARDROSSAN.

Bye-Laws of the Company, enacted at their General Meeting, held the 21st August, 1840, in terms of their Act of Incorporation.

1st. No moving power shall be used upon the railway, after a double line of rails shall have been laid, except locomotive engines; and horse-hauled waggons and carriages shall, until the line is opened, leave the different depots or stations at such hours as shall be fixed by the Company.

2nd. Trains going east shall keep the north line of rails, and those going west shall keep the south line.

3rd. Trains going on the railway later than half an hour after sunset, or earlier than half an hour before sunrise, shall have proper signal-lamps attached to the front and rear of the train, so as to be distinctly visible.

4th. No person shall be allowed to be upon the engine or tender, except the engineman and fireman, without the consent of the Company.

5th. Passengers are to book their places and pay their fares before taking their seats; they shall show the ticket which they will receive on paying the fare, to the conductor or guard when requested, and shall deliver it up before quitting the Company's premises.

6th. Passengers are to take their seats pointed out to them by the conductor or guard.

7th. Passengers at the intermediate stations will only be booked on the understanding that there is room in the train for which they are booked, and in case there should not be room for all, those booked for the longest distance will have the preference.

8th. Any person who shall take a seat in a carriage without having paid his fare, or shall occupy a superior class carriage to that for which he paid, or shall travel beyond the station for which he booked himself shall be liable in a penalty of forty shillings, in addition to the full fare of the entire journey.

9th. Any person doing any damage to any of the Company's carriages, by cutting the lining, breaking the windows, or otherwise, shall be fined in five pounds.

10th. All smoking is strictly prohibited upon the carriages, or in any of the Company's premises; any person persisting in smoking after being warned not to do so, shall be liable in a fine of forty shillings, and in case of his persisting after a second warning, he may immediately, or at the first stopping place, be removed from the Company's premises, and forfeit his fare.

11th. Any passenger in a state of intoxication committing any nuisance, or wilfully interfering with the comfort of other passengers, obstructing any of the Company's officers in the execution of their duty, or not attending to the directions of the guard in cases where the personal safety or comfort of any of the passengers is concerned, will be immediately removed from the Company's premises; or in case he shall at the time be travelling, then at the next station, or as soon after the offence as conveniently may be, and shall forfeit his fare.

12th. The charge made for passengers does not extend to luggage. The Company will not be answerable for any luggage, unless the passenger to whom it belongs have booked and paid for it.

13th. The Company's porters will render every facility to passengers for loading and unloading luggage at the different stations. No fee or gratuity is permitted to be taken by any of the Company's servants, under any circumstance whatever, under pain of instant dismissal.

(Signed) ALEX. MONTGOMERIE, Chairman.

(A true Copy.) JAMES MOFFAT, Clerk to the Company.

Copy of letter sent to the Secretary of the Ardrossan Railway Company, relative to the Company's bye laws, and in reply to their letter of the 20th November.

Board of Trade, 7th Dec., 1840.

Sir,—With reference to the bye-laws of the Ardrossan Company, submitted for approval of the Lords, &c., by your letter of the 20th November, I am directed to say, that as their Lordships' jurisdiction is expressly confined by the Act "to bye-laws, orders, rules, or regulations which impose penalties for their enforcement upon persons other than servants of the company," it does not appear that bye-laws 1, 2, 3 and 4, which merely state certain regulations to be observed with a view to the safe conducting of the public traffic, come within the meaning of the Act.

At the same time those bye-laws appear to their Lordships unobjectionable as far as they go, though insufficient as a complete code for conducting the public traffic on the railway.

With regard to bye-laws 5, 6 and 7, as no penalty is affixed, they appear to be simply notices to the public, and at any rate appear unobjectionable.

In bye-law 8 the words "without permission" should be inserted between the words "shall" and "take a seat," and "shall" and "occupy." With reference to this bye-law also, their Lordships wish to be informed what is the course adopted by the Company with regard to the collection of tickets, and what course is adopted in the case of tickets being lost. Where no intention to defraud exists, a penalty is misplaced, and payment of the fare is all that the Company can have a right to demand. Subject to these remarks, their Lordships approve of the bye-laws.

Bye-laws 9 and 10 are unobjectionable.

Bye-law 11 is right in principle, but it appears anomalous that the offences enumerated in it should be subjected to a less severe penalty than "smoking." Their Lordships, however, do not wish to disallow the bye-law on this ground, as it appears practically sufficient. It must be borne in mind, however, that it does not supersede the duty of enforcing the 16th section of the 3 & 4 Vict. c. 97, in cases in which the public safety is endangered by the conduct of the offender.

Bye-law 12 is disallowed by their Lordships, as in direct contradiction with the provisions of the Company's Act of Incorporation, 3 & 4 Vict. c. 104, s. 88. Any attempt to limit the rights of passengers, as defined by this section, will render the Company liable to a prosecution; and their Lordships request that an explicit statement of what the practice is with regard to passengers' luggage on the Ardrossan Railway may be furnished them without delay.

Bye-law 13 relates to the servants of the Company, and is quite proper.

In giving their sanction, subject to the above exceptions and remarks, to these bye-laws, their Lordships wish it to be understood that they are acting provisionally from a wish not to leave the Company without the protection of bye-laws, and that their sanction must be taken without prejudice to any steps which they may hereafter think it their duty to take with a view to enforcing greater system and uniformity in the bye-laws and regulations of railway companies generally.—I am, &c.,

S. LAING.

To the Secretary of the Ardrossan Railway Company.

5.—GARNKIRK AND GLASGOW.

Regulations and Penalties.

[We give those only referred to in the subsequent communication from the Board of Trade.]

1. No person shall pass upon the railway with waggons or other carriages earlier than one hour before sunrise, or later than one hour after sunset, upon work-days, nor at any time upon Sundays, without written leave from the Company.

* * * * * *

6. All carriages shall take the north line of rails in going east, and the south line in coming west, unless otherwise directed by the Company's servants.—*Viz.* The passenger trains go both east and west upon the north line; waggoners and others must therefore attend to this to avoid interrupting these trains.

* * * * * *

12. Every person going into or leaving a siding with a waggon, engine, or other carriage, shall adjust the switches or other machinery to suit the road he is taking, and shall, after passing, re-adjust the same so as not to interfere with the main line.

Regulations for Passengers.

Passengers by the Company's coaches shall take charge of their own luggage, for loss of or damage to which the Company shall not be responsible; nor shall they be responsible for accidents of any kind occurring from no culpable negligence on their part. Luggage, exceeding in weight or bulk what can be carried in the hand, and put under the passengers' seat, and dogs and the like, shall only be carried in the passenger train, when there is a spare and suitable waggon, and shall be paid for extra. Fares shall be paid, or tickets delivered, on demand, to the collectors thereof. At the stations where tickets are sold, passengers will provide themselves with tickets before entering the carriages.

Passengers shall take and keep the seats allotted to them, and shall not stand upon the carriages or on the seats, nor lean upon the doors, or over the sides. The carriage doors shall always be kept shut, except when they require to be opened by the persons in charge. At the Gartsherrie and Coatbridge stations, or elsewhere, when required, passengers shall shift their places in the trains, as directed by the attendants. They shall not enter or quit the carriages while they are in motion.

No passenger or other person shall unnecessarily interfere with any part of the carriages or machinery, or hold conversation with the enginemen or other servants of the Company while on duty; and no person shall intrude upon the privacy of other passengers. Smoking in or near the carriages will not be permitted.

No intoxicated person shall be allowed to travel on the railway, and no spirits or intoxicating liquor shall be permitted to be used thereon or in the carriages.

Board of Trade, 22nd Dec. 1840.

Sir,—With reference to your letter of the 23rd June, enclosing a copy of the bye-laws and regulations of the Garnkirk and Glasgow Railway Company, and requesting an early confirmation of them; I am directed to inform you, that in order not to leave the Company without the protection of a code of bye-laws, their Lordships are pleased to confirm provisionally those submitted to them, subject to the following exceptions and remarks:—

1. With regard to the bye-law which attempts to limit the responsibility of the Company in the case of passengers' luggage, their Lordships observe that the liability of the Company as carriers, is regulated by the Carriers Act, 1 Will. 4, c. 68, which expressly defines the objects for which carriers are not to be responsible without notice, and with respect to other articles declares that no public notice or declaration shall limit their liability. Their Lordships cannot allow the present or any bye-law which is inconsistent with the provisions of this Act.

Digitized by Google

2. With regard to the further portion of the same bye-law which declares that luggage exceeding what can be carried in the hand and put under the passengers' seat shall only be carried in the passengers' train when there is a spare and suitable waggon, their Lordships cannot allow a regulation which appears to give the Company an arbitrary discretion of refusing to take the *bona fide* luggage of a passenger by the same train as that by which he himself proceeds. If the Company wish for a regulation to protect themselves from being defrauded by "goods" being carried as "passengers' luggage," they must frame one not open to the objection of including *bona fide* luggage, and on submitting it for their Lordships' approval, must accompany it by an explanation of the course pursued with regard to passengers' luggage.

3. With respect to the bye-law which declares that the railway shall not be used on Sundays, their Lordships do not wish to raise any question respecting the propriety of this regulation, or the right of the Company to prohibit Sunday travelling, as far as their own carriages and servants are concerned; but as the railway is declared to be free to the public on payment of rates by the 65th sect. of the Company's Act, 7 Geo. 4, c. 103, if the case should arise of any person claiming to use the railway upon a Sunday, a question would be raised, which it would be for the courts of law to determine, as to the power of the Company, under their Act, to refuse the use of their railway upon Sundays.

This question is one which would not be affected by any bye-law which the Company had thought proper to make, and therefore the bye-law in question, as assuming to settle a point which exceeds the range of bye-law jurisdiction, appears improper.

The intimation of the intention of the Company to close their railway on Sundays might be conveyed by a simple notice, which would obviate the objection above stated of appearing to decide by bye-law, and impose a penalty, in a case which is clearly beyond the scope of bye-law legislation.

4. With regard to such of the regulations as relate to the prevention of accidents, I am directed to call your attention to the enclosed observations of Sir F. Smith.

In giving their sanction to these bye-laws subject to the above exceptions and remarks, their Lordships wish it to be understood that they are acting provisionally, from a wish not to leave the Company without the protection of bye-laws, and that their sanction must be taken without prejudice to any steps which they may hereafter think fit to take, with a view to enforcing greater system and uniformity in the bye-laws and regulations of railway companies generally.—I am, &c.,

S. LAING.

To the Secretary of the Garnkirk and Glasgow Railway Company.

MEMORANDUM relative to the Bye-laws of the Garnkirk and Glasgow Railway.

Board of Trade, 2nd February, 1841.

No. 6. In this article it is stated that the passenger trains travel both east and west upon the north line, and waggoners are enjoined to attend to this arrangement to avoid interrupting such trains.

I believe that the rails of the north line are alone calculated for passenger traffic; if otherwise, the train should not be restricted to the use of one line only.

No. 7. By this article it would appear that the starting of waggons or other carriages from the depots or sidings at such periods as to avoid the chance of collision with passenger trains is left to the discretion of the owners of waggons, or other persons.

Such a system is likely to endanger the safety of the public, and it is therefore recommended that proper time-tables should be established for the passenger traffic, and that arrangements should be made to ensure its punctuality and to prevent the north line of rails being used by any other carriages at or near the time when the passenger trains are due. For this purpose the Company should employ vigilant and and trustworthy servants.

No. 12. By this article it appears that parties bringing their carriages upon the line from sidings are held responsible for the adjustment of the switches. This is a very dangerous practice if permitted on the line used for the public traffic, and the system adopted generally on passenger lines, of placing pointsmen in charge of these switches, should be adopted.

FREDERIC SMITH.

General Remarks of the Board of Trade on this Branch of the Returns:—

This Return would be incomplete without a reference to the Report of the officers of the Railway Department, for the reasons which have hitherto induced the Board of Trade to suspend as far as possible the exercise of the revising power over bye-laws vested in them by the 3 and 4 Vic., c. 97. These may be stated shortly as follows:—

1. The fact that 43 out of 77 Railway Companies have made no return of bye-laws at all.

2. The doubt existing whether the power of disallowance under Lord Seymour's Act extends to the numerous class of bye-laws which, although of a public nature, do not in express terms inflict penalties on the public.

3. The evident intention of the legislature that the Board of Trade should not, under the pretext of disallowing, assume indirectly a power of enacting bye-laws.

4. The equally evident intention that the Board of Trade should act as far as possible on an uniform system towards all railways, rendering it advisable not to disallow any particular bye-law until prepared to act upon a general principle in all similar cases. And

5. The total absence of complaint on the part of the public, and of evidence to show that a single one of the bye-laws of the different Railway Companies returned to the Board of Trade had operated in a manner practically oppressive or injurious.

With regard to rules and regulations suggested for the adoption of Railway Companies, the suggestions made by the Board of Trade have been confined to recommendations addressed to particular Railway Companies, with a view to the prevention of accidents, and are in a great measure contained in the Reports of Inspectors already given in the preceding returns. In several instances the propriety of enforcing the provisions of Lord Seymour's Act for the prevention of trespassing, and for the punishment of misconduct on the part of servants, has been urged upon Railway Companies.

In three cases Railway Companies have been induced to erect gates, and station policemen at crossings of turnpike roads upon a level, in consequence of requisitions from this Board, calling upon them to comply with the provisions of the 2 and 3 Vic., c. 45.

No formal rules and regulations have, however, been issued by the Board of Trade, nor is any power given to it in that behalf by the Act for regulating railways.

RAILWAY PASSENGERS' TAX.

The Petition of the Bolton and Preston Railway Company—

Sheweth,—That the Bolton and Preston Railway passes through, and communicates with, a district containing a large population, chiefly of the working classes, for whose special accommodation your petitioners have provided on their line open carriages, which they are running at a very low rate of charge, amounting to little more than a penny per mile per passenger.

That the expense of conveying and providing for the accommodation of second and third class passengers is considerably greater, as compared with the fares paid by them, than that which attaches to the conveyance of first class passengers.

That the disadvantage under which your petitioners carry on this branch of their passenger traffic, arising from the before-mentioned inequality of expense, and which operates indirectly to the prejudice of the working classes, is greatly increased by the no less unequal pressure of the tax upon railway passengers to which your petitioners are subject, which amounts to nearly ten per centum on the fares paid by third class passengers, to rather more than six per centum on second class fares, whilst in respect of the fares of the first class passengers it is rather less than four per centum.

That your petitioners have found since they provided carriages for the conveyance of third class passengers, that the proportion of first class passengers has been only one-eighth of the whole number conveyed upon the railway.

That your petitioners beg leave respectfully to represent to your honourable House, that the present rate of taxation is unequal and unjust, and bears with peculiar hardship upon the working classes and upon those railway companies who give the greatest accommodation to that class of passengers; and that if the modification recommended by the Select Committee on railways, as stated in their fourth report, were, adopted, the public revenue would be considerably increased, the working classes benefited, and the advantages of railway travelling greatly extended.

Your petitioners therefore humbly pray that your honourable House will be pleased to adopt such measures as will effect a more fair and equal rate of taxation upon passengers by railway.

And your petitioners will ever pray, &c.

THE VENICE AND MILAN RAILWAY.—(Extract of a letter from Venice, dated May 1.)—The 26th of April was for Venice a day of joy and festivity, a day which long will be engraven in the remembrance of the inhabitants of that ancient city. On that day his imperial highness the Archduke Rayner, viceroy of the Lombardo-Venetian kingdom, laid the first stone of the gigantic bridge destined to unite the queen of the isles to the neighbouring continent. The patriarch, at the head of the clergy, the high civil and military functionaries, the Directors of the Venice and Milan Railway, and all that Venice numbers of rank and and respectability, assisted at the interesting ceremony. A scroll containing the deeds of foundation sealed by the archduke himself, a copper and silver medal, both bearing a view of the bridge thereon the image of a waggon drawn by a locomotive, with these words above, —"*Commerciis terrâ marique augendis;*" and the following below,—"*Fugit ocior ventis;*" together with several golden and silver pieces of coins struck this year at the Venetian mint, were put in a leaden case, and deposited by the illustrious representative of the house of Hapsburgh, in a niche made for that purpose. This immense bridge, which will rival the greatest Roman works still extant in Italy, will be all of stone, and will be 3½ miles in length. A gentleman named Antonio Busetta Petich has undertaken the construction of it for the sum of 4,830,000 Austrian lire, or about 160,000*l.* The work will be begun forthwith, with the engagement of completing it in four years.

LLANELLY RAILWAY.—On Thursday, the 6th instant, another new Colliery commenced operations on this line, and a district of country west of the Cwm Amman Valley has thus been opened, by a railway connexion with the sea. The Glanlash branch (prolonged to collieries on the manors of Earl Cawdor and the Lord Bishop of St. David's) has this week been shown to be in such a state of forwardness as to convey coal the entire line, and the Mynydd Mawr Company have availed themselves of this condition, by sending down largely since the above period. We have from time to time examined many specimens of Stone Coal, but we have seen none more pure than this, nor none more likely in the market to rival the fame of Pembrokeshire Anthracite; and we congratulate the Railway Company on this important accession to their trading prospects—a congratulation we offer in perfect sincerity, since that enterprize which induced the formation of this line of railway deserves its reward.—*Cambrian.*

THE SOUTH-WESTERN RAILWAY.—We regret to find that the alteration in the South-Western Railway regulations, has deprived us of the opportunity of forwarding the London mail in the morning; a convenience much wanted, and which was only enjoyed long enough to make us regret the deprivation the more.—*Isle of Wight and the Hampshire Independent.*

The Paris and Rouen Railway Company are now accomplishing the legal formalities requisite for their commencing operations in the department of the Eure.—*Hampshire Independent.*

THE AMSTERDAM AND ARNHEIM RAILWAY.—It will be remembered that the ex-king of Holland made himself guarantee for the payment of the interest on the sums subscribed for the Amsterdam and Arnheim Railway, and that after his abdication it became a question whether the pledge was personal or in his character of Sovereign. His Majesty has removed the doubt in a manner truly royal by giving orders for the regular payment of this interest out of his privy purse, although the road is not yet even begun.

AMERICAN EXPERIENCE OF THE RAILWAY SYSTEM.

From Second Report of the Directors of the New York and Erie Railroad Company, 3rd Feb., 1841.)

On the Utica and Schenectady Railway, seventy eight miles in length, the number of through passengers, in 1839, was 95,776, and of way passengers 86,823, total 182,599; equal to 125,102 through passengers; the fare through being three dollars, or a fraction short of four cents per mile. It is understood that the passengers transported on that road are estimated at not more than one-fourth of the whole number that pass between Utica and Schenectady, on the canal and otherwise, per annum.

The expenses of the year amounted to less than 30 per cent. of the receipts. The balance, after deducting all expenses, amounted to more than 15 per cent. on their capital. Had half of their capital been borrowed at 6 per cent., the earnings of the year, after paying the interest on the loan, would have divided 25 per cent. on the stock; or paid off the loan in four years of like receipts; or divided 10 per cent. per annum, and paid off the loan in six years.

The number of through passengers, as stated above, divided by the number of miles in the road, gives an average equal to 1604 passengers per mile yearly, 134 per mile per month, and 31 per mile per week.

100,000 through on this road would give 224 passengers per mile yearly, 19 per mile per month, and 4½ per mile per week.

66,000 through would give 147 passengers per mile yearly, 12 per mile per month, and 3 per mile per week.

33,000 through would give 73 passengers per mile yearly, 6 per mile per month, and 1½ per mile per week.

On the Boston and Worcester road, forty-one miles in length, the average in 1839 would be 2195 passengers per mile yearly, 183 per mile per month, and 42 per mile per week.

On the Boston and Lowell, twenty-six and a half miles in length in 1838, 4900 passengers per mile yearly, 409 per mile per month, and 94 per mile per week.

On the Camden and Amboy, sixty-one miles in length, in 1839, 2984 passengers per mile yearly, 249 per mile per month, and 57 per mile per week.

Utica and Syracuse, fifty-three miles in length, in 1839, 2502 passengers per mile yearly, 192 per mile per month, and 44 per mile per week.

The number of way passengers on the Utica and Schenectady Railway amounted, in 1839, to 86,823. The gross revenue derived from them was 87,979 dols. 57 cts., amounting to 1.01 dol. for each individual; and as the charge for a through passenger is three dollars, it is seen that the way passengers traveled on an average, one third the length of the road. It may be assumed as nearly self evident, that in a country occupied by a population distributed evenly over its surface, and having a uniformity of character and pursuits, the railways which traverse it will receive numbers of way passengers proportional to the lengths; that is, a straight road two hunded miles long will have twice as many way passengers as a road one hundred miles long. If we apply this principle to the case of the New York and Erie Railway, we may estimate the number of its way passengers from that on the Utica and Schenectady road, in the following manner, viz:—

Miles. Miles.

78 : 446 :: 86,823 : 496,419 = number of way passengers on the New York and Erie Railway. If we suppose the distance travelled by the above number of persons to be the same in proportion as on the Utica and Schenectady Railway, the average journey for each will be one hundred and forty-eight miles. At four cents per mile the sum paid would be 5.92 dols., and the amount per annum received from all the way passengers would be 2,938,978.08 dols.

To illustrate this view of the subject still further, we will make a similar estimate from data furnished by the Utica and Syracuse Railway. The length of this work is fifty three miles; the number of way passengers in 1839 was 55,802 who paid on an average seventy-three cents each, the price for a through passage being two dollars. By extending the calculations as above, we shall find that the number of way passengers on the New York and Erie Railway would, at the same rate, be 469,579, and the sum received from them 3,056,959 dols.

The amounts obtained in these calculations agree sufficiently to show that with regard to the railways cited, the rule that *the numbers of way passengers are as the lengths, holds good.*

The mean of the two results is abont 3,000,000 dols., from which, if we were to deduct one-third for expenses, we would have a net receipt of 2,000,000 dols. on way passengers alone; equal to 22 per cent. on the capital; or if two-thirds of the cost of the work were defrayed from loans at 5½ per cent., the income on the remaining 3,000,000 dols. of stock would be 55 per cent. per annum. In other words, if the New York and Erie Railway shall receive as many way passengers in proportion as the Utica and Schenectady, and Utica and Syracuse Railways, the net earnings might be more than sufficient to pay 5½ per cent. on 6,000,000 dols. of loans, and 50 per cent. on 3,000,000 dols. of stock, and this without taking into account the profits on through passengers, on freight or on the transportation of the mail.

Nothing can illustrate more forcibly than this the advantages which long roads possess over short ones. The results obtained may seem extravagant, and it is not intended to be asserted that they will from the first be realized; but when it is remembered that the Utica and Schenectady railway has, to the north of it, a country which, as yet, yields very few passengers, and that on the south side it is in immediate contact with the Erie canal, which, during seven months of the active portion of the year, divides with it the way business, and that the Utica and Syracuse Railway, having the same competition with the canal to sustain, has also the inconvenience of being constructed for nearly half its length across swamps which are at present uninhabitable, whereas the New York and Erie Railway is every where free from these disadvantages, it cannot be deemed unreasonable that we should expect to profit to a very considerable extent from the principle above set forth.

The Boston and Lowell road is one of the best in the country, and is worked as cheap, or cheaper than any other, in proportion to its length. But it is short, and not withstanding its heavy business, both in passengers and tonnage, pays but about nine per cent. per annum on its cost. * * *

Though the cost of roads on this side of the Atlantic is comparatively small, and their character as to routes, grades, curves, and superstructure, is quite various, it is believed that not more than two or three that are forty miles or more in length, and have been finished and in use twelve months, are unproductive; among which, the only one in New England or New York, is that from Stonington to Providence. Their earnings vary from 0 to 15 per cent. Some shorter roads are known to be productive, but it is deemed quite safe and due to the subject, to state that of the roads which are completed and in use, *those which are not productive are short ones.*

The report of the Western Railway Corporation of Massachusetts, dated March, 1840, states that the net income of the railways finished in that Commonwealth, averages over 8 per cent. per annum on their cost.

In 1839 the net income of the Utica and Schenectady road was 15 per cent.; of the Utica and Syracuse, 11 per cent.; of the Camden and Amboy, 13¼ per cent.

CIRENCESTER AND THE RAILWAY SYSTEM.

From the *Wilts and Gloucestershire Standard.*

We propose to direct attention to the great benefits likely to be conferred upon the ancient borough of Cirencester by reason of the railway which has been formed, and is now about to be opened, in conjunction with that immense national work, the Great Western Railway. Like many of our readers, we are decided enemies to all sorts of innovations, and we always hesitate before lending a helping hand to any work of this nature, bearing the appearance of a mere speculation, until fully convinced of its propriety and practical usefulness to the community. Proofs the most abundant have, however, been given, that the advantages which may be anticipated by this town and neighbourhood, for many miles round, are at present incalculable. To the agriculturist, the merchant, and the tradesman, as well as every member of society to whom time (that which no man can purchase) is an object, the railway to Cirencester promises immense and peculiar advantages. Look to the neighbouring town of Swindon, a town of great antiquity, but one, though most respectable, as obscure as it is ancient; see what a mighty change will be effected here. Instead of one or two coaches, and as many pair of post-horses passing in a day through it, hundreds, nay thousands, of human beings will be whirled by it, brought into connection with it, and it will become a first-class station of great importance on the Great Western line. Last week we noticed the high price produced by the sale of a piece of land in the immediate vicinity of Swindon, which at once exhibits the effect the railway has on the value of the soil. If, in addition to this, any evidence were wanting of the beneficial effect produced upon this town by the junction of the Cheltenham and Great Western with the Great Western Railway, the fact (as stated in our columns some weeks ago) that there are upwards of 200 houses building in the neighbourhood of the terminus at Swindon, must render it sufficiently plain; and the inhabitants, one and all, stimulated by these invigorating symptoms of prosperity, begin to feel their own importance, as active, and not dormant, members of society. So will it be with us at Cirencester; we shall almost enjoy a new state of existence; with the railway from Bristol to London on the one hand, and that from Gloucester to Birmingham and the north on the other; with these advantages we feel that we shall have the retirement of this delightful and healthy country, with all the benefits of the most speedy locomotion. That this change must be conducive of great gains and comfort to the public, we conceive that there can be no manner of doubt, and we hope that, from time to time, we may have it in our power to second the good arrangements of those who have the control of this mighty engine, which, like the wand of the enchanter, passes over the land, and is the immediate cause of those vast changes, and those extensive improvements, which we foresee must speedily be perceived and felt by the inhabitants and neighbourhood of Cirencester.

IMPROVED LOCOMOTIVE.—Mr. Witty exhibited a model of his improved locomotive engine, in the large room of the Cross Keys, on Monday evening week. Steam was applied, and the model ran from one end of the room to the other in a satisfactory manner, after which Mr. W. explained to the company what constituted the improvements in his engine. Its superiority consisted in its great simplicity on the one hand, and an improved application of the power of steam on the others. All the *recoil* which retards the progress of other engines, was in this entirely done away with. A calculation made of the additional effective force of Mr. W.'s over the other engines now in use, showed that it is as the sum of the sides of a right angled triangle is to the hypothenuse.—*Hull Times.*

THE SOUTH-WESTERN—GOSPORT BRANCH.—The *Hampshire Independent* states that the works at the Gosport terminus are rapidly progressing, and will, it is expected, be shortly completed, but adds an expression of regret "that nothing in the way of improvement or addition to the inns of that place is going to meet the great increase of accommodation which will be required on the opening of this branch of the South-Western Railway."

MR. WHISHAW'S RECIPROCATING SYSTEM OF RAILWAYS.

[We now redeem the promise which we made in reviewing Mr. Whishaw's valuable work on the railways of Great Britain, to give at some subsequent period an account of the author's Reciprocating System. We adopt his own account with such abridgment only as the absence of plates renders necessary].

In March, 1839, we submitted to the Institution of Civil Engineers the outline of a proposed new system of laying out and working railways, which, from the peculiar method proposed of carrying on the traffic, we have designated the Reciprocating System. Had this plan emanated from a Stephenson or a Brunel, it would, no doubt, ere this have been carried into execution. So much, however, are we convinced of the efficacy of the system from the results of our examination and experiments on the principal railways of the kingdom, that we have no hesitation in at once laying before that large and increasing portion of the British people who are so greatly interested in every improvement that can reduce the original cost of railways, and thus extend the system to those parts of the country in which money is not so plentiful as in the great manufacturing districts, and where the introduction of railways would tend greatly to ameliorate the condition of the people, and without doubt afford an ample return for the much reduced outlay.

The present expensive mode of constructing railways is quite incompatible with their further extension; and unless an economical, and at the same time an efficient, system is introduced, a large mass of the population of the united kingdom will be for ever debarred of the comforts and conveniences afforded directly to those places which are included in the catalogue of railway cities, towns, or districts.

We shall divide the account of the reciprocating system into three parts, viz., 1st, construction of railways according to this system; 2nd, method of carrying on the traffic; and, 3rd, the estimated cost and annual expenditure.

The peculiar feature proposed in the construction of railways according to the reciprocating plan, is the adoption of a single line of way throughout, whatever may be the expected amount of traffic: by which the original cost of the earthworks, masonry, and upper works on railways so constructed would necessarily be reduced to a considerable extent; and further to introduce in undulating or hilly districts of country a considerable proportion of second class gradients, and where necessary for the sake of avoiding heavy earthworks, tunnels, or expensive viaducts or bridges, even third-class gradients, where such inclines could be introduced of short length.

In order that the whole system may be thoroughly understood we shall describe *seriatim* the mode of construction under the following heads, viz.:—1. Land and Fencing; 2. Earthworks; 3. Drainage; 4. Tunnels, Viaducts, and Bridges; 5. Level Crossings; 6. Permanent Way; and 7. Stations and Depots.

1. *Land and Fencing.*—The land is to be enclosed throughout to an uniform width of 34 feet; where within a foot of the surface of the lands or where carried on embankment, exclusive of that for slopes, sidings, and stations or depots, 9½ feet of which, on each side, is for the fence, bank ditch and benches. In the case of cuttings an additional width of 3½ feet on each side is to be provided for a field drain at top of the slope, and 3 feet for the extra width under ballasting.* For each siding, an additional width of 5 feet on each side is to be enclosed for a length of 360 feet; and four such additional parcels of land are to be enclosed in each mile. Besides which, at every intermediate station there is to be an additional way of 450 feet in length, for which an extra width of land is to be enclosed. The fencing, in districts where stone is abundant, as in the West Riding of Yorkshire, in Westmoreland, and in parts of Lancashire, Wales, and Scotland, &c., is to be constructed of dry stone walling, with coping rounded on top, and laid in mortar. In other districts where wood is obtained at a much cheaper rate than stone, stout oak or larch cleft-posts with three rails, and dwarf space and pale fencing is to be introduced with a planting of quick along the top of the bank, which is to be formed from the side drain. The field gates may either be of iron or wood, according to the custom of the particular district. All the posts are to be charred to a height of 3 inches above the ground level.

2. *Earthwork.*—The top width of embankments to be 15 feet, and the clear width of cuttings between the side drains to be 18 feet; the slopes of cuttings and embankments throughout to be regulated by the description of strata intersected. In plastic clays and loams the slopes will generally stand at from 2 to 1 to 3 to 1; the embankments requiring, in most cases, the less amount of slope of the two. In gravel and in indurated sands the slopes will stand at 1½ to 1. In solid chalk the cuttings may be formed at one-sixth to one; and the embankments formed from the produce of such cuttings at from 1 to 1 to 1½ to 1. In disrupted chalk the cuttings will stand at from 1½ to ¼ to 1. It is advisable in deep chalk, or other cuttings, to carry up the slopes from the bottom, according to the strata as above, for two thirds the height when it is as much as 40 feet, and then run a bench 6 feet in width, with an open drain or water-course, along the middle, to receive the surface water from the lands, which may be carried into the lower drains by earthen pipes, or well pitched wooden trunks, of a size to be regulated by the flow of water, which may be generally ascertained by reference to the neighbouring water-courses. Above the bench, the slope to be formed at ¼ to 1, where the slope is at ½, or at ⅓ to 1, where the slope is at ¼. In red sand stone, and other solid rocks, the sides of the cuttings will be perpendicular.

In forming embankments of clays, loams, or any loose or doubtful materials, when they exceed 10 feet in height, they are to be carried up in layers, or courses, each of from 1½ to 2 yards in thickness. The whole of the bottom layer, whether formed from a cutting at each end, or from a cutting at one end only, or from side cutting, is to be completed throughout before the next layer is superposed.

Although this method will considerably increase the first cost of embankments formed of treacherous soils, yet it will save a large annual outlay in the shape of "repairs to slopes," and entirely prevent accidents from the permanent way being disturbed by slips of the uncertain materials of which some of the embankments will necessarily be formed. By the ordinary mode of constructing embankments large cavities are left in the body of the work which presently form reservoirs for the water percolating from the surface, and thus channels are effected; slips are continually taking place, and the permanent way is sinking daily for years after, so that the items of "maintenance of way" and "repairs to slopes" form a large amount in the annual expenditure.

By the above described method, each layer is well trodden down and exposed to the weather for a sufficient time till it becomes consolidated before the next layer is superadded. We do not recommend the earthworks to be executed by night, as they are generally less attended to by the workpeople than in the day time, but rather that they should be carried on simultaneously, and not too hastily; and if the money is not plentiful, then we would let to contractors so many layers of the embankments from end to end. Thus the bottom layer of each embankment throughout would become consolidated nearly at the same time, depending of course on the lengths respectively, side cutting and spoil banks must be resorted to where the length of the lead would render it more expensive to form the embankments from the regular cuttings. Where side cutting is rendered necessary, the most advisable plan is to run side dykes parallel to the embankments, which tend to keep them solid by being thus well drained. The height to which spoil banks should be carried must depend upon the value of the land where they are to be placed; but a good plan is to increase the width of the contiguous embankments, provided the lead is not of too great length. Earthworks, formed according to the general plan, and taken throughout the kingdom cost at from 6d. to 1s. 6d. per cubic yard. The average cost is about 1s. 4d. per cubic yard.

3. *Drainage.*—Lateral drains are to be formed parallel to all the cuttings and embankments; to be generally 3 feet wide at top, 1 foot at bottom, and 1½ feet deep. At the top of the slopes of cuttings an open drain is also to be formed 2 feet 6 inches wide and 1 foot 3 inches deep, the produce of which (if the soil is of proper quality) is to form a bank for the quick plantings, which in course of time will become the permanent fence; but where the fences are of stone this will not be required; in such case, the excavated earth from the top drains will go, with the produce of the cutting, to form the contiguous embankments, or carried to spoil, as the case may be.

Where cuttings are deep and there is a great flow of water, it will be necessary to introduce open semicircular drains of brick, or open square drains of stone, paved at bottom with flags if in a stone district; and in extreme cases culverts will be necessary, with eyes or openings from the surface, according to the plan adopted in the great Tring cutting of the London and Birmingham Railway. In stone districts a rubble drain should be formed down the centre line of both cuttings and embankments, and rubble drains or soughs carried therefrom into the side drains, or where the embankments are high, into open slope drains, formed either of flags, semicircular open brickwork, or wooden well-pitched troughs—the dimensions in all cases to be regulated by the circumstances of each particular case. Slope drains must also be introduced in deep cuttings, to carry the water from the top drain into the lower water channel. In districts where brick earth is plentiful, the best kind of sub water courses are formed of perforated circular tile drains, as iron pipes constructed spigot and faucet fashion.

4. *Tunnels, Viaducts, and Bridges.*—The clear width of tunnels at level of rails to be 12 feet, and the clear height from level of rails to soffiete 18 feet; the vertical working shafts to be of 7 feet clear diameter, and at intervals each of a quarter of a mile, and to be left open at top when finished, for the purposes of ventilation; but a circular roof of 13 feet diameter to be elevated on light iron columns 6 feet above the top of shaft, to throw off the rain water, which would otherwise fall into the tunnel. The ground about the top of each shaft to be sloped off to carry the surface water away from the shafts. The vertical shafts through most strata will require to be lined with 9-inch brickwork; and on no account should cavities be left behind the lining, but in all such cases the work is to be keyed in and wedged up solid to the required thickness. Iron curbs of 7 feet clear diameter, formed in two parts, must be introduced on the roof of the tunnel to support the shafts. The produce of the shafts' excavation, and afterwards of the adit or drift-way, and subsequently of the tunnel itself, to be drawn up by double horse-gins, or in coal districts by steam-engines, or in mountainous districts, where water is abundant, by water-wheels. When the shafts are sunk to the level of the bottom of the tunnel, a drift-way, 3 feet wide and 5 feet high, is to be driven from shaft to shaft throughout, for draining the works. In moist soils this adit will require to be shored up with wooden struts, cross sills, head plates and struts, and planked at top.

When the vertical shafts and adit are completed throughout, the tunnel may be commenced. None of the tunnels to be formed with level planes, but having a sufficient inclination in either direction, or

* This will afford space between the rail and the ditch for workmen to get out of the way of passing trains.

Digitized by Google

in both directions from the middle to carry off the water. A movable frame with three floors will be convenient for carrying on the excavation, and brick or stone lining where required. This frame should correspond nearly with the clear size of the tunnel, and be mounted on six wheels, three on each axle, and the middle one of each set to be without flanches. Three strong parallel rails to be laid down on cross sleepers, the outer rails to be 10 feet apart, the rails must not be in longer lengths than of five feet, so that they may be laid down from the lower floor as the excavation proceeds. The front of this frame to be furnished with three stout flaps hung from the top, which may be let down in cases where blasting by gunpowder is required, the frame in such a case to be run back to a convenient distance; in case also of the appearance of a slip of earth, the men may run to the back part of the floor, and let down the flaps to protect themselves from injury.

When brickwork is used as the lining for the tunnel, it will require in most cases to be of two bricks in thickness; and except the invert the whole is to be built in Roman cement and sharp river sand, (if to be had conveniently.) No cavities are to be left behind the brickwork, nor loose or doubtful soil, which should be removed and the space filled in with solid brickwork. Lateral recesses three feet wide, three feet deep, and six feet long, are to be formed in the tunnel at intervals each of 30 yards, for the workmen to get out of the way of the train when the railway is opened for traffic. A stone springing course will be required at the meeting of the side walls and the invert. The invert (where required) is to be built of segmental form with a versed sine sufficient to allow of a drain being carried the whole length of tunnel at least 12 inches under the level of the rails. The permanent rails through the tunnels to be laid on half timbers or half baulks, and secured together by cross ties dovetailed into the longitudinal timbers, and secured thereto by screw, bolt, ties, and nuts. The tunnel faces to be of plain and neat design; no ornamental work to be introduced on any account, except the tunnel be carried under part of a part or ornamental grounds. The surface-water above the tunnel near either end is to be carried into the drains of the contiguous cuttings by open semicircular drains of brick or stone, according to the district. *Bridges and viaducts.*—The bridges carrying roads over the railway are to be of a clear span of 12 feet, and clear height from rails to soffite of 15½ feet in the middle of way. The arches to be of segmental form, with a versed sine of three feet; to be built (where bricks are used) in four half brick rings. A central semicular drain to be carried under the permanent way of a size in proportion to the depths of the contiguous cuttings.

In bridges carrying the railway over roads, rivers, canals, &c., the clear width between the parapets is 12 feet, and except where adjoining lofty embankments the parapets are to be only 18 inches above the level of the rails. In districts where brick earth is plentiful, angular or moulded earthen copings are to be used instead of stone, whereby much expense will be saved in the bridge-building department. Over deep and wide cuttings three-arched bridges may be advantageously introduced.

When large viaducts are necessary, we recommend that they should be formed on the laminating wood principle, similar to those of the North Shields Railway, the whole of the timbers to be prepared by Bethell's patent process, whereby they are rendered durable, however much exposed to the weather, as the solution is found to penetrate to the very centre of the wood. By the adoption of this system of viaduct-building, a very great expense is necessarily saved. Occupation arches under the railway are to be 10 feet wide and 12 feet high, and over the railway to be 10 feet in the clear between parapets.

5. *Level-road Crossings.*—Wherever it is practicable, the crossing of a railway by a road is to be avoided; but where this cannot by any possibility be effected, then a level paved way must be formed, with one gate, however, instead of two, 12 feet in length, and furnished with a disc in the middle. A small wooden lodge will be also required, to contain two apartments, one of which is to be furnished with a fire-place and chimney of brick; but where brickwork is built at a low rate as in Ireland, then the lodges may be built of brick, and in stone districts of rough rooted stonework.

To be continued.

RAILWAY ADJUDICATIONS.

THE EASTERN COUNTIES' RAILWAY—PETITION OF GARDNER.

Equity Exchequer, May 22.—This case, which involved a dispute as to the payment out of Court of money paid in by the Company upon the purchase of a certain house in Shoreditch for the purposes of the railway, occupied the greater part of the day, and was not concluded when the Court rose.

May 24.—Mr. Simpkinson and Mr. W. C. L. Keene appeared for the petitioner; and Mr. J. Russell for some, and Mr. K. Parker for other, incumbrancers on the property purchased by the Railway Company; Mr. Campbell for the Company; and Mr. Roupell for other parties, the assignees of a person named West.

Mr. Roupell, in the course of his argument, observed, that the Court had not, in his view of the case, any jurisdiction to decide the rights of the parties on petition in a summary way, inasmuch as the point for the consideration of the Court consisted substantially whether or not the Court would enforce by specific performance two contracts, a proceeding never taken in any instance by a court of equity, otherwise than on bill and answer, with the usual testimony adduced in support of the case by the rules of the Court.

The Lord Chief Baron observed—I am glad this point has been mentioned, as it gives me an opportunity of stating, now that the courts of equity are in progress of reformation, that this is an instance of a complicated case which may, with perfect justice and propriety, be decided in a summary way upon petition, without the parties being driven to the incumbrance and expense of a bill, answer, and evidence.

At the conclusion of the argument of Mr. Roupell, his Lordship, declining to call on Mr. Simpkinson to reply, decided that the petitioner was entitled to the money in court, subject to the claims of the several incumbrancers and the payment of various sums, and directed a reference to the Master relating to those and other points.

MANSER v. NORTHERN AND EASTERN RAILWAY COMPANY.

Court of Chancery, May 26.—This was an appeal from an order of the Vice-Chancellor, refusing an injunction to restrain the Company from building a bridge in a manner which the plaintiff alleged would interfere with the use of his mill. Mr. Manser is a miller at Hoddesdon, and the stream over which a bridge was proposed supplied him with water to work his mill.

Mr. Wigram, Mr. Richards, and Mr. J. Moore, for the plaintiff, complained that by the plan proposed the stream would be inconveniently narrowed.

Mr. Jacob, Mr. Bethell, and Mr. L. Wigram, on the part of the Company, maintained that they were pursuing the powers of their Act of Parliament, and in fact doing Mr. Manser no damage.

The Lord Chancellor said, he must determine the case upon the affidavits, unless the parties could agree upon some eminent Engineer, whose opinion might guide the Court. Unless this course were adopted, the Court might be liable to miscarry in its judgment. The Engineer would determine upon the height of the bridge, and an answer might be given to this proposition, which appeared for the benefit of all, on Saturday next.

THE QUEEN v. THE BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY.

Court of Queen's Bench, May 27.—*(Sittings in Banco.)*—Under the Act of Parliament which incorporated the defendants, a power was given to two justices to make orders directing the defendants to make archways and other necessary works to keep up the communication between the different parts of such estates as may be traversed by the railway in its route. Such an order having been made by two justices of Worcestershire (which order was afterwards confirmed by the quarter sessions of that county upon appeal), the defendants refused to submit to the direction, and were indicted for disobedience to the order; upon which they caused the indictment to be removed hither with a view to its being quashed, upon the ground that the defendants, being a corporation aggregate, were not liable to an indictment at all.

Mr. Serjeant Talfourd now showed cause against the rule, and contended that the position upon which the rule *nisi* had been obtained was not supported by any other authority than a *dictum* of Lord Holt, which was mentioned in the Term Reports without any statement of the time, place, or circumstances, in which the *dictum* had been uttered.

The Court seeming to agree in opinion with the learned serjeant,

Mr. Whately upon the other side, mentioned some authorities in support of his position, and referred in a particular manner to a case in which Mr. Justice Littledale expressed a strong doubt as to whether such an indictment could be sustained.

Lord Denman said, that the question was of too much importance to be disposed of upon motion, and suggested to Mr. Whately that he should demur to the indictment, the Court giving him liberty in a subsequent stage of the proceeding to contest the fact of disobedience to the order in the judgment should be against him, upon the point of law.

COMPENSATION CASE.

Bolton and Preston Railway.—On Tuesday last, an inquisition was held at the Swan Hotel, before Mr. Hulton, barrister, of Preston, and a respectable jury. The inquiry was under the provisions of the Bolton and Preston Railway Act, to assess compensation to be paid to Mr. A. Turner, a gentleman residing near Chorley, for damage done to his land by reason of the Company's cutting a tunnel through it. It was alleged, we understand, by Mr. Turner, that this could not be effected without injuring his land, and a dwelling-house erected upon it, and in consequence he wished the Company to purchase the whole estate, for which he claimed 8,000*l.* The Company, feeling persuaded, from the opinions of men well versed in such matters, that the tunnel could be made without endangering the building, made an offer of 200*l.*, as a bond to indemnify Mr. Turner from any damage. These terms not being agreed to, the present jury was summoned. Mr. Wilkins and Mr. Cross appeared for the Company, and Mr. Brandt and Mr. Segur for Mr. Turner. After the jury had been sworn, they proceeded to Chorley by a special train, and were shown the land by Mr. Adie, engineer to the Company, and by Mr. Myers, surveyor, of Preston, on behalf of Mr. Turner. They were absent about three hours, and on their return Mr. Brandt appeared and informed them that an arrangement had been made, and that a verdict would be taken by consent for 250*l.* and that a bond of indemnity, as originally offered by the Company, would be given. —*Manchester Courier.*

Articles Lost and Found on Railways.—We are happy to find that the vigilance of the police on the North Midland Railways is employed along with other important duties, in restoring property accidentally lost on the line. The following are instances in point. On the morning of the 18th instant, the night watchman, in passing through the Clay Cross Tunnel, found a pig which had dropped from a luggage train without having sustained any apparent injury. It was safely deposited in a succeeding train and forwarded to Derby. On Thursday a lamb that had strayed upon the line near Eckington, and had been killed by a train in passing, was conveyed to the owner by Spencer, a policeman.—*Derbyshire Chronicle.*

SOUTH-EASTERN RAILWAY COMPANY—GENERAL MEETING.

THE Half-Yearly Meeting of this Company was held on Thursday, at the London Tavern. At 1 o'clock T. W. TYNDALE, Esq., Chairman, commenced the business by requesting the Secretary to read the advertisement, by which, according to the Act of Parliament, the meeting had been summoned, such advertisement having been published in the *Times* and *Chronicle*, the *London Gazette*, the *Dover papers*, the *West Kent Guardian*, and *Railway Times*.

The CHAIRMAN then proposed that the seal of the Company be affixed to the Registry, as required by the Act of Parliament: and it was necessary to give authenticity to the Registry.

Mr. TYRRELL—Why can't you fix the seal on your own responsibility?

The CHAIRMAN—Because the Act requires that it should be done by the authority of the meeting.

Mr. TYRRELL—I do not sanction it.

On the motion of the Chairman the common seal was then ordered to be affixed to the Registry.

The CHAIRMAN said, the next motion was, that the Report of the Directors be read. As he felt exceedingly indisposed, he threw himself upon the forbearance of the meeting, and begged their indulgence. (Hear, hear.) It was the first time he had made such an appeal—perhaps it might be the last. (No! no!)

The Report was then read as follows:—

DIRECTORS' REPORT.

London, 27th May, 1841.

In the Report made to the half-yearly meeting in November last, Mr. Cubitt stated that in the spring of 1842 the railway might be opened to Tunbridge, and in the summer of the same year to the Staplehurst road.

From the progress which has been made during the last (the winter) half-year, the Directors have great pleasure in being able to confirm this opinion to the fullest extent.

Since the last meeting much additional land has been paid for, and the whole line is now fenced off down to the Staplehurst road, 52 miles from London, and the nearest point on the railway to Hastings. A contract for fencing an additional 10 miles eastward from the Staplehurst to the Bethersden and Hothfield road has been let, and is now in course of execution. A large portion of the land between the Bethersden road and Folkestone is also paid for, and the whole between Folkestone and Dover.

Contracts for rails, chairs, and other materials for the permanent way, have been entered into, and portions of each have been delivered.

Twelve engines and tenders have also been ordered and are in preparation for the opening of the line at the time before stated, and the subject of carriages, waggons, trucks, &c., is now under the consideration of the Board.

Besides the works in the Godstone and Tunbridge divisions (which are in a very forward state), the works requiring the greatest time in execution upon other portions of the line are steadily advancing.

The Directors are impressed with the importance of opening the whole line at the earliest possible period; nevertheless the completion of the works to Tunbridge continue to engage their first attention. The northern tunnel in the Shakespeare Cliff at Dover is finished. The construction of the sea wall is proceeding in a satisfactory manner, and the cuttings and embankments up to Folkestone are almost complete. There are nearly 4,000 men employed on the line, with the requisite proportions of waggons and horses.

The late winter has in no instance caused injury to the works, on the contrary, they have stood the test, severe as it has been, and thus the opinion always entertained of their stability has been confirmed.

The measure authorised by the resolution of the proprietors at their last half-yearly meeting, for uniting with the Brighton and Croydon Companies in purchasing and perfecting a sufficient station at London Bridge, is working with the best effects, and the advantages anticipated from it by the Directors are likely to be realised.

Pursuant to the resolutions of the Special Meeting in January last, the branch lines to Canterbury, Ramsgate, and Margate have been surveyed, and the plans, sections, &c., duly deposited. The Directors have also taken the same course with respect to a branch line to Maidstone. Mr. Robert Stephenson and Mr. Joseph Cubitt have expressed an opinion in their favour, and there can be no doubt that they will prove powerful auxiliaries of traffic to the trunk line, and in this respect deserve the utmost support of the proprietors.

By a resolution of the meeting in November, 1840, 509 shares were declared forfeited; of this number 70 were taken up by parties under agreement, and the remaining 439 being added to those which were at that time undisposed of will make a total of 586 shares at the Company's disposal, but it is not the intention of the Directors to sell them at present.

As some misunderstanding appears to have arisen on the subject of the loss occasioned by the sale of forfeited shares, and by the issue of shares in 1839 at 12*l.* discount, the Directors think it desirable to state that the total amount of such loss is 184,597*l.* 11s. 4d., as shown in the statement of capital account annexed hereto. This sum is subject to such alterations as may result from the recovery of amounts for which judgments have been obtained against proprietors in arrears for calls, whose shares have been forfeited.

The arrears of calls on the first of April last amounted to the sum of 134,596*l.*, the particulars of which are given in the capital account. Of this amount the sum of 20,341*l.* has been since received. The Directors have reason to expect that in a short time the arrears will be much further reduced. And the final payment is, in the great majority of instances, a mere question of time. The Defaulters are in the mean time deprived of the advantage of receiving interest on the amount of capital already paid up, and are chargeable with interest on their arrears. The Directors have adopted proceedings in all cases where they have considered it to be to the advantage of the Company to do so. There are, however, cases in which it is ascertained that the parties are unable to pay their arrears; such shares have been duly declared forfeited by the Board, and it is intended to submit to this meeting resolutions for confirming such forfeiture. There are also two cases in which the registered proprietors, having sold their shares, have been unable to compel the purchasers to register the transfers. It is proposed to include these shares in the resolutions of forfeiture; but such arrangements have been made that the Company shall suffer no loss.

As the Company will before the next half-yearly meeting be in a position to exercise their powers of borrowing on mortgage to the extent of 450,000*l.*, it is proposed to submit to this meeting a resolution authorising the raising of that amount, or any part of it.

Three Directors will go out on this occasion by rotation, viz., Messrs. Lewis Cubitt, Richard Davis, and William Wilson, all of whom are re-eligible and have offered themselves for re-election.

The annexed Account of the Receipts and Expenditure of the Company has been prepared so as to show the total Receipts and Expenditure under each distinct head to the 1st of April; the account shows a balance in hand of 84,370*l.* 16s. 6d.

T. W. TYNDALE, Chairman.

BALANCE SHEET.

Statement of the Capital of the Company on the 1st April, 1841.

DEBTOR.

1841.		£	s.	d.
April 1.	To Amount of calls made, including deposits on 28,000 shares, at 33*l.* per share	924,000	0	0

The CHAIRMAN then said, that in addition to this Report the Directors had to present to the Proprietors a very detailed account from the Engineer-in-Chief, as to the progress of the works within the last half year.

The Report was then read.

[The insertion of this we must postpone till our next. It gives a very detailed view of the state of the works, and concludes by assuring the shareholders that Mr. Cubitt "had no ground for at all altering the opinions he had formerly expressed as to the duration of the work, nor his estimate of the expense."]

The CHAIRMAN said, after such detailed Re-

Digitized by Google

ports, he should not detain the meeting by any lengthened observations. He would call their attention to the state of the share-list, as mentioned in the Report, and he would beg to take their opinion on this state of circumstances, which had arisen since, that 20,000*l.* more had been received, and that the number of shares in arrear from various parties had been greatly reduced. The Secretary would inform the meeting on this subject, and then they could form a judgment as to how far the Directors had been correct in anticipating that the whole of these shares would be ultimately paid.

The Secretary then read a statement to the effect that since the account was printed there had been the following alterations. The number of shares on which 5*l.* had been owing was reduced to 1,000; those on which 10*l.* had been owing, to 783; those on which 15*l.* were owing, to 3,684; those on which 18*l.* were owing, to 1,526; those on which 24*l.* were owing, to 533. Altogether the amount of arrears had been reduced from 134,396*l.* to 114,055*l.*

The Chairman said, he had now to move—that the Reports as read be printed and circulated, and in his opinion it would be best to print separately the statement also just read. (Hear, hear.)

The motion was agreed to as proposed by the Chairman.

The Chairman—Is there any question connected with the execution of the works, or the conduct of the Directors, on which any proprietor wishes to have information? If so, it will be promptly and cheerfully answered by my colleagues and myself. I have this to state to the proprietors, that Mr. Cubitt, our Engineer-in-Chief, would have been here had he not been summoned before a Committee of the House of Commons to-day. Gentlemen connected with him, however, are here—District Engineers, Mr. Simms, Mr. Wright, and Mr. Barlow. (Hear.)

Mr. Parsons said he thought every proprietor must be satisfied with the detailed Reports which had been presented. (Hear, hear, hear.) Mr. Cubitt's was worthy of that gentleman's character and reputation, and was as excellent a Report as had ever been presented to any Company. (Hear, hear, hear.) He merely now wished to ask the district Engineers who were present, one or two questions as to the state of their particular portions of the work, not only as to progress but expenditure, and the prospect of its ultimate amount. In regard first to the Dover division, it seemed that 304,000*l.* would be required, and he should like to know from the Engineer, whether the Company could rely on that as quite sufficient to complete that part of the line?

Mr. Wright—I am confident that the sum will amply suffice. I have gone through the estimates thoroughly.

Mr. Parsons—I can speak personally to the attention shown by the Engineer to any proprietor wishing to inspect the works.

The Secretary stated, that 119,800*l.* had been expended on the Dover division; 54,000*l.* on the Godstone; and 53,000*l.* on the Tunbridge divisions.

Mr. Parsons then inquired whether the Engineer for the Godstone division could state with certainty that it would be finished for the amount yet unexpended of the estimate, viz., for 194,000*l.*

Mr. Simms—That sum will be quite adequate.

The Chairman merely wished it to be clearly understood that Mr. Cubitt was responsible for these estimates.

Mr. Parsons—If Mr. Cubitt were here I should put these questions to him.

Mr. Baxendale—He has already answered your questions in general, by stating in his Report that he has no reason to alter any of the estimates he made of the expense attending the different portions of the work. (Hear.)

Mr. Parsons, Yes: but still in the present condition of the Company it is highly desirable to satisfy thoroughly the public—by confirming the general statement of the Chief Engineer (just as bills are endorsed frequently for additional security) through the concurring testimony of the Engineers on the separate divisions:—from whose statements let it be remembered the Chief Engineer must make his estimate. For often have railway companies been deceived by general estimates which the result proved were insufficient. It is therefore highly satisfactory to us to find, that on close examination, there is the most distinct assurance of the estimates for all the portions of the work proving quite adequate. (Hear, hear.)

The Chairman—Let me be understood, I pray, as by no means depreciating these queries; but merely as reminding you that after all Mr. Cubitt is the person responsible to us for the estimates.

Mr. Parsons would further enquire, whether in the Tunbridge division the amount now unexpended of the estimate would be quite sufficient to complete it?

Mr. Barlow said, in reply, that the estimate did not include the permanent way; but that including this item, the sum unexpended would amply suffice for the completion of the division: indeed, every portion hitherto done had been under the estimate. (Hear, hear.)

Mr. Parsons thought it could not but be satisfactory to the proprietors to hear such distinct assurances (from officers who show their sincere desire not to mislead the Company, by the candid declaration that the estimate did not include the permanent way) of the sums yet unexpended being entirely sufficient for finishing the works. (Hear, hear.) The expense of the permanent way could not be much. (Hear, hear.)

Mr. Cooper asked, if apart from the payment to the Brighton, there would be enough funds to make the line complete from the point of junction with the Brighton line, to Dover?

The Chairman—Yes; quite enough.

Several Directors—More than enough: much more.

Mr. Cooper enquired if the Directors had under consideration any agreement with the Brighton Railway to substitute a toll for the purchase money?

The Chairman replied, that there was no other agreement with the Brighton Company, save that which had been made formerly, to pay half the expense to the point of junction. At present the subject of another agreement seemed premature.

Mr. Cooper—Is it open to us to substitute a toll?

The Chairman—No: it is not. If that were desired, it would have to be done by a new notice and a new Act of Parliament. We have given notice to purchase, and we mean to exercise that right.

Mr. Hankey asked, whether supposing the Directors had to purchase the necessary portion of the line to Brighton—the sum so appropriated would retard the advance of the other parts of the line, and delay the period of its opening?

The Chairman—Not in the least, it would have no effect upon it. (Hear, hear.)

Mr. Barlow—What is the estimate of the whole amount required to complete the work to Dover?

The Chairman—About 1,200,000*l.* (exclusive of land) I believe.

Mr. Parsons—And is the estimate for the land likely to be exceeded?

The Chairman—Not in the least.

Mr. Parsons—Then adding the land estimate 210,000*l.*, the amount seems to be between 1,400,000*l.* and 1,500,000*l.*

The Chairman—Mr. Fearon our Solicitor will say if it is likely to exceed that.

Mr. Fearon—Certainly not. (Hear, hear.)

Mr. Cash asked, in reference to an account of some dreadful accident recently reported, whether it was true as then appeared, that the workmen on the line, laboured upon the Sabbath?

The Chairman replied, if it was so, it was strongly against the wishes of his colleagues in the Direction and of himself. For what the contractors however did, they were not directly responsible.

Mr. Cash said, he hoped that as the contractors were employed by the Directors, the latter would take care to prevent the Sabbath being so employed upon the works.

The Chairman—Most certainly our endeavours shall be to prevent such a proceeding. (Hear.) In respect to the land expenses, &c., he would observe that owing to arrangements with land owners, the expence of very few bridges had been incurred. In one division of 28 miles, there was not a single accommodation bridge.

Mr. Parsons—While the cost per mile is less by one half on our line than on the Brighton. (Loud cries of hear, hear.)

Mr. Mott suggested the publication of a lithographic section of the works.

The Chairman agreed it would be desirable.

The Secretary said if it were to be published with the Report this would be delayed sometime.

It was ultimately agreed to postpone it for a while—the Secretary intimating that there would be no difficulty in it, and that in the meantime there were plenty of plans for the inspection of proprietors at the office.

Mr. Barclay—I should like just to hear distinctly the ground of the Directors' expectation—that the arrears due on shares will be recovered.

The Chairman—The ground of that expectation is this, that the larger amount is due on shares respecting which more than 15*l.* are owing, and if the present prices are retained (which there is no reason to suppose will not be the case) they will bring in a large portion of capital. And further, much of the amount is in the hands of solvent men, who are only taking their time to pay, which is fortified by the fact of such large payments having been already made. (Hear, hear.)

Mr. Barclay—And I understand you have collateral securities from some?

The Chairman—To some extent we have.

The Secretary—To the amount at least of 40,000*l.*

In answer to a question,

The Chairman said, the Board had before them the estimates of Mr. Stephenson and Mr. Cubitt of the Canterbury and Maidstone branch lines, which were remarkably cheap ones. (Hear, hear.)

Mr. Bayley asked if the "sleepers" would be Kyanised?

The Chairman replied, that such was not the intention of Mr. Cubitt, unless ordered by the Directors. Hitherto the Board had not seen the necessity for doing so. Perhaps the subject had better be left to them till they had more decisive information.

A Proprietor said, he believed on the Great Western line it had not been done.

The Chairman said, it was not he thought likely to be necessary on the South-Eastern, because their sleepers were to be of the old well-seasoned timber, made of angular pieces cut from one solid tree instead of (as on other lines) being made from young trees. Moreover, the Kyanising would be the less requisite, as the sharp ends alone would be in the earth. It now was the duty of the proprietors to elect three Directors in the room of three who went out this year, Mr. L. Cubitt, Mr. Wilson and Mr. Davis. He begged to propose that Mr. L. Cubitt be re-elected.

Unanimously agreed to.

Mr. L. Cubitt, in returning thanks for his re-election, said he had been connected with public works from his boyhood; and he had particularly had opportunities of observing the South-Eastern line of railway—he had gone much into the details and calculations—and he never had seen works so well arranged and so economically constructed. (Hear, hear.) Certainly the works had not been gone on with so rapidly as they might have been; but then the proprietors should remember that this was advantageous to them—for *that* engineering which was the slowest in progress was at once the most durable and the most economical—(hear, hear,)—and this slowness—resulting from reasons to which he would not advert—was assuredly the fault neither of the Directors nor Engineers. (Hear.) He had been much in connection with the Resident Engineers, and he was glad to find that they were all the Company could possibly desire—that they were not, in fact, to be looked on as mere

Digitized by Google

employés—that they were possessed of shares in the concern, and had a stake in its prosperity—so that they looked zealously and sincerely to its advancement, as connected with their own personal interests. (Hear, hear.) As to the plan, for the publication of which some gentlemen had asked, he thought it very desirable; and he thought, too, it might be accompanied by a census of the population through which the line passed. In regard to the expenditure for land, he could not but say that considering the quantity obtained, this expense had been but small, particularly when it was borne in mind that their foundation level was much wider (being 36 feet) than that of any other Company. (Hear, hear, hear.) Now, respecting the Kyanizing, it had already engaged a good deal of the attention of the Board and Mr. Cubitt, who had invented a sleeper unrivalled among railway lines —(hear)—and using that he probably would be justified in not adopting the Kyanizing process. (Hear, hear.) The proprietary of the Company were now, he rejoiced to see, getting into a sound and healthy condition; and if every proprietor had fulfilled his engagements, the line might have now opened to Dover. (Hear, hear.)

The CHAIRMAN then proposed the re-election of Mr. R. Davis, which was agreed to.

Mr. DAVIS in returning his acknowledgments said, he rejoiced in the re-election of Mr. L. Cubitt, whose great experience and abilities rendered the most efficient service to the Company. (Hear.)

Sir General HODGSON begged to observe, that Mr. L. Cubitt was no relative or connection of Mr. Cubitt the Engineer.

On the motion of the Chairman,

Mr. W. WILSON having been also re-elected, said he perfectly concurred in the extreme importance of having Mr. L. Cubitt on the Direction.

Mr. PARSONS asked if there would be any harm in Kyanising?

Mr. L. CUBITT—It would be unnecessary, and a great expense; so at least we are inclined to think at present; we can assure you that every shilling of expense is carefully looked to.

Mr. PARSONS—It would be about 200*l.* per mile, would it not?

Mr. L. CUBITT said, he believed the cost would exceed that; but on 66 miles, that was a sufficient consideration. (Hear, hear.)

A PROPRIETOR—If necessary, could not the Company do it themselves?

Mr. CUBITT—Should it be deemed necessary, you may depend on its being done in the most economical manner.

A PROPRIETOR thought it would be better to leave the question in the discretion of the Directors. (Hear, hear.)

The SECRETARY then said, he had to call the attention of the proprietors to the subject of forfeiting shares. There were two descriptions of shares subject to forfeiture at the present moment. One comprised a list of 280, on which 15*l.* were due or more; and the rest, a residue of 120, had only 10*l.* due on them. In the former list, the shares belonged to 10 persons: in the latter, to 4. Two of the cases were those of registered proprietors who had sold the shares, the party purchasing refusing to register the transfer; and if the Company determined to forfeit them, they would sustain no loss, inasmuch as the same number of shares would be taken by the party who was liable to the Company under his original registration. (Hear.) The others were those in which little hopes could be entertained of recovering any portion of the arrears due. But the remaining shares were not proposed to be forfeited now, because they were those on which payments upon account had been received, and on which too a great extent of security had been given. Upon those shares now proposed not at present to be forfeited, there would not be more than 12*l.* per share on an average due. There were altogether 280 shares in this list, of which 75 owed 15*l.*, 40 owed 18*l.*, 160 owed 24*l.*, and 5 owed 26*l.* per share. On those intended for forfeiture there was no chance of recovering the amount even of the judgments the Company had obtained against parties: and they were proposed to be forfeited on a call subsequent to that on which the judgments had been obtained. There were 10 transferred to a minor, whom the Company could not of course compel to pay, and the only means of getting them back was by forfeiting them. It was proposed, therefore, that the forfeiture of the shares in question be confirmed.

A PROPRIETOR said, as we understood, the effect of the resolution would be that the shares would return into the coffers of the Company to be sold.

The CHAIRMAN—Yes.

Mr. HANKEY wished to know if these shares included those on which there had been an attempt at fraudulent transfer?

The SECRETARY—No; on those, calls have been paid to avoid forfeiture.

Mr. HANKEY—I am glad the former exposure has had a good effect.

Mr. COOPER wished to know if the transfer of shares to a minor was not invalid?

The CHAIRMAN said, he feared not.

Mr. HANKEY thought it was high time the law on that point was altered. (Hear, hear.) Certainly it was very fraudulent. Did the Secretary think it was collusive?

The SECRETARY—No; he now wished to state to the Company—that there were five persons in arrear 10*l.* on 120 shares, four out of the five having sold their shares, who could not give him the names of their purchasers, consequently they were not aware of their liability to forfeiture (the purchasers). It was a question, therefore, whether the Company would forfeit them now, as they would have to account to the purchasers hereafter; supposing (as they were bound to do) they sold the shares, they would have to account to the purchasers at present holding them for the excess beyond 10*l.* per share which they might fetch. Perhaps they had better be postponed till November.

A PROPRIETOR—How do you know that they were ignorant of their liability?

The SECRETARY—Not knowing them I can't give them the notice.

In answer to a question,

The SECRETARY stated, he knew the parties were quite solvent.

Mr. MAUBERT—Then forfeit them at once. There has been enough of forbearance in this Company.

The CHAIRMAN—Then you mean to move that these go along with the other shares proposed to be forfeited?

Mr. MAUBERT—Yes. They will be forfeited in the names by which they appear in our books. (Hear.)

A PROPRIETOR asked how long the shares in question had been in arrear?

The SECRETARY said, since October.

The PROPRIETOR—Do you know they have been sold?

The SECRETARY—Oh yes. Three of the parties registered for them are in the room; I could name them. The number to be forfeited would have been greater, but yesterday calls were paid upon 180, to reduce them below the forfeiture amount.

The PROPRIETOR—It is impossible that the purchasers are not aware that some liability must, in the course of six months attach to their shares, on account of calls. It cannot be *bona fide* ignorance. (Hear.)

The CHAIRMAN—Oh, I think there will be no hardship in the forfeiture of these shares; nor will it involve the Company in any liability.

It was then agreed that they should be forfeited, and the whole of those proposed to be forfeited were then declared to be so.

Mr. MAUBERT—I wish to be informed if notice of forfeiture has been given to all on whose shares there are arrears?

The SECRETARY said, there had been such notice on all shares upon which less than 15*l.* were due; but in all cases where more than that amount was due proceedings were taken to recover.

Mr. MAUBERT—Why, on all the former and the latter class too, has not forfeiture been declared?

The SECRETARY—That could not be done before two months' notice.

Mr. MAUBERT—I thought forfeiture could be declared directly a call was due and unpaid?

The SECRETARY—Yes, legally; but the custom in this Company has been not to forfeit till another call is due.

Mr. MAUBERT—A custom that has worked then very injuriously for our interests. The moment a call is unpaid forfeiture ought to be declared. I think this a much better course than that of suing for shares, which may bring a Company into bad odour.

The SECRETARY—Had the worthy proprietor heard what passed earlier in the meeting, he would have known, that a large portion of the shares have been saved from a position of forfeiture; the whole of those which were in a condition for forfeiture, had received the notice, but as a three months' notice was required between the notice and confirmation, it could not be done in time for this meeting with more than those which had just been declared forfeited.

The CHAIRMAN could assure the worthy proprietor, that the Directors were sincerely desirous of doing full justice to the proprietary.

Mr. MAUBERT had not the least doubt of that. (Hear.)

The CHAIRMAN added that the point should be well considered at their very next meeting, when the opinions expressed would receive their full weight. (Hear.)

Mr. PARSONS just wished to notice that when the worthy proprietor recommended forfeiture in all cases, there were some cases in which such a course would be favouring the defaulter, as when the shares might produce less on sale than could be recovered from him. (Hear, hear.)

Mr. MAUBERT said his aversion was great to law, whereby he always suspected the lawyers gained most.

Mr. BAXENDALE begged to say it was not so in this instance, for the Company had gained 80,000*l.* by law.

Mr. MAUBERT—That is worth gaining certainly. (Hear, hear.)

Mr. BAYLEY—Still the threat of forfeiture often induces payment. But the proprietors should leave the Directors unfettered in their discretion which course to adopt. (Hear, hear.)

The CHAIRMAN said he doubted not this was intended by Mr. Maubert, who only wished to draw the attention of the Directors to the subject. The next business was a resolution that 450,000*l.* be ordered to be raised on loan, with interest, upon the credit of the undertaking.

A PROPRIETOR enquired why this was required?

The CHAIRMAN—To meet the payment of 350,000*l.* to the Brighton chiefly.

The PROPRIETOR—The operation of calls not being sufficiently rapid?

The CHAIRMAN—Quite sufficiently so for the works, but not for this large payment to the Brighton, also.

The PROPRIETOR—In fact we wish to get on quicker to a termination. (Hear, hear.)

In answer to questions,

The CHAIRMAN said, the Directors would consider the expediency of increasing the capital of the Company for the branch lines to Maidstone, Canterbury, Margate, &c.

The resolution was agreed to.

The CHAIRMAN—This concludes the business of the day, gentlemen. (Hear, hear.)

Mr. COOPER said, it remained to carry a vote of thanks to the Chair. (Hear, hear.)

This having been cordially responded to,

The CHAIRMAN, in reply, said, this would in all probability be the last occasion on which he should have the honour of filling that chair. He had taken it when the Company were by no means in so prosperous a condition as they were now; he rejoiced to leave it when they were in so auspicious a state, and had such encouraging prospects. (Hear, hear.)

The meeting then separated, about three o'clock.

BIRMINGHAM AND GLOUCESTER RAILWAY—EXCESS OVER ESTIMATES.

To the Editor of the Railway Times.

Mr. Editor,—Had your Tewkesbury correspondent, "E. L.," who dates on the 4th of May, been content to wait for the Report of the special meeting of the Birmingham and Gloucester Railway Company, held at Birmingham on that day, he would have seen that his case was still stronger than it is represented to be by the *Worcester Journal*.

By the original Act of Parliament for forming this line, which received the Royal Assent on the 22nd of April, 1836, the Company were empowered to raise a capital of 950,000*l.* by shares, and in case this sum "shall be found insufficient for the purposes of this Act," to borrow 316,666*l.* "on the credit of the said undertaking." The object of the Company was stated to be the "making a railway from Birmingham to Gloucester, with a branch railway therefrom to Cheltenham;" and the clause relating to the payment of half the cost of the line between Cheltenham and Gloucester by the Cheltenham and Great Western Union Railway Company is added at the end of the Act in order to compromise the opposition of that Company, and can in no way affect the original Parliamentary estimate.

In the second Act, which received the royal assent on the 5th May, 1837, power is given to make branches to Worcester and to Tewkesbury, and no increase of the capital is authorised. On the contrary, the Engineer, Captain W. Moorsom, in a letter to the *Railway Times*, dated 27th November, 1839, speaks of the capital of 950,000*l.* as covering his estimates in 1836 and 1837, and gives as his original estimate for the whole of the line and stations, exclusive of the carrying establishment, the sum of 728,874*l.* In this Act it appears to have been contemplated that the Cheltenham Company should pay half the expense of the line between Cheltenham and Gloucester, and the Cheltenham branch was abandoned.

We therefore find that the following estimates have been from time to time officially given:—

1st April, 1836.—Entire line from Birmingham to Gloucester, branch to Cheltenham, and stations	£728,874
2nd May, 1837.—Line from Birmingham to Cheltenham, half line from Cheltenham to Gloucester, branch to Worcester, branch to Tewkesbury, stations, and stock	950,000
3rd February, 1839.—"Revised Estimate" for same as No. 2, including all the stations, but exclusive of carrying establishment	728,774
4th February, 1841.—Entire line from Birmingham to Gloucester, branch to Tewkesbury, stations, and stock	1,326,666
5th May, 1841.—Line from Birmingham to Gloucester, and Tewkesbury branch, which is a single line worked by horses *exclusive* of station at Lawley-street and "permanent station at Gloucester," "*and any new works which may be required for the developement of the capabilities of the line*"	1,441,666

If the 60,000*l.* which the Directors were empowered to borrow in March last be added to this sum,—and their intentions on the subject are not very definitely expressed,—the present capital will amount to 1,501,666*l.*

And who will assure us that if *another* "minute investigation" be entered upon in March, 1842, another 175,000*l.* may not be required to erect these stations and "new works"—to say nothing of the Worcester branch so quietly abandoned.

Now, after the repeated puffs of the extraordinary cheapness of construction and correctness of estimates of this line, of which thirty miles pass through a country almost unrivalled in the facilities it affords for laying down a railway, it appears rather inconsistent to see the cost gradually increasing till it reaches 26,700*l.* per mile, for an unfinished line, without a terminal station at either end. To pay five per cent. interest, moreover, on the million and a half of capital, will require a *net* revenue of upwards of 1,400*l.* per week, after deducting from the gross receipts a sum sufficient to meet the demand for salaries, wages, locomotive power, maintenance of way and works, depreciation of stock and of materials of permanent way, rent of stations, police, Direction, and engineering—demands that would not fall very far short of a similar sum.

I am, Sir, your obedient servant,

JUNIUS.

26 May, 1841.

FARES ON RAILWAYS.

To the Editor of the Railway Times.

Sir,—The recent numbers of your paper have so abounded with articles on this subject, that were they read attentively and clearly understood, little else need be written upon it. So little attention, however, is in general paid to any matter which does not immediately interest us, that we must not be surprised if the most valuable treatises should when produced at an unseasonable time, fail entirely of their object.

Having for some time employed myself to ascertain how railways could be most profitably worked, I have from time to time consulted your columns for information on the subject, and it affords me some hope from several articles I have lately found there, that I may yet succeed in my search. Of one thing, I think there cannot be a doubt, viz., that all the railway world has been on a wrong scent in seeking to indemnify an excessive outlay by such a high rate of fares as would limit the passengers to a small fraction of the number that would travel at a lower rate, without any sensible increase in the cost of conveyance. They thus content themselves with a less proportionate *individual* profit on the *few*, that might be obtained even on the *many*. This may indeed seem a paradox to such a "wayfaring man" as your correspondent, who is content to take in all his knowledge as he runs (or perhaps as he travels by railway) without reflexion, but as we are still only in the dawn, as well as in an almost unknown region, even a "wayfaring man" must hesitate a little where the road diverges, and in the absence of finger-posts, consult with anxiety such indications as the way affords lest he finds himself going astray from the right line in "the proportion of the square of the deviations from it."

A little consideration will convince him that the proposition above laid down may be true, notwithstanding its apparent absurdity. He will find that four passengers at 3d. per head, when the cost of conveyance is excessive, compared with the numbers carried, (as he assumes to be the case of the Croydon traffic, when he states the cost of conveyance is equal to the sum received, in which assumption, however, he is wrong,) gives less *individual* profit, and consequently *much less gross* profit, than 2d. per head on a much greater number, which might be conveyed with a very slight addition to the cost, for

Four passengers at 3d., deducting 10d. gross cost of conveyance, leaves 2d. gross profit, or ½d. per head; while

Twelve passengers at 2d., deducting 12d. gross cost of conveyance, leaves 12d. gross profit, or 1d. per head.

Here, by reducing the fares one-third, the number of passengers is trebled, the cost of gross conveyance increasing 20 per cent, and a double profit per passenger is gained, consequently the low fares are sixfold more profitable.

Whether the Croydon or any other Company has yet ascertained the exact point which, in the case of its particular railway, will yield the greatest profit—in other words "that constant quantity which may be safely added to the actual cost of conveying each passenger, wholly irrespective of cost of construction," may be brought to light by the efforts you are now making to direct the public mind to the subject.

The Croydon Board at least deserves well of the public, for they were ready to risk the experiment of low fares, had they not been prohibited by the Greenwich monopolists.

The whole bearing of the negociation between the Croydon and Greenwich Boards seems to involve the principle advocated by Mr. Ellet, which principle the latter Company does not venture absolutely to deny, however reluctant it may be to adopt it. But until a fair opportunity is afforded to the Croydon Company to make some general experiment to ascertain that "constant quantity which, added to the actual cost of conveyance, wholly irrespective of *Cost of Construction*," will yield the greatest net profit, the Greenwich Company must be content to receive their present tolls on such a number of passengers only as the Croydon Company shall find it most profitable to themselves to carry, while this fixed toll per passenger is to be added to the cost of conveyance. Would it not be far more reasonable that the Croydon Company should be allowed to make the trial they desire? The Greenwich Company might rest assured that low fares would never be persisted in, if the result were not an *amazing* increase of passengers, which surely is all the Greenwich Company can desire.

I am, Sir, &c.

A RAILWAY PROPRIETOR.

MANCHESTER AND LEEDS RAILWAY.

To the Shareholders resident in Manchester.

Fellow Shareholders,—A meeting of the proprietors in our Railway is fixed to take place in Manchester next Thursday. Few of the proprietors resident in London will be able to attend, and we must therefore rely on you to elicit some little information from the Directors, as to the progress and prospects of our Railway. Amongst numerous other matters upon which we require instruction I may mention:—

1. The London traffic—how it happens that goods are carried the whole road between London and Manchester, per Leeds and Manchester, North Midland, Midland Counties, and London and Birmingham Railways, whilst a difficulty seems to exist as to the carrying of passengers by the same route? and whether the law cannot be appealed to, to compel the dissentient railways, if such there be, to allow the passage of the Leeds and Manchester passenger trains along their lines?

2. Whether Mr. Gooch and Mr. Stephenson are to continue to act as the Company's Engineers in the construction of the branches to our Railway? And if so, whether stringent measures should not be taken to prevent them from exceeding their estimates on these branches, to an extent equally enormous with the excess on the main line? This is an important point, and one on which I hope there will be no flinching on the part of the shareholders.

3. How does the Heywood branch progress? What traffic will it bring on the line? Will it be completed for the estimate? and if not, why not? This branch was I think to have been completed a month ago.

4. Whether the Directors have resolved on reducing the number of their board, and so lessening the amount of Directors' salary. And, generally, whether they have taken steps for enforcing a system of economy in all departments of the Company?

There are many other points, such as the rate of fares, the branch through Manchester, &c., which will press themselves on the notice of the coming meeting, and which I need not enumerate.

Your obedient servant,

A BONA FIDE HOLDER.

PROFESSOR M'GAULEY'S CLAIM OF PRIORITY OF INVENTION.

To the Editor of the Railway Times.

Sir,—In reference to a letter from Prof. M'Gauley in the last number of the *Railway Times*, wherein he endeavours to establish a claim of priority of invention of certain apparatus for preventing accidents on railways, I take the liberty to refer him to a letter of Mr. Pettit's in the same number, by which he will see that the invention was patented by him (Mr. P.) long before the Professor made his plans public, which I presume to think will be consider a sufficient reply to his pretensions.

I am, Sir, your obedient servant,

W. HANCOCK.

1. Toll to London and Birmingham 12*l.* 12s. 7d., to be deducted from gross receipts. The receipts are exclusive of those for the mails.

2. The receipts are exclusive of those for the mails.

3. Receipts include the Northern and Eastern toll, &c.

4. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

8. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.*

10. The 5,331,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet.

12. The 27*l.* 19s. 7d. from goods, &c. is for toll only.

13. Ten per cent, is the maximum dividend allowed by the Company's Act.

14. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

17. The capital of 741,000*l.* includes the new capital for London and Brighton station.

18. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

19. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

21. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

22. The 3,290*l.* 6s. 8d, are the receipts after deducting the toll to the North Midland Company.

23. The receipts for goods, &c. include, carriages, 00*l.* 0s. 0d.; horses, 00*l.* 00s. 0d.; dogs, 0*l.* 0s. 0d.; parcels. 000*l.* 00s. 00d.; cattle, 00*l.* 0s. 0d.; corn, 00*l.* 0s. 0d; heavy goods, 000*l.* 00s. 0d.; coal, 00*l.* 0s. 0d.

25. Including 228*l.* 1s. 1d., Manchester and Leeds traffic for two last weeks.

26. The receipts stated are after deduction of Liverpool and Manchester toll.

27. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

28. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

31. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

We can agree with T. F. *so far as to admit that Mr. Eilet's paper on Railway Fares contains errors; we value it however as an important approximation to a true theory, and still more so for the stimulating originality with which it treats the subject. An imperfect theory is better than none to begin with, and at the commencement of an investigation we are rarely in condition to obtain any other.* T. F. *should remark that Mr. Eilet's rule about adding a certain quantity to half the expenses amounts to his saying, "Seek by the experiment I direct a certain quantity, this when found is the profit added to half the expense of conveyance, add to it the other half and you have the fare it is most to your advantage to charge." With respect to the other instance, Mr. Eilet says that the "loss," that is, the amount of profit less than it might have been, "increases as the square of the departure from the charge which corresponds with maximum revenue."* T. F. *applies this assertion not to the loss but to the receipts, and censures accordingly. Be it observed we are not defending or adopting Mr. Eilet's conclusions—we are simply stating them.*

A Constant Reader (Warmington.)—*Before we invite our readers to account for the fact he mentions we should like to be sure that it is a fact.*

THE RAILWAY TIMES.

SATURDAY, MAY 29, 1841.

THE present paralysed and unsettled state of the Government of the country, is in several respects a most unfortunate thing for the railway interest.

Some we know there are, who will deem it no subject of regret that the Railways' Regulation Bill will be thereby got rid of altogether for the present; but even they may find to their cost before another year passes over their heads, that they have but put off one evil day (*evil*, according to their thinking) for a worse. Concession to the principle of self-government, which might have been obtained with ease from a feeble and temporising administration, may be hard things to procure at the hands of men of more resolved minds, of greater firmness of purpose, and better backed up by the country at large. We think it can hardly be doubted, that there must be a great deal more to fear from any Bill for the Regulation of Railways, brought in by a Ministry with a sure working majority of forty or fifty at their beck and call, than from one promoted by a Ministry without Parliamentary strength enough, to carry a single measure of importance, unless by sufferance of their opponents. The Whig President of the Board of Trade consented weeks ago to the abandonment of the much vituperated 11th clause—giving power to the Board to enforce the adoption of any improvements in railway practice they might consider conducive to the public safety, providing only that they were not merely of a *tentative* character; and had the opposing Companies (or Boards rather) but consented on their parts, to the enactment of those provisions, that had for their object to enforce full and faithful returns from Railway Companies, of all matters respecting which the country is entitled to the fullest possible information—the Railways' Regulation Bill might, in an amended shape, have been by this time the law of the land. May the Railway Companies, when next the Legislature takes them in hand, get off only half as well!

Opinions will probably differ less, about the gain from the postponement of another measure of railway reform, which stands equally shelved by the existing state of parties. We allude to the much needed modification of the passenger tax. The battle on this point has been won; but the fruits of victory may be yet for a long time to seek. Mr. LABOUCHERE has signified his willingness to make the experiment of substituting a tax on gross receipts for the present unequal and oppressive capitation tax; but who can tell what Mr. LABOUCHERE'S successor may think on the subject, or how far he may be disposed to venture?

The sister kingdom it is, however, which must be allowed to suffer most in its railway interests from the present ministerial *interregnum*. A plan, as we lately informed our readers, has been fully matured, by which about a million and a-half of English capital might be forthwith employed in carrying a railway through the heart of Ireland, and as many millions as might from time to time be requisite to lay down similar lines throughout the whole of the Green Isle, could be had as soon as wanted—giving immediate employment to starving thousands, and securing through all future time, incalculable advantages not only to Ireland but to the whole empire, of which it is so valuable and (say what our Irish friends will) so affectionately regarded a member. And of so thoroughly sterling and genuine a character is this plan—so unquestionable the ability of the promoters and patrons of it to carry it into effect, that earnest money to the amount of 140,000*l.* has been tendered in hard cash to the Government if they would but procure the necessary parliamentary sanction. The Irish Secretary, too, Lord MORPETH, has expressed on the part of the Government, their entire approbation of the plan, and great willingness to promote it by all the influence which Government possesses. Why, then, is it not brought forward? Simply because the Government does not feel itself *strong enough to carry it*. Not strong enough, though the plan itself is of such strength in all its aspects—moral, economical, and political—that but for the falling sickness with which its Castle and Downing-street patrons are unhappily struck, it must have overborne all possible opposition!

Every well-wisher to his country—whether Whig, Tory, or Radical—must pray for an end to a state of things of which such are the very equivocal results. Better any Government than no Government at all. Better an overwhelming triumph of some one system of rule or other, than a systematic prostration of all principles of action to purposes of mere party and temporary ascendancy. Better that all parties, whatever their merits or pretensions may be, should go to the wall, than that so many substantial interests of the people at large should be so postponed and endangered.

To a right understanding of the remarks we have made, or may hereafter make, on *railway fares*, it is essential to bear in mind that we do not advocate the interests of the public as *against* those of the railway shareholders, but, in the present state of the question at least, as *concurrent* with them. We apprehend, and shall endeavour to show, that by a general and considerable reduction of fares, the railway proprietaries would most surely and most extensively serve themselves, while they would best fulfil the purposes for the sake of which they were permitted to disturb so many old proprietary interests, and derange so many established modes of industry.

If it should ever happen that loud and violent attempts were made to invade the just rights of the new proprietaries, and to wrench from them an unfair enjoyment of that for which they have spent and risked so much, we trust we should not be found slow to do our best in their defence. But this is not the question of the day. Neither is it the question, whether any unfair intention exists on the part of railway proprietaries to exclude the public from a cheaper and more extensive use of railways. All that has taken place, or is taking place, in this matter, is readily accounted for without the imputation of greedy or dishonourable motives. It is quite enough to remark, that the subject is even yet new—that the needful experiments involve some danger, and that therefore few have yet been made—that the principles involved have been but imperfectly considered—that even as it is, the public have profited largely by the new mode of transit—that the construction of the roads and the organization of their working have yet scarcely left attention to spare for other subjects—and that the interests entrusted to the Directors were too valuable and extensive to be tampered with by doubtful and guessing trials.

Gladly excluding, therefore, all thought of purposed wrong, we have yet to remark that the reasons which excuse or even justify Directors following their present course, will do nothing towards averting the consequences of that course. The loss, if loss follow, will not be the less for its having been honestly incurred. It is therefore of the utmost importance that the subject should be extensively and closely examined, and that they who have to decide on these questions, so momentous to every line, should make themselves masters, at whatever pains, of the facts and arguments by which they should eventually be determined. If honesty of intention be hitherto a sufficient justification, henceforth negligence can be covered by no defence.

As we remarked in effect last week, the new combination of commercial principles produced by the peculiar employment of railway capital, required that these principles should be separated and examined anew; and we then endeavoured to dispose of one great source of error which presented itself at the threshold of the investigation, namely, the popular notion that the first cost of the railway should be admitted to influence the rate of fares.

We think we shall advance the same general object if, before we seek the basis of a sound and practicable theory, we expose the fallacy of some other considerations which have been

Digitized by Google

suffered unduly to interfere. In so doing we shall intimate, though not fully discuss, the principles which we take to be true.

If two railways were running side by side, under two different and irreconcileable proprietaries, and each were affording to the public the same accommodation, we might leave it to their rivalry to find eventually the smallest cost at which it was possible to convey their passengers, as well as the fares which on the whole brought the greatest profit to themselves. They would force each other on working out the problem by practice, though probably years of loss would be incurred in the process.

Now, in the view required by the present argument, this is the case with all other modes of transit, but it is NOT the case with railways; and hence it has happened that railway proprietaries have neither been forced into the most profitable course, nor have been induced to seek for the true grounds of the question. In the absence, too, of clearer views, they have resorted to modes of argument used elsewhere, but really inapplicable here, and thus have arisen serious errors.

The most important of these errors is a class of false comparisons. The Belgian Railway administration compared their moderate prices with the higher fares of their neighbours; they ventured to enhance their tariff, and suffered in consequence a severe loss. [See the report in our present number.] If when two coaches are running at the same hour and on the same road, that which charges the higher fare is sufficiently loaded, the other may reasonably advance to, or nearly to, the same price. But even with the slight difference of different hours, two coaches on the same road rarely prosper alike at the same price, and on different roads the analogy becomes still more faint. Each railway is confined as to its utility to the local spot of earth on which it is fixed; and except we could substitute a ride from Ostend to Brussels for one from London to Northampton, just as we could have chosen in days of yore between the Express and the Peveril of the Peak, we cannot, except through a misleading fallacy, adjust by each other the fares of different and distant railways. The Belgian authorities soon found that the true elements of comparison were the fares of the railway on one hand, *with the means and habits of the population by which it might be used on the other.*

An error similar in kind, though somewhat different in form, is that of comparing the fares by railway with those of the coaches running parallel with it. The saving of time by railway is important, and the accommodation and comfort so much greater than the coach can afford, that it is concluded the fare may safely be fixed near or perhaps above that charged by the coach. If it were sufficient to induce those passengers, or even double their number, to travel by the railway who would otherwise go by coach, this argument would be enough for the purpose; but it is founded on none of the elements, and furnishes of itself none of the elements, required to prove that the fares charged are the best for the interests of the railways.

If a single coach were running between certain large termini, the fares, even if originally low, would be raised so as to fill it from the small part of the population, who, from wealth, could pay, or from necessity were compelled to pay largely for the accommodation. However exorbitant this profit, the proprietor would insist upon and get his fares from this limited class of customers. But his high profit would induce the starting of another coach, and then the fares must be reduced so as to fill both, by placing the accommodation within the reach of a larger part of the population. If yet another coach were set on foot another enlargement of the source of employment must be secured by another diminution of fare, and so on until the number of coaches and the fares were so adjusted to the population as to leave only an ordinary profit to all.

It will be observed that in the early stages of this process high fares are obtained because of the inadequateness of the means of conveyance to the extent of population: a power of selection is acquired by it, and is employed in choosing those who for whatever reason will pay most largely. These high fares make large profits because the very circumstances which secure them, secure also full and sufficient occupation for every necessary horse and man; all expenses indeed are limited to the working of the *one* coach. Here the proprietor might wish to rest without either extension or rival, content to reap large proportionate gains from a business which required little attention, and left much leisure.

But now suppose him to be liable to a fixed and considerable annual charge, (no matter for what purpose) which he must earn by his coaching business. By this supposition the bearing and effect of the whole question is changed. It is no longer a matter of the greatest proportionate profit on whatever amount of business he may choose to do, but of the greatest absolute sum of profit, let the extent of business necessary to obtain it be what it may. To meet his engagement he must employ more coaches—to fill them he must lower his fares; and he must use his best judgment to discover where the remaining amount of fare is so combined with the new extent of business, as to yield him the greatest clear gain.

We think we may now see where the comparison between the coach and the railway fails. The lowest cost of working the coach increased by a moderate profit, fixes the fares below which the system will not continue to extend. How many soever the persons who wish to ride, if they cannot pay this sum the coach proprietor cannot avail himself of their wishes, let his necessity for making an extended profit be what it may. But these circumstances are *peculiar to the coach;* there is nothing in the railway analogous to them—nothing to show that the price and extent of business, limited by the peculiarities of the coach, is the price which best promotes the profit of the railway. For aught that yet appears there may be ten or a hundred times as many to be carried at a profit by the railway as could possibly yield to the coach the terms necessary to its existence. Nor will even the principle of the argument apply except in the case of a railway, whose power of transport is inferior to the demand for its aid. While our railways with comparatively small additions to their means of locomotion, are capable of carrying many times the number of passengers who would travel, even if no fare at all were charged, it is to other considerations we must look, for the mode of ascertaining what is the limit to be put to the amount of travel, and what are the most profitable fares.

If we now return to the supposed case of a coach proprietor extending his business in order to meet a certain annual demand, we shall find that it bears a considerable likeness in its main features to that of the railway. His extraneous annual liability represents very nearly the interest of capital and the cost of maintenance, management, &c. &c. of the railway, the amount of which is independent or nearly so of the amount of traffic. In neither case do these matters at all affect the extent of use, for they do not enter into the considerations by which it is determined, but in both the proprietor seeks to meet them by extending the use, and in both he has to consider where the extent of use and diminution of fare, yields him the most towards the payment of the annual inevitable demand. If we can imagine the anxiety with which the coach proprietor would watch the effect of his plans in one case, we may form some judgment of the care which ought to be exercised in the other.

The absence of effective competition affords another occasion of false comparison. It is indeed no uncommon thing for the possessor of a sole source of supply to mislead himself by the supposition that monopoly gives an unlimited control over price. He grasps at a large profit on each individual article, without considering the importance of the demand he thus excludes. Just so with some speculators on railway fares. If the public have no other mode of conveyance, or at least none other equally eligible, it seems to them as plain as possible that the railway may exact almost what it pleases for its services. We have already said enough for the exposure of this mistake, and we wish now to guard against its misleading and seductive effect.

Hitherto we have been chiefly occupied in removing error, and the extent to which this article has already run out, forbids our now noticing positively the principles on which this important inquiry should be conducted. Our remarks, however, if so obvious as to appear almost needless, will yet, we think, point out the general considerations to be kept in mind when we return to the subject.

THE Court of Queen's Bench gave a decision this week on the law of deodand, which though not immediately relating to any railway case, it is important the railway public should be made acquainted with, inasmuch as it furnishes the rule by which a good many railway cases as yet undisposed of, will of course be determined, and by which juries should in all time to come, be guided in their verdicts on homicides arising from railway or other accidents. We refer to this decision with the more satisfaction, that it happens to confirm in a remarkable degree, an opinion of our own on the scope of the law in question, published in the *Railway Times* of the 29th August last, on the occasion of the Eastern Counties' great slaughter case, but which we had the mortification to find at the time, all our legal friends and correspondents without exception entirely dissented from. It may be remembered that in that case the Coroner's jury returned a verdict of "Accidental Death," and imposed certain deodands, amounting to 500*l.* on the engine, which had been moving to the destruction of the persons killed; and that the Directors of the railway in a Report made shortly after to their constituents, expatiated in a grand style of indigdignant surprise, on the inconsistency of finding the deaths *accidental*, and yet mulcting the Railway Company as if they had been caused by some gross misconduct of theirs. It may be also remembered how we maintained that the verdict was substantially a most righteous verdict, and that the inconsistency imputed to it was one of a mere verbal nature, which had been forced on the adoption of the jury, by one of those fictions in which our forms of law so unfortunately abound, and that but for that very

Digitized by Google

inconsistency, the Company who had offended greatly in the matter, would have escaped unpunished. Our view of the law was this:—

"A deodand meant, in the early times, to which its origin is to be traced, a thing given or sacrificed to the Deity, (hence the word *Deo dandum*,) to appease His wrath in the case of any person coming to a violent death, *through any accident not arising from the fault of any reasonable and responsible creature*; and commonly the thing so forfeited was that through the instrumentality of which the accidental homicide had been caused—it being the province of the Jury summoned to inquire into the cause of death, to impose the deodand, and to set a price by the payment of which the thing forfeited might be redeemed by the owner. But when such superstitious offerings fell into disuse, the power of imposing a deodand, came to be regarded as simply a convenient method, by which Coroners' juries might mark their sense of the degree of culpability attachable to the owners of the irresponsible instrument of a violent death, *though, strictly speaking, they never had in point of law any power to punish for such culpability*. If a homicide arise *from the fault of any reasonable and responsible creature*, it becomes then a case either of murder or manslaughter and a finding to that effect takes it at once in all that regards the matter of punishment out of the jurisdiction of the Coroner's jury. *It is only by saying that there is nobody to blame, that a Coroner's jury can fine any person, however culpable; and this it is which constitutes the legal fiction in this as in similar cases.* Had the Jury found that any of the Company's servants were to blame for the accident, and *therefore* imposed the deodand, their verdict would have been of no force whatever in law, and would have been quashed at once, on application to the Court of Queen's Bench."

Now then for the decision, by which we say this our view of the law has been confirmed. It was given on Monday last, in the case of the Queen *v.* Polwarth, the circumstances of which were briefly these:—A person called MASON having met his death in consequence of the improper manner in which a steam boat had been managed, the Coroner's jury found a verdict of murder against a particular individual, and imposed a deodand of 800*l.* on the steam-boat. The inquisition was brought into the Court of Queen's Bench by writ of *certiorari*, and a rule to show cause why it should not be quashed having been argued at great length, the Court pronounced the following judgment. We quote from the *Times* report:—

"Lord DENMAN now stated the opinion of the Court to be, that a Coroner's jury *had no power to impose a deodand in an inquisition where they had also found a verdict of murder*. All the cases of deodand reported in the books were cases in which the death had occurred by misadventure; and, whatever might have been the origin of deodands, it had never been thought that they were intended to operate as fines to be imposed upon individuals for negligent or malicious conduct. The principle upon which they were founded was now a matter of mere conjecture, but, whatever it might have been, the Court was of opinion that at this time of day they were not called upon to extend the application of them beyond those instances in which they had been levied according to ancient usage, and the established principles of the common law. The finding of a deodand on the same inquisition which returned a verdict of murder, had been presented for the first time in the case now under consideration, and the Court had therefore no difficulty in deciding that such part of the inquisition as related to the imposition of a deodand should be quashed."

We were perfectly right, then, in saying that had the jury in the Eastern Counties' great slaughter case, found that the Company were to blame—which would have implied, of necessity, either murder or manslaughter—and *therefore* imposed the deodand, the verdict would have been of no force whatever in law, and would have been quashed at once on application to the Court of Queen's Bench." But as it is, it has not been quashed; and, in spite of all the big talk of the Directors, never will be quashed. We still confess it to be a pity that they could not have had "a little more verbal consistency for their money"; but we must at the same time repeat our fervent thanks that "they have not, for the mere sake of such consistency, been suffered to slip through the hands of justice."

For the same reason that the verdict in the Eastern Counties' case cannot be quashed, it clearly follows that that given sometime afterwards in the case of the Birmingham Railway cannot be sustained. The jury, in the latter case, found that SIMPSON, the driver, was guilty not only of the wilful murder of DANSON, the man killed, but of taking away his own life; and furthermore, imposed a deodand on the engine and tender of 2,000*l.* But the Judges say, that a coroner's jury "have no power to impose a deodand on an inquisition where they also find a verdict of murder." *Fining*, in direct and express terms, is *not* within their province; they must either fine under cloak of the legal fiction we have before explained, or not at all.

We should be disposed, on general principles, to say that a power which can only be thus covertly used, cannot be too soon put an end to. But when we look to the salutary influence which the imposition of a sharp fine now and then for homicidal negligence exercises on the public mind—coming too, as it always does, close on the heels of the offence, and while it is yet fresh in recollection—we must wait for stronger proofs than any we have yet seen, of harm arising to the public from the existing practice of imposing deodands—even though founded on superstition and dependent on a fiction as it is—before we vote for its abrogation. We hope, at all events, never to see it abolished until a public prosecutor is appointed for the protection of the public interest, with power to prosecute all offenders against the public safety to judgment and punishment. Many grievous offenders are now reached through a deodand, who might otherwise escape with perfect impunity.

WE have noticed some more *dicta* of the Court of Queen's Bench during the week, which though like that adverted to in the preceding article, not delivered in any railway case (and therefore not to be found under our usual head of "Railway Adjudications"), are of universal application to public undertakings, and as needful to be kept in remembrance of Railway Companies as perhaps by any others. In the case of the Queen *v.* the Bristol Dock Company, Lord DENMAN, in delivering the judgment of the Court, laid it down (we quote again from the *Times*)—

"That where parties obtained an Act of Parliament for the construction and maintenance of great public works, they were bound in law to fulfil all the incidental duties of which the performance was necessary for the discharge of their duties in respect to the principal subject. His Lordship also stated, that if public bodies omitted the performance of such incidental duties, they would be compelled to do so by the direct interposition of this Court. It had been argued upon the part of the defendants, that as the injury consequent upon their neglect to repair the bank was of a public nature, and one for which they were liable to an indictment, that particular proceeding ought to be adopted, and there was therefore no necessity and no ground for a mandamus. The Court, however, dissented from this position, and declared that where a Company were obliged to do a particular work, and where the consequence of their not doing it was to produce a public nuisance; that circumstance, although it rendered them liable to an indictment, did not release them from the necessity of a specific performance of their duty upon the subject in obedience to the mandate of this Court."

WE are delighted to find that we were not mistaken in our hopes that railway travelling would soon be made subservient to a more extended enjoyment of social intercourse. The teetotalers of Cheltenham are following the example of the Gloucester Mechanics' Institution, and are going on Whit-Monday to see the sights of Birmingham. A special train is to convey them, and with reinforcements from Gloucester, Tewkesbury, and Worcester, they expect to make up a jaunting party of a thousand strong. In their advertisement they say, with appropriate humour, that "they have great pleasure in announcing their intention to use a chief blessing of Providence for the promotion of health and happiness in rational enjoyment, which their own exhilirating element (water) affords by its condensation for locomotive power." (The little mistake about "condensation" they will perhaps get the engine-driver to correct for them.) "Public opinion is progressing at railway speed to condemn the iniquitous appropriation of the fruits of the earth to the manufacture of a soul-destroying poison, while thousands are starving." In these railway days, there is nothing novel to remark in their breakfast being provided at the end of their 46 miles trip, however startling such a fact might have been a few years ago. Three hundred are to enjoy the morning refection in the splendid Town Hall of Birmingham. The "teetotal band" (another of the happy signs of the times) is to enliven the gala. The fares we are glad to observe are at a handsome reduction from those of the Company's usual traffic.

An excursion equally characteristic, though probably on a much smaller scale, is projected by the members of the Belper Mechanics' Institution. They take Whit-Tuesday for a tea visit to the members of the kindred institution at Chesterfield, the latter it seems engaging to return the compliment. Here again the Railway Directors provide a special train. Knowing the assiduity with which music has been cultivated at Belper and its neighbourhood under the auspices of Mr. Strutt, we are not surprised that the Mechanics' Institution should have its own "band" for such a trip, or that the band should be excellent. We imagine, too, that the munificent donor of the Derby Arboretum, or his immediate connections, have had something to do with the getting up of the fête.

Passing away, however, from these particular affairs, and their grateful points, we cannot but express a hope that they will prove but the precursors of many such to be enjoyed in the course of the summer. That Directors should omit to avail themselves of so good a mode of extending the use of their railways we cannot suppose, nor do we imagine they will enjoy the profit the less for its having been earned in promoting the enjoyment and improvement of thousands, who, but for their facilities, must have been content to remain at home.

For reasons which we take to be strong and good, we are no teetotalers, and yet we can cordially join our Cheltenham friends in their delight at the advance of temperance. Time was when Governments thought there must be treason in every meeting of their subjects, and

Digitized by Google

when an assemblage like that of these merry-making water-drinkers would have been taken for rebellion. After that came the day of almost constant inebriation—every private rencontre must be signalised by a guzzle, and every social party by still deeper potations. It is surely a peculiarity of the times that a thousand persons whisk away a hundred miles in a day, and have hours to spare to enjoy the sight of one of the most thought-stirring towns in the kingdom—all to celebrate the sovereignty of cold water; and that hard-working mechanics should travel 30 miles of an evening to discuss matters of science with their fellows over a cup of tea.

A CORRESPONDENT ("G.") in our pages this week, puts a question which we shall be happy to be enabled to answer, by communication of information on the subject from parties cognizant of the facts, as it opens a field of the utmost importance in relation to the economical working of railways in general, and the consequent returns to be expected by the shareholders. In no particulars have the estimates of the earlier projectors and supporters of the railway system been more exceeded than in the cost of locomotive power; and our information on the subject is, as yet, extremely scanty. Mr. BURY, in his evidence before the Committee of the House of Commons in 1840, stated, that in consequence of being even then ignorant of the annual value of that most important item, depreciation of stock, we could as yet form only an approximation to the cost of locomotive power, and that it would require two years before he should be able to ascertain the exact amount on the London and Birmingham line; while the cost must vary, in the case of each individual railway, according to the cost of fuel, and the section of the line. Mr. BOOTHBY, in his evidence on the London and Birmingham Railway Bill in 1839, stated, that the Directors had attempted to carry out a contract for the supply of locomotive power at the rate of a farthing per passenger per mile, and a halfpenny per ton of goods per mile; but that the contract had never been put into execution, and that he believed it to be "utterly impracticable." The cost at that time, April 1839, Mr. BOOTHBY estimated at seven-sixteenths of a penny per passenger per mile. On the Liverpool and Manchester Railway the cost of locomotive power *increased* in three years 3-16ths of a penny per passenger per mile—the cost per train for each trip of 30 miles being 3*l.* 7s. 7d. in 1836, 3*l.* 11s. 3d. in 1837, and still more in 1838, when it amounted to five-eighths of a penny per passenger per mile.

The items which make up the actual cost of locomotive power are numerous, and some of them are not unlikely to be omitted in the calculations. They appear to us to be as follows —Interest of capital expended on engines and tenders, wages, fuel, cost of materials for repairs, wages of men employed in repairs, rent of engine-houses, water cranes, &c., (or interest of money laid out on their construction, and cost of keeping them in order,) and cost of new engines, deducting the value of the materials of the old ones. It is the uncertainty of the last items that renders the affair at present so problematical, and we apprehend that its amounts, as well as that of the repairs, will be found to be very much dependant on the section of the line. In some instances, we fear, it will prove to be enormous.

We understand that on the Manchester and Leeds Railway a detailed account is kept of the expenses chargeable to each engine, as well as of the amount of work performed by each, as accurately as it can be ascertained. An account of this nature, while highly valuable to the Company, as testing the relative merits of the engines supplied by different makers, is most important for the light that it throws on the general subject, and, in abstract at least, should be communicated to the shareholders. On another line again, we are informed that a new engine has recently been introduced, in which the fire is blown by a fan and the blast is dispensed with; and that, by the consequent removal of the resistance occasioned by the contraction of the blast pipe, upwards of 50 per cent. has been saved in the cost of coke in a trip of eighty miles. To any authenticated facts of this class, whether isolated or reduced to system, we shall be most happy to open our columns, convinced that any light that may thus be thrown on the subject, will be of essential service to the interests of railway locomotion in general.

To the shareholders we would say—press, at your half-yearly meetings, for detailed accounts of the cost of locomotive power.

THE proceedings of the summer half-yearly meeting of the South-Eastern Railway Company, held this week, a full report of which will be found in another part, are upon the whole of a very satisfactory character. Certainly this concern has recovered wonderfully, from the state of extreme prostration into which it had not long ago sunk. Signs of careful, prudent, and vigorous management are visible in every department. No excess of actual cost beyond estimates—no unexpected delays in execution—no taxing of the patience or good nature of shareholders—no jumbling or mystification of accounts—everything in the money way; explicit, distinct, and clear, (wanting only, perhaps, a little more minuteness, after the excellent fashion of the Belgians, to which we have elsewhere invited the attention of our readers.) The present balance sheet of the South-Eastern Company is, we think, the first railway account we have ever seen in which that subservient, representative of all wicked, and abominable things, "Mr. ETCETERA," does not once make his appearance. The works are described by a most competent judge, whose services on the Board of Direction it is a happy thing for this Company, to have secured, Mr. Lewis Cubitt (of the same name as the Engineer of the line, but no relation), as being in every respect admirably executed; and though there is yet much to do before any part of the line can be opened, it does not appear that the Directors could have done more, with the amount of funds placed at their disposal. The Engineer calculates on being able to open the line as far as Tonbridge next Spring, and the whole before the close of 1842.

The intimation given at the meeting of the retirement of Mr. TYNDALE from the Chairmanship of the Company on account of impaired health, was received with general concern. His long and steady devotion to the interests of the Company—the personal annoyances and hazards which he has cheerfully braved on its behalf—and the great courtesy of his demeanour on all occasions—must ensure to him in his retirement from office, the cordial sympathy and good wishes of every one who, like him, has its welfare at heart.

THE Great Western Railway is now close on the eve of being completed throughout its whole length. On Whit Monday (Monday next) a further opening will take place to Chippenham, and in the course of June it is expected that the entire distance from London to Bristol will be thrown open to the public. The *Bristol Times* states as an *on dit* that the Directors have "promised a very handsome gratuity to the contractors should they finish the work between Bath and Wootton Bassett by the 15th of June." The Corporation of Chippenham give a grand entertainment on Monday to the Directors, Engineers, &c. in honour of the extension of the line to that place, and the day is to be kept as a general holiday throughout the neighbourhood.

—o—

THE *Hampshire Independent* in noticing our strictures on the management of the South-Western Railway—in the justice of which, so far as relates to the rise in the fares, it entirely concurs, as indeed does the whole of the public press—makes the following remarks with respect to the speed of the trains: "The *Railway Times* would make it appear that the distance between London and Southampton is only 60 miles instead of 77; for the performance of the journey, by the first class trains, in three hours, is stated to be only 'at the rate of 20 miles per hour.' It is also stated that 'the mixed trains take generally upwards of four hours, and not unfrequently five—going but little faster than a well-horsed stage-coach.' We are sorry to see such erroneous statements as these put forth in the *Railway Times*. The editor must surely see that 77 miles in three hours is much nearer 30 miles per hour than 20; and an inquiry of any impartial person in the habit of attending the terminus at London, or that at Southampton, would have proved that the time the mixed trains take *generally* to perform the journey, is from three hours and thirty minutes to three hours and forty-five minutes. Every mixed train longer on the journey than the latter period, is an exception to the general rule." We beg to say in answer, that the number "20," was palpably a misprint for "25." We have travelled on the line too often, and are too familiar with it to have possibly intended to use the former. The word "generally," as applied to the speed of the mixed trains we readily recall; we should have said, they take "*often*" upwards of four hours, and this we can of our own knowledge attest. The "exceptions to the general rule," in this as well as most other instances, on this line, are so numerous that one may well stand excused for occasionally mistaking the one for the other.

—o—

THE Report of the Select Committee of the House of Commons which was appointed early in March last "to consider whether it is desirable for the public safety to vest a discretionary power of issuing regulations for the prevention of accidents on Railways in the Board of Trade, and if so, under what conditions and limitations," was brought up on Thursday last, and ordered to be printed. The consideration of the Railways' Regulation Bill of Mr. Labouchere, to which the inquiry of this Committee had reference, has been again postponed till the 4th of June—that is, we presume, to the 4th of June, 1842.

—o—

THE cause of Railway Board Reform is, we are glad to see, making steady advancement. Every now and then we have the satisfaction of meeting with proofs that the labours of our correspondents and our own in this department are not in vain. The *Liverpool Standard* states, that "a Special

Digitized by Google

Committee of the Directors of the North Midland Railway has been appointed *by themselves*, to see if any and what deductions can be made in the expenditure of the Company," and if they but remember not to forget *themselves* in the inquiry—their number, their services and their allowances—(though we would by no means insinuate that their Board is worse in any respect than most others,) great good cannot but follow. We should have liked, however, to have seen a shareholder or two called in to help the Directors on the occasion; it would not have lessened the reality of the inquiry, while it would have furnished a guarantee for its impartiality which is now wanting. A correspondent of another Liverpool paper, the *Mail*, announces that it is intended at the next general meeting of the MIDLAND COUNTIES' to move for the appointment of a Committee of General Inquiry, which is, among other things, to ascertain whether "fewer hands might not direct the machinery with equal, if not more efficiency, and at less expence." The writer quotes in support of the measure, an opinion expressed by Sir Robert Peel in the House of Commons, which escaped our notice at the time it was delivered, but which is well deserving of being treasured up in the remembrance of all railway proprietaries. "*If shareholders would but look after their Directors, most shareholders would prosper.*"

—o—

WE last week inserted the prospectus of a "Railway Insurance Fund," and expressed our cordial good wishes for its success. We have since been informed that Mr. Bell, of the Northern and Eastern Railway, had previously devised a similar but more extended scheme. His plan, we understand, comprehends, besides an insurance fund, a savings' bank, and other facilities for prudent laying up, within the reach of every class of persons employed on railways. When Mr. Bell's prospectus is published, we shall be in a better position for judging of the fitness of the plan; it is scarcely necessary to say in the mean time, that we shall rejoice in the success of any and every institution of the kind.

—o—

A LETTER from Geneva of the 18th inst. states that the Sardinian Government having proposed to the Directory of that Canton to join it in constructing a railway between Seyssel (Savoy) and Geneva, which would run along the left bank of the Rhone, the offer had been readily acceded to, and the plan was about to be carried into execution.

—o—

THE *Hanover Gazette* announces the opening of a great part of the railway from Berlin to Dresden, by which the distance may be traversed in 12 hours.

—o—

RAILWAYS AND THE APPROACHING ELECTIONS.—We quote from the *Macclesfield Courier* the following curious notice:—

"Various are the rumours of candidates for the representation of Knaresbrough, in the event of an early dissolution of Parliament; some of the leading parties being anxious to support two candidates who will take shares to the amount of 10,000*l.* in a proposed railway from Bolton station, near Tadcaster, to Knaresbrough; and one of these, it is reported, is to be a certain Alderman of York, who is a large railway speculator, and who, if returned, would be certain to obtain for Knaresbrough the proposed railway."

Other towns might do well to take a hint from the shrewd people of Knaresbrough. As, for example, Salisbury, Chatham, Rochester, Canterbury, Bury, Thetford, &c., Many worse ways there may be of expending money for a seat in Parliament than subscribing for a given number of shares in a railway for the benefit of one's constituents.

—o—

PROGRESS OF THE RAILWAY SYSTEM IN ENGLAND.—The total number of miles of railway completed in Great Britain and Ireland at the end of March last was 2,191; the number of railways finished, 53; partially opened, 18; not yet opened, 10.

RAILWAY OFFENCES AND OFFENDERS.

WE regret to find some Companies and magistrates still persisting in the teeth of the admonitions of the Board of Trade, in the clearly unjust practice of both enforcing payment of the full fares by passengers in every case where the distance travelled is greater than the distance originally paid and bargained for by them, and fining them *also* for the omission to pay the full fare. The fine as the Board have repeatedly pointed out should be alternative only on the *refusal* to make good the deficiency.

In the last number of the *Derbyshire Chronicle* we find the following report of a case "brought before" the magistrates at Alfreton on the 14th inst. "by Mr. Jackson, Superintendent of Police on the North Midland Railway:"—

"John Marriott, of South Normanton, was fined 1*l.* and 1*l.* 4s. 6d. costs for refusing to pay the excess of fare for riding further than the distance for which he had taken his ticket, and for trespassing upon the line. It appears that Marriott when "rather the worse for liquor" took his ticket at Derby for Southwingfield; but on his arrival at the latter place he refused to get out of the carriage saying he had not ridden far enough yet. At Smithy-moor he got out, but refused to pay the additional 6d. fare for the extra distance, and persisted in attempting to walk forward on the line to the Clay Cross tunnel. He was accordingly brought up and made to pay as above stated, a circumstance which cannot fail to impress him with a conviction of the advantage of getting "glorious" previous to starting by a railway train."

The additional fare required from this poor muddled passenger was *sixpence*: not knowing (evidently) what he was about he refuses; and instead of being adjudged to pay the sixpence with costs (the usual course in all cases of debt, and this was nothing more), with any alternative as to fine or imprisonment, which the justices in their wisdom might have seen fit to annex to their decree, he is at once "fined 1*l.* and 1*l.* 4s. 6d. costs"—that is, he is sentenced to pay *eighty-nine* sixpences for omitting or refusing (refusing *before* judgment, be it observed, *not after*) to pay *one!* Really this is quite shocking. If the man was "glorious previous to starting," the Superintendent at the Derby station should, as the Superintendent at the Birmingham line did, in the case we noticed two weeks ago, have declined to give him a ticket; but having booked him notwithstanding, the least the guard should have done when he reached the station for which he was entered, was to turn him out in "all his glory" whether he would or no. To humour the fellow in his drunken whim of riding a little further and then to punish him to such an enormous extent for the whim is rank injustice. The Company's servants were clearly more to blame than he; they were (or should have been) in their senses—he was not.

THE *Chesterfield Reporter* furnishes us with another batch of cases from the same Justice Room. Verily these Alfreton magistrates will become famous in the land ere long.

"John Marriott, of South Normanton, carpenter, was convicted in the mitigated penalty of 1*l.* and costs, for passing on foot upon the North Midland Railway, in the township of Stretton, without licence and consent of the said Company.—James Tomlinson, of Brackenfield, farmer, was brought up by John Jackson, policeman, for having trespassed on the North Midland Railway, near Higham Bump Mill. Samuel Ward, policeman, stated that he had seen the said James Tomlinson on the line on the 6th day of May, and went up to him and asked him his authority for crossing the line, and found that he had none; but as an excuse for so doing he said the land on both sides of the line belonged to him. This statement was wrong, but if it had been right he had no business to cross the line at that place, as there was a crossing within a few hundred yards of him for the accommodation of the landowners. Tomlinson stated in his defence that he did not think he did any harm by crossing the line, but at the same time knew it was wrong, and promised never to do the same again. He was ordered to pay the expenses, which were 17s. 6d."

Both dear walks these, and trespasses no doubt, but of so harmless a character that they might have been very safely and prudently overlooked. The North Midland police might, we think, be better employed than in absenting themselves from their posts to invoke the rigour of the law on such innocent offenders as these.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BELFAST AND CAVEHILL RAILWAY.

May 24.—Committee on Bill revived; leave to Committee to sit and proceed to-morrow at 12 o'clock.

BRISTOL AND EXETER RAILWAY.

May 25.—The Bill read a third time and passed.

GREAT LEINSTER AND MUNSTER RAILWAY—(No. 1).

May 25.—Bill read third time and passed.

GREAT NORTH OF ENGLAND RAILWAY.

May 25.—Message from the Lords that they have agreed to the Bill *without* amendments.

LONDON AND GREENWICH RAILWAY.

May 24.—Time enlarged for Committee to Report on the Bill till Friday, 11th June.

NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY.

May 27.—Bill reported; Report to lie on the table.

SHOTTS AND WILSONTOWN RAILWAY.

May 24.—Bill read third time and passed.

SOUTH-WESTERN RAILWAY (No. 2.)

May 24.—Bill read third time and passed.

FIRE ON RAILWAY.—On Wednesday last, as the train which leaves Dundee for Arbroath at one o'clock was proceeding eastwards, about a mile from Dundee, the guard discovered a body of smoke issuing from one of the last of the waggons in the train, and on examination it was found that two waggons loaded with flax were on fire. It happened fortunately, that there was a cistern near, where the engines are sometimes supplied with water; had it been otherwise, the consequences would have been much more serious. The burning waggons were conveyed to the cistern, where the flames were easily extinguished, and the train continued its journey. The accident was produced by a burning piece of cinder from the engine lighting upon the flax.—*Dundee Paper.*

SOUTH-WESTERN RAILWAY.—The conduct of the Directors of the railway in raising the fares, appears to cause great dissatisfaction, as it is observed, that after they had succeeded in stopping all the coaches (excepting one) between this town and London, they immediately adopted the course pursued by monopolists generally, of demanding exorbitant charges. It is to be hoped, however, that this injudicious step will be fully exposed, and if the expression of public opinion on the subject does not prove successful, encouragement will be given to the coaches that will no doubt ere long be again put upon the road.—*Salisbury Journal.*

Digitized by Google

THE BELGIAN RAILWAY SYSTEM.

We last week briefly informed our readers that we had received a copy of a Report on the state and working of the Belgian Railways, just presented to the Legislative Chambers of that kingdom by M. Rogier, the Minister of Public Works. We proceed to give the substance of this important document, and shall comment on it as we go along, intending, however, to reserve for other occasions the greater part of the remarks and arguments which its statements are likely to suggest. In giving English values, we take the franc at 25 to the pound sterling; the league is stated in the Report to be 5,000 metres, being equal to 3,107 English statute miles.

In the introduction to the Report, the Minister, after specifying the Reports presented in previous years, states that from the periods at which these Reports were formerly made up, it was necessary to complete them by *estimates* only of the receipts and expenses of the latter portions of each year, which estimates were not always borne out by the actual results. But the present Report exhibits not only the actual results of last year to the 31st December, 1840, but an abstract of the entire cost, of working, and experience of the whole Belgian system of railways to that date, from its commencement in May 1835.

The total sum allotted for the entire system of roads, stations, engines, with all their appurtenances of carriages, waggons, utensils, furniture, &c. &c., was 5,026,588*l.* The extent of the roads made and to be made is 351 miles. The sum assigned to the roads and stations, 4,404,000*l.*, or about 12,547*l.* per mile: the highest rate being 27,876*l.* per mile for the anticipated cost of the section extending from Ans to the frontier of Prussia, and the lowest, 7,274*l.*, that of the line partly executed with double rails from Ghent to Courtray. Something more than one half of the entire system has a double line of rails, the rest a single one. Of this sum of 4,404,000*l.*, there has been already paid 2,646,011*l.*; and of the 351 miles to be made, more than 200 miles are at work, and more than 140 miles are in course of execution. In this state of things the Minister says, page 8, "If, in the course of the execution of the works, unforeseen expenses should be required by extraordinary circumstances at some points, we confidently hope that they will be covered by the savings effected on the entire line." M. Rogier afterwards speaks of the completion of the system as perfectly assured, for the sum originally voted.

The cost of the land for the 147¾ miles of road, with double rails, now at work, seems to have been about 1,822*l.* per mile, but the 12¼ miles from Brussels to Tubise, cost 76,527*l.*, or 6,283*l.* per mile; including the latter item, the sum required was about 2,160*l.* per mile. We have selected the double line portion as furnishing the most correct comparison with the greater number of the English railways.

On these 160 miles of road, the total amount of law expenses was about 5,280*l.*, or about 33*l.* per mile, and this seems to have been occasioned by some cases of more than usually obstinate occupants. Indeed, on the 27¼ miles from Ghent to Courtray, the cost of this kind was for the whole only 13*l.* 7*s.*; and on the 12 miles from Tirlemont to Waremne, the charge is not one farthing.

The charge for earth work, bridges, culverts, &c., on this length of road, including the laying of the rails, amounts to 597,292*l.*, or 3,733*l.* per mile.

Few of the lines throughout their whole length are supplied with double rails, though several have them partially. That from Brussels to Antwerp is complete: its length is a little more than 28 miles; the cost of rails, &c. was 111,908*l.*, or 3,997*l.* per mile.

On the 14 sections of road now at work, comprising with the above mentioned 160 miles, intended to be double road, 48 miles of single road, total 208 miles—there are 32 stations, of which 10 or 11 seem to be of a class appropriate to the traffic of considerable cities or towns. The total cost of these is 124,374*l.*; that at Malines, which is situated at the intersection of the main lines and is the head-quarters of the system, has had expended on it 38,858*l.*

For these 208 miles the expenses of engineering and survey amount to 66,143*l.*, or 318*l.* per mile. This includes salaries, office expenses, books, expenses of inquiry, travelling expenses, instruments, &c. &c.—in short, the whole charge of this department.

The entire cost of the 14 sections in their present state at work, including the stations and fixtures of the line, but exclusive of engines and carriages, is 2,015,427*l.*, being an average charge of only 9,690*l.* per mile.

Besides attesting the solidity and general excellence of the works by reference to the easy charges of maintenance, the Minister remarks that the cost of the Belgian railways, moderate as it is compared with those of railways executed in other countries by private Companies, is a proof of the wisdom of the Government, in deciding to execute and work them under its own direction. We may be permitted to congratulate the Belgians on the result, without committing ourselves to an approval of the principle of this arrangement. Besides the advantage of cheapness of transit there are other social interests involved in the question of Government interference in every thing: and there are other countries where the consequences might have been of a very different kind.

With much greater reason the Minister observes that "the cost of the Belgian Railways has induced foreigners and even distinguished writers to suppose that they traverse only easy and level countries." To correct this error he asserts that "on the contrary there is not a line which does not present great difficulties and considerable works," and refers amongst other things to the necessity in so flat a country, of providing swing bridges of expensive and difficult construction, for crossing at low levels the innumerable canals with which the territory is furrowed in all directions. He points out with the same view the necessity of attaining a difference of level of nearly 500 feet in the 37 or 38 miles of road from Louvain to Ans, and of crossing many valleys in that distance, by embankments of from 50 to 65 feet in height, which alternate with cuttings from 30 to 50 feet in depth, to which is added on this portion of the road a tunnel of 1¾ in length. From Ans to Leige about three miles, there occurs a descent of 360 feet to be accomplished by two inclined planes, served by stationary engines of 360 horses power. From Ans to the frontiers of Prussia a route of about 24 miles along the tortuous valley of the Vesdre it is found necessary to construct the bridges of the Meuse and the Ourthe, 25 bridges and 18 tunnels, and after all the road attains at the frontier an elevation of nearly 600 feet above that of Liege.

From these and other particulars given by the Minister, it clearly appears that if the average cost of the Belgian railways has been small, it has not been from want of great natural difficulties, both to stimulate the genius of, and to occasion extraordinary expence to, the Belgian people.

The stock of implements of transport on 1st January, 1841, stood as follows:—

Locomotive engines	122
Tenders	108
Carriages for passengers	528
Ditto for goods	673
Ditto for the use of the establishment	136

Of these about one third were added to the stock during the previous 14 months.

On the 1st of January, 1841, 99 of the 122 locomotive engines were at work in good condition; 7 were undergoing considerable repair; 12 were either quite new, or had not been wanted, and it would seem 4 had been in use only occasionally. They have cylinders of from 11 to 14 inches in diameter, the greater part being of 12½ and 12 inches. We shall hereafter state the numbers and condition of the carriages.

The Belgian government has succeeded in concluding a convention with the neighbouring state of Prussia for the extension in that direction of their railway system. We find too in the appendix a convention with the Messageries Royales of France, for the constant transmission of goods, but hearing nothing of French railways in this direction, we conclude that our lively neighbours prefer to lay out their money in preparing for some future grand military exhibition in the neighbourhood of Paris.

Leaving now for the present the statement of original cost and present state of these railways, we pass to that of the cost of working.

It appears that in 1838 a sum of 123,600*l.*, was allotted by the Chambers to the working and maintenance of the railways then established. These consisted of six sections, worked during the entire year, two others during nine, and two more during four months and a half. The real cost was 110,200*l.*

The next year the same sum of 123,600*l.* was voted; ten sections being worked during the entire year, and three more for three months and a half; the cost, however, only reached 123,376*l.*, while much was added to the passenger use of the railway, and the carriage of goods was in that year commenced.

Again, in 1840, the same sum of 123,600*l.* was set apart for the purpose, and again it was too much. This year 13 sections were worked for the whole year, and another during 7 months and a half, but the real expence was 119,884*l.*

During these three years the total receipts have risen from 123,912*l.* in 1838 to 213,406*l.* in 1840.

It is, however, very important to follow the Minister in his calculations of the mean cost per mile of the distance the trains have run. An account being kept of the distance gone over by each locomotive, which is given in the appendix, it is easy to ascertain the cost relative to the work done.

These being the data the Minister gives the following table:—

Digitized by Google

TABLE.

			Division of Cost.		
	Distance travelled in miles.	Cost per mile per train.	Maintenance of road and police.	Cost of transport.	Booking office and guards.
		s. d.	s. d.	s. d.	s. d.
1835	31,300	4 3¾	1 3¼	2 6¾	0 5¼
1836	61,845	3 9	1 1¾	2 2	0 5¼
1837	191,368	4 11¾	1 5¼	2 7¾	0 10¼
1838	400,148	5 5¼	1 3	3 5	0 9¼
1839	541,428	4 6¾	1 1	2 10½	0 7¼
1840	735,038	3 3¼	0 8¼	2 0	0 7

Our readers will not fail to remark the great reduction of expense of working per train per mile, which has been effected since the opening of the first sections: nor will it escape their observation that in 1838 the cost was greater than either before or since. The latter fact, as well as the other observable variations of expense, the Minister accounts for by pointing out that the sections opened in each year which were only parts of important lines, and of themselves terminated in unproductive neighbourhoods. The general saving he attributes to the extension of the system, the consolidation of the road, in consequence of which it required less labour to keep it in working condition, to the effect of public competition in the supply of consumable articles, to the railway becoming itself a cheap carrier of its own supplies, and to the successive extensions of the road having brought into competition the different and distant coal fields of the kingdom. He remarks particularly that the expense of working 14 sections is far from being equal to 14 times that of one; and that in promoting a very extensive and popular use of the railway they are by no means adding materially to the expense either of the maintenance of the road or of the management.

"On review," says the Minister, "it seems to be decisively established that the average expense of trains by the mile, goes on decreasing as the railway extends and the road becomes more fully used. We may affirm without fear that during 1841 the expense will not reach 3s. 1d. per train per mile. This cost covering as it does all the charges of working of whatever kind, is inferior, if we are not mistaken, to that of the most economical railways elsewhere, even to that of the coal railway of Darlington."

The receipts of these railways furnish a very striking lesson on the error of expecting an increase of profit from an increase of fare.

The entire receipts were as follows:—

In 1835	£10,759
1836	33,005
1837	56,659
1838	127,913
1839	169,963
1840	213,406

Satisfactory as this is on the whole, the Minister points out the fact that in the latter years considerable sums were received for the transport of goods of various kinds, of which service the several parts were successively brought into action during those years; the sums received for the passenger traffic increased in proportion to the extent and importance of the roads which were completed until the year 1839, when the proportionate augmentation ceased and did not recover itself during the year 1840. Though of some length we cannot refrain from giving the Minister's own account of the cause of this unpropitious change.

"From the opening of the first section in May, 1835, the principle was established that this national work, executed at the cost of all, and managed by the Government, ought to be rendered accessible to all classes of society, on terms consistent with their respective means. The Berlins and diligences, therefore, offered comfort and enjoyment to the wealthy; the waggons, from their cheapness, were within the reach of the working population; while the middle classes, not forgotten, found in the chars-a-bancs a more economical conveyance than any in use before the establishment of the railway; all enjoyed without distinction the advantage of great speed.

"In the original tariff the prices were so graduated that that of a seat in the waggon was only one-half of that in the char-a-bane, one-third of that in the diligence, and one-fifth of that in the Berlin. These rates were in force during the sole working of the first section and were on the average as follows:—

Berlin	1.931	pence per mile.
Diligence	1.158	ditto.
Char-a-bane	0.772	ditto.
Waggon	0.386	ditto.

"These figures suffice to account for the immense crowd which resorted to the railway at that time. The waggons alone carried three times as many passengers as all the other classes of carriages put together, and produced about two-thirds of the total receipts.

"At the opening of the second section, which completed the line from Brussels to Antwerp, this tariff was already considerably altered,—the fares of the better classes of carriages, and particularly of the Berlins, was reduced, and that of the waggons was increased. However, notwithstanding that augmentation, the results were still satisfactory in consequence of the junction of the two principal centres of the activity of the country, and because the entire line from Brussels to Antwerp cost little more to work it than that portion of it which lay between Brussels and Malines.

"In this period as in the preceding one, the waggons carried the great mass of travellers, and produced as great a sum as all the other classes united. Who does not remember the working of those two years, when every day trains departed of 15 or 20 carriages full of passengers, and on holidays even 30 or 35 carriages to a train were not enough?

"However, during the prevalence of these fares, still moderate, though somewhat modified at the successive openings of the new sections, the receipts of 1837 and 1838, did not continue to be in proportion to the number of sections worked; but as with the expense, so with the receipts, it could not well be otherwise; for of four sections opened in 1837, and four others in 1838, three were worked only during two winters and one summer, and two others during one winter without a single month of summer.

"So without examining sufficiently the causes of this state of things, which could have been only temporary, people began to fear for the results of the railway, considered as a financial operation, and unfortunately at the same time, the beginning of 1839, they had to balance the accounts of the ten sections at work, the result of which could not but strengthen their fears, and induce them to conclude that the railway would not pay its own current expenses. Then departing from the entire idea on which it was established, they recollected that in the beginning they had calculated on it as a means of lessening the taxes. It was on the whole resolved that it was necessary to increase the receipts of the railway immediately.

"With this intent, our fares being much lower than those of the neighbouring countries, it was believed that they might be raised without inconvenience to a certain amount, and yet remain lower than those of the foreign roads.*

"This last change of the tariff took place on February 20, 1839; by it the average price is as follows:—

"Diligence from	1.0196 to 1.545	pence per mile.
"Char-a-bane	0.6487 to 0.9609	ditto.
"Waggon	0.3252 to 0.7724	ditto.

"The advance of the fares of the diligence and the char-a-banc, it will be seen was small in comparison of that of the waggon. For the latter the fare which had hitherto been but one-half of that of the char-a-banc was raised to four-fifths and five-sixths of it, and became a tax beyond the means of country people and the working classes.

"*The consequence was immediate; the waggons were deserted.*

"The third ten days of February in every other year had shown a considerable increase of passengers over the traffic of two other previous periods of ten days each in the same month; but in this year (the new tariff came into operation on the 20th) it exhibited an account of 23,000 passengers, and 800*l.* of receipts less than those of the ten days immediately preceding. The effect is still more evident on a comparison of the month of March, 1839, with that of January in the same year; their receipts being equal within 2*l.* 16s., which they ought not to have been taking into account the advance of the season.

"Without resting on isolated facts, an examination of the general results will show that from the 1st of March, 1839, to the 31st of December, 1840, taking into account the sections opened in 1839 and 1840, the advance of the fares was very prejudicial to the passenger traffic."

Then follows a table, from which it appears that in 20 months the diminution of passengers was, for the diligences 170,901, for the char-a-bancs 462,592, and for the waggons 1,455,800; and that the receipts were less than they would have been by 31,029*l.*, or about 11½ per cent. on the entire receipts from passengers for the time.

It seems that this diminution of passengers, affecting as it did the use of the waggons generally, was to be attributed in a considerable degree to their disuse by country-people travelling short distances, and particularly to markets: a special rate was applied to short distances, and by its amount it repulsed this class of passengers. The Minister shows that the reasons which induce carriages on common roads to adopt this plan, do not apply to railways: the means of transport possessed by the one are limited, and ought to be reserved for long passengers; the other can carry as many as they please, and should therefore make terms which will take in all.

After four months' trial of the plan, it was found very unadvisable to persist in it. Another was devised, by which (1 July, 1839,) two classes of waggons were established, or rather the waggons accompanying certain trains at certain places were charged one price, and those with other trains another price. The second class fares were fixed at 3.36d. from station to station.

This arrangement was found complicated and inconvenient, both to the managers and the passengers; nevertheless, being on the whole a reduction on the lower class of fares, it quickly brought about an augmentation both of passengers and of receipts. This result has induced the authorities to inquire how far they can safely return towards the original tariff, and they seem to be additionally induced to take up the question by observing that the number of carriages in each train, and the number of passengers in each carriage, are not sufficient to employ with advantage the power of the locomotives. We understand that since the presentation of this Report a new tariff has been published, with the particulars of which we are not yet fully acquainted, but of which we gave a sample in our last.

The details of this experiment on the comparative effect of fares of different amounts, we have given at greater length than we should have done but for the fact that little of the kind has been at-

* "Exactly at the same time the Paris and St. Germain Railway Company sought to increase their receipts; they succeeded in doing so by *lowering* their fares.

Digitized by Google

tempted here; and it would seem that but little is known of the principles by which questions of this kind are determined. Purposing to take up the subject in another form, we content ourselves at present with asking special attention to the facts we have just given.

With respect to the carriage of goods—just as the bulk of waggon passengers produced the business and profit of the railway in 1835 and 1836, so the transport of heavy goods furnishes the principal part of those of this branch of the service now; for its expenses are small in proportion to its receipts. The course taken was just contrary to that adopted with respect to passengers. It was not until Feb., 1838, that the railway was employed at all for the conveyance of goods, and then only on special bargain to carry not less than 59 cwt. at a time. This traffic produced in 11 months only 2,320*l.* In April, 1839, admission was given to goods of a ton in each lot, which produced in nine months the sum of 13,897*l.* In 1840, this source of income gave 18,791*l.*, while carriage by the entire waggon of about three tons, as above described, furnished only 888*l.*, on which the latter plan was finally abandoned.

Less unwilling than at first to engage in the details of the transport of merchandise, the Government put into operation, on the 1st of August, 1840, six different tariffs, each applicable to a particular branch of the service.

The first is that of goods to be delivered at their respective addresses. The charge for parcels under 11lbs. is 4.8d., whatever be its destination. That for larger matters varies with the weight and distance. A sufficient instance may be that of a package above 57 lbs. and not exceeding 220 lbs., which would be conveyed from Ostend to Ans (124 miles) for 3s. 10¾d. Bulky goods are charged by their dimensions.*

The second tariff is that relative to the transport of merchandise in general from station to station. Goods of this kind are divided into three classes. The first are of the heaviest and coarsest description, as stones, marbles, bricks, metals, grain, &c.; the third is composed of fragile articles, and those which are difficult of transport. The second takes all the rest. Taking the same example as to place and distance, viz., from Ostend to Ans (124 miles), the price is for the first class 10¾d. per cwt.; for the second, about 1s. 0¼d. per cwt.; and for the third, 1s. 5½d. per cwt. Here the receipts in five months have been 16,572*l.*

The third tariff is that of baggage accompanying passengers. A weight of 44 lbs. goes free with the passenger, provided he himself takes care of it: if he commits it to the care of the servants of the railway he receives a ticket, for which he pays 1d. Taking again the distance from Ostend to Ans, baggage above weight pays 3s. 2d. per cwt. Baggage not distinctly addressed, or which is insufficiently packed is refused: none is taken during the quarter of an hour immediately before the departure of a train. The receipt from this service during the entire year of 1840, was 5,290*l.*; the present tariff was, however, only decreed in July: how much of the receipt is to be attributed to its regulations does not appear.

The transport of money, bills, and articles of value is the subject of the 4th tariff. From 20*l.* to 40*l.*, carried from 96 to 124 miles, is charged about 1s. 7d. This produced 183*l.* in 5 months.

* Under this head, five months of 1840, produced 3,697*l.*

Private carriages are conveyed under the fifth tariff, according to which one four-wheel carriage or two two-wheel ones occupying one waggon are charged 2*l.* 16s. for a transit of from 96 to 124 miles. The income realised in all 1840, was 4,958*l.*

The sixth tariff regulates the conveyance of horses and cattle. Three horses, or six horned cattle, are carried in one waggon from 96 to 124 miles for 3*l.* Twenty pigs or sheep are charged for the same distance 1*l.* 11s. 2d. This tariff was, added to the income, in five months only 372*l.*: it seems to have disappointed the expectations formed of it.

The losses incurred by damage or abstraction of goods in five months, amounted to only 60*l.*

Finding that increased facilities afforded to the public augmented the receipts in every instance, without incurring a proportionate increase of expense, the administrators of the railway are now occupied in extending the arrangements for carrying, with a view to render unnecessary all agency between them and the population of the towns on the railway; they anticipate too, that by private branch conveyances on the common roads all parts of the country will soon be brought within reach of the new mode of transport. Whether it be desirable that the Government should possess the sole control of the means of conveyance, we are strongly inclined to doubt: we cannot, however, refuse to the Belgian Government the praise of having discharged the trust confided to it, not only with diligence, economy, and skill, but with an evident and prevailing desire to render the railway as available as possible for all purposes and to all classes of the population.

The interest on the capital engaged, realised in the several years, is as follows:—

1835	7¾	per cent.
1836	10	,,
1837	1¼	,,
1838	1¼	,,
1839	2¾	,,
1840	4	,,

In the first year, only the section from Brussels to Malines was open; in the next, there was added the continuation of it to Antwerp.

Early in 1837, the opening of the sections to Termonde, and in September of the same year of that to Ghent, and those to Tirlemont through Louvain, added greatly to the capital engaged, and to the cost of working without proportionately increasing the receipts.

In 1838, the same state of things continued in consequence of the opening of the lines to Ans (Liege) and Ostend. In 1839, the tariff was tampered with, and the branch of St. Trond and the line from Ghent to Courtray were opened.

In 1840 considerable reductions of expense had been effected, the road had come to a sound working state; the administration had become better organised and accustomed to their duties, and passengers tariff had been partly restored to its original state, and the railway was opened to a greater variety of traffic, affording extended facilities to the public in general.

After briefly enumerating the political and social advantages which Belgium is deriving from her system of railways, the Minister concludes his Report as follows:—

"Under whatever aspect we view the subject, the superiority of railway transit over every other mode of conveyance is incontestible. The time will come when secondary railways branching off from the main trunk will present a complete web of communications, and our country, so rich and so industrious, will become one great workshop, one immense market, and we hope its inhabitants will compose but one family, united by common interests and kindred feelings."

Having thus given the principal facts in this important document, we wish to call attention to the document itself. We do so under the impression that we shall render the railway proprietary, as well as the public, an essential service, by exhibiting for imitation here the particularity and lucid order of these accounts.

We may pass over the body of the Report with the remark that it sums up and accounts for the proceedings and results of the enterprise with great exactness and skill, and it states with freedom the views on which the Minister proposes to act in future.

The Appendix consists of a variety of documents we now proceed to describe.

Table 1. gives the cost and length of each section of the railway, and states how much both of cost and length is located in each province of the kingdom; this includes both the past and the anticipated future cost. The recapitulation shows how much of this has actually been expended, and how much remains to be spent, and duly divides these sums under the heads—Lines, stations, and fittings, and means of transport. A further classification exhibits the sums spent on the sections already finished, and those on the lines not yet completed. The total is made to correspond with the sum voted by the Chambers for the establishment of the system.

The other division of this table shows the length of each section already opened, as stated in the original plans, the length as agreed in the contracts, the actual length now they are completed, and that under which they are charged in the tariffs. It then exhibits the length of single and double rails actually on each section, on the 1st of January last, the names of the stations and the length of the rails, laid down on the short piece of road belonging to each. This is followed by similar particulars, as far as applicable, with respect to the roads in course of construction, and the stock of rails in hand available for each.

The capital employed in the establishment of the railway is accounted for in the second table, under the general heads of—lines, stations, means of transport, and general expenses. The first is subdivided into the particulars—cost of land and compensation,—law expenses,—earthwork, buildings, bridges, &c.,—sleepers, rails, &c.,—plantations,—and expense of opening. These are given for each completed section, and as far as they go for each section in progress. Next is given the cost of the stations in each section, and that of each kind of fitting for the whole. Of the means of transport we have the sums spent for each article, from locomotive engines to baskets. The general expenses are particularised into salaries, office expenses, &c.

The 3rd table makes us acquainted with the expenses of working the road during the year 1840. It is impossible to give in this notice an exact account of the minutenes to which this statement descends. Under the general heads of—maintenance of way and police, expenses of transport, and cost of management, the charges are distributed into a great variety of particulars, and are so disposed that at one view may be seen the cost of each kind,

Digitized by Google

and in the most important particulars how much has been incurred on each section, or at each station. Nothing seems to be omitted, and the sum total agrees with that charged by the Minister in his budget.

In the 4th table we have a short statement of the cost of working the road in each year, a comparison of that cost with the number of leagues run during each year, and a partition of the cost per league, under the three general heads above mentioned.

Table 5th shows how much has been received in each month of each year, from each branch of the service.

Table 6th gives the same amount distributed by stations and years.

From table 7 we learn how, during 1840, each branch of receipt contributed to the amount at each station and to the effect of each line.

Table 8 states how much has been received each year at each station from passengers only, and gives the monthly average by principal stations.

Table 9, in a part for each year, gives the number of passengers who have travelled in each month by each kind of carriage, and the corresponding receipts, together with the receipts from the carrying of goods and other sources.

Table 10 details the accidents which have occurred from the beginning, with their causes and results. The total number is 27, out of which there appears to have been 13 deaths.

The 11th table contains the different tariffs for passengers which have been in force, and shows the superior, mean, and inferior rate per league in each case.

The 12th table in several sheets gives the tariffs of several kinds in force in December, 1840.

The stock account of rails and their appendages from the beginning, is given in the three sheets of Table 13. Here are detailed the date and number of the order—the kind of rail—the firm to which the order was given—the quantities and prices of the several articles and contracts—the quantities actually furnished—the amount of debt contracted by each order, the amount paid, and the date of the last receipt—the weight and value of each lot, the section and neighbourhood in which they were used, and the length of single road which the rails covered, distinguishing the sections completed from those in progress.

The next table enumerates the whole of the buildings and dependencies, as they existed on the 1st of November, 1840. They are divided into those for general purposes—for passenger traffic—for conveyance of goods—for works of maintenance and construction. The dependencies or fixtures, as coke ovens, platforms, turning tables, &c., are also specified. Those of each station are described together; and the use of each building, its dimensions, and the material of which it is constructed, are clearly denoted.

Table 15 presents a comparative view of the state of the means of transport for the 21st of each month since November, 1839. It gives the number of locomotive engines and of carriages, trucks, &c. of each class separately; it states how many of each kind were in good order, under repair, and in course of construction on the 1st of January, of each of the years 1840 and 1841.

The 16th table accounts for all the locomotive engines. It gives their names and numbers, diameters of pistons and driving wheels, names of makers, date of entry into the service, leagues run in the last three months of 1839, and each quarter of 1840, with the entire distance done by each from the beginning, together with the date and nature of their repairs. The miles run over by all the engines in 1840 amounted to 733,938; the grand total of miles to 1,993,953.

The tables conclude with the 17th, which is a list of all the contracts and purchases made during 1840, distinguishing those furnished for the current working of the railway from those supplied for the finishing of the sections at work, and from the cost of works and materials for those not yet opened. The nature and amount of the charges, the previous estimate, where any was made, and actual cost are given together with the name of the seller or contractor.

Then follows a copy of the convention with the Messageries Royales of France, and a large and well executed map of Belgium and its railways concludes the whole.

THE VOICE FROM THE EAST.

To the Editor of the Railway Times.

From my old Corner, High-street, Shoreditch, 20th May, 1841.

Dear Mr. Editor,—Excuse me for my brevity last week, and bear with me this, if I intrude upon you at greater length than may possibly suit either your pleasure or convenience. Your suppression of more than one letter I have lately sent you, has operated like a real wet blanket on my *cacoethes whisperandi*. Yet this notwithstanding, I *must* speak out, else I shall soon be "too full for utterance." I live, as I may say, but to blab; and as long as I live I shall, with Barnaby's raven, "never say die." You may throw this epistle too, Mr. Editor, in the fire, yet from its ashes, though I say it, there shall arise reproachful recollections which will, one time or other, make you repent your unthankfulness. I have never written to you a line which had not your own editorial good, or the good of those whose interests you have undertaken to advocate for its direct and exclusive object; and I don't think (with all due submission be it said) that you have done yourself or your friends a single groat's-worth of good by a single line of mine you have suppressed. But then, who am I? Aye, that is the question. The question which makes all the Bozzes and Buzzes, the Sams and Sumphs around me gape, as if an "*Eh tu quoque?*" were on the tips of their tongues, ready for bitter ejaculation—the question of questions which shakes all Shoreditch to its foundations, and causes Shoreditch's pride, "Bozrah, the chief of the governors," Bozrah the Great, to ply his imperial hammer with tenfold ratatatishness. Who am I? If I may be allowed to answer for myself, I should say—I am one who is admitted on all hands to pretend to no more knowledge of things than he possesses (which should set at once silly H——d, and two or three besides, quite free from all suspicion)—one who can tell with considerable exactness what is passing under his nose, (which shows equally that neither am I of kin to the class of the A.'s, and the B.'s, and the W. C. W.'s,)—one who gives all his services for nothing, and never charges a doit more than he is actually out of pocket for his travelling, eating, drinking, or lodging, (and is therefore neither R., nor C., nor either of the H.'s,)—one who delights neither in wry faces nor bad rhymes, and has never for the sake of retention of office submitted to rebukes and insults, disgraceful to a gentleman to bear, (an assurance which it must be very pleasant to the friends of a certain "gentleman at large" to receive,)—and one who has still the same opportunities as ever of knowing all that passes within the walls of this Board-room, and is as resolved as ever to tell the public all that it may be at any time of benefit to the public to know, *not else*, (and who, therefore, can neither be D., nor G., nor H., nor W.) Crafty C——r may smile incredulously at the last of these disavowals, but it is not the less true for all that. If so be, then, that thou art neither a false pretender, nor blind as a beetle, nor greedy as a (six)-Guinea shark, nor yet despised as an exploded squib, or as a toadee to a bum-bailiff, who the deuce art thou? What business can you have *there?* Permit me, my masters, to say, *that is my business!* Poverty, they say, makes us acquainted with strange bed-fellows; so also does duty at times. Enough is it to you to know, that I do occupy a "corner" exceedingly well adapted for hearing, that my ears are of more than ordinary quickness, and my skill in stenography superlative. Enough is it for the ease of my own conscience that —call me "traitor" as they may—"traitor" I am none; unless, indeed, he is to be regarded as a "traitor" who disclaims all allegiance to cliques and factions, and prefers before all things the interests of truth and justice.

In my brief note of last week I was rather harsh I fear on a certain gentleman "from the far north." The treament he received was, to be sure, exceedingly scurvy, and such as *no body of gentlemen* could be guilty of *towards a gentleman*. But since I wrote you last, I have been told of a certain letter from this very ill-used person, which ought to have been, but some how or other was *not*, read to the general meeting that would, if published, have done him honour, and I cover his intriguing colleagues with confusion. Perhaps, Sir, it may yet see the light.

The Liverpool individual whom the meeting were impudently said in the Company's official Reports to have elected in place of Mr. W., but whose name was never once mentioned to the meeting, is in all things, save the manner of his elevation to office, unexceptionable. And after all, seeing what a hocussing affair "this great corporate misfortune" is altogether, it may be said to matter little how he got in. All freedom and fairness of election have been long since out of the question.

The Manchester attorney who was elected (by the Board) in place of the manly D., said to have resigned in disgust is no "rara *avis*," but a very respectable sort of person withal. He has been since his accession to office busy with the list of arrears—inclined thereto, no doubt, by professional leaning—and is reported to be engaged on a treatise for the benefit of this and all other railways, to be entitled "*A short and pleasant way with defaulters.*"

Another vacancy has taken place in the Board by the resignation of Mr. G. (not "Justus.") Whether from "disgust" like others who have resigned before him, I cannot positively tell. But if I may be allowed to indulge in conjecture, I should say, disgust, deep disgust. There may be many causes, however, for disgust—good and bad, and neither the one nor the other. If it be true, as is whispered about, that there is a very near resemblance between the case of this Mr. G., and that of Katspa of the far-famed Rogulaneum Chronicles, his disgust is not of a description which should command the smallest sympathy.

I told you in one of my last year's epistles that the February Kalends of 1841 were destined to be fatal to the Chairmanship of "Pooh! Pooh!" They have *not*, but you must not therefore set me down as the less entitled to credit. It *was* settled that he should be got rid of, and had I not disclosed to the *Railway Times* this arrangement *quoad Boz*, and had not the *Railway Times* published all about it beforehand, "Pooh! Pooh!" would have been got rid of at the exact time predicted. I defy any one of the Liverpool clique to deny this. So then, rather than fulfil a prediction of the *Railway Times*—rather than seem to be driven by the *Railway Times* to do anything—they prefered re-electing "Pooh! Pooh!" no matter what the violence might be to their own opinions, or what the prejudice done to the interests of the poor shareholders. Admirable—thrice admirable—most conscientious—most magnanimous—most trustworthy of all Directors!

I can't say whether "Pooh! Pooh!" feels grateful, as he should do, for the service you and I have rendered him in this instance; for I don't by any

Digitized by Google

means view in that light the *author's copies* which he has sent me (and you too perhaps) of his several doggrel effusions on the Eastern Counties' Railway; but this I can tell you, all the Liverpoolers wish you and I to the d—l for our pains. Indeed, I think but for this they would have forgiven the *Railway Times* everything else. The *Railway Times* it is and that alone which has fastened upon them for another year, a Chairman who is admitted on all hands to be alike by his talents and temperament wholly unfitted for the office.

The carrying business has been on the whole better conducted of late than formerly, and with comparative freedom from accidents; *but still at a constant daily loss.* Public favour, as we all know, is not easily whistled back, and this our friends here are proving to their cost. The traffic is not half what was contemplated, nor one fourth of what under better auspices it might have been. The fares are still too high, and the general bearing of all concerned as little winning as ever. The wants of the locality are not understood, or if understood, not attended to. (so much for stranger and non-resident Directors.) All the London world is now *a-Maying*, but the poor Eastern Counties' is but little the better for their peregrinating propensities. On the very first of May another passenger was killed, and though this certainly was not owing to any negligence on the part of the Company, it served to set people a-thinking *what a line this was* for killing innocent holiday folks, and to spread abroad a notion that there was somehow or other a "bad luck" about it which it might be just as well for prudent people to eschew.

The best thing, undoubtedly, under existing circumstances, would be as one of your correspondents lately suggested, *to shut up the line altogether for the present*; the 150*l.*, or thereabouts, received weekly from the Northern and Eastern would then be a clear profit, instead of being, as now, swallowed up in the general loss. But such a step has more of honest courage in it than the leading people here are equal to. "He is a fool," says the proverb," who finding a hole in his pitcher, continues pouring in," but it is precisely of men of this calibre that the majority of this Board is made up.

I mentioned to you in one of my former epistles, the great reserve maintained with respect to the cost of last year's heavy catalogue of accidents—the actual cost, I mean, out of pocket, and not the consequential loss from the frightening of the public, but we are getting at the truth bit and by bit, and one day, I suppose, shall get at the whole. Mr. Corbould and his son have had 400*l.* damages, besides all expenses; and on the 9th February, I see 240*l.* was voted to Surgeon Cornelius and his bone-setting coadjutors. *Query*, does any of the said 240*l.* go into Corney's own pockets, and, if any, how much? He is a Director be it remembered, and should by doing any business for the Company for profit be *ipso facto* unseated.

Justus Gibbs has been sadly annoyed by your publication of his letter, and has lost ground by it considerably in the opinion of his Liverpool masters. He had led them to believe it was not half so bad.

How goes on the prosecution against the *Railway Times?* The tone of the people here on the subject has recently fallen to B flat. Even the everlastingly simpering and sputtering Sam has ceased to talk about "muzzling the bear." Something surely must have happened. Have they caught a Tartar, or what?

From the general talk, it is to be inferred that the six guinea charge forms no part of the bill of accusation against your journal. The practice of travelling free, and yet making the Company pay, is openly avowed, and its perfect fairness as firmly asserted. The miserable plea is, that it is "all one to the Company" how the Liverpool Directors come to town! Even as it would be "all one" in a money point of view, whether the Company went on squandering thousands by carrying on a losing traffic, or lost the same amount by a robbery of the exchequer. And it is such morality as this which the Bozzies and Sams of this part of the world back up, and nose-led shareholders assemble at the London Tavern from all parts to applaud uproariously!

"What wonder then, we take it not to heart,
Such arrant —— and fools should pay the smart."

I remain, with best wishes, dear Mr. Editor,
Your faithful friend,
Q.

REFORM IN RAILWAY DIRECTIONS.

To the Editor of the Railway Times.

Sir,—Allow me to say a few words bearing upon your correspondent, "C. D.'s," letter, and I will confine myself to points of explanation.

The admission that my plan would "have the good effect of saving useless salary, breaking up cliques, and preventing unholy compacts," calls for my grateful acknowledgments. It goes a long way to induce the belief that my plan would answer my highest expectations.

There is no "magic" in the number eight; I have even offered to have nine—*if they are wanted.* "C. D.," by referring, may see that I fixed on eight, only because I saw work for as many; and, as at present informed, do not see the use of more.

"C. D.'s" statement, though confidently given, that Directors, as I would have them, "will still be nearly useless or worse, and any modification of the class will be little better," is but assertion at best—like mine, *unproved* assertion—and I therefore put in a claim for my propositions being considered by those most interested—the body of shareholders—in full confidence that said propositions have suffered no injury from "C. D."

I think "C. D." made his charge against me of considering "even the eight to be all rogues," in a heedless moment. "C. D.," I suppose, does not consider mankind so honest that no check from one, upon the actions of another, is necessary, else what becomes of his *own* plan of having Auditors to look after his *one* Director? Why is not every man's word and accounts taken as correct, without question? Why has his quoted line Managers, with Directors to check *them*, and a Chairman to check the Directors, if "general superintendence" means check? And "C. D." must not run away with the notion that I am so steeped in railway sin as to have ever been an unbeliever—(would to heaven I had been born a sceptic!)—alas! I had faith enough for the elect; like many a confiding damsel, who never knew of, or at least comprehended, the meaning of the word misanthropy, "*I believed and am undone.*"

I thank "C. D." for the idea of the hat—it would be an excellent method—as good as the ballot box—and enables me to offer another mode of selection for shareholders' consideration; it will be quite as well as alphabetical order.

"C. D." has overlooked a circumstance, perhaps trifling to him in competition with his own opinion, regarding the employment of a *single* Director, in whom to place confidence. It is, that where that method has been tried, it has failed, *signally failed*, not on English railways only, but wherever else proprietors have had the weakness to entrust great concerns to single hands. It is a premium to "roguish tendency." If it do not find a man a rogue, it makes him one. If "C. D." is open to conviction upon this point, I recommend him to hold some conversations with the principal shareholders of the United States Bank; they cannot fail to lead to his edification, and in the meantime I beg to congratulate him upon his ignorance of the working of the method he advocates, as it proves fully that his name does not figure in the share-list of one concern at least worked by a single and highly-paid Director, "*the bona fide head of his department*," from which so many of our countrymen have been thrown into irretrievable difficulty and distress.

It is not ingenuous of "C. D."—nor indeed what I expected of so intelligent a person—to repeat, after my last explanation, that I would have Directors for a year. I never contemplated that they should be "turned out in a year"; my proposition is, that they shall hold office for the periods mentioned in the Acts.

If my letters should have no other effect, in bringing back to "C. D.'s" mind the Romans and their public works, than to induce a re-perusal of the Roman classics, which, from the *gusto* with which he refers to them, I am sure were the recreation of his more youthful days, as they would now be of his maturer years, the having written them will still afford me some satisfaction.

A RAILWAY SHAREHOLDER.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

To the Editor of the Railway Times.

Mr. Editor,—The letter of your correspondent "F." in your journal of 22nd inst., seems worthy the attention of those who, like myself, have promoted this railway for the sake of its bearing upon this part of the country.

When we brought forward our grand connection railway from Northampton to Worcester, in the year 1837, we fully expected to get on to London by the Cheltenham and Great Western, if not by a more direct line by Oxford, and it has latterly appeared to some of us that the Cheltenham and Great Western line could be amended, so as to avoid the present circuitous and expensive route, which would tunnel through the Cotswold Hills at Sapperton, and would pass through the costly properties in the vallies of Stroud and Chalford.

On any such line as that proposed by "F," this railway would then take the traffic from this part of the country, which while it would greatly benefit the proprietors, would accommodate these populous districts, namely, Worcester, Kidderminster, Bewdley, Leominster, Bromyard, Ludlow, Tewkesbury, Ledbury, Malvern, and Cheltenham, in addition to Gloucester, all the traffic from which would take this route in order to reach the metropolis, whereas such traffic will be lost to this railway on the present route.

It has been rumoured that a survey has been made with this view, and that a very good line has been found from Cheltenham to Cirencester, making the distance only 15 or 16 miles instead of 30; and it has also been said, that a saving in the cost of making the railway from Cheltenham to the Great Western line would thus be effected to the extent of between 200,000*l.* and 300,000*l.*

Can any of your correspondents inform us in this neighbourhood whether such is the case? We are materially interested in this question, as being the best line we are likely to have to London for some time to come; and it seems a question of so much moment to the proprietors and Directors themselves that no doubt some of them can give us the necessary information. Yours very truly,

K.

Kempsey, May 26, 1841.

CHELTENHAM AND GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—Is not your correspondent "F.," in your columns of the 8th of May, in rather more of a hurry than is ordinarily consistent with good speed? Captain Moorsom has certainly put forth a Report, which "F." calls "able and valuable," in which he suggests getting through a difficult country by means of gradients of 1 in 60. Now, a proposal to depart from a plan laid out by one of the first Engineers of the day, and for which the sanction of Parliament has been obtained, merely because another gentleman, by no means his equal in professional note, has *suggested* the use of gradients hitherto considered absurd, seems to me rather of the wildest.

The question of the permanent cost of working lines of different inclinations, cannot yet be said to be by any means decided, regulated as it must be in a great measure by the important items of repairs of engines and depreciation of stock. Can any of your readers enlighten us as to the respective cost of working the Blackwall Railway, the Euston planes on the London and Birmingham, and the Lickey incline of the Birmingham and Gloucester Railway I am, Sir, your obedient servant,

G.

24th May, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—Allow me to state for the information of your correspondent, "Another Leeds Shareholder," that the fares by coach from Manchester to Leeds are now 10s. inside and 6s. out. By railway the first class fare is 15s., and the second class 10s. ! ! !

It is a mistake to suppose that our main line is completed—there is a tunnel yet to form near Hebden Bridge, which may possibly absorb some 50,000*l.* or 80,000*l.*, judging from the magnificent scale of our past expenditure; it is also a mistake to suppose that a complete line of railway now exits from Liverpool to Hull—a junction is yet to make between the Liverpool and Leeds lines, which will probably cost 400,000*l.*

Can you inform me, Mr. Editor, where to procure a copy of any Railway Act at a moderate price.* Our Directors seem little disposed to afford information to the shareholders, and I am desirous to know the powers conferred by the Act recently obtained as to the issue of the new or quarter shares at a discount, and as to other matters affecting our interests. I am, Sir, yours, respectfully,

A LEEDS SHAREHOLDER.

26th May, 1841.

SALISBURY RAILWAY.—It is confidently affirmed that the rumour which we stated to be prevalent last week, that the South Western Railway Company have it in contemplation to form a branch line to Salisbury, is true, and that the point of junction will be at Bishopstoke, between Southampton and Winchester. It is added, that the Great Western Railway Company will probably seek to secure for that line some of the traffic of South Wilts and the adjacent district, by forming a branch from Box, or the neighbourhood, through Warminster and Salisbury. —*Wiltshire Independent.*

GREAT WESTERN RAILWAY.—The large and commodious edifice, intended as the Bath terminus of the Great Western Railway, is now fast approaching completion. The centerings of the elegant structure, denominated the St. James's Bridge, are removed. We hear, also, that the permanent rails are being laid down between Bathampton and Bathford. Large crowds are daily to be seen on the banks of the canal, and other parts commanding a view of the works near Sidney Gardens, which are progressing with extraordinary progress.—*Wiltshire Independent.*

BIRMINGHAM AND GLOUCESTER RAILWAY.—The following query appears in the *Railway Times* of May 15th. "A Birmingham and Gloucester Shareholder desires to know whether it is true that the Company are threatened with legal proceedings by the City of Worcester, for the recovery of a penalty to a large amount for the non-fulfilment of some contract entered into with that city, and what that contract is:" As our contemporary appears unable to answer the question, we will for the satisfaction of his correspondent, state what the contract was and what the penalty due to the Citizens of Worcester for its non-fulfilment. The Company, when they went before Parliament to obtain their second act, where opposed by the Citizens of Worcester. To remove this opposition they covenanted to construct their then projected line from Abbot's Wood direct to this city, so that Worcester might become a station instead of a mere branch, or to forfeit 70,000*l.*, in which sum they bound themselves to the performance of the former contract. That legal proceedings will be taken for the recovery of this forfeiture by the Citizens of Worcester if the Company do not yield it up with "gentle and unforced accord," is we presume certain.—*Worcestershire Chronicle.*

* We know of no other place to apply to but the Queen's Printing Office, New street Square. Copies of Private Acts, from the small number of them ever required, are necessarily expensive. We may take this opportunity of notifying to our country friends that copies of all Parliamentary papers (other than Acts which have been actually passed) may be had at the rate of three halfpence a sheet at a shop opened for the purpose by Messrs. Hansard, in Great Turnstile, Holborn.

TO THE SHIPPING INTEREST.—The attention of the Shipping Interest, Steam Navigation Companies, Agents, and other parties engaged in this description of business, is directed to the MIDLAND COUNTIES HERALD, a Journal published weekly at Birmingham, and most extensively circulated in that important town and in the adjacent populous commercial towns in Warwickshire, Staffordshire, and Worcestershire, as well as throughout the Midland District generally, the weekly circulation being at the present time Five Thousand Six Hundred Copies.

The HERALD is regularly supplied to the merchants, factors, manufacturers, Iron Masters, and other classes of men extensively engaged in business in the districts above named. Copies are also forwarded to the News Rooms and principal Inns in the Midland Counties, as well as to those in Birmingham and the neighbouring towns; and the HERALD possesses considerable interest for the Working Classes, in consequence of the numerous advertisements for workmen in its columns.

The estimation in which the HERALD is held in Birmingham and the Midland Counties is fairly shown by the great number and varied character of the advertisements which weekly appear in its columns, and from the nature and extent of the circulation, it offers a most desirable and valuable medium for the publication of advertisements relative to the sailing of vessels to all parts of the world, the rates of freight, and other particulars.

These Advertisements have hitherto been principally confined to the London, Liverpool, and Bristol Journals; but when it is considered that the circulation of these Papers in Birmingham and the neighbourhood is necessarily *exceedingly limited*, the importance of publishing the SHIPPING LISTS in a Paper well known and referred to for all business appointments throughout so extensive, populous, and important a district, appears to be obvious.

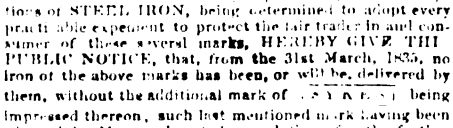
In addition to the Advertisements it contains, THE HERALD is much referred to for its Commercial Information, as well as other Intelligence interesting to Men of Business.

WRIGHT and DAIN, Proprietors.

MIDLAND COUNTIES HERALD OFFICE,
Birmingham, May, 1841.

*** The Proprietors would have pleasure in receiving *Sailing Bills* at their Offices, for the information of parties who call respecting this description of business.

TWENTY-FIVE very superior CART HORSES to be Sold by Auction, by Mr. DIXON, at his Repository, Barbican, on Friday, June 4, 1841, commencing at Two o'Clock precisely, Twenty-five remarkably fine shaped powerful CART HORSES, the Property of Mr. R. S. Dixon, of Belvedere Road, have been employed on the South-Eastern or Dover Railway. Colours—Bays, Blacks, Browns, Chesnuts, and Greys.



The above lot of Seasoned Cart Horses are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all Persons wanting them for immediate work. On View and Catalogues had Two Days before the Sale.

A great variety of New and Second-hand Carriages, of every description, always on Private Sale at this Establishment, remarkably Cheap.

NOTICE TO THE CONSUMERS OF

MESSRS. JOS. SYKES and SONS, the Sole Contractors for and only importers of, these descriptions of STEEL IRON, being determined to adopt every practicable expedient to protect the fair trader in and consumer of these several marks, HEREBY GIVE THIS PUBLIC NOTICE, that, from the 31st March, 1835, no Iron of the above marks has been, or will be, delivered by them, without the additional mark of SYKES being impressed thereon, such last mentioned mark having been adopted by Messrs. Jos. Sykes and Sons for the further protection of themselves and the public; and all persons who shall impress such mark upon any bar iron, either with or without the additional mark SYKES will be proceeded against.—Hull, May 11.

TO IRON FOUNDERS AND OTHERS.—To be submitted to public AUCTION, by Mr. WM. BROWN, on Monday, June 7th, 1841, at Two o'Clock, at the Railway Arms, CHEDDINGTON, Bucks—about 20 Tons of Cast Iron, 2½ Tons of Scrap Iron, 80 3-inch Axles with square ends for four feet, 8-inch gauge, quantity of Old Brass, sundry lots of Plank and Scantling, and other effects, lying at the junction of the London and Birmingham and Aylesbury Railway, at Cheddington, Bucks, near the Grand Junction Canal.

To be viewed by applying to G. Morris, Cheddington, of whom Catalogues may be had also at the office of Mr. Wm. Brown, Land Agent and Surveyor, Tring, and Newroad, Aylesbury.

HANCOCK AND PETTIT'S PATENT RAILWAY CONTROULER.—A Model Railway and Carriages, worked by Steam Power, exemplifying the manner of applying this most effectual method of arresting the progress of Railway Trains, independently of the Engine-driver or Guard, may be seen Daily, between the Hours of Twelve and Four, at the Zinc Works, No. 55, Parliament-street.

"Better calculated to effect the desired object than any other which has come under our notice."—*Railway Times.*

Applications for Licences to use, to be made to Mr. Walter Hancock, Civil Engineer, Stratford, Essex.

Important and Extensive Sale of Horses, Fly Boats, Vans, Carts, Tarpaulins, Iron, Tar, Dock Yard Implements, &c. &c.

By T. M. FISHER (by order of Messrs. Morris, Herbert, and Co., who are declining the carrying business), on Monday, Tuesday, and Wednesday, the 14th, 15th, and 16th of June, and following days, at their stables in Castle Field, and their Dock Yard and Wharf, on the Duke's Canal, Castle Field, Manchester: sale to commence each day punctually at eleven o'Clock in the forenoon.

SIXTY Capital Short-Legged Young and Active Horses, in first rate working condition, suitable for vans, carts, and waggons; 25 very superior Fly Boats, with iron knees, in thorough repair, complete with cloths and cabin furniture, the whole built by Messrs. Morris, Herbert, and Co., in their well-known substantial manner, and of the very best well-seasoned English timber, three spring vans, six broad-wheeled carts, with iron arms; cart and boat peers, trucks, beam, scales, and weights; corn, bean, and hay cutters, stable furniture and utensils, very large and valuable stock of new and second-hand tarpaulins, cart and boat sheets, canvas, chains, ropes; also, the boat-building implements and stock, which includes a very large quantity of the best English oaks, sawn and in balk; timber carriage, tar, nails, wrought iron; carpenters, joiners, and smiths tools; two pair of smiths bellows, two anvils, stocks, taps, and dies, rack jack, and other effects.

Catalogues will be published on Saturday the 5th of June, and may be had at any of the offices following, viz.:—Messrs. Morris, Herbert, and Co.; the *Railway Times*, and *Mining Journal*, London; *Midland Counties Herald*, Birmingham; *Liverpool Standard* and *Mercury*, Liverpool; *Leeds Mercury*, Leeds; or from the Auctioneer, who will forward the same to parties living at a distance, on application by letter directed to his office, No. 17, Princess-street, Manchester.

FOR SALE.—THREE LOCOMOTIVE ENGINES and TENDERS for RAILWAYS, 4 feet 8 inch gauge, cylinders 12 inches diameter; length of stroke 18 inches; diameter of driving wheel, 5 feet—86 brass tubes.

These Engines are most substantially made, highly finished, and will be sold considerably under the usual price.

To be seen at the Manufactory of Messrs. George and John Rennie, Engineers, No. 6, Holland-street, Blackfriars, London, to whom application is to be made.

London, May 28, 1841.

TO ENGINEERS of Large Business.—To be LET a spacious WHARF and large WAREHOUSE ROOM with Residence for superintendent, and Cottages for workmen, at Rotherhithe. The wharf has extensive privileges. Or, well suited to an Engineer requiring a large space of ground, and a frontage of 255 feet next the river, with good approaches from the land. Apply to Mr. W. Woodward, 1, Furnival's Inn, between twelve and two, if by letter, pre-paid.

NOTICE TO RAILWAY CONTRACTORS and OTHERS.—To be Sold by AUCTION, by Messrs. JOHN FIDEL and SON, on Friday next, the 4th of June, 1841, at Uffington, Berks, between the Faringdon Road and Shrivenham Stations on the Great Western Railway (without the least reserve)—140 Waggons, with coupling chains complete; 10 sets of Wheels and Axles, several Stone Trucks; 6 useful Cart Horses and Harness; 6-inch wheel Waggons and Carts, and other effects.

Catalogues may be had of the Auctioneers, Faringdon, Berks, 4 days prior to the sale.

Sale to commence punctually at 12 o'clock.

SIR WILLIAM BURNETT'S PATENT.—For the Preservation of Timber, Canvas, Cordage, Cotton, Woollen, &c. from Dry Rot, Mildew, Moth, and Premature Decay.—The value of this Discovery has been amply proved in her Majesty's Dock Yards and elsewhere. Official Reports and Specimens of Wood, Canvas, and other articles may be seen at the office. The process is simple, inexpensive, and perfectly innoxious in its use; as applied to ship-building, it purifies Bilge-water, and retards oxydation of metals. By the process green wood may be rapidly seasoned. The Patent Material may be purchased, or Licences for Tanks granted to Noblemen, Gentlemen, Builders, Upholsterers, Piano-Forte Makers, Sailmakers, and others. When for the purposes of trade, on very advantageous terms to the Licensee. Timber of all dimensions, Planking, Canvas, Cordage, Ships' Sails, Awnings, Rick Cloths, Tents, and all other articles of Linen and Woollen Manufacture are received for preparation at the Proprietors' Waterside Premises Copenhagen Wharf, Britannia Bridge, Limehouse.

Particulars and terms may be obtained on application at the Office, 4, Castle-court, Birchin lane, Cornhill.

Digitized by Google

RAILWAYS.—WANTED, by a Young Man respectably connected, a Situation (at home or abroad) as Clerk and Accountant, in which employment he has had considerable experience upon an extensive Line of Railway just completed. Has a thorough knowledge of the Constructive and the Permanent Service. Can produce Testimonials and Security, if required.

For further particulars apply by letter to A. B., No. 20, Charing Cross.

BOX TUNNEL, WILTS.—TO CONTRACTORS, BUILDERS, TIMBER MERCHANTS, &c.—The Sale of One Hundred Thousand Feet of Memel, Pine, Oak, Ash and Larch Timber, in convenient Lots, on Tuesday and Wednesday, 8th and 9th of June next.

Catalogues to be had of Mr. Giller, Auctioneer, Melksham; and at the Inns in the immediate neighbourhood.

TO ENGINEERS, RAILROAD CONTRACTORS, BUILDERS, SHIP OWNERS, and Others.—Margary's Patent for Preserving Timber and other Vegetable Substances from Dry Rot and Decay, is recommended as the most Effective and Cheapest. The material used costs only 4d. per lb. It has been adopted extensively under the sanction of Messrs. Brunel, Locke, and other eminent Engineers.

Terms for granting licences, and every information may be obtained from THOMAS JOHN CROGGOU, 8, Ingram Court, Fenchurch-street.

ON SALE.—TWO LOCOMOTIVE ENGINES FOR RAILWAYS, 4 feet 8½ inches gauge; large copper fire-box, and 120 brass tubes, 2 inches diameter; driving wheels 5 feet 6 inches diameter, and two pairs carrier wheels, 4 feet diameter, 13-inch cylinders, and 18-inch stroke. Made by one of the first makers in Lancashire, perfectly new, and could be delivered immediately.

For further particulars apply to Joseph Johnson, Iron Merchant, &c., Canning Chambers, Liverpool.

Liverpool, May 21.

TO GAS COMPANIES.—A Person aged 30, who has been for several years practically engaged in the Gas Manufacture, has erected and superintended Gas Works, both at home and abroad, and is now Manager of a considerable Gas establishment in an English country town, is desirous of removal to a similar situation in any of the larger towns, as Liverpool, Manchester, Bristol, Bath, &c. Satisfactory testimonials and references. Apply by letter, addressed to P. B., care of Mr. Robertson, *Mechanics' Magazine* Office, 166, Fleet-street.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton.
Grain, Timber, &c.	55s.
Beer, Hides, Soap, Sugar, &c.	60s.
Raw Coffee, Rice, Earthenware in Crates, &c.	62s.
Bales, Grocery, Oils, Tea in Chests, Wool, Paper, &c.	65s.
Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.	70s.
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,

Agents to the Grand Junction Railway Company.

GREAT WESTERN RAILWAY.—VERY IMPORTANT TO RAILWAY CONTRACTORS.—Extensive Sale of Railway Plant, now in use on Contracts Nos. 5 and 6, C., near Wootton Bassett and Christian Malford. Mr. HUNT has received instructions to sell by public AUCTION, without the least reserve, about the first week in June, all the very useful and extensive Plant of Railway Materials belonging to the Contractor, who will have completed a distance of seven miles on the above line of Railway, in the course of a few weeks from the date hereof, comprising more particularly 200 Waggons, (half of which are nearly new); 150 tons of Railway Bars; 70 Iron Crossings; 40 tons of Chairs; 10,000 Sleepers; 3,000 Wheeling Planks; 700 Wheelbarrows; 70 sets of Bridge Centerings, of various sizes; 9,000 feet of Legging for ditto; quantity of Timbers such as Uprights, Wall-plates, Sills, &c. &c. Several sets of Materials for Brickmakers' Moulds; 2 sets of Blacksmiths' Tools, complete; 10 Pug Mills, for grinding clay and mortar; a good six-inch wheel Timber Carriage; quantity of Bricklayers' Scaffolding; 100,000 Bricks; 10,000 Pantiles; a large Water-butt; and a variety of other unmentioned effects.

Due Notice of the Sale with further particulars will appear in handbills and future advertisement.

Wootton Bassett, April 17, 1841.

TO ENGINEERS AND OTHERS connected with Railways. A Working Model of Mr. E. Galloway's Patent Railway, dispensing with Locomotive Engines and Ropes. Mr. Galloway will attend personally to illustrate his invention on Mondays and Thursdays, between the hours of two and four.

GREAT WESTERN RAILWAY.—On Monday the 31st of May, the Railway will be further extended to Chippenham, only 13 miles from Bath.

The Cheltenham line will also be opened for traffic on the same day as far as Cirencester, a distance of 15 miles from Cheltenham, 12 miles from Stroud, and 18 miles (by direct route) from Gloucester.

The daily trains will run as under, except on Sundays:—

LONG TRAINS.

Down from Paddington:—

8	a.m.	to Cirencester and Bristol.
9	—	to Bristol.
10	—	to Cirencester and Bristol.
12	—	to ditto and ditto.
2	p.m.	to ditto and ditto.
5	—	to ditto and ditto.
(Mail) 8 55	—	to ditto and ditto.

Up to Paddington:—

7 30	a.m	from Chippenham and	7 15	a.m	from Cirencester
10	—	from ditto, and	9 45	—	from ditto.
12	—	from ditto, and	11 45	—	from ditto.
2	p.m	from ditto, and	1 45	p.m	from ditto.
4	—	from ditto, and	3 45	—	from ditto.
6	—	from ditto, and	5 45	—	from ditto.
(Mail) 2	a.m	from ditto, and	1 40	a.m	from ditto.

SHORT TRAINS.

8 30 a.m. to Maidenhead.	7 30 a.m. from Reading.
10 30 a.m. to Slough.	9 a.m. from Slough.
1 30 p.m. to Ditto.	9 a.m. from Reading.
4 p.m. to Reading.	10 50 a.m. from Maidenhead
4 30 p.m. to Slough.	3 30 p.m. from Slough.
5 30 p.m. to Maidenhead.	6 p.m. from ditto.
7 20 p.m. to Reading.	7 45 p.m. from Maidenhead

For further particulars of fares, time, and stoppages at stations, reference must be made to the train bills, which may be had at any of the Company's stations.

Passengers and Parce's will be conveyed from Chippenham to Bath and Bristol by coaches from every train. There will also be conveyances at Cirencester for passengers and parcels to Cheltenham, Stroud, and Gloucester.

Other conveyances as usual to Oxford, Newbury, &c., from the nearest railway stations; and from Chippenham to Devizes and neighbouring towns.

The charges on merchandise and cattle have been reduced, and the scale of rates may be known on application at any of the stations.

Paddington, May 26, 1841.

LONDON AND BIRMINGHAM RAILWAY. ALTERATION OF TRAIN.—The Public are informed that on and after Tuesday next, the 1st June, the time of departure from Birmingham of the last Up Train will be changed from half-past Five to Six o'Clock, p.m., and that a corresponding alteration in the time of departure from the intermediate stations will also take place.

By order, R. CREED, Secretary.

Euston Station, May 26, 1841.

LONDON AND BIRMINGHAM, GRAND JUNCTION, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.—In connection with the above lines of railway, places can be secured by Mails to

Edinburgh, Holyhead, Newcastle-on-Tyne, Banbury, Stratford-on-Avon, Carlisle, Bangor, Leamington, Shrewsbury, Lichfield, Brackley, Warwick.

Also by Coaches to

Ashby-de-la-Zouch,	Newcastle-on-Tyne
Atherstone,	Northampton
Bangor,	Newark
Buckingham	Newport Pagnel
Bourne	Oxford
Brackley	Oundle
Boston	Olney
Banbury	Oswestry
Carlisle	Peterborough
Deeping	Stamford
Edinburgh	Sleaford
Folkingham	Shrewsbury
Grantham	Spalding,
Harborough	Stratford-on-Avon,
Holyhead	Thame,
Kettering	Wellingborough,
Lincoln	Weldon,
Leamington	Winslow.
Lichfield	

From the
Spread Eagle, Gracechurch-street.
Swan with Two Necks, Lad-lane.
Cross Keys, Wood street.
Spread Eagle, Regent's-circus.
Golden Cross, Charing-cross.
George and Blue Boar, Holborn.
Griffin's Green Man and Still, and
The Euston Station.

HORNE AND CHAPLIN, Agents.

Parcels for 8½ p.m. Mail Train, viz. Boxes, Trusses and General Merchandise, received at the above Offices until 7 p.m.; Solicitors' and light Parcels until 7½ p.m.

Omnibuses to and from every Train, Fare 6d.

Post Horses for hire may be had on application at the above Offices, to convey Carriages to or from the Railway and any part of London (within 5 miles) including the driver, 10s. 6d. each pair.

TO RAILWAY CONTRACTORS.—To be Sold 140 2½-yard capital EARTH WAGGONS, 36-inch wheels, 3¼ inch axles, 4-feet 8-inch gauge, of the very best construction.

The above are lying near the Great Western Railway, and the Wilts and Berks Canal, Uffington, Berks.

Apply to Mr. M. C. S. Medley, Farringdon.

PATENT MANUFACTURE.—An excellent opportunity offers itself to any person disposed to embark in the Manufacture, under Patent, of an article in extensive demand, the present cost of which will be reduced by the patent process upwards of 50 per cent. For the purchase of the entire Patent Right, and the fitting up of the requisite manufacturing machinery, £5,000 will be required.

Letters from principals to be addressed to M. M., care of Mr. obertson, Patent Agency Office, 166, Fleet-street.

TO MANUFACTURING CHEMISTS.—VITRIOL MAKERS, PLUMBERS, WORKERS IN METALS, and others.—Delbruck's Patent Autogenous Soldering Process, or new mode of Uniting Lead to Lead, and other metals, without solder. Licenses are now ready to be granted by the Patentees' Agents, Messrs. A. Clarke and Son, Bear Garden, Southwark, on whose premises the patent may be seen daily in operation.

A quantity of Sulphate of Zinc for sale at a very low price.

SPECIFICATIONS OF RECENT PATENTS. The MECHANICS' MAGAZINE, No. 929, published this day, price 3d., contains copious abstracts of the following recent Patents:—

Lawes's, for certain improvements in the method, process, and apparatus for cleansing and dressing feathers; M'Kinley's, for certain improvements in machinery or apparatus for measuring, folding, plaiting, or lapping goods or fabrics; Amos's, for certain improvements in the manufacture of paper; Von Almonde's, for improvements in the production of mosaic work from wood; Dockree's, for an improvement or improvements in gas burners; Deacon's, for improvements in the manufacture of glass chimneys for lamps; Ashton and Wakefield's, for certain improvements in the manufacture of hat bodies; Hutchins's and Bakewell's, for improvements in preventing ships and other vessels from foundering, and also for raising vessels when sunk; Pope's, for improvements in detaching locomotive and other carriages; Graham's, for an improved manufacture of that kind of carpeting usually denominated Kidderminster carpeting.

Also description, with seven explanatory Engravings, of Berney's improved spring gun stock; Life and Labours of Telford, No. 9; Scottish harbours; the Tay ferries; Rotary engines; Theory and Practice; Practical trisections of plane angles; Rational philosophy, Letter III., matter; Hydrostatic lamp; Observations on the effect of wind on the suspension bridge over the Menai strait, &c.; Method of setting out involute teeth of wheels of different sizes; List of Designs registered in May; List of English and Scotch Patents granted in May; List of Irish Patents for April; &c. &c. &c.

Published at the Mechanics' Magazine, Patent, and Designs Registration Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

Agents for Dublin: Machin and Co. Paris: W. and A. Galignani. Hamburgh: W. Campbell and Co.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by all booksellers.

Just published, a new Edition of ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Maps, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

Published at the *Railway Times* Office, 122, Fleet-street.

Just published, price 6d.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London, and correct Railway Time Tables.

Also by the same person, price 6d.,

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, with a Map, &c.

Published at the *Railway Times* Office, 122, Fleet-street, Bell, Fleet-street, and sold by all Booksellers.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, facing Saint Bride's Church, in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, May 29th, 1841.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 179. Vol. IV.—No. 23.] SATURDAY, JUNE 5, 1841. [Price, 6d.

NORTH MIDLAND RAILWAY.—The Directors of the North Midland Railway Company are ready to receive MONEY on DEBENTURES, under the powers of the Act of Parliament, in Sums of not less than £500, bearing interest at 5 per cent. per annum for periods of 3, 5 or 7 years.

By order,
H. PATTESON, Secretary.

Warnford-court, Throgmorton-street,
May 21, 1841.

SOUTH EASTERN RAILWAY COMPANY.—NOTICE OF CALL.—The Directors having this day made a CALL of £5 per share from the Subscribers to and Proprietors of this undertaking, and directed that the same be PAYABLE on Tuesday, the 6th day of July next, at either of the undermentioned places, viz.:—

Messrs. Glyn and Co., bankers, Lombard street, London.
Messrs. Moss and Co., and Messrs. Barned and Co., bankers, Liverpool.
Messrs. Jones, Loyd, and Co., bankers, Manchester.
Messrs. Beckett, Blayds, and Co., bankers, Leeds.
The Union Banking Company, York.
Messrs. Fector and Co., and Messrs. Latham and Co., bankers, Dover
Messrs. Jemmett and Co., bankers, Ashford
Messrs. Wilmshurst and Co., bankers, Cranbrook.
Messrs. Beeching and Sons, bankers, Tunbridge and Tunbridge wells.
The Country branches of the London and County Banking Company.

The Proprietors are hereby required to pay the same accordingly.—Dated this 1st day of June, 1841.

JOSEPH BAXENDALE Deputy Chairman of the Board of Directors.
J. S. YEATS, Secretary.

Railway Office, 10, Coleman-street, London.

TO GAS COMPANIES.—A Person aged 30, who has been for several years practically engaged in the Gas Manufacture, has erected and superintended Gas Works, both at home and abroad, and is now Manager of a considerable Gas establishment in an English country town, is desirous of removal to a similar situation in any of the larger towns, as Liverpool, Manchester, Bristol, Bath, &c. Satisfactory testimonials and references. Apply by letter, addressed to P. B., care of Mr. Robertson, *Mechanics' Magazine* Office, 166, Fleet-street.

SIR WILLIAM BURNETT'S PATENT.—For the Preservation of Timber, Canvas, Cordage, Cotton, Woollen, &c. from Dry Rot, Mildew, Moth, and Premature Decay.—The value of this Discovery has been amply proved in her Majesty's Dock Yards and elsewhere. Official Reports and Specimens of Wood, Canvas, and other articles may be seen at the office. The process is simple, inexpensive, and perfectly innoxious in its use; as applied to shipbuilding, it purifies Bilge-water, and retards oxydation of metals. By the process green wood may be rapidly seasoned. The Patent Material may be purchased, or Licences for Tanks granted to Noblemen, Gentlemen, Builders, Upholsterers, Piano-Forte Makers, Sailmakers, and others. When for the purposes of trade, on very advantageous terms to the Licensee. Timber of all dimensions, Planking, Canvas, Cordage, Ships' Sails, Awnings, Rick Cloths, Tents, and all other articles of Linen and Woollen Manufacture are received for preparation at the Proprietors' Waterside Premises Copenhagen Wharf, Britannia Bridge, Limehouse.

Particulars and terms may be obtained on application at the Office, 4, Castle-court, Birchin lane, Cornhill.

HANCOCK AND PETTIT'S PATENT RAILWAY CONTROULER.—A Model Railway and Carriages, worked by Steam Power, exemplifying the manner of applying this most effectual method of arresting the progress of Railway Trains, independently of the Engine-driver or Guard, may be seen Daily, between the Hours of Twelve and Four, at the Zinc Works, No. 55, Parliament-street.

"Better calculated to effect the desired object than any other which has come under our notice."—*Railway Times.*

Applications for Licences to use, to be made to Mr. Walter Hancock, Civil Engineer, Stratford, Essex.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES, about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad street, City; 69, Princes-street, Leicester-square; Manufactory, Mill-wall, Poplar, and also of the following Agents —

Robertson and Co., 12, Goree Piazzas	Liverpool,
Mathias Dunn	Newcastle-upon-Tyne
Joseph Bothway	Plymouth.
John Thompson and Co.	Wigan.
J. T. Tregellas	Truro.
Thomas Mooney and Son	Dublin.
Coates and Young	Belfast.
James Kibble and Co.	Glasgow.
James Gunn	Leith.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of nine months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

TO ENGINEERS AND OTHERS connected with Railways. A Working Model of Mr. E Galloway's Patent Railway, dispensing with Locomotive Engines and Ropes. Mr. Galloway will attend personally to illustrate his invention on Mondays and Thursdays, between the hours of two and four.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

GREAT WESTERN RAILWAY.—VERY IMPORTANT TO RAILWAY CONTRACTORS.—Extensive Sale of Railway Plant, now in use on Contracts Nos. 5 and 6, C., near Wootton Bassett and Christian Malford. Mr. HUNT has received Instructions to sell by public AUCTION, without the least reserve, about the first week in June, all the very useful and extensive Plant of Railway Materials belonging to the Contractor, who will have completed a distance of seven miles on the above line of Railway, in the course of a few weeks from the date hereof, comprising more particularly 200 Waggons, (half of which are nearly new;) 150 tons of Railway Bars; 70 Iron Crossings; 40 tons of Chairs; 10,000 Sleepers; 3,000 Wheeling Planks; 700 Wheelbarrows; 70 sets of Bridge Centerings, of various sizes; 9,000 feet of Legging for ditto; quantity of Timbers such as Uprights, Wall-plates, Sills, &c. &c. Several sets of Materials for Brickmakers' Moulds; 2 sets of Blacksmiths' Tools, complete; 10 Pug Mills, for grinding clay and mortar; a good six-inch wheel Timber Carriage; quantity of Bricklayers' Scaffolding; 100,000 Bricks; 10,000 Pantiles; a large Water-butt; and a variety of other unmentioned effects.

Due Notice of the Sale with further particulars will appear in handbills and future advertisement.

Wootton Bassett, April 17, 1841.

TO CAPITALISTS, ENGINEERS, MILLWRIGHTS, IRON-FOUNDERS, AND OTHERS.—To be disposed of, an old-established Engineer's, Millwright's, and Founder's concern, the present Proprietors retiring from the manufacturing branch; situated in London; arranged for a most extensive business. The premises will be let on lease at a rental of £1,600 a-year. The machinery, plant, and tools are valued at about £14,000.

Applications, with real name, to be made to Messrs. Kerley and S. Ware, Solicitors, 5, Gray's Inn Square.

A GOOD JUDGE of the qualities of iron and steel, having had many years experience, wishes for a situation as inspector of metals or storekeeper. Address A. B., 231, Strand.

TO RAILWAY COMPANIES, CARRIERS, AND OTHERS.—RICHARD PARKER (late of Hambro' Wharf), having taken the New Inn Yard, Old Bailey, London, which is very spacious and in the Heart of the City, is desirous to form a Connection with one or more Railway Companies or Carriers, to deliver, receive, collect, and draw their Goods to and from the Railway Station or Stations, and to attend to all matters that may be required; and having had considerable experience as a Carrier, he does not hesitate to pledge himself to transact all such Business equal to any establishment in London, and upon moderate terms.

N. B.—He would not object to take a Share in any respectable concern.

TO RAILWAY CONTRACTORS.—To be Sold 140 2½-yard capital EARTH WAGGONS, 36 inch wheels, 3½ inch axles, 4-feet 8-inch gauge, of the very best construction.

The above are lying near the Great Western Railway, and the Wilts and Berks Canal, Uffington, Berks.

Apply to Mr. M. C. S. Medley, Farringdon.

MR. WHISHAW'S RECIPROCATING SYSTEM OF RAILWAYS.

(Concluded from p. 575.)

In forming occupation, level crossings, a cattle-arch of 6 feet wide and 7 feet high should also be introduced, as on the Birmingham and Derby and Northern and Eastern Railways; lodges are of course not required to be built at these crossings. When it is practicable to bring a number of field gateways on each side into a side occupation lane formed for the purpose, it is desirable to build a bridge over or under the railway, as the case may be, thereby avoiding several level crossings, besides the additional cattle-arches.

6. *Permanent Way.*—The gauge of way is proposed to be five feet in new districts, but if the intended line is to join any other railway, it must of course correspond with the gauge of that line. The rails, chairs, pins, keys, felt-blocks, sleepers, and ballasting, constitute the permanent way, or upper works of railways. The rails throughout the cuttings and tunnels are to be of the bridge form, weighing about 56 lbs. to the yard lineal, and laid with an intermedium of felt on longitudinal timbers of American pine, (Bethellized and coated externally with Stockholm tar,) 12 inches on bed by an average thickness of 6 inches, two timbers being cut out of a whole baulk, so that the rails are fixed with a slight inclination inwards, and secured thereto by screws, similar to those used in the permanent way of the Great Western line.

The whole of the screws to be immersed in boiling linseed oil for 48 hours before being used, and the number to each 15 feet rail to be 24. Cross ties of old ship oak, 8 inches by 4 inches (where it can be obtained at a moderate cost) to be introduced between, and dovetailed into the longitudinal timbers at intervals of 6 feet, and secured thereto by screw ties.

2. On embankments, shallow parallel rails, weighing 56 lbs. to the yard, are to be entirely used, to be fixed in chairs, the sockets of which are to correspond in shape with the lower part of the rail, leaving only sufficient space for inch deal wedges, thus getting rid of large keys or other fastenings altogether. The chairs are to be secured with Warden's Patent Spikes to the cross-sleepers, or stout oaken pins or trenails, where the spikes are costly; three spikes or pins to each joint chair, and two spikes to each intermediate chair. The joint chairs to weigh 22 lbs., and the intermediate chairs, 16 lbs., each respectively. The chairs to be fixed on a level surface of the sleepers, and the lateral inclination given to the rail, to be obtained by forming the bottom of the socket with a slope of $\frac{1}{16}$ of an inch in its width.

The cross sleepers are to be of larch, 9 feet in length, and having a cross section of 10 inches by 5 inches; or sound old ship oak, if it can be obtained at a moderate cost, and of a scantling something like 9 inches by 4½ inches. The larch sleepers to be prepared by Bethell's process.

The bearings of rails to decrease in length towards the joints; a plan adopted by Mr Stephenson on the North Midland and Northern and Eastern Railways. Thus in a 15 feet rail the joint-bearings are to be each 2 feet 9 inches, and the intermediate bearings 3 feet 2 inches each.

The ballasting must depend upon the particular district through which the railway is carried. Small coal and cinders form the best kind of ballasting; broken stone, gravel, indurated sand, burnt shale, burnt clay, or sand, will all answer the purpose. The depth of ballasting throughout to be 18 inches; and when it can be effected (in the absence of cinder or small coal) it will be better to let the sublayer for 12 inches be of broken stone or gravel, and the upper layer of firm sand. The whole width of ballasting throughout the single way is to be 10 feet in width on the top surface, and to be sloped off gradually to the verge of the embankments, or to the verge of the side drains of cuttings.

At every change of inclination a gradient-indicator is to be fixed up, either of wood or iron; if of wood, the butt end is to be charred to three inches above the surface of ground. At the top and bottom of planes having inclinations rising more than 1 in 150, these indicators are to be raised to a height of five feet above the ground, and a lamp with a strong reflector fixed on the top, to remind the engine-driver of regulating the admission of steam to the cylinders, or the stoker of applying the brake when necessary.

The mile standards may be either of stone, wood, or iron, according to the particular district; the standards to be double faced, so that the figures may be readily seen on approaching them from either side. Where the inclines have second class gradients, the distance standards to be fixed at each eighth of a mile, otherwise at intervals each of a quarter of a mile. The faces to be of different forms, to distinguish the mile from the eighth, the quarter, or the half-mile, &c.

7. *Stations and Depôts.*—In order fully to illustrate this system, Mr. Whishaw has given a plan of a terminal station, and a plan of an intermediate exchange station. Although only occupying 3½ acres of ground, the terminal station and depot are sufficiently large for the amount of passenger and merchandize traffic we have taken as a basis for our calculations throughout; besides which accommodation, we have provided a large coal and lime depot, with eight commodious cellars under the level of the railway having openings for shooting the coal or lime from the waggons; each cellar is 47 feet deep, 15 feet wide, and seven feet high, with three eyes to each. The coal and lime office is next the high road, and adjoining the sloped common-road leading to the coal cellars. The Secretary's, Engineer's, and other offices, are over the booking office and waiting rooms. The entrance for first-class passengers is distinct from that for second and third class passengers; a waiting room is provided for ladies and another for gentlemen, being first-class passengers, and a general waiting room for second class passengers.

The merchandize depot consists of a large warehouse, altogether 100 feet long by 50 feet wide, besides cellars, having an available capacity of 70,000 cubic feet. On the level of the railway, at the end next to the common road waggon yard, are railway waggon docks, for loading or unloading to or from the common-road waggons. The floors of the warehouses are furnished with trapways, for raising or lowering goods to or from the railway waggons. The offices in this department are contiguous to the large warehouse, and entered from the common road waggon yard. A weighing machine is placed on the middle line of way in the warehouse.

The engine-house and carriage-house are conveniently placed contiguous to the station. The coke store and water tank are elevated above the cross line which runs between the offices and the engine-house, so that the coke is easily lowered in sacks at a moment's notice by means of a convenient trap way in the floor.

Carriage docks are conveniently placed for embarking or disembarking gentlemen's carriages on trucks.

The arrival and departure or up and down lines are quite apart.

An intermediate exchange station is also shown in the engravings; it is supposed to be in cutting. The offices are above, on the level of the high road or cross road contiguous. The platforms of the up and down lines are entirely distinct from each other. A separate approach is provided for those going by the up and those going by the down train; and there is also a separate departure passage for those who have arrived by the up line and those who have arrived by the down line. Moreover, the entrance to the station is on one side of the cutting, and the exit gates on the other. A bridge sufficiently removed from the buildings and over the cutting, effects the necessary communication with the city or town as the case may be. The requisite conveniences are placed as much as possible out of sight of the passengers in the railway carriages.

The engine and carriage sheds are placed on either side of the lines, and between these are two 30 feet turntables (for engine and tender) to be moved by rackwork and pinion similar to that of the Greenwich Railway.

Coke Ovens.—In almost every district of England and Scotland it is more economical for a Company to make their own coke than to purchase it from regular coke burners. 24 coke ovens similar to those of the Newcastle and Carlisle Railway, placed if possible towards the middle of the line, will be sufficient for the quantity of coke required.

Mode of carrying on the Traffic.—For the sake of easy illustration, we may suppose a line of railway is to be constructed between two large towns, 60 miles apart, and through a populous district of country, the traffic daily being equal to 380.74 first class passengers, carried the whole distance; 714.28 second class passengers carried the whole distance; and 366.30 third class passengers carried the whole distance (the fares per mile for each class respectively being 2.50d., 2.00d., and 1.30d.); and the traffic in merchandise being equal to 200 tons of goods daily, also carried the whole distance, the average charge being equal to 3d. per ton per mile. To continue the illustration in an intelligible manner, we may suppose the trains to start simultaneously from either end of the line, and from each intermediate stopping place, at every hour, or 24 trains daily. The number of first-class passengers going in each direction daily, will be equal to 190.37; of second class passengers to 357.14; and of third class passengers to 183.15; which will give for each train an average number of 7.83 first class passengers, 14.88 second class passengers, and 7.63 third class passengers. The number of passengers therefore per train would be 30.34, and the weight of the passengers (with luggage), allowing 180 lbs. gross for each, would be equal to 2.438 tons.

The carriages we propose to construct in four compartments; the two middle ones being for first class passengers, and the end ones for those of the second class. The middle compartments would each hold six persons, and the end compartments each eight passengers, or altogether twenty-eight passengers. These carriages to be mounted on six of Losh's, or other equally approved, 3½ feet wrought iron wheels; and to be hung with Adam's bow springs, and within 12 inches of the level of the rails (which renders the cost of raising the platforms at the stations to a considerable height unnecessary); the extreme width of each carriage being 7 feet 3 inches, and the whole length of the united bodies 20 feet. The weight of this description of carriage would be about 4.75 tons.

The third class passengers we propose to convey in four-wheel waggons, furnished with seats. The net weight of such a waggon is about 2.50 tons; so that the average gross weight of passengers and carriages per train would be only 9.68 tons.

The gross weight of each train we propose not to exceed about 26½ tons, or 59.360lbs. The Post-office establishment, weighing in round numbers 10 tons, might be taken by two of the trains daily, and extra bags by every other train, if necessary. The average weight of merchandise, &c. per diem would be 200 tons, or 9.09 tons by each of the twenty-two trains. Two four-wheel waggons, weighing each 2.25 tons, would be necessary to convey the merchandise, so that the ordinary train would consist of two waggons, or trucks, of merchandise, &c. placed next to the engine, then the passenger waggon, and lastly the passenger carriage; and the mail train would consist of the passenger waggon placed first, then the Post-office establishment, and lastly the mixed passenger carriage. The average gross weight of the ordinary train would thus be 23.27 tons, and of the mail train 19.68 tons; but each ordinary train might take up one gentleman's carriage, and the mail train two, either from the terminal station, or from any of the intermediate stations, so that the gross load of the mail train, with the addition of the gentleman's carriages would be 26.18 tons, and of the ordinary train with one such carriage, 26.52 tons.

The speed throughout, including stoppages, may be taken, for example, at 20 miles an hour, so that the 60 miles would be performed in three hours. We have already said, that we propose the trains to start at every hour in the day from the terminal

Digitized by Google

and principal intermediate stations. It remains only to describe the peculiar system of working the trains by a single line of way.

Furnishing the Line.—We now come to the number of engines, carriages and trucks, &c., necessary for carrying on the above amount of traffic. For this purpose two working engines and tenders, and two spare engines and tenders, will be required at each terminal station, say A. and B.; six at each of the stations D. and E.; and two at each of the half-way stations C., E. and G.; altogether 26 engines of class D., but modified in their proportions for each run, according to the ruling gradient thereof; each of the six sets of engines to be in every respect uniform.

Of carriages and passenger waggons there will be required 12 of each sort only, as they go from one terminus to the other.

We have supposed four intermediate minor stations, in addition to the terminal, principal intermediate, and exchange stations; and we propose to keep two carriage trucks, and two horse boxes at each of the terminal, at each of the intermediate exchange stations, and one of each sort at the minor stations respectively; so that altogether there would be 18, or with two spare ones, 20 horse-boxes and 20 carriage-trucks respectively.

There would also be required 20 merchandise waggons, 20 lime and coal waggons, 2 ballast waggons, and 20 cattle trucks, distributed about the different stations throughout, according to the peculiar nature of the district traversed.

The Establishment.—For the effectual working of the reciprocating system, the following would be the number of persons required in the various departments. One Secretary, 1 superintendent of the locomotives and mechanical department, 1 general superintendent of the line, 2 resident engineers, and 2 draftsmen (either two residing at each terminal station), 6 clerks in the Secretary's office, 2 clerks (one at each terminal station) in the superintendent's department; 14 booking clerks in the coaching department; 2 clerks in the locomotives department; 4 clerks in the stores department, and 6 clerks in the merchandise department. Besides, the above there would be required in the coaching department, 8 guards, 26 porters, and 26 police at the stations; 4 at each of the terminal stations, and 2 at each of the intermediate stations. In the construction department 20 overlookers of waymen (who are all to be sworn in as constables, to act in case of need, and also to give the requisite signals), 90 waymen, and 10 bricklayers, masons and carpenters. In the locomotives department 18 engine-drivers and 18 firemen; 12 coke and water fillers and table turners; 12 fitters, 12 smiths, and twelve strikers. In the coach building and repairing department, 20 artificers altogether. In the coking department, 1 foreman, 6 burners, and 6 labourers; besides 12 supernumeraries in various departments; altogether 337 persons. The annual expense on this account, exclusive of wages in the coking department, would be 21,184*l.*, according to the average of salaries and wages paid throughout the kingdom.

Locomotive Engines, Coke, &c.—The number of miles run by the locomotive engines per annum would be equal to 1,051,200; the gross load moved one mile per annum, taking 26.50 tons as the average gross load for each train, as before, would be 27,856,800 tons. Taking the consumption of coke as equal to .715 lbs. per ton per mile, which is a full allowance, we have 8899.17 tons. To make this quantity of coke, it would require 13,185.95 tons of the best coking coal, the average cost of which, taken throughout Great Britain, may be set down at 20s. a ton. We have already given the number of persons required in the coking department, the amount for wages would be equal to 752*l.*, and for coal, 13,183*l.* 19s.; together, 13,915*l.* 19s., which gives .119d. as the cost of coke per ton per mile.

Estimated Cost of Construction, &c.—We now come to the cost of constructing and furnishing a railway in the most substantial and complete manner (but without extraneous ornament), necessary for carrying out effectively the reciprocating system. We shall take the length of the line at 60 miles as before, and the prices throughout on a liberal scale:—

Preliminary expenses, and obtaining the Act of Incorporation (very uncertain)		£18,000	0 0
Engineering and surveying for three years, during the time of carrying on the works		5,600	0 0
Law charges for three years		3,000	0 0
Salaries for three years		1,500	0 0
Lands and compensations, including valuator's charges at a fixed sum per acre throughout, viz., 6.06 acres per mile, or 363.60 acres for the main single line of way, at an average cost of 250*l.* per acre		90,900	0 0
19.80 acres for sidings, at 250*l.* per acre		4,957	10 0
3.25 acres for each of the terminal stations and depots, containing sufficient space for carrying on the large traffic as taken above, according to the reciprocating system, at 560*l.* an acre		3,250	0 0
1.33 acres for each of the five exchange stations, and 66 acres for each of the four minor stations, altogether 9.29 acres, at 350*l.* an acre		3,251	10 0
Fencing and drainage throughout complete, including field gates at 600*l.* per mile		36,000	0 0
Earthworks, taking an average of 60,000 cubic yards per mile, to be executed in the manner already described, at an average 15d. per cubic yard		225,000	0 0
Bridges, taking 2.50 per mile, and at an average cost of only 450*l.* (on account of their small size)		67,500	0 0
Culverts, at 2 per mile, average cost at 60*l.* each		7,200	0 0
Taking two large wooden viaducts on the laminating principle, at 10,000*l.* each		20,000	0 0
Tunnels taking one mile of tunnelling at an average of only 40*l.* per lineal yard, on account of its small sectional area		70,400	0 0
Level crossings, taking ten paved level road crossings, including four lodges for high roads, at 50*l.* each		500	0 0
Permanent way, 275,098 yards lineal of rails, at 56lbs. to the yard, equal to 6877.45 tons at 11*l.* per ton		75,651	0 0
105,600 chairs for half the main line, at an average weight of 18lbs. each, equal to 848.57 tons, at 9*l.* 10s. per ton		8,061	8 2.40
Laying half the length of permanent way with cross sleepers (for main line) including ballasting, &c., 52,800 yards lineal, at 7s. 6d.		19,800	0 0
52,800 larch sleepers, bethellized throughout at 5s. 6d. each		14,580	0 0
84,282 yards lineal (for half the length of main line, and for the additional lengths of sidings throughout, and for stations), laying the way with longitudinal sleepers, cross ties, ballasting and screws, &c. complete at 22s. per yard		92,710	0 0
Stations and depots, two principal stations and depots, each at 13,213*l.*	£26,426 0 0		
Five exchange stations each at 4,000*l.*	20,000 0 0		
Four minor stations each at 1,500*l.*	6,000 0 0		
Coke ovens 24 ovens similar to those of the Newcastle and Carlisle Railway, high chimney not required	4,500 0 0		
		56,926	0 0
		£824,787	8 2.40
Estimated cost of furnishing the Railway and Stations—			
Twenty-six locomotive engines and tenders	39,000 0 0		
Twelve mixed carriages	6,000 0 0		
Twelve passenger waggons	720 0 0		
Twenty horse boxes	2,000 0 0		
Twenty carriage trucks	2,600 0 0		
Twenty merchandise waggons	1,200 0 0		
Twenty coke, coal and lime waggons	1,400 0 0		
Twenty cattle trucks	1,300 0 0		
Furnishing the stations with water apparatus, turntables, lamp standards, &c. complete	16,000 0 0		
Furnishing the engine sheds with lathes, tools and implements	11,000 0 0		
Furnishing the various offices	2,000 0 0		
Electro-galvanic telegraph	18,000 0 0		
		101,320	0 0
		£926,107	8 2.40

So that the total cost of constructing the railway in the most complete manner is estimated at 824,787*l.* 8s. 2.40d., and of furnishing it at 101,320*l.*, or altogether at the average rate of only 15,435*l.* 2s. 5.60d. per mile.

We now come to the annual revenue and expenditure accounts; the latter of which is founded on data furnished by the every day working of the various lines of railway in active operation. The average annual revenue account would stand thus—

380.74 first class passengers carried the whole distance daily, equal to 138,970.10 per annum at 2.50d. per mile		£86,830	5 0
714.28 second class passengers ditto, ditto at 2d. per mile		130,356	10 0
366.30 third class passengers ditto, ditto at 1.30d. per mile		43,452	6 4
Carriage of Post Office		7,200	0 0
Taking 900 private carriages and 800 horses, carried the whole distance per annum		2,550	0 0
Parcels		6,000	0 0
Cattle		1,000	0 0
200 tons of merchandise daily (313 days) carried the whole distance at an average charge of 4d. per ton, per mile		46,950	0 0
		£324,339	1 4
The annual expenses of the establishment, exclusive of the wages of those engaged in the coking department would be		£21,936	0 0
The coke		13,915	19 0
Materials for, and reinstatements of the locomotive stock		13,000	0 0
Ditto ditto of carriage stock		4,960	0 0
Repairs to bridges and buildings		4,400	0 0
Permanent way materials		2,200	0 0
Sundries:—advertising, printing, stationery, parcels, postage, &c.		900	0 0
Direction		1,000	0 0
Rates and taxes		900	0 0
Duty to Government at ½d. per passenger per mile		16,668	0 0
		79,879	19 0
Fund for depreciation of locomotives and carriage stock, &c.		30,000	0 0
Interest on loans, &c., take		6,000	0 0
		£115,879	19 0

Thus the disbursements would amount on an average to only 35.72*l.* per cent. on the gross revenue.

By looking carefully over the different items of the estimated first cost of a railway to be worked by the reciprocating system, as given above, it will be seen that it is taken throughout as if in a difficult country, and that the most liberal scale of prices has been adopted, in order that exceptions may not be taken to the system on account of a false estimate.

As already observed, the distances of the exchange stations from each other would depend entirely on the amount of traffic; and the average speed is taken as for a line with a great proportion of second-class inclines.

We have only to add our strong conviction of the absolute necessity of having a ready mode of communication between the guard or captain of the train and the engine-driver, in case of fire or other accident. Accidents by collision, however, (which are by far the most frequent,) would be rendered quite impossible by the reciprocating system.

The signals would be easily given by fixing a small alarum (two or more with distinct sounds would be better) in a box attached to the tender; and by means of a string or wire to the guard's seat on each conveyance, and the intervention of a spring crank, the sounds would be readily effected.

ACCIDENT ON THE BIRMINGHAM AND GLOUCESTER RAILWAY.—One day the week before last as a down train was descending the inclined plane at Bromsgrove, the drags used for the purpose of impeding the progress of the engine broke and the train rushed down the incline at a frightful velocity, and narrowly escaped running into some carriages which were on the line.—*Worcestershire Chronicle.*

A steam coach running at a moderate rate, which is about 21 miles per hour, would run over a distance of 500 miles per day of 24 hours, and at that speed would reach British India from London in about 8½ days—or Pekin in China in 11 days—or from Gibraltar to the Cape of Good Hope in 10 days—or from Quebec to Cape Horn in 17 days—or once round the globe in 51 days—or 7 times round the globe in one year—or a distance equal from the earth to the moon in about 16 months—or from the earth to the sun in 500 years.—*Greenock Paper.*

THE RAILWAY SYSTEM IN AUSTRIA, GERMANY, FRANCE, AND HOLLAND.

(From the Letters of Chevalier de Gerstner—*Franklin Journal*, April, 1841).

1. Austria.

The first railway constructed in Austria for the transportation of passengers and freight, is that between the Moldau and Danube, or from Budweis to Lintz; the project for the same originated in the proceedings of the commissioners from the ten states bordering on the river Elbe, who met at Dresden in 1819, in consequence of the congress act of Vienna, and held a convention for the regulation of the navigation upon the Elbe. The free navigation upon this river commenced in 1821, and the commission at Dresden had, before its dissolution, applied to the Austrian government with the request to regulate also the navigation of the river Moldau as far as Budweis, and to establish from that point to the river Danube a canal or railway, in order that goods may be transported upon this line of communication from Hamburg to the Danube, and back. In the year 1822, I was requested by the President of the Court of Commerce to place myself at the head of this undertaking, and proceed immediately to make the local reconnoissences. I then went to England to consult there upon the best plan of locating the railway over the mountains which divide the waters of the Moldau and Danube, and which have an elevation of 1,000 feet above the surface of the water on the one, and of 1,500 feet on the other side.

At that time, the engineers in England were unanimously of opinion that every railway which leads over a mountainous country must be composed of horizontal or nearly horizontal sections, connected by steep inclined planes, which are to be worked by stationary steam-engines. My explanation, that I regarded a railway, in the principles of its construction as well as its ultimate objects, as nothing more than a very good turnpike road, and therefore could, in no case, agree to the adoption of inclined planes, was entirely disregarded.

I returned from England in November, 1822, superintended, during the following two years, the necessary surveys, and obtained, on the 7th September, 1824, from his late Majesty, Emperor Francis I, a charter for the construction and management of a railway between the Moldau and Danube. In March, 1825, I formed a company of stockholders in Vienna, and completed, up to the end of 1828, the first thirty-nine miles of this road from Budweis to the summit. The principles upon which this section was constructed, were, to have no greater ascent than forty-four feet per mile (1.120), and no smaller radius of curvature than 622 feet; finally, not to lose again any ascended height. As the road was intended principally for the transportation of salt, the superstructure was made of wood, with flat bars fastened upon longitudinal sills, and the adopted maximum rise was founded upon the experience, that the railway cars, as they were then constructed, commenced at that inclination on plate railways, to descend by their own gravity. In the fall of 1828, the section of thirty-nine miles was opened, and used, as intended, with horse-power.

Plain as these principles of construction must appear to every body, and though their results realised all expectations, propositions were made for altering the same, and adopted by the Directors of the Company without further inquiry. I therefore once more explained, in a Report published in February 1829, the motives for adhering to the former principles, and proposed at the same time the introduction of light locomotive engines for carrying on the transportation on this road; but my propositions were disregarded by the Directors, who preferred to have the other section of the road, from the summit to Lintz, constructed on a plan in which grades of 115 feet per mile (1.46) were adopted for considerable distances, ascending heights were lost again (the road was made undulating), and curves with radii of 60 feet were frequently introduced. In the year 1832 the whole line of 80 miles in length was put in operation, and since that time has been used without interruption, in summer and winter, although the country is covered with snow through five months in the year. The Company had formerly let the transportation of salt and merchandise to a contractor, who received three kreutzer in silver per 100lbs., on those 39 miles of road the construction of which I had superintended; this is equal to one and one quarter cents. per ton per mile; after the opening of the whole line, never less than ten kreutzer was paid for double the former distance, or 80 miles, which is at the rate of two cents. per ton per mile; and there can hardly be anybody, from the engineer to the cart driver who in passing over this railway does not sincerely regret, that the principles adopted in the construction of the first half of it, were not adhered to in the construction of the other half. The Company would thereby have saved at least one cent. per mile for every ton of goods transported, which for 25,000 tons per annum would amount to 20,000 dollars, while the additional cost of the road, if constructed according to my principles, would have been only 120,000 dollars; besides, it is now impossible to use locomotive engines upon this railway, which would be of the greatest advantage, since wood is so cheap in this section of country. There certainly exists no other railway neither in Europe nor in America, on which the principles of construction were so different in its two halves, and where the consequences are at the same time so apparent; and it is to be wished for the sake of instruction that a great many persons may visit this road, and convince themselves of the results of both plans of construction.

Under these circumstances, it is surprising that this railway, which has cost 800,000 dollars, or 100,000 dollars per mile, has paid, since its opening in 1833, 5 per cent. annually, on the capital expended in the construction, although only 6,000 passengers, and 25,000 tons of goods (principally salt) are conveyed annually over the same. If 925,000 dollars, or 11,562 dollars per mile, had been expended for the construction, the profit would have been six and one-half per cent., and with the application of locomotive engines, perhaps eight per cent. on the cost of construction. The stockholders of this railway labour under the disadvantage that a part of the capital was obtained in loans on short terms, while another part was received for shares sold below their par value; the dividends for the first subscribers are thereby lessened, and will be sufficiently large only after the debts are liquidated.

The railway from Budweis to Lintz was afterwards continued to the salt depots, in Gmunden, and forms now an uninterrupted line of 130 miles in length, which has been for three years in full operation. The plate rails of this road are of the same dimensions as on many of the American railways, upon which locomotive engines are used without difficulty; but unfortunately the road from Lintz to Gmunden has also been constructed upon such principles as will exclude the use of locomotives for ever. The total cost of the whole railway of 130 miles in length, is 1,170,000 dollars, or 9,000 dollars per mile, which appears very low, considering the great number of bridges and frequent rock excavations. Upon the road from Lintz to Gmunden, 95,000 passengers, and 40,000 tons of goods were conveyed last year, and the income, on the same, is therefore far greater than on that from Budweis to Lintz.

In the year 1826, the construction of a railway from Prague to Pilsen, in Bohemia, was commenced, it was intended for the transportation of wood from the forests of Prince Turstenberg, and of coal from the vicinity of Pilsen; the length of the projected line was eighty miles; the limited means of the Company, however, allowed only the construction of the first thirty-five miles, and the railway was then publicly sold, to pay the debts of the Company.

At present, the railway is used only for bringing wood and building materials to the city of Prague. I here take occasion to remark, that I have never been in any connection with this work.

The public, in Austria, expended for the above named railways, of 165 miles in length, about 1,500,000 dols., at a time when the other States of Germany had not even thought on the introduction of railways. By the construction of this road, which, in part, traverses very difficult sections of country, they have acquired in Austria an experience, which, if judiciously applied, must be followed by the best results; and already these railways have called forth those undertakings, which are at present, executed in Austria on a much larger scale than in any other State in Europe.

The first great railway now in progress in Austria, called "Emperor Ferdinand's North Road," extends from Vienna to the salt works in Bochnia, (Galitia,) and will be 310 miles in length; the section from Vienna to Brunn, of 100 miles, is already opened, and they are actively engaged in the prosecution of the work. Last year, the Directors of the Company estimated the cost of construction of this railway, at 20,000 dols. per mile, it will however, not fall short of 25,000 dols. per mile, or of 7,750,000 dols. for the whole line. As the greater part of this capital is already paid in, the whole road will undoubtedly be completed in the course of a few years. The continuation of this line to Cracow will then likely follow, and for a railway from Cracow to Warsaw, the Russian government has already granted a charter.

The second important railway now under construction in Austria, is that from Vienna to Raab, (in Hungary,) which, with the branches to Basden, Glockknitz, and Oldenburg, will have a length of 170 miles. With the considerable amount of capital at disposal, it may be expected that this railway will also be completed within a few years.

At this moment, there may be 300 miles of railways in operation in Austria, and double as many miles will be in operation in the course of three years.

2. German States.

Besides the railways in Austria, the following have been established in Germany, for the transportation of passengers and freight, and are partly in operation:—

1. The Nuremberg and Furth Railway, four and one half miles in length, though very short, gave, nevertheless, for the stockholders, the best results ever obtained on any railway in Europe. The population of Nuremberg, is only 38,000, that of Furth, 25,000, and the number of passengers upon the railway were—

In 1836 ..	449,389 ..	the dividends,	19 per cent.
In 1837 ..	469,304 ..	"	17½ "
In 1838 ..	439,889 ..	"	17 "

2. The Berlin and Potsdam Railway, fourteen miles in length, has cost 1,000,000 dollars; it has been opened, partly, on the 21st September, 1838, and in its whole length, on the 29th October, 1838. Up to the 29th December of the same year, the number of passengers transported were 102,119. This railway will, if well managed, give very favourable results.

3. The Leipzic and Dresden Railway, of 71½ miles in length, was opened on the 8th April, 1839. The capital stock is 3,150,000 dollars, and the Company had, besides, the right to issue bank notes to the amount of 350,000 dollars. The great cost of this railway, which will not be short of 50,000 dols. per mile, has its cause in the great unevenness of the country through which the road has been located; but on the other side, a very great traffic may be expected upon it. Although only six miles of this road were opened on the 24th April, 1837, and afterwards merely small sections at both ends, the number of passengers has been—

From 24th April to 31st December, 1837, 145,674
In the year 1838.....565,870*

4. The railway from Brunswick to the Hartz, is constructed by government, and will be thirty miles in length. The section from Brunswick to Wolfenbuttel, of eight miles, was opened on the 6th December, 1838, and the number of passengers, to the end of that year, was 24,600.

* According to a report lately published by the Directors, there were transported over the Leipzic and Dresden Railway, during the year 1839, 411,531 passengers, and 131,936 cwt. of merchandize; the total receipts were 262,282 dollars.

Digitized by Google

5. The Dusseldorf and Elberfeld Railway, of thirteen miles in length, is undertaken with a capital of 700,000 dollars. Unfortunately, at the advice of the engineer, Robert Stephenson, an inclined plane was made in the middle of this road, which, as I have formerly observed, is in contradiction with the experience in America. On the 20th December, 1838, the section from Dusseldorf to Erkrath was put in operation.

6. The Magdeburg and Leipzic Railway is seventy-five miles long, and constructed with a capital of 2,0[illegible]0,000 dollars; a part of this road will be opened in the course of this year, the remainder, in 1840.

7. The railway from Cologne to the frontier of Belgium, forty-three miles in length, is located through a very difficult section of country, and its cost is estimated at 3,500,000 dollars; the completion of this road may not take place before two or three years. Cologne will then have a railway communication with the harbours of Ostend and Antwerp, in Belgium).

8. The Munich and Augsburg Railway, forty miles in length, is constructed with a capital of 1,200,000 dollars, and will be completed in the course of the year.

9. The Taunus Railway, from Frankfort to Mentz, and Weisbaden, is undertaken with a capital of 1,300,000 dollars, and will be twenty-six miles in length; it will likely be completed in the spring of 1840.*

10. In the Grand Duchy of Baden, a very extensive Railway is now under construction, through the whole length of the State, at the expense of the government, and as, at the same time, a railway is constructing through Darmstadt, there will be, within a few years, a continuous railway from Frankfort, on the Main, to Basle, in Switzerland.

There are some other small railways in different parts of Germany, upon which, however, nothing but coal, iron ore, &c. is transported.

The cost of construction, and even the length of the above-named railways, cannot be accurately stated, as scarcely any of the lines is entirely completed, or, at least, buildings, locomotives, cars, &c., are still wanted on them. The average of the cost of the several railways, as above stated, is 47,000 dollars per mile; but when they are all in full operation, their cost will be found to amount to 50,000 dollars per mile; and perhaps to more The cost of a mile of railway, with a single track, in Germany, is, therefore, two and a half times greater than in America. If we take into consideration the extremely low wages of all classes of workmen, in Germany, but at the same time, also, the greater unevenness of the country, and compare both with what they are in America, we cannot but regard the works in Germany as very expensive, and I must, after mature deliberation, refer again to those causes by which the American railways are so much cheaper, and which were stated in my fourth letter. It is for the fear of a too great expenditure that no other railways are now undertaken in Germany, and that so many good and useful projects were abandoned. Amongst the projected railways, with the locality of which I am somewhat better acquainted, I mention the Rhine and Weser, the Berlin and Stattin, and the railway from Berlin to Frankfort, on the Oder. These lines might, with the assistance of the great experience acquired in America, be constructed for such sums as would insure a good profit to the stockholders.

3. France.

The most extensive railway line in France, is that from Lyons to Roanne, which was constructed by three companies, and is thirty-eight lieues in length; the Epinac railway is six and one half lieues, and the Paris and St. Germain Railway four and three quarter lieues long, while the total length of the other railways in operation will hardly amount to eleven lieues; France has, therefore, at present, only sixty lieues, or 150 miles of railways in operation.* The most expensive of these roads is that from Paris to St. Germain, which is only 18,400 metres, or 11¼ miles in length, and has cost 14,860,000 francs, or, per mile, 242,000 dollars. The part within the city of Paris was, of course, the most expensive, but even after deducting the length and cost of this section, we find 165,000 dollars as the cost per mile for the other part of the road, with a double track. Of the Lyons and St. Etienne Railway, which has also two tracks, the cost per mile was about 70,000 dollars.

Upon the Paris and St. Germain Railway, 1,375,396 passengers were conveyed from the 26th August, 1837, up to the 25th August, 1838, and the total receipts have been 290,834 dollars, or, per mile of road, 25,448 dollars: this gross income per mile is eight times as great as that upon the American railways, where it averages only 3,075 dollars: but compared with the capital of construction, the gross income, in America, is fifteen per cent., and on the Paris and St. Germain Railway, only ten per cent. The French railways pay like the diligences (stages) ten per cent. of the gross income, as a tax to the State; the expenses of managing these roads, will, therefore, not amount to less than two-thirds of the gross income, and the Paris and St. Germain Railway will hardly yield an interest of four per cent., if the traffic does not materially increase.

These are the causes why the railways projected in the spring of 1838, from Paris to Havre, from Paris to Orleans, and from Strasburgh to Basle, for which the concessions were given by the Chambers, find so little support from the public, in France, that these projects will, it is likely, be entirely abandoned. The great mass of the population in France, is poorer than that in Belgium, and as the Belgian railways, with an average cost of 45,000 dols. per mile, yield only five per cent. on the capital of construction, the railways in France ought not to be constructed for more than 30,000 dols. per mile, if the capital of construction shall yield five per cent. interest. But to arrive at this, the principles of construction, hitherto followed, as also the now existing revenue laws in France, so injurious to every enterprize, require a thorough reform.

4. Holland.

If the establishment of the railways in Belgium, belongs to the remarkable events of the age, it is still more the case with the railways in Holland. This interesting country is known to be intersected by navigable canals in every direction, and nowhere are better and more carefully maintained turnpike roads to be found. Nevertheless, the construction of this railway is the more remarkable, as there is between Amsterdam and Harlaem, a canal upon which passenger boats are running, and close to it a turnpike road. A width of track of four feet eight and one-half inches, like that of the English railways was intended for this railway; but when it became known that the St. Petersburg railway has a width of six feet, and the railway from London to Bristol, even of seven feet, it was established by a decree of the Government, that all the railways in Holland shall have a clear width between the rails of two metres, or six feet six and three quarter inches.

For a second railway, from Amsterdam to Arnheim, along the Rhine, the concession was given by His Majesty, King William, with a guaranty not before heard of in any work of this kind; the King declared himself ready to guaranty to the stockholders, with his own private property, a dividend of four and one-half per cent. per year. It is unnecessary to mention, that the whole capital was instantly subscribed.

---

* A part of this road, from Frankfort to Hoechst, was opened in September, 1839, and the whole line in April, 1840. Up to the 1st July, the number of passengers were 251,610, yielding an income of 50,000 dollars.

* The following is a list of the railways in France at the close of 1839 —

	Length in metres.		Miles.
a. Railways completed.			
From St. Etienne to Andrezieux,	22,000	or	13.66
From St. Etienne to Lyons	58,000	,,	36.02
From Andrezieux to Roanne	67,000	,,	41.61
From Nimes to Beaucair	24,000	,,	14.90
From Montbrison to Montrond	15,500	,,	9.62
From Paris to St. Germain	18,400	,,	11.43
From Paris to Versailles (right bank)	18,572	,,	11.53
From St Vaast to Denain	8,300	,,	5.53
From Cette to Montpellier	27,000	,,	16.77
From Mulhouse to Thann	19,660	,,	12.21
From Creusot to the Canal du Centre	10,000	,,	6.21
From Villers Cotterets to Port aux Perches	8,155	,,	5.06
From Epinac to Bourgogne Canal	28,000	,,	17.39
From Alais to la grand Courle	18,000	,,	11.17
Total	346,187	,,	213.11
b. Railways in progress, from Nimes to Alais	46,319	,,	28.77
From Paris to Versailles (left bank)	18,630	,,	11.57
From Bordeaux to La Teste	51,000	,,	31.68
From Abscon to Denain	5,540	,,	3.69
From Strasbourg to Basle	140,000	,,	87.00
From Paris to Orleans	120,000	,,	74.53
	381,489		237.24

BRISTOL AND EXETER RAILWAY OPENING.

EXCURSION TO BRIDGWATER.

(From the *Bristol Gazette.*)

Our readers are doubtless aware that Monday last was fixed for the opening of that portion of the Bristol and Exeter line which has been completed to the town of Bridgwater. In consequence, however, of some minor arrangements not being in a sufficient state of forwardness to ensure to the public that complete accommodation, which it is the most anxious wish of the Directors always to afford it was judged best to limit the intended opening to such Proprietors only as should apply for tickets issued from the Company's offices in Broad street. The applications for these tickets were exceedingly numerous, every one who had a right being eager to participate in an excursion which all expected would be one of unmixed gratification. Nearly 400 tickets were issued, and many Shareholders arrived in this city from Bath, Cheltenham, Gloucester, Manchester, and other places to join in the party. Everything was ready by the time fixed for the starting of the train, which was announced to take place at 9 o'clock on Monday morning. Long before that hour immense crowds of spectators had thronged the Bath road, the bridge, the approaches to the railway, and myriads crowned the adjoining heights of Pyle Hill, which command a fine view of the station and of the line for more than a mile. The proprietors who had obtained tickets had likewise assembled in great numbers, and the temporary platform from which the train was to start, was crowded to excess. Several carriages were upon the the rails, and expectation was at its height, when a notice from the Directors was posted upon the carriages, expressing their great regret that an unexpected obstacle on the lower portion of the line, obliged them to postpone the intended excursion until 9 o'clock the following morning. Rumour, of course, became at one eloquent, and all sorts of absurd and ridiculous assertions flew from mouth to mouth; one had it that the embankments had given way, another that the cuttings had fallen in, a third that all the bridges had tumbled down, &c., these absurdities were, however, quickly disposed of by the arrival of Mr. Badham the Secretary, who briefly stated the cause of the disappointment. On the previous evening, after every thing had been ascertained to be in order for the excursion, the engine driver of the splendid new engine the *Javelin* from the factory of Messrs. Stothert, Slaughter, and Co., of this city), which was intended to be used, had contrary to orders, run his engine down the line, and the consequence was, as no obstacle was expected, he came in contact with a trawley on the line, and the engine was thrown off the rails and across the line, about 24 miles from Bristol. Fortunately no one was hurt. As soon as the news arrived in Bristol, the Directors procured the *Fire Ball* engine from the Great Western Company, and sent it down to get the other put to rights; this, of course, could not be accomplished, without some delay, and the Directors prudently resolved not to keep the company in a state of suspense, which might become painful, but at once to put off the excursion. The explanation given by Mr. Badham, appeared to afford general satisfaction, and in a few minutes all had dispersed. We understand that subsequently,

Digitized by Google

in order to remove any doubts that might have remained on the minds of the shareholders from a distance, Mr. Morgan, one of the Directors, and Mr. Badham, accompanied three of those gentlemen down the line with the *Fire Ball* engine, and completely satisfied them that the line was perfect in every respect.

THE EXCURSION.

On Tuesday, the 1st of June, the Excursion came off, and high as were the expectations of pleasure from this trip, we may say that the most sanguine were fulfilled. By nine o'clock nearly as many of the proprietors were assembled as had collected on the preceding morning, and though the spectators were not quite so numerous, still there were vast crowds on the road, the bridge, and Pyle-hill. The *Fire Ball* engine, from the Great Western Station, having been turned upon the line, eight carriages, four of each class, were speedily attached to it, and in a few minutes crowded by the proprietors present. Mr. Brunel, accompanied by Mr. Gravatt, took under his immediate superintendence, the direction of the engine, and the Directors, the Secretary, and the other officers of the Company, politely interested themselves in accomodating their numerous charge. Precisely at 14 minutes to 10 the train started, and as it glided slowly at first across the Exeter bridge and under the London road, it was hailed with loud and repeated cheers by the assembled crowds, which were responded to by the party in the carriages. It is supposed by many who have never travelled by a railway, that the high speed precludes any good view of the scenery through which your journey lies. We will just briefly dot down a few of the more striking, beautiful, and picturesque points in the landscape, through which the railway travels from Bristol to Bridgwater, and we will then leave it to such objectors to say if they can well imagine a more delightful ride. If they are not convinced by our description, we invite them to take a trip the very first opportunity, and we will answer for their never starting so futile a proposition again. On emerging from the bridge, we pass through the deep cuttings of Pyle-hill, in which the eye of the Geologist finds more attraction than that of the lover of picturesque beauty; but there is also much matter for contemplation, in the triumph which it exhibits, of genius and art over the mighty obstacles formed by nature. Proceeding out of the cutting the line runs by the back of Bedminster old church with its neat little burial ground, while the eye surveys a large extent of our city, taking in a comprehensive view of most of its magnificent ecclesiastical structures, from the noble tower of ancient Redcliff on the right, to the more modern, but handsome spire of Paul's on the left—a little further and we catch Clifton in the distance, her handsome crescents terminating in the lovely and romantic beauties of the Avon, and including the observatory, the abutments for the suspension bridge, and the many beautiful residences of the merchant princes of our city. Yet a little further and we obtain a full view of the celebrated mansion of Sir John Smyth, Bart., one of the works of the immortal Inigo Jones, lying embosomed in the foliage of venerable elms. The passenger by the railway must not however allow his attention to be too long arrested by this lovely spot, or he will lose the view of old Dundry tower on the other side. There is something to us particularly pleasing in the rapid succession of beauties and of wonders which are obtained by a railway trip. In one moment we are wrapt in the contemplation of Nature presenting herself in her most attractive and delightful aspect; in another our attention is arrested by some stupendous work of art; as though the latter growing envious of the intense admiration bestowed upon the former, put forth all her powers of rivalry. In fact the whole forms a complete panorama, affording to the spectator just time sufficient to note each particular beauty, but not allowing him to devote himself exclusively to one. Passing by these delightful spots, our way proceeds along the rich vale of Ashton, affording a good view of that genteel village with its pretty church; thence through the cuttings and arches at Cambridge Batch; this is part of the line which stands we believe unrivalled. The archway (for it can scarcely be called a tunnel) is hewn out of the solid rock of mountain limestone, and is upwards of 100 yards in length, presenting from either end one of the most beautiful vistas imaginable. It was observed by some of the parties in the carriages to be precisely of the same extent as the train. At Backwell, we stopped for a few minutes to take in water, the heat of the day and the heavy load having made our engine thirsty. Invigorated by the draught the *Fire Ball* shot along the line with redoubled speed, passing at a short distance the villages of Wraxall and Nailsea, and giving an opportunity of admiring the scenery of Clevedon on the one side, and on the other the range of the Mendip Hills, with the rich vallies lying at their base. Arrived at the Yatton station the train was greeted with a very good band of music striking up, "See the Conquering Hero comes," whilst the shouts of the assembled villagers rent the air. The distance from Bristol to Yatton is 12 miles, which was performed in three quarters of an hour. From Yatton it is intended to run a branch to Clevedon for the accommodation of the visitors of that pretty watering place. In two minutes the train again started, and keeping along the valley, brought out in succession, views of Kenn church and village, Yatton, Worle Hill, with the windmill, and the village itself, and so on to Banwell station, whereat great number of persons were assembled and booths erected, giving to the scene the bustle and appearance of a fair. Here, likewise, as indeed all along the line, the villagers welcomed the approach of their strange visitor, with every demonstration of applause. From Banwell, at the distance of a few miles rapidly skimmed over, is the Branch for Western-super-Mare, which lies about a mile and a half distant. This branch cannot but prove highly acceptable to the citizens of Bristol and Bath, as it will enable them in about an hour to run down and enjoy the fine sea breezes, and the pleasure of a bath in the waters of Old Neptune, either before commencing business in the morning, or at the close of their labours in the evening. From Weston the road runs through Uphill cuttings, the deepest on the line, being at some points 80 feet from the surface. We cannot refrain from inviting the attention of the geologist to the peculiar phenomena of this part of the line. The soil consists principally of marl, and blue lias, intersected at one place by very hard limestone rock, which required vast quantities of gunpowder to displace. Over these cuttings is a bridge, 118 feet in the span, and a beautiful specimen of this kind of architecture—elegance and strength being united. Arrangements have already been made by the Steam Packet Company to run their packets between Uphill and Cardiff, which will not occupy more than an hour, so that the whole distance between Bristol and Cardiff will be accomplished in about two hours; and persons going to Merthyr and South Wales can proceed at once by the Taff Vale Railway. From hence for several miles the line runs as straight as an arrow, and was aptly called by some of the proprietors, the Bristol and Exeter Race Course; as far as the eye can reach, the rails may be traced in an apparently interminable series. Beyond this, the next point of interest is at the river Axe, where some of the most difficult and trying portion of the works on the line was encountered. The course of the river has been turned, and about a mile and a quarter of it filled up, exhausting all the earth excavated from the deep cuttings at Uphill. Leaving the river Axe, our course continues over an exceedingly rich meadow country, having the villages of South Brent on the left, and Lympsham and Burnham on the right. The lighthouse at the latter forms a very striking feature in the landscape, as also does the Steep Holmes, and the lighthouse on its sister island, on the edge of the horizon. Beyond Lympsham the line crosses the Glastonbury Canal, and runs for a considerable distance nearly parallel with and adjacent to the Bridgwater turnpike road, and so continues on to the Puriton cutting, across which is thrown a very handsome skew bridge. From hence to Bridgwater occupied but a few minutes, and as we came rapidly on, the throng of people on each side of the road became every instant more dense. It seemed as though the whole town had turned out to welcome us, and the huzzaing, the waving of hats and handkerchiefs, and the joyous contenances of all assembled, added to the pleasing excitement of the scene.

Arrived at the station at Bridgewater, we were welcomed by the splendid band of the West Somerset Yeomanry, arrayed in full uniform. The station is a handsome structure, and the offices are so arranged as to afford the best accommodation for the public. The distance by the rail from Bristol to Bridgwater is 32¼ miles from station to station, and we performed it in one hour and about three quarters. The average speed was about 18 miles an hour, though occasionally we attained a much higher rate.

THE BREAKFAST.

The Directors of the Company, wisely auguring that the appetites of their constituents would be sharpened by their ride, had taken the precaution of ordering a repast to be prepared, and though we have before had experience of the liberality of the Company, we were nevertheless not prepared for the luxurious banquet which on this occasion awaited us. The shell of the large building, intended to form a new hotel, and situated close by the station, was covered over as a tent, and within, five long tables, with a cross one at the top, were laid out. The room was profusely and tastefully decorated with flowers and evergreens, in various forms and devices; at the head of the centre table was a transparency of the Queen, and at the other end a large V. R., with the royal arms. The repast, which was of course cold, included every delicacy the most fastidious could desire, and the champagne, claret, sherry, &c., were of the finest flavour, and in full abundance. To Mr. Sutton of the Clarence, and Mr. Rees of the George, under the direction of Mr. John Browne, one of the Directors, the credit of supplying this very elegant entertainment is to be attributed.

It having been announced that the train would leave for Bristol at two o'clock, the Company lost no time in taking their seats. F. Rickets, Esq., the Chairman of the Directors, presided, supported on his right by the Mayor of Bridgwater, Robert Bagshot, Esq., and on his left by J. B. Badham, Esq., the Secretary to the Company. Near the Chairman we noticed Messrs. S. Lucas, Wm. Morgan, W. Browne, C. B. Fripp, W. P. King, and other Directors of this Company. The Vice-President's chair was ably filled by Mr. John Browne, the Bridgwater Director. At the conclusion of the breakfast,

The CHAIRMAN (F. Rickets, Esq.) rose and proposed the healths of the Queen, Prince Albert, and the rest of the Royal Family, which were received with loud cheers.

The CHAIRMAN then rose and said, he had to express to the Company the regret felt by the Directors and himself, that the excursion did not take place yesterday as intended, owing to an accidental obstruction on the line. He could, however, now congratulate them on having reached the loyal town of Bridgwater. That loyal city was in ancient times beseiged by the troops of Fairfax, and now they, by the railway, had come also to lay their seige, but it was one of no hostile nature, it was with the wish and intention of bringing trade and commerce to the city, prosperity and happiness to its inhabitants. (Cheers.) He would give them the health of his friend on his right, the Mayor of Bridgwater, Robert Bagshot, Esq.,—drank amidst loud cheers.

R. BAGSHOT, Esq., acknowledged the compliment, and proposed the health of the Chairman and success to the undertaking. (Immense cheers.)

The CHAIRMAN on rising was received with renewed cheering. After expressing his sincere thanks for their kind reception of the toast, the Chairman proceeded to say:—Gentlemen,—This is a day to which I have long looked forward to with pleasing anticipation. It was intended to open the line for traffic yesterday; but some arrangements at the

Digitized by Google

juncture with the Great Western Railway, in Temple-meads, involved the necessity of new works by both Companies, which are not yet quite complete, and and we must be satisfied with having given to every shareholder in the Bristol and Exeter Company, an opportunity of ascertaining for himself, that the Directors have fulfilled their promise to have the permanent way ready before the 1st of June. Not long ago this was by many considered a thing scarcely to be hoped for, and I confess there have been periods when my own confidence has been put to a severe test. But now those fears have vanished, 24 miles of our line are formed, and the 11 miles between this town and Taunton will be finished in the summer of next year, and we may look forward to the completion of the line to Exeter within a reasonable period. The advantages of railway travelling are duly appreciated by other countries; and I find in a Belgian paper, a short article on the subject, which I cannot deny myself the pleasure of reading to you. The Chairman having read the article, concluded as follows:—Gentlemen, I have now only to express to you my sincere thanks for the kind manner in which you have drank my health, and to assure you that it shall be my constant endeavour faithfully to discharge my duties. (Cheers.)

The CHAIRMAN then again rose, and after alluding to the proud position Bristol had taken up within the last few years, as exemplified in those magnificent undertakings—the Great Western Railway, the Bristol and Exeter Railway, the Great Western Steam Ship Company, &c. &c., proposed the health of the Right Worshipful the Mayor of Bristol, R. Phippen, Esq. (Drank with much applause.)

The SECRETARY stated that he had received a polite note from his Worship, regretting the impossibility of his being present; it was his intention to have joined in the excursion if it had taken place yesterday. (Cheers.)

The health of the Mayor of Exeter and the Boroughreeve of Taunton were then given from the Chair and warmly received.

The next toast was the members of Parliament for the county of Somerset. (Cheers.)

T. T. KNYFTON, Esq., then rose and said, he begged permission to propose a toast, "Success to the Bristol and Exeter Railway." He said, as one living in a district through which the line passed, he could not too fully appreciate the advantages it would confer. He felt also bound to bear his testimony to the wisdom the Directors had shown in the selection of such able engineers to conduct their operations. He lived near a portion of the line where very severe work was to be encountered, and numbers of workmen brought together. Amongst these occasional disturbances would arise, but as a magistrate of the county he could not but bear his testimony to the zealous and anxious manner in which the Directors and the Engineers always co-operated with the magistrates in every instance. (Loud cheers.) Mr. K. concluded by proposing the toast amidst reiterated cheering.

The CHAIRMAN then gave "the Members of Parliament for the county of Devon," and stated that Sir Thomas Acland came a distance of 30 miles to be present at the expected opening yesterday, but his previous arrangements prevented him attending that day.

The CHAIRMAN then gave "Col. Tynte, and the officers of the West Somerset Yeomanry Cavalry, and thanks for the attendance of their band." (Loud cheers.)

The SECRETARY said, he had just received a polite note from Col. Tynte, which he would take the liberty of reading; it was addressed to himself, and was as follows:—

"Bridgewater, May 31, 1841.

"Sir, I have made known to the officers of my regiment the very flattering mark of attention shewn by the Directors of the Bristol and Exeter Railway to them, and to myself, and in our united names, beg to express our thanks to them for their kind attention. But, as our time is limited, and we shall be obliged to attend to the duties of the field with the men, we shall not be able to take advantage of what would otherwise have given us great pleasure, and upon an occasion on which we all feel great interest.

"I have the honour to be, Sir, yours, &c.,

"C. K. K. TYNTE, Col. Commanding W. S. Y. C."

"Success to the Great Western Railway Company" was then drank amidst much applause.

C. B. FRIPP, Esq., having been loudly called for, returned thanks on behalf of the Company in an eloquent speech, in which he contrasted the position of the Company in its present successful state with what it was that day eight years, when they were canvassing persons to take shares, and succeeding in many instances with great difficulty. He congratulated the shareholders in the Bristol and Exeter line on the fact of their interests being identified with those of the Great Western; and after alluding to the triumphs of the *Great Western* steamer, expressed his confident hope that ere long the Exeter line would be continued to Falmouth, from whence Bristol would extend, not one, but many arms of steam across the Atlantic. (Cheers.) Mr. F. then alluded to the talents displayed by Mr. Brunel, who had not servilely followed the plans of other railways, but had formed a model for himself, the result of deep thought, and consummate genius. (Cheers.)

J. BROWNE, Esq., the Vice-Chairman, then gave the health of Mr. Brunel, and may he long live to witness the prosperity of the great lines he has been so instrumental in constructing. (Loud cheers.)

Mr. BRUNEL, in a few neat observations, expressed his gratitude for the enthusiastic manner in which his health had been received.

The CHAIRMAN then gave "Success to the Bristol and Gloucester Railway," which will constitute so important a link in the chain of railway communication between the west and the north of England and Scotland. (Cheers.)

T. RANKIN, Esq., one of the Directors of the Bristol and Gloucester Railway, returned thanks.

The toast of "Sir John Guest and the Taff Vale Railway Company," to which the line will be indebted for another important addition to its traffic, was acknowledged in suitable terms by J. T. Ball, Esq., the Secretary of that undertaking.

"The Bristol General Steam Packet Company," (whose packets are ready to establish the communication between South Wales and Somersetshire,) was then given from the chair, and drank amidst much applause.

The CHAIRMAN the gave "The health of the indefatigable Secretary to the Company—Mr. Badham." (Loud and long cheers.)

The SECRETARY, in acknowledging the compliment said—Mr. Chairman, and Gentlemen, I thank you for the very kind spirit and manner in which you have done me the honour to drink my health. It is a satisfaction to me to know, that by constantly devoting this greatest of all blessings to your service, it has been my endeavour to deserve that you should wish me the enjoyment of it. Some years have now rolled away since I had first the honour of becoming your Secretary. At that period I believe there were many among you who thought that the office would be of short duration, and that the undertaking must sink under the load of difficulties which encumbered it. But, gentlemen, I had the honour of being acquainted with the character of your Chairman, and several of your Directors, and knew that their motto was the same as distinguishes the arms of our city—"*Virtute et Industria.*" My own has always been—"*Deo duce, industriæ nihil impossibile;*" and I therefore never despaired of witnessing the triumph which you enjoy to-day—that of having accomplished what was then deemed almost impossible. But this has not been brought about without great efforts, excellent management, and many sacrifices on the part of your Directors, and great patience and perseverance on yours. As to the Directors' system of management, perhaps you will permit me to remind you of its more prominent features. In the times of financial pressure the utmost possible forbearance and indulgence towards those shareholders who could not pay their calls, and who would have been utterly ruined by legal compulsion. The utmost practicable economy in every branch of expenditure. The adoption (as the circumstances of the times, and your own as a Company, developed their practicability) of those leading measures in the history of this undertaking—the allowance of interest upon paid up calls—the lease to the Great Western Company—and the allotment of forfeited shares to the good and substantial proprietors. Gentlemen, I do not hesitate to declare, and I speak with a good deal of practical experience of the operations of all these measures, that they have produced great and permanent benefits to your undertaking; and that without them, the event which you celebrate to-day, would either never have taken place at all, or have been effected at a distant period in a very imperfect degree. Neither of those measures alone could have produced the result. It has been by their reciprocal and mutual co-operation. If your time permitted, I should beg to be indulged with an opportunity of dilating somewhat upon these highly important matters. But your stay at Bridgewater is too short to-day for me to run the risk, by any lengthened observations of mine, of depriving you of the advantage of hearing others more entitled to your serious attention. Still the kind warmth with which you have greeted my name, is the best evidence of your approbation of the zeal and energy with which I have always endeavoured to carry out the measures adopted by the Board. My invariable maxim is, if I do a thing at all to do it as well as I can. This sometimes produces an identification of myself, with the end to be attained, which a just secretarial etiquette does not fully warrant: but I have always found the Chairman and Directors so anxious to accomplish every measure which they deemed conducive to the interest of the proprietary, as readily to excuse an excess of zeal on the part of their Secretary. Mr. Chairman and Gentlemen, permit me to repeat to you my best thanks for your kindness in drinking my health, and to wish to you all a long and uninterrupted enjoyment of the same inestimable blessing. I feel that no tribute of mine could add a feather to the weight of your justly celebrated Engineer in Chief, Mr. Brunel; and I might say the same with respect to your resident Engineer, Mr. Gravatt; but I trust that the latter will not deem it an ill compliment if I conclude by proposing the health of Mr. Gravatt, the Resident Engineer of the Company. (Great cheering.)

The health of the Directors of the Company having been drank with every mark of approbation.

The CHAIRMAN returned thanks on behalf of his colleagues and himself, and pledged the continuance of their best exertions on behalf of the undertaking. Many of his colleagues were present at the table with him; amongst those absent were, Mr. Divett, M.P., for Exeter, who was prevented by his Parliamentary duties from joining his colleagues on the Board to day. The Deputy Chairman, Mr Jas. Gibbs, Mr. Kington, and Dr. Miller, were also unavoidably deprived of the pleasure of being present; but he (the Chairman) knew that the proprietors needed no assurance of the deep interest felt by each of those gentlemen in the success of the undertaking. (cheers.)

The CHAIRMAN then gave the Solicitors to the Company, which was responded to by Mr. Savery.

The next toast was the Lancashire shareholders in this Company. (Cheers.)

Mr. FRANCIS PARKER, the Manchester Director, then stated that, as representing a large and influential body of shareholders, he felt unfeigned satisfaction in being able to state, that the measures of the Board had met the unqualified approbation of all his constituents. (Cheers.)

The time now approaching for the train to return, the company broke up, and proceeded to take their places in the carriages, and at 20 minutes after two the train again started, amidst the music of the bands and the cheers of the assembled multitude. As it continued its rapid course, every bridge and convenient spot on the whole line was crowded with spectators, who hailed it as it shot past them with deafening cheers. At a few minutes after four, the train arrived at the terminus in Temple-meads, and the company alighted,

Digitized by Google

every one expressing their unbounded approbation of the excursion, as having been one of unmixed gratification. For ourselves, we have only to add that the Bristol and Exeter line may well challenge competition with any in the kingdom either as respects the beauty of the country through which it passes,—the manner in which its vast works have been executed,—or the ease, speed, and safety with which it may be travelled. No official announcement has yet been given when it is to be opened to the public, but the state of the line itself is evidence that the delay cannot be of many days duration.

HIGH AND LOW FARES.

Mr. Ellet's "Laws of Trade applied to the determination of the most advantageous fare for Passengers."

To the Editor of the Railway Times.

Scribimus indocti doctique ..... —Hor.

Sir,—The very flattering manner in which you noticed Mr. Ellet's Essay on the most advantageous fare for railway passengers, when you gave an extract from the *Franklin Journal* for the benefit of your readers; and the still stronger terms in which you have since recommended a careful study of its contents, cannot but lead the public to attach great weight to the investigations contained in that paper. Backed by such authority, and clothed, as it is, in a scientific garb, it passes current with those who are unable to decipher its mysterious symbols, as the result of the most profound wisdom. All concur in praising it, as a production of consummate skill, rather than confess their inability to comprehend its train of mathematical demonstration; and even well qualified parties are led to take the announcements upon trust, rather than undergo the fatigue of minute and critical investigation.

How often does it not occur in argument, that a well timed quotation from some Latin author—poet or historian, no matter—rivets the attention and calls down universal applause on the speaker, although the passage be wholly irrelevant to the subject under discussion. Self-love is flattered with the idea of being able to appreciate the beauties of classical learning. But if such be the effect of Latin; what magic in a little Greek, however scanty. *Ah! si vous saviez le Grec*, as D'Alembert says. Similar effects attend the display of algebraic characters in any treatise on a subject professedly scientific. Even with common algebra the effect is considerable, but far greater is the sensation created by the formal parade of the calculus: it at once stamps the author as a man of the most transcendent ability, and the work, as a production of the highest intrinsic merit. The majority of men are deterred from bestowing on the matter their undivided attention, from its supposed abstruseness; and others, willing to be thought of equal attainments with the author, knowingly give their assent to doctrines so gravely propounded.

The essay in question certainly displays with considerable prominence the author's ingenuity and skill in algebra; but, I hope I may be permitted to express my doubts whether the results obtained are at all commensurate with the labour involved in their investigation; and to question the necessity, or even expediency, of having recourse to the transcendental analysis in the solution of the problem. I must also beg leave to dissent from your opinion, that "no one at all acquainted with the use of symbolic language, will be at any loss to accompany the author in his very curious reasonings and deductions." On the contrary, I should consider it as a closed book to the majority of the profession; deservedly eminent as that profession is nevertheless on all hands admitted to be in science. Very few engineers ever venture on the study of the differential calculus; and of those few, by far the greater number, disgusted with the apparent want of rigorous proof, are deterred from prosecuting the enquiry by the peculiar nature of the analysis itself, which does not afford to the mind of the beginner that conviction so conspicuous in other branches of the mathematics. Many an otherwise skilful mathematician, may read this essay, and from being unacquainted with the principles of the calculus, be wholly unable to comprehend the train of reasoning, by which, after differentiating and integrating, certain results are obtained; although he may be competent to affix their relative values to the algebraic terms.

The author of the essay, after some intricate calculations, arrives at the following conclusion, that the most advantageous fare for passengers ought to be *a certain constant quantity which experience dictates for the profit per passenger, added to the actual cost of his transportation.*" Or simply, that there is *a certain charge* which will be most profitable to the railway. A result, be it observed, which might very well have been arrived at, without the aid of a refined analysis (*a*).* What the constant quantity is, or in what manner it may be approximated to, we are not told (*b*). Now, as the object of the Essay was to determine the most advantageous fare; and the whole problem depends on the value of the constant quantity, which is a part of the charge; it must be admitted that the question still remains in exactly the same position as at the commencement of the investigation. The author has therefore taken great pains to prove literally *nothing*. I shall, however, commence at the beginning, and follow him in the order of his reasoning.

The author, at starting, boldly encounters the difficulty, and assumes that a certain amount of fare may be charged, which shall tempt a greater number of the community to avail themselves of the proffered means of communication than any other amount of fare would do.

No one will, I am sure, withhold their assent to this supposition. It may be proved to be consistent with reason and experience.

The author proceeds thus:—"It matters not for our present purpose, what this limit, which he chooses to prescribe for himself, may be, whether it amount to one dollar or to twenty dollars, providing it be admitted that there is a sum to which each individual, after considering all the circumstances, all the charges, the advantages sought, and the inconveniences to which he will be exposed, limits the amount that he will rather pay for his fare than decline the trip."

In dismissing the consideration of the limit, the author evidently forsakes the substance in pursuit of an empty shadow: for the limit is the very thing sought—the problem to be solved—the point at which the fares must be most remunerative to the railway proprietors (*c*). How then does he meet the difficulty? He avoids it, and proceeds thus—"If we were now able to separate the public into classes, and fix appropriate values on these classes, to represent the charges which they could afford to pay—as we can separate and value the different varieties of tonnage—the problem would be readily solved; for we would then have only to apply the equations already deduced for heavy tonnage to each class, by inserting in the formulæ the ascertained values of Π, and obtain from them as many correct results as we should find varieties in the travelling community."

It would appear from this, that in America the fares are the same for all. It may perhaps be repugnant to their notions of freedom and equality to be ranged in separate classes. But with us unfortunate Britons, who are compelled by the state of society in which we live, to range ourselves in distinct classes according to our circumstances, it would appear an easy matter to determine the most advantageous fare by classing the community according to their means (*d*).

What the formulæ are, deduced from heavy tonnage, and applicable to passenger traffic, when divided into classes, I am at a loss to determine, not having the benefit of the author's essay on the laws of trade. It seems, however, inconsistent to contend that we should *only* have to insert in the formulæ the ascertained values of Π, when Π is the greatest charge which any grade of passengers can afford to pay, and the value of which has not been determined in this essay, nor have any feasible means of doing so been pointed out. To ascertain the value of Π would be to solve the problem of the most advantageous fare; and this, the author himself has not succeeded in accomplishing.

He next proceeds to state, that "the Company do not, however, know whether the value which represents this particular grade is a constant quantity, or whether, as appears probable, it may not be a function of the distance, or otherwise complicated." By what possible reason can this value, which is nothing more than the amount which an individual can spare for the journey, be a function of the distance, or have any connection whatever with it? Your having a pound to spare, may induce you to make an excursion by railway; but in the name of all that is possible, how can the pound in your pocket depend on the fact of a certain railway being one or two hundred miles in length? And, if not, how can it be a function of the distance? (*e*).

We have now arrived at the whole purport of Mr. Ellet's essay and elaborate calculations. They go no further than to prove, that the said value *is a constant quantity*, and *not a function of the length* of the railway; that is, does not depend on it. This is evident from the summing up. In order to find the most advantageous fare, we must "*add to the constant quantity which experience dictates for the profit per passenger, the actual cost of his transportation.*" Here, then, after wading through a tedious investigation, we arrive at the satisfactory conclusion, that the value sought *is* a constant quantity. An answer which any man of *common* sense would have given in half the time, without the aid of analysis. Like an over skilful engineer, the author has raised an entrenchment where no natural obstacles presented themselves, to demolish it with his own artillery. Our transatlantic brethren we know are rather fond of "calculating," and the present instance only confirms the saying. True, a man may do the commonest sum by algebra, and succeed admirably in puzzling himself and others too; but wherein consists the advantage beyond the gratification of a mere desire for display, when the same result might be obtained in the common way (*f*)?

We now come to the most important part of the whole essay; indicating the law by which the passenger traffic will increase or decrease, according to the charges; and I request your attention to the fact, that this law—the most important consideration in the problem—one which requires rigorous proof, before it become the basis of further operations, is here *assumed*. And, though the author has enjoyed the benefit of the assumption throughout the essay, he has been unable to arrive at any better results than those you have already seen!

We are to take for granted, then, that there is a certain number of the community at large, who can afford to pay a given sum for an excursion by railway—"another number that can afford to pay twice that amount"—"others three times that sum, and so on, until we arrive at the limit which would almost preclude travelling." So far, there is nothing taken for granted to which all will not, readily, give their unqualified assent. Not so, however, to the following. "We shall now *assume*, that *the number of individuals in each of the three classes is the same*; or that there are *three times as many who cannot afford to pay three dollars, as there are of those who are unable to pay one*—the number of persons excluded being directly as the sum which represents their grade."

If we assent to this proposition, we evidently at once fix the law which shall determine the charge. To assent without proof, were highly irregular and illogical. If we take that for granted, which, upon further experience, may be proved to be untrue, the whole of our speculations, based upon such false premises, must eventually also be erroneous (*g*).

We know that the number of persons who are in comparatively easy circumstances, as the majority of tradesmen, is much greater than those who live in affluence. Again, those who may be considered

* The letters *a*, *b*, &c. refer to the Editorial remarks at the close of this paper.

Digitized by Google

as appertaining to the labouring classes, depending for support on daily labour, far exceed in numbers the aggregate amount of the other classes.

So far, therefore, is the required assumption from being at all probable, that it may be proved to be utterly at variance with well established facts. And consequently, it would be palpably absurd in us to adopt the conclusions which the author of the essay may have arrived at, knowing as we do that no reliance can be placed on results which are evidently based on false premises; and that those premises are false, you have already seen (*h*).

I trust that sufficient has now been shown to convince you that the author's deductions are not the result of careful examination and comparison of authenticated facts, but are rather the mere airy fabrics which ingenuity and skill can sometimes build on the insecure foundation of a supposed law. I shall, however, pursue the inquiry with the hope of arriving at some further elucidation of the subject.

The author requires our assent to two distinct propositions:—

1st. "That, for every increase of cost the number of passengers will be diminished; and that the diminution of the number will be proportional to the augmentation of cost." And,

2ndly. "That it is proper to assume, that if the fare on the road between two important towns were reduced to *zero*, and the public were carried free of charge, the number of travellers would be represented by some constant quantity T; and, "that for every increase of 1 cent. in the charge, the number would be reduced some quantity represented by the co-efficient *t*," in the equation $T - b\,h\,t =$ number of passengers.

These two propositions are, however, irreconcileable with each other, as we shall presently see.

If we put F to designate the fare, N the number of passengers, *f* the *increase* of fare, and *n* the *decrease* in the number of passengers, we shall have by the 1st—$F : f :: N : n$; or $n = \frac{N f}{F}$

Now, by the 2nd, T is the number of passengers when *zero* is the fare; consequently, if we substitute them for N and F in the preceding, we obtain $n = \frac{T f}{o} =$ infinity; that is the *decrease* in the number of passengers consequent on increasing the fares from *zero* to *one cent.*, would be infinite. The number of passengers would, in this instance, be represented by T — infinity; a value *less than nothing*. Whereas, the author supposes, and we know, that it must be a positive quantity. This shows how irreconcileable with each other and with reason, are the two propositions to which our assent is required (*i*).

The author, proceeding on the supposition that $T - b\,h\,t$ is equal to the number of passengers, deduces the gross charge $b\,h = \frac{1}{2}\left(\frac{T}{t} + \hat{c}\,h\right)$; wherein $\frac{T}{t}$ is a constant quantity to be *readily* determined, experimentally, by noting the reduction in the number of passengers produced by any augmentation of fare.

It appears then, that by this process, we are to venture on the dangerous experiment of raising the fares, so as to ascertain the diminution in the number of passengers; and this merely for the purpose of obtaining the value of a certain constant $\frac{T}{t}$, upon the *erroneous supposition* of the existence of a certain law, when by the same experiment the *true* law itself can be readily determined, thereby wholly obviating the necessity of the constant $\frac{T}{t}$, or of the different formulæ contained in the essay. Such are among the palpable absurdities of which even distinguished talent may occasionally be guilty.

According to the author, "the only objection to his argument is the assumption, that the diminution of travel is proportional to the elevation of the charges on the line; a postulate which *cannot* be proved to be correct."

A little further on, he observes, that the bounds within which the charge can possibly range, are "not very well defined, it is true," but are sufficiently restricted to prevent material error; and that, "consequently, within these bounds it appears safe to *assume* that the *increase* or *decrease* of travel (not the travel) will be proportional to the elevation or depression of the charge."

By the author's own showing, then, the law of travel is to be assumed only within certain limits, not easily defined. The author here states, that the increase will be proportional to the elevation of charge; exactly the reverse of what was previously announced. I shall, therefore, suppose it to be a mistake, and read the *increase* or *decrease* of travel will be proportional to the *depression* or *elevation* of the charge. But this law is precisely what was denounced in the preceding paragraph of the essay, as "a postulate which cannot be proved to be correct." What then can the author possibly mean, by assuming in one place that to be a law, which in another part he characterises as incapable of proof? It is mere idle scribbling unless he take pains to define the ideas which he wishes to impress on the mind of the reader. Without precise and definite ideas and expressions, truth, which is the sole object of mathematical investigation, can never be attained.

After a scientific investigation of the problem—the most advantageous fare—the final conclusions which the author arrives at, are as follow: that within certain vaguely defined limits, the law governing the increase or decrease of travel may be *assumed*—that upon this assumption the value of the constant $\frac{T}{t} = H$, is to be computed; and, that the computation of the value of the constant is to be effected by having recourse to the *experiment* of increasing or lowering the charges on the railway.

I ask you, Sir, as the editor of a scientific journal, if this be science; or does it deserve the name? If the subject, from its peculiar nature, were incapable of mathematical demonstration, why give us the benefit of an *ad captandum* display of algebraic symbols? If, on the other hand, the question be susceptible of rigourous mathematical investigation, how has the author accomplished his self-imposed task? He has left the matter wrapped up in precisely the same state of doubt and obscurity as at the commencement of the inquiry.

In investigating the second and, according to the author, more important problem, of determining the amount of fare to be paid by passengers who are brought to the main line by its tributaries, the same fatal objections prevail against the assumption upon which the whole subsequent mathematical process is founded. As in the preceding question, T represents the number of passengers supposed to travel at fares equal to zero, and the co-efficient *t* indicates the diminution in the number of passengers consequent on raising the fares an unit. Though the several mathematical steps of the investigation are in themselves correctly deduced from each other; yet, in the final equation expressing the gross charge $b'\,h = \frac{1}{2}\left(\frac{T}{t} + 2\,h\,\hat{c}\right)$ the constant $\frac{T}{t}$ again occurs; and the erroneous manner in which its value is to be computed, altogether precludes the possibility of deriving more satisfactory conclusions from these investigations than from the preceding.

The next announcement we meet with is, "that the loss increases as the square of the departure from the charge which corresponds with the maximum value." But this is in reality nothing more than a property or function of the general law which, I have already shown was assumed upon insufficient and erroneous authority; and, therefore, like that assumed law, falls to the ground (*j*).

The author in prosecuting the inquiry, transforms the equation representing the profit into $C\,h = \frac{\pi}{3} + f\,h - \frac{\hat{c}\,h}{3}$; in which he candidly admits, that he neither knows the value of $f\,h$, nor whether it be a positive quantity, nor any thing else about it: he, nevertheless, for the purpose of reducing the equation into the simpler form $\frac{\pi}{3} = C\,h$, considers the second and third terms as cancelling each other; and hence, the final expression becomes $\frac{\pi}{3} + \delta\,h = C'\,h$, the gross charge for conveyance. This equation is then expressed at length in words, thus "add to the constant quantity which experience dictates for the profit per passenger, the actual cost of his transportation, to obtain the gross charge of his conveyance."

I might here comment on the impropriety of embodying terms in the original equation, to be afterwards discarded as of too trifling a value to affect the result; but I shall pass on to the very sage conclusion at which the author, after the preceding elaborate calculations, arrives that the profit per passenger must be ascertained by experiment; or, in fact, that the most advantageous fare—the problem to be solved—must be determined by experiment, and by experiment only (*k*).

In what other light then, can we view the essay, than as a decided failure? Had the author attempted the subject in his closet, and arrived at no better conclusion, it would have been only one of the many failures that precede discovery, in the investigation of hidden truths, and though extremely mortifying, would have entailed no dishonour whatever, but would rather have given fresh proofs of ability and skill in scientific research, not the less so, because unsuccessful. But in the present instance, the author has not only failed in the object he set out with, but he has thought proper to publish that failure to the whole world. Nor can the ingenuity and skill displayed, exempt him the less from censure, for attempting, upon the assumption that the world holds *omne ignotum pro magnifico*, to pass off as an adequate solution of the problem, a production which he must himself have known to be wholly unsatisfactory and inconclusive. The author's admission "that there are plausible objections to the process" of investigation, and that the paper "may not possess all the accuracy that is sometimes attainable in similar researches" is however from its candour, sufficient to disharm criticism of her sting.

I trust Sir, that my observations on the essay in question, will not be viewed by you, or by your readers, in any other light, than as the effect of a desire for the discovery and propagation of truth, and the consequent detection and exposition of error. Whatever may be the popular standard of scientific truth beyond the Atlantic, let us, fellow countrymen of the illustrious Bacon and the immortal Newton, not be content with any less rigorous process in the investigation of truth, than the inductive philosophy affords. Let us collect and combine authenticated facts, induce first principles from a careful comparison of those facts—and, upon that secure and lasting foundation, rear up an orderly superstructure of unerring laws (*l*).

I remain Sir, your obedient servant,

C. E. BERNARD, C.E.

NOTES ON THE PRECEDING PAPER—BY THE EDITOR.

If Mr. Ellet were resident in England, we should leave the defence of his paper to himself, perfectly satisfied that in so doing we should not only be giving him fair play, but should most effectually promote the elucidation of the subject. Under the circumstances, however, we deem it not improper to make such remarks on Mr. Bernard's critique as may tend in our judgment at once to further the discovery of the truth, and to set Mr. Ellet's paper in a just and proper light—leaning, perhaps, as in fairness bound, rather to the side of the absent. We have marked the portions of Mr. Bernard's letter, to which the following notes apply by the letters, *a*, *b*, &c.

Digitized by Google

(*a*). This remark is not strictly correct. If Mr. Ellet be right, it would follow that on the Company effecting a reduction in the expense of carrying each passenger, they would promote their own interest by employing half the saving in reducing the fares; for you will gain more in those you admit, than you lose by lowering the fare to those who would go without the reduction. If, on the contrary, the expense of conveyance were increased, it would be necessary to add half the increase to the fares, or you will admit more than it is to your profit to carry at the new cost. This does not follow from the apparently equivalent, and certainly not profound, proposition—"add a profit to the whole cost, and you will get something."

(*b*.) There is much truth in this remark, but it seems to require some qualification. The quantity $\frac{1}{t}$ found in the equation which expresses the fare to be charged, gives in fact not a sum, but a number of persons, and that a number to be obtained by reasoning on the results of the experiment directed. In this state the result is not applicable to the fixing of a fare at all, and its use seems to be limited to showing, that in a given state of society the most profitable fare varies, as we have stated above, with the *half* of the expense of working, and not with the *entire* expense; the remaining part of the fare being constant. Afterwards it is shown that it follows from Mr. Ellet's fundamental supposition that the constant part of this equation is in money the half of the highest fare which would be charged. Suppose this highest fare known and substituted for $\frac{1}{t}$, we should have, according to Mr. Ellet, the most profitable fare. If, however, it be not known, the result shows that with a given cost of conveyance, but a varying state of society, the most profitable fare varies with the half of the general tendency in the population to become passengers, as judged of by the highest fare which could be exacted. We certainly think that Mr. Ellet has done good service, in thus reducing the question, even on hypothetical grounds, to a shape and dimensions in which it may be examined with some chance of eventually finding the truth. In the meantime, we not only admit, but are anxious to call attention to, the fact—that they are hypothetical, and probably erroneous, grounds on which he has done it—as well as that there is some degree of incompleteness in his results.

(*c*). Not exactly so. In the then present state of the argument, all it was necessary, or even proper to show, was the existence of such a limit, and the consequences of its existence; *where* it might ultimately be found was another matter. The case is just like that of inserting the unknown quantity in an algebraic equation.

(*d*). Here Mr. Ellet has not expressed his meaning very clearly; or what is more probable, he refers mentally to what he has already said in his former treatise, which, as is the case with our correspondent, we have not yet seen. Perhaps, however, the argument will be found intelligible, and applicable, if we express it thus: "If we knew the law by which prices and variations of price affect the consumption of each description of goods we could tell how to avoid injuring ourselves by the charges we make for carrying those goods. We would charge only so as not to check consumption without bringing us a more than equivalent revenue from what under our rate did continue to pass. Now, these data we *can* obtain, and we can apply the information to each description of goods, according to the appropriate rules; but in the case of passengers, no inquiry will obtain for us this information—we must proceed on supposition, and the simplest is that of equal portions of the community being excluded by equal increments of fare. If this be not quite correct, probably it is so within the limits of the practical application of the resulting equations."

(*e*). Mr. Ellet seems to mean, that if one class be taken as the average of the whole, on the supposition that all were going alike to a certain distance, it is not unlikely that another class would be found to be the average class if all were alike going to a different distance. Nothing is more probable than this: for the fare is only one item in the mixed considerations which eventually determine a person to travel. The wealthy can better spare the time for long journeys, and the enterprising and busy must take them; the poor besides paying the fare, make greater proportionate sacrifices in the value of their time, and other expenses, and their connections are seldom scattered so widely as are those of their richer neighbours. There is, therefore, some likelihood that for long journies the average class is higher than for short ones, especially as there is little probability of low fares, inducing the very rich to take many more short journeys than they would otherwise do.

(*f*). The manner in which this result comes out, and the circumstances under which it is to be used, make here all the difference between the obvious and the sought for. After showing that the charge to the passenger varies in some cases as one-half, and in others as two-thirds of the cost of conveying him, Mr. Ellet goes on to say that when you have so far corrected your tariffs as to have come near to the truth, the rigorous application of the formulæ is not of importance. Under such circumstances you will have learned already what is the sum you may safely take for profit, and for small variations in the cost of transit you may continue to use that sum; but you must not go far from this point without resorting to the more correct mode of calculation—if you do you will suffer for it. If there be anything like parity of expense of transit in England and America, the instance given by Mr. Ellet, although but an instance, shows that he has a very different notion of the amount of the most profitable fare from that which prevails here. The fare for 500 miles on his supposition amounts to but 2*l*. We are, we presume, very far yet from the point at which he would say, small variations are of little consequence, and therefore you need not trouble yourselves with exact reckonings.

(*g*). It is quite true, and must be carefully borne in mind, that the law on which the whole calculation is based is a supposition, not a set of observed facts. It is very probable also, that in the end it will turn out to be an incorrect supposition, and that the whole theory must be hereafter re-constructed upon the facts hereafter ascertained; and yet, we think Mr. Ellet has done well in taking this course, for he has thus brought the subject into a shape in which facts can be compared with a theory, and therefore easily compared with each other so as to facilitate the finding of the truth at last; in so doing he has followed strictly philosophical example. Scarcely any general truth has been discovered but through the comparison of many facts with an hypothetical theory, and with each other. So long as the hypothesis is suffered to take rank only as an hypothesis, there is no more powerful help to investigation existing.

(*h*). The proposition sought is really not that of the number of persons in each class, but that of the number of journeys, or rather of miles, travelled over by each class. This distinction Mr. Ellet has not pointed out, though it would do something towards rendering his assumption more probable. After all, however, it is of the utmost importance to have a better basis for these investigations than mere assumption, however useful or however probable it may be. It is only to the experience of the railways at work, carefully collected and accurately compared, that we can look for such a basis.

(*i*). Mr. Ellet observes, that his equation can never be applied at the extreme limits, one of which limits is the supposition here made. Mr. E. is in this only doing what is constantly done in such inquiries. Mr. Bernard, we doubt not, is perfectly familiar with the fact that, within certain limits, properties may be assumed for curves, so as to render possible investigations which would scarcely otherwise be effected; and that these assumed properties, while they lead nearly to the truth within those limits, would lead only to absurdity much beyond them.

(*j*). If Mr. Ellet's paper had done no more than call attention to the fact, that there is a fare corresponding to the greatest profit, and that the loss increases much more rapidly than the departure from it, whether the departure be above or below it, he would have "done the state some service." The *exact* law is at present of little importance.

(*k*). The quantity $f\,h$ merely represents the extent, if it were known, to which the true fares are affected by the fact that the very richest class of travellers could and would pay almost any sum that might be asked of them. In his attempt to simplify the result for use when near the truth, Mr. Ellet sets this against the one-third of the cost of conveyance which enters into the same equation. It is in this case, on Mr. Ellet's supposition, enough to know that such a quantity exists, and is of a kind contrary to cost.

(*l*). Mr. Bernard's estimate of the value of the paper now under review we still think is much too low, and we are disposed to dissent still more strongly from his observations on Mr. Ellet's conduct in publishing it. We agree heartily with him, however, in calling for further research, believing that much, very much, remains to be done, and may be done, to the great advantage alike of the public and the proprietaries. We shall gladly receive the result of Mr. Bernard's further labours; and, thanks to the present state of marine locomotion, there is no likelihood of Mr. Ellet's additional remarks—if he favour us with them—being out of date. For ourselves, neither our columns nor our labours, shall be wanting to the discussion of this momentous question.

NEWCASTLE AND NORTH SHIELDS RAILWAY.—The Directors of the Newcastle and North Shields Railway seem determined to bring Tynemouth and Newcastle as near to each other as Newcastle and Gateshead—(measuring the distance by the time of transit). There are to be "mail-trains," which will run five times a day in each direction; and by this new arrangement of the Directors, persons will be whisked from Newcastle to North Shields in 12 minutes, and to Tynemouth in 25!—*Hull Advertiser.*

Digitized by Google

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—I am much pleased with your correspondent, "A Bona-Fide Holder's" suggestion that if Messrs. Stephenson and Gooch continue to act as Engineers on the Manchester and Leeds line, stringent measures ought to be taken to prevent a repetition on the branch lines of the enormous excess incurred in constructing *the main line*. Our Directors state that the branches will cost 310,000*l.*; if the actual cost should turn out to be just double the original estimate, or 620,000*l.* (as has been the case in the *cost of the main line,*) it is evident that the branches will never pay; for *even gold*, Mr. Editor, may be purchased at too high a price!

Goods are now carried by the Manchester and Leeds Company from Manchester to Hull for 10s. per ton!!! The distance is nearly 100 miles. Now, Mr. Editor, on the Liverpool and Manchester Railway the charge is the same per ton, although the distance is only 31 miles—and the general impression is that that line derives no profit whatever from the goods traffic—if it be so, how enormous must be the loss incurred by the Manchester and Leeds Railway Company in conveying goods to Hull at 10s. per ton? Two months ago they charged 30s. per ton; the reduction has been caused by the competition with the carriers by canal to Hull. The Leeds Board of Directors are rather deficient *in tact*, or they might surely come to an arrangement with the Canal Companies, by which this ruinous competition might be put an end to, while at the same time the public were well served. But, Mr. Editor, the Leeds Board has all along been fond of carrying things with a high hand—they have swept away *at an enormous cost* the opposition their haughty bearing had aroused—so at least it is whispered in Lancashire—and for my part I believe it is so. A great deal has been said about the admirable management of the Leeds Board!!—even you, Mr. Editor, have lent your voice to swell the general approbation. Now, I for one, incline to judge of a general's abilities and genius by the result of his campaigns, and unless our Directors manage to work the Leeds line to a profit, I shall feel little inclination to award them praise. There have been difficulties to overcome, I confess; but at what cost has this been accomplished? Why, at the enormous cost of 58,000*l.* per mile!! "Another such victory, and we are undone."

I am glad to be able to inform your readers, that our Directors contemplate a reduction in the fares *throughout* from Manchester to Leeds. This is well, so far as it goes; but they ought also to reduce the fares from Manchester to Huddersfield, and from Leeds to Huddersfield; the route by railway is in both cases so circuitous, that all the coaches continue to run *at lower fares*, and in about the same time as the railway!! The distance from Manchester to Huddersfield is 7 miles more by railway than it is to Halifax—by the coach road it is 3 miles less, and yet, Mr. Editor, our Directors charge, I believe, a uniform rate *per mile by railway* to both places!! Can it then be wondered at that the Halifax coaches have all discontinued running while the Huddersfield coaches are still on the road? Possibly our Directors have taken powers in the Act obtained this session to remedy all this—if they have not, they have been grossly negligent of the interests of the shareholders.

As respects a dividend, Mr. Editor, I beg to inform your readers that our Directors intend dividing *five per cent.* for the current year!! This I have on good authority; 31,000*l.* has been netted by the partial working of the line during the 18 months preceding 1841—and but for that circumstance the dividend would have been only 2½ per cent.!! Our Directors evidently count upon a great increase in the traffic receipts in 1842, to enable them to continue to divide 5 per cent.—and they are right, I think. To do them justice, I beg to state that they *all* continue to hold firmly *all* their shares; one of them (a cannie Scot too, *mirabile dictu!*) holds 1,000 shares—the fall on which, since September last, amounts to just 39,000*l.*! Our Directors hold one-fifth of the entire shares; the decline in market value of their property during the last eight months is no less than 200,000*l.*—punishment sufficient, Mr. Editor, for any gross mismanagement, and a good security for amendment!! Our Directors ought to spare no expense in conveying passengers *free by omnibus* from Bradford and Huddersfield to the nearest stations on the railway—they ought in fact never to rest satisfied till all the coaches discontinue running. How else are they to net a 5 per cent. dividend on a line costing three millions, or three millions and a-half?

Your correspondent may keep his mind easy as to the Heywood branch—it is to cost only about 10,000*l.* The population is about 20,000, and there are a great many factories in the town. As respects the Oldham and Halifax branches and the extension line to Hunt's Bank, in Manchester, I have examined the line of country, and I can assure your readers that the works are of the nature termed "gigantic." Let our Board beware of excess in the cost! the patience of the shareholders is nearly exhausted. Let them pause also ere they incur any expense in forwarding a line to Burnley or Bradford—they have quite sufficient in hand already.

In conclusion, Mr. Editor, allow me to inform your readers, that it is said in Manchester, that "the knowing ones" are *quietly* buying up all the Manchester and Leeds shares that come into the market at 20*l.* discount. Let not the distant shareholders be too much alarmed. In Manchester, the general opinion seems to be that the shares are now rather below their real value, and that nothing but the grossest mismanagement (*if even that*) can prevent the line ultimately turning out an excellent investment. For myself, I am *a holder on investment*, and in the foregoing remarks, I have no other object in view than the welfare of our line.

I am, Sir, your obedient servant,
A MANCHESTER MAN.

RAILWAY EXCURSIONS—LOW FARES.

To the Editor of the Railway Times.

SIR,—At this season of the year, when the masses are "making ready" or are "on the move" for their summer parties (and joy be with them!), perhaps I shall not be considered out of place in offering a few stray thoughts to the readers of the *Railway Times*, on the subject of railway excursions. The excellent remarks (editorial and otherwise) which have from time to time appeared in your paper, are such as must have convinced the careful reader how unwise—aye, how unjust—a thing it is to fix the charges for travelling by railway at a high rate; and, without entering at all into the question of profit or loss to proprietors—leaving that to be discussed by others "able and willing"—I venture simply to record my strong conviction that railway fares *must* be too high, and railway management altogether of too restrictive a character, when they offer not such inducements and afford not such facilities for the working population to travel, as it is in their power to accept; and to this strong conviction shall I ever adhere, whether proprietors' profits be more or less than originally anticipated. There does not at present exist one line leading out of London—"great and still increasing" London—that affords such inducements and facilities to the working population, and I consider, therefore, I am well warranted in saying that the railway system, so far as they are concerned in this particular, is worth nothing. Gainers, no doubt, by the substitution of railways for the old horse coach competition system, are all those who do not claim to belong to the strictly operative class. The mercantile community for instance—they have secured about double speed, punctuality, exemption from fees and gratuities, &c., and *perhaps*, in a long journey, a saving of a shilling or two in the fare; but, why should not *we* be gainers too? Why should not we be allowed to be *excursion-gainers* at least, and contributors to the support of the railways? It occurs to me, moreover, that we rather lose opportunities than gain them; for in the old system, to which railways have nearly put an end, the fares were not always at one *fixed* standard—they varied from high to low according as monopoly or competition operated upon them (though, I believe, *upon the whole*, they were not higher than the railway fares are now). There were times, then, that the industrious and well-doing amongst us were tempted to start out from our usual close confinement, and to take to ourselves the luxury of a change of scene and a change of air—of inhaling the sweet and cheering country breeze—the operation of competition enabling us (though, may be, *at a pinch*) to compass the charges. But what great things, Sir, were we led to expect when the triumph of the new system was pronounced a certainty? Why, we gladly anticipated, and were assured, that an opportunity would be given to increase the frequency of our excursions, and that thousands of those amongst us who before could not, would now be enabled to enjoy their trip of friendship or their journey of pleasure, in consequence, first, of the adoption by Railway Companies of a fixed and lower standard of fares than had previously existed, and, second, by a saving of our time. Unfortunately for us, however, this is not the case—the hope is blighted. There are no such inducements held out to us to use railways—we are either forgotten, or our *patronage* is despised. Two shillings, Mr. Editor, to Harrow, *from Euston-square*, nearly or about a half a day's wages for a half an hour's ride, is a most complete and efficient prohibition; and a state of things which, *I* humbly submit, loudly calls for immediate "Reform." While, as now, the means of cheap and *speedy* conveyance and accommodation are not provided at all times, in all seasons, and directions, as will enable the operative population to take occasional excursions, and to enjoy their just share in the wonderful improvements and discoveries of the age, which have been brought into operation as much (or more) through their instrumentality as through that of any other class, I have no hesitation in saying that the railway system has decidedly failed to answer the fond expectations formed of it by the public at large, and that the fault is not with the railways, but with the railway managements.

Thanking you, Sir, for your able interest in this behalf, and for the admission into your pages of communications upon this very important question, and begging your acceptance of this,

I am, Sir, respectfully,
W. L.

London, May 31, 1841.

RAILWAYS IN SCOTLAND.—At the recent spring meeting of the Commissioners of Supply for Perthshire, Sir John S. Richardson of Pittfour introduced the subject of the contemplated main line of railway from London to the North of Scotland. That line had been fixed under the sanction of Government, so far as Edinburgh, and means were now in progress for its continuance the length of Perth. The Northern Counties were also engaged in the preliminaries necessary for its extension as far as as Inverness, and Sir John considered this county had a great and direct interest in co-operating with them for that object. He concluded by moving "that the county of Perth agree to join the town council of Inverness, in their application to Government for a survey of the best trunk line of railway communication to the North of Scotland, in connection with the great line from London to Scotland. Mr. Colquhoun of Clathick seconded the resolution, which was unanimously adopted. Mr. Smith of Deanston Works thought this a proper opportunity to mention as to the progress of the junction line from the Edinburgh and Glasgow Railway to Stirling. He was happy to say that the matter was in a forward state, and that the flying survey from Stirling northward to Perth was also well advanced, and that, so far, the opinion of the engineers was highly satisfactory regarding the practicability of the undertaking, and the facilities the district presented for the formation of a railway.—*Dundee Courier.*

1. Toll to London and Birmingham 138*l.* 9s. 10d., to be deducted from gross receipts. The receipts are exclusive of those for the mails.

2. The receipts are exclusive of those for the mails.

3. Receipts include the Northern and Eastern toll, &c.

4. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

8. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.*

10. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet.

12. The 27*l.* 4s. 1d. from goods, &c. is for toll only.

13. Ten per cent. is the maximum dividend allowed by the Company's Act.

14. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

17. The capital of 741,800*l.* includes the new capital for London and Brighton station.

18. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

19. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

21. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

22. The 3,325*l.* 2s. 11d. are the receipts after deducting the toll to the North Midland Company.

23. The receipts for goods, &c. include, carriages, 40*l.* 6s. 6d.; horses, 52*l.* 1s. 0d.; dogs, 3*l.* 1s. 0d.; parcels, 216*l.* 0s. 10d.; cattle, 38*l.* 15s. 0d.; corn, 21*l.* 7s. 7d.; heavy goods, 427*l.* 13s. 6d.; coal, 53*l.* 10s. 3d.—Total, 852*l.* 15s. 8d.

25. Including 124*l.* 1s. 0d., Manchester and Leeds traffic for the last week.

26. The receipts stated are after deduction of Liverpool and Manchester toll.

27. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

28. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

31. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

The Eastern Counties' Criminal Prosecution.—*It is no fault of ours that the Company do not more to make their Rule absolute. We are ready for them. Perhaps they desire that next Tuesday's meeting should first pass over. If so they judge shrewdly of the event.*

The pamphlet of Mr. H (Bristol) *discloses a case of apparently gross iniquity, but we must take time to make a few inquiries.*

A Chippenham Reader *requests us to state that it was not the Chippenham Corporation, as intimated in our last, which gave the entertainment to the Great Western Directors, on the extension of the line to that place, but the people of the town and neighbourhood at large who entered into a subscription for the purpose.*

W. H. *on High and Low Fires in our next.*

Sir Robert Peel, *we are informed, made the observation which we quoted in our last, in reference to Joint Stock Companies generally, and not to Railway Companies in particular.*

The Bolton and Leigh Railway *is let to a Mr. Hargreaves, who receives the whole of the tolls and pays the Company a certain fixed sum as rent, and this is one reason why no returns of the traffic of this line are made public. The Lessee conceives that the account is a matter which affects his individual and private interests alone. Another, and perhaps a better reason is, that the traffic on the Bolton and Leigh Railway is so mixed up with Mr. Hargreaves' general business as a carrier upon canals and other railways, that he has always found himself totally unable to define the amount of receipts for traffic upon goods fairly attaching to this particular line. We beg to thank the Directors and Mr. H. for their obliging attention to our inquiries.*

Manchester and Bury Canal and Railway.—*The Return of the Company for the week ending 30th May, which came to hand too late for insertion last week, gives—For passengers and parcels £400 11s. 10d.; goods and coals, £296 3s. 7d.*

We are obliged to C. B. *Winchester) for pointing out the mistake as to the "corresponding week," which he will find has been corrected.*

THE RAILWAY TIMES.

SATURDAY, JUNE 5, 1841.

THE present week has witnessed a great movement of the Railway System in the West of England. On Monday last, agreeably to announcement, the Great Western Railway was further opened up to Chippenham, which is only 13 miles distant from Bath; and on the same day the Cheltenham branch was opened as far as Cirencester, 15 miles from Cheltenham. Seven trains each way have since commenced running daily between London and Bristol (excepting only the distance between Chippenham and Bath, which for a few weeks longer must be performed by horse power) and London and Cirencester. Bristol, once a long day's journey from the metropolis, can now be reached by the fast trains within five hours; Cheltenham in about the same time. The Bristol and Exeter Railway, which is destined to extend the chain of communication still further westward, is also as far as Bridgewater, a distance of 32½ miles, nearly quite ready for public traffic. On Tuesday the Directors and a large body of the proprietors took an experimental trip to Bridgewater (a very full and interesting account of which will be found in another part of our paper of to-day), and the line was everywhere found to be in a most excellent working condition. The only thing which stops the opening to the public for a few days longer is the completion of the necessary arrangements for the intercommunication with the Great Western at Temple Meads (Bristol.)

We are glad to learn that the immense benefits which these ramifications of the railway system are about to confer on the Western Counties' begins to b fully appreciated by the inhabitants. "It seems," says a correspondent, who accompanied the opening train to Chippenham, and also the experimental train to Bridgwater, "as if a whole people had turned out to give joyous and grateful welcome to some hero of a hundred fights, or other equally great national benefactor. Nothing could be more gratifying or satisfactory than the reception which we every where experienced."

WE have been favoured by Mr. YOUNG, the intelligent Secretary of the Croydon Railway, with the following comparative view of the traffic on that line during the three first days of Whitsun week in the last and present years:—

LONDON AND CROYDON RAILWAY.

Comparative Statement of Passenger Traffic, to and from New Cross Station, (London traffic NOT *included,) on Whit-Sunday, Monday, and Tuesday,* 1840 *and* 1841.

Year 1840.

Passengers—First class, 63; second class, 2,057½; third class, *nil.*—Total, 2,120½.

Receipts—First class, £3 18s.; second class, £66 11s.; third class, *nil.*—Total, £70 9s. Deduct Government duty, £6 14s.; leaving net amount, £63 14s.

Year 1841.

Passengers—First class, 124; second class, 1,727; third class, 1,153½.—Total, 3,004½.

Receipts—First class, £5 18s. 4d.; second class, £59 4s. 2½d.; third class, £27 11s. 8d.—Total, £92 14s. 2½d. Deduct Government duty, £9 1s. 1d.; leaving the net amount, £83 13s. 1½.

Comparative Statement of Passenger Traffic, from ALL *the Stations, on the above three days,* 1840 *and* 1841.

1840.

Total No. of passengers and amount received	10,683½	£524	19 6
Deduct toll to Greenwich Railway	£97 9 3		
Ditto duty	31 5 2½		
		128	14 5½
Net amount		396	5 0½

1841.

Total No. of passengers and amount received	9,315½	£480	16 6
Deduct toll to Greenwich Railway	£67 13 7½		
Ditto duty	26 11 2½		
		94	4 10
Net amount		£386	11 8

The trains in the latter period were about one-half of those in the former.

Accountant's Office, June 4, 1841.

To bring out the importance of this statement it is necessary to explain that for some distance from the London terminus the Croydon Company uses the Greenwich line, and in consequence of the high toll required for its use they have during this year raised the fares of the passengers they carry over it: but that the New Cross station is beyond the point at which they depart from the Greenwich line, and the fares beyond the point of separation have not been raised. It will be observed, too, that during this year third-class carriages have been brought into use.

It appears that in the present year there were carried to and from the New Cross station, excluding the London traffic, 800 passengers more than during the same three days of last year; chiefly, it seems, in consequence of the facilities afforded by the addition of third-class carriages to passengers to whom the fare is an object; the increase of receipts, after deducting the Government duty, amounted to about 20*l.*, against which we presume there is nothing to set but the wear and tear of the additional carriages for the three days. A clearer proof of the importance to Railway Companies of taking such measures as shall bring their means of locomotion within the reach of the working, and the inclinations of the money-saving classes, it would be difficult to conceive.

But we find no such result on the total traffic of the Company; and simply because the effect of the Greenwich toll neutralizes that of the improved arrangements. The number of passengers carried during this year, instead of increasing from 10,650 to 12 or 13,000, as in all probability it would have done after the manner of the New Cross traffic, has fallen off to 9,315, and the gross receipts, instead of increasing to more than 600*l.*, have diminished from 524*l.* 19s. 6d. to 480*l.* 16s. 6d. It seems, however, that the Croydon Company suffer only the loss of the increase of receipt they ought to have had: while in comparison with last year, the Government goes short of some 4*l.* or 5*l.*, and the main positive loss to the amount of near 30*l.* falls upon the right parties—the miscalculating Greenwich. If after this evident proof of mistake, they choose to go on in the same course, we can only be sorry they will not suffer alone.

We have given prominence to this statement for the sake of the remarkable illustration it furnishes of the truth and importance of the principles for which we have of late been contending. We can see nothing which invalidates the comparison, and are therefore compelled to conclude that the reason why the entire Croydon traffic did not show the same increase of passengers, and the same increase of profit to the proprietors, and advantage to the public as those exhibited by one portion of it is just this—that where the Croydon Company have had the entire controul, the traffic has been so conducted as to reach downwards to classes of the community who were heretofore excluded from it, and where the Greenwich high notions have prevailed, the line has been placed beyond the reach of many who heretofore used it.

We take this opportunity of recommending to the special attention of the Greenwich proprietary another excellent letter, which "Expositor" has addressed to them in our present number.

THE Eastern Counties' Railway Company are to hold a Special General Meeting on Tuesday next, "*to authorise* the Directors of the Company to raise by loan the sum of 100,000*l.* under the powers of an Act passed in the present Session of Parliament enabling the Company to raise that sum, and *to authorise* the Directors to issue such debentures, bonds, or other securities for the money to be raised as they shall think fit." Although the advertisement calling the shareholders together, thus announces so positively what they are to do when they meet—"to authorise" the borrowing of the money on any terms for which it can be had—instead of saying, as is usual with the notices of Companies blessed with *Directors* only and not *Dictators*, that they are to meet "*to consider* the propriety" of giving such authority—we do trust the shareholders will pause a little and consider well, before they do the bidding of their masters in this instance, or take any more leaps in the dark.

Digitized by Google

Two or three points there are which common prudence dictates, should be first of all satisfactorily cleared up, before the authority asked for is granted. How is the 100,000*l.* proposed to be raised meant to be applied? To the forwarding of the works, or to the liquidation of existing debts and liabilities? How much of it, if any, is bespoke by the London and Westminster Bank? How much is to go to Lord PETRE, Mr. LABOUCHERE, and other cormorants of their class? How much to contractors for balances owing? How much to the Solicitors on account of their enormous bills of costs? When the shareholders have obtained answers to these questions, they will then be able to tell pretty nearly, how their capital account at present stands (as to which we suspect them to be in general most profoundly ignorant), and how far the 100,000*l.* will go towards improving their condition.

Again, what measures (if any) have been taken to secure a due economy in the expenditure of the 100,000*l.*, or such portion of it as, after paying off existing debts, may remain applicable to the furtherance of the works? Have all extravagant salaries been reduced? All useless supernumeraries been dismissed! All scandalous allowances (six-guinea included) been surrendered? Or is money to be once more borrowed, at a prodigious sacrifice (for on no other terms can it be expected to be raised), to provide "pretty pickings" for an over-numerous, a voracious, and an unscrupulous executive?

The Company are now very near the end of their tether; not many more thousands (*hundreds of thousands* are out of the question) can they hope to raise in any way; and if they do not wish to find themselves some fine morning soon, stuck irretrievably fast, with the Brentwood tunnel not cut through, and all beyond it, everywhere begun but nowhere finished, they will make it their immediate business to ascertain, by what measures of retrenchment and reform, the little that is left can be turned to the best possible account, and not separate without making secure provision for the carrying of these measures into effect.

Finally, before they do authorise their Directors to go into the market with debentures and bonds to sell for what they will fetch, we recommend to them to provide some other fund *than the capital itself* intended to be raised, out of which to pay the interest upon it. Shareholders may, in the desperate hope of saving what they have already sunk, be induced to lend money on so foolish a venture; but it would be idle to expect that any considerable number of persons from amongst the general public—free to invest their spare cash where they please, and having so many better securities to pick and choose from—will do anything of the sort. It is now clear that the line, so far as it is opened, does not pay, but that, on the contrary, it has been and continues to be worked at a constant loss. The Directors themselves have denied on oath that they have ever represented that it was worked at a "considerable profit," and though they have omitted (accidentally, of course) to add whether it is worked at *any* profit at all, there is a "Voice from the East" which has made up for the omission in a way which places the fact of the loss beyond all possible doubt. We refer to the tabular statement given this week by our truth-speaking and obliging correspondent, "Q.," of the actual receipts of this Company for the ten weeks preceding the 16th of May last. At the same time it is equally clear that the loss arises solely on the Company's own proper traffic, and that were they to cease carrying altogether for the present—which is evidently the only prudent course left for them—*there would then be a clear revenue of considerable amount, out of which to pay interest on bonds and debentures.* The toll payable by the Northern and Eastern Company, for the mere liberty of passage on part of the Eastern Counties' line, yields now from 5,000*l.* to 7,500*l.* a year, and may be expected soon to yield much more. Nor would this be all the gain to the Company from abandoning their own carrying business for a time. For, the abandonment of the business would free the Company at once from all the heavy expense now attending it (a point rather overlooked by our friend "Q."), and leave in their pockets the present large excess of the expenditure over the receipts. No doubt it will be mortifying—very—to the pride and conceit of that arrogant clique, who, pretending to rush to the rescue of this unfortunate undertaking, have plunged it into all but hopeless ruin, to tell them to shut up shop; but things have come to a pass, when all personal considerations must give way to the common safety—*when, if the shareholders would save themselves, they must think and act for themselves.*

In two or three recent articles we have indicated to some extent the general principles in relation to which we think the proper rate of fares on railways should be discussed. Much, however, remains to be done; and if we pursue the subject with some pertinacity, and at the risk of some repetition, we trust we shall be justified by its immense importance and the necessity of exposing it to view in every light.

If a railway, after being once in operation, were to cease to be worked, it could only be because the current cost, whatever that cost might consist of, overbalanced, and hopelessly so, the current receipts. Nothing less than this would increase the loss already incurred: any degree of misfortune which fell short of that, would still leave a fragment of return which it were better not to throw away. The current cost of working is therefore the sole but concrete and indispensible item which constitutes one side of the comparison from which we deduce the amount of profit for the past, and the propriety of working for the future. The other side consists of the amount of receipt. This simple view of the matter, however, is not enough for our practical guidance, valuable as it may be in ridding us of plausible errors and in giving a true general direction to our further inquiries.

Since no traffic will long be carried on at less than prime cost, it might seem that it were easy to fix the least possible fare; not so, however. For the greater the traffic the less the cost per passenger; and reduction of the cost lowers the amount of the most profitable fare; and this, by again inducing a larger use of the railway, reduces again the cost per passenger—each fact being alternately a cause and an effect; and though they operate with diminished intensity at every change, yet they carry us, before they cease to act, far beyond the point at which we might suppose they would rest. Yet after all they do rest, and the resting point is determined by the amount to which, with all possible advantage, it is found practicable to reduce the cost.

Important, therefore, as the current cost is, considered simply as a deduction, out of receipts, to the prejudice of dividends, it is still more so, as the circumstance which fixes the limit to the use of the railway. In one point of view of great moment, we last week showed how this happens; we shall now suggest another view of it, to which perhaps sufficient attention has not been directed, and to which we shall probably advert more at large hereafter. The current cost not only limits the amount of persons *within* a given circuit who can avail themselves of the railway, but it limits the extent of the *circuit* itself, and therefore with double effect limits the entire amount of passenger traffic. If we suppose that travelling by other means (cost, time, and inconvenience taken together) is as undesirable for each mile as that by railway for any certain number of miles, it is clear that the extent of country from which passengers will come, measured in a direction *perpendicular* to that of the railway, will be increased as the railway fare is diminished; for the distance from which it is worth while to come to the railway, increases with the diminution of the cost, and consequently with that of the fares. Our present object only requires that we should point out the existence and importance of such a consideration, not its particular law or amount.

In every view, therefore, the current cost of the maintenance and working of the railway, is the fundamental consideration on which its prosperity is founded. What, then, are the items of which it consists? What are the means by which the Directors and officers of each railway may be satisfied that they are efficiently fulfilling the trust reposed in them in this particular? And what are the means by which the proprietaries may be satisfied that their property is well managed in a point thus vital to its welfare?

To bring within the compass of this article the several parts of the object we have in view, we shall answer these questions at present very briefly. In general terms, current cost is made up of whatever would cease to be expended if the railway ceased to be worked or cared for. Whatever is laid out with a view to future and continued use, if of an indestructible and undeteriorating nature, goes to the account of capital; if the article bought is to endure for years its cost is to be spread over those years: current repairs, whether of railway or machinery, belong to current yearly cost, except they be of enduring effect, and then they should be classed as directed above. Each of these subjects opens a large field for investigation, first, of its details, and secondly, of its general principles.

Nothing can satisfy either the Directors and officers of a railway, or its proprietors, that all is done that can be done, but a system of accounts which will furnish the means of comparing the charges of different parts of the same railway and those of different entire railways with each other. To this the utmost publicity of accounts is indispensable, and it is equally necessary that those accounts should be on a uniform plan. This once effected the energy and prudence of some, the rivalry of others, the science of engineers, and the practical tact and constant observation of workmen, would all contribute to a diminution of the cost without sacrifice of efficiency, and the experience of each line, nay, of each person, would be available for all.

If there be a person (we would fain hope there is not) hedged in and troubled with narrow views, who doubts the wisdom, or at least the advantage to himself, of such a publication of matters in which, perhaps, he is personally concerned, we ask him how is it that the Rail-

Digitized by Google

way System by which he is now himself profiting, has started so suddenly into large and energetic life? If the Liverpool and Manchester Company could and would have locked up from public knowledge, the numbers of passengers they carried and the speed they accomplished, of what avail in stimulating others would have been all their prodigious enterprise and vast success? By what right does he stand between any one of his fellow-proprietors and the share of that proprietor in their common affairs? On what pretence does he intercept the blessings to be derived from the free and cheap intercommunication of thousands of friends and kindred? Let him take warning that the cunning are often too cunning for themselves—that as the system on which he feeds owes its birth and stature to publicity, he may starve it, and himself along with it, by mystery and concealment; and if he can comprehend the counsel addressed to enlightened self-love in ancient times, by the wisest and most benevolent authority, let him remember that "the liberal deviseth liberal things; *and by liberal things shall he stand.*"

If, however, publicity and uniformity of accounts be so necessary to the right control of the cost of working, they are not less so to the ascertaining of the principles on which the fares should be regulated. It is now past dispute that railway fares may be much too high for profit, and the probability is, that they not only may be, but that in this country they commonly are so. The considerations, however, by which erroneous judgments on this subject can be corrected, are to be derived only from an extensive comparison of facts. We have borne our willing testimony to the value of Mr. Ehet's analytical labours, but we cannot too often or too strongly repeat the observation that they are founded on hypothesis merely. We must know much more of the law, according to which the amount of fare influences the number of travellers, before we can place the necessary reliance on any theoretical deductions.

Now each railway may separately suffer, *and very largely*, for want of this necessary knowledge, and probably no railway is capable of obtaining it from its own isolated and unassisted experience. But in the variety of incidents and of opinions, many different tariffs and modes of working will be projected and carried into practice. If these were duly published with their effects and circumstances—points of resemblance noted, and anomalous or extraneous ingredients eliminated—they would furnish the basis of a general law which would be available for the guidance and contribute to the prosperity of all. Without this indeed, railway interests rest in fact only on the chances of a clever guess.

To this end, however, it is necessary that the accounts should be not only faithful and published, but on a uniform system. We can imagine no objection to this arrangement, which could originate in motives its authors dare avow: nor do we suppose that even professional jealousy would offer, or that Directors would suffer it to offer effectually, any impediment to this great step in railway improvement. If the profession who have gained so much credit for the immense improvements in locomotion we now possess, count it worth any thing to maintain their vantage ground in public estimation, they will not merely suffer, but lead this inevitable movement.

In these remarks, as we have already intimated, we have had a particular object in view; and that is to deduce from a view of the principles on which the prosperity of railways depends, the necessity of *uniformity and publicity of railway accounts*. It, indeed, the interests of the proprietors were adverse to those of the public, we should reckon that we had been speaking to unwilling ears; some vague fear or undefinable jealousy might mar our hopes. But it is not so: that which will serve the public will serve the shareholders, and we cannot detect in this case the existence of a single honest interest which does not ask for the light of day. Quacks and jobbers fatten on mystery; there may be a few of these who will try to go on doing so; but we reckon too confidently on the moral qualities which are usually associated with genuine talent, to suppose, that the minds which have presided over the birth of this gigantic power, will ever suffer corruption to strangle it in its cradle.

Looking forward, therefore, to eventual and not very distant success, we shall call attention to the principles on which these accounts should be constructed; not that there is any lack of the needful talent already engaged, but that the subject may undergo the searching examination which is to be had no where but under the public eye. We hold it too for a sound maxim, that accounts to be good for anything must be intelligible to all, and we can conceive no better mode of making them so, than the submitting of their principles to vigorous and repeated discussion.

We have another reason too for this course. The passing under review of a system of accounts necessarily brings on that of the subject matter of account: here we shall therefore find the opportunity of discussing in their relative connection, many points of extreme moment which have hitherto been considered chiefly as independent facts. We speak not of doing all this of ourselves; our pride and our office will be to afford to the talent employed in these gigantic works and ambitious of public usefulness, a fair field for its honourable exercise, and for the rightful interests concerned, an open, and we trust effectual means, of improvement and defence.

The novel pleasure of railway holiday-making is strongly attracting the attention both of the public and of the managers of railways. We learn from the *Derby Mercury*, that a few days ago an immense special train brought a large crowd of visitors to that town from Sheffield. Forty-three carriages composed the train, which was drawn by three engines, and nearly all the carriages were well filled. To see the far-famed Derby Arboretum was the special object of the visit. A striking proof, how much the gifts of science mutually increase each others value. But for the Aboretum the railway might not have been thus used—and but for the railway the Aboretum might have been beyond the enjoyment of the Sheffielders. The jaunt which the science—and, let us add, the liberality of these extraordinary days—have thus made so easy of accomplishment, has, we make no doubt, been equally profitable to the railway, and to the travellers; to the one in a money point of view, and to the other in the pure and intellectual feast which it substituted for coarser and less laudable pleasures. That constant accompaniment of a railway trip "a good band" was not wanting, and banners also graced the show.

The Birmingham mechanics, it seems, are not to be outdone by their Gloucester friends. They return the visit next month. It is expected that the train will be a very large one; and, we doubt not, the reception and treatment at Gloucester will be worthy of the occasion.

The Cheltenham disciples of temperance, whose intended trip to Birmingham on Whit-Monday, we noticed in our last, assembled in great force on the occasion. Their "gathering" is thus described in the *Cheltenham Journal*:—

"The long-pledge Rechabites, and short-pledge Teetotalers of Cheltenham and its neighbourhood, were summoned "by beat of drum and sound of trumpet," to repair to the Temperance Hall at five o'clock this morning, and from thence marched in procession, headed by the Teetotal band, to the railway station, the Rechabites wearing the regular sash of the order, and the Teetotalers medals and rosettes, where, to the number of 800, they embarked in first, second, and third class carriages, for Birmingham, to breakfast with numerous other friends to the cause in the magnificent Town Hall. The idea of a party of 800 going 80 miles to breakfast, and all by the same conveyance, would have astonished our forefathers, but in this age of invention and improvement such an event ceases to be a matter for wonder. It is the intention of the party to visit the Botanical Gardens, and other places of public amusement, during the day, and return to Cheltenham at six o'clock this evening."

The Directors of the Hull and Selby Railway have met the prevailing wish in another way. To give their neighbours an opportunity of spending their holidays agreeably, they offered to convey them to York, Leeds, and Manchester, and bring them back, for a single fare only. We understand that many availed themselves of this liberal arrangement; it would be interesting and useful to know exactly how much it increased the traffic.

It is hardly possible to anticipate how great may be the change in the habits of our working neighbours from this change in their modes of spending their leisure. Even the thoughts employed in anticipating such enjoyments exert a powerful influence on the character, to say nothing of the edifying effects of recollection. We are glad to observe that not a single object is proposed for these excursions, of an immoral or even of a doubtful kind.

—o—

The Northern and Eastern Railway will be further opened to Harlow in the course of a month or two; and when that takes place it is expected that all the coaches from Cambridge will avail themselves of the Railway.

—o—

The *Hundelsblad* states, that the ex-King of Holland has offered to the Prussian Government to construct, at his own expense, the railway from Berlin to Breslau, in Silesia, on condition of the Government guaranteeing to him a minimum interest of 4 per cent. on the capital expended, for 40 years; after which term the road to belong to the State. The expenses are calculated at 40 millions of thalers, or 37½ millions of francs. It is supposed the offer will be accepted.

—o—

We have received the following from a known and well-informed correspondent:—

Railway from Lancaster to Glasgow.—It gives us pleasure to learn from good authority, that a decisive step is likely to be taken soon for the promotion of the line recommended by the Government Commissioners between Lancaster and Glasgow. The Railway Companies, in successful operation between Birmingham and Lancaster, are beginning to move in this undertaking, and a powerful party is organizing itself in Scotland to co-operate with those interested in the northern counties of England. So that some important proceedings may be expected to be taken when the preliminary measures are ripe, and a reasonable opportunity presents itself for action.

RAILWAY OFFENCES AND OFFENDERS.

The North Midland Police seem bent on acquiring a reputation for rigour beyond any other railway police in England; and the local justices to be nowise indisposed to help them to the attainment of the questionable object of their ambition. We have had occasion lately to animadvert on more than one instance in which the letter of the law against offenders has been pushed, at the instance of the officers of this Company, with the justices' sanction, to an extent productive of much positive injustice and hardship to individuals, and not at all called for by a due regard for the interests either of the public or of the Company. "An officer," to use the words of a great military authority, "should *see* everything, but it is not necessary he should *notice* everything." The following is one of the newest of their exhibitions of ultra-zeal:—

"Wakefield Court House, May 24.—Magistrates present Sir George Armitage, the Rev. E. H. Brooksbank, and E. Tew, Esq.:—Thomas Briggs, of Royston, was charged by William Atha, police constable on the North Midland Railway, with trespassing on that line at Crofton, on Thursday week. The defendant, who is a respectable man, and a proprietor of the same line of railway, did not deny the charge, but begged of the Bench to mitigate the penalty as much as possible, as urgent business at Leeds had caused him to make the trespass for the purpose of getting to the station at Oakenshaw sooner than he otherwise might have done. The magistrates responded to his wishes, by merely inflicting a penalty of 5s., which with the expenses, amounted to 17s."—*Leeds Mercury.*

We do not deem the police constable the more to blame in this case that the offender is a shareholder of the line—one of the man's own masters in fact; it shows however very strongly *how blind to all distinctions* the ultra-zeal is of which we complain. Yet, neither do we see why the circumstance of the offender being a shareholder, and a respectable man to boot, should cause him to be more severely fined by justices, than other persons for precisely the same description of offence. We read in the *Lancaster Guardian*, that not long before this—

"Two men, of the names of John Winskill and John Beck, were charged with being found trespassing on the Lancaster and Preston Junction Railway, contrary to the regulations, &c. They were fined 1s., and costs 7s., which they paid, and were discharged."

And in the *Hampshire Independent*, that at the Police Office, Basingstoke—

"Jesse Fry, for trespassing on the London and South-Western Railway, was fined 8s., including costs."

The amount of the fine and costs in both of these cases was 8s., which is something less than one-half of what the North Midland shareholder had to pay for the same thing—with this difference only, that the North Midlander was in the anomalous position of being a trespasser on his own property! Yorkshire is not Lancashire, and a very far way from Hampshire, and Justices' justice has been long famous for its diversity; yet such differences as these—in a railway era especially like ours which makes so little account of time and space—ought not to be heard of. The Yorkshire justices should feel obliged to us, for letting them know how neighbour and distant justices act under the same circumstances, and we hope will profit by the information.

At the Audit House, Southampton, on Tuesday, the 25th—

"A man name James Hunt, a flyman, was fined 10s. and costs, for using abusive language to a policeman at the railway station on the 21st instant."—(*Hampshire Independent.*)

Pity there is not an "Audit House" at this end of the line too where "abusive" language could, without going further, be equally punished, whether indulged in by railway hangers onor by railway officials!

Outrageous Conduct of Passengers.—Informations were preferred, at the instance of the Midland Counties Railway Company, before the County Magistrates, at Derby, against Sampson Frost, of Nottingham, turner, for being drunk, rude, and disorderly, and assaulting two female passengers; and also for assaulting and abusing the guard: against John Pickard, of Nottingham, lace-maker, for striking, assaulting, and abusing the guard, and wilfully obstructing him when in the execution of his duty: and against Thomas Gauntley, of Radford, lace-maker, for a similar offence. The several offences before named were acknowledged by the parties, who by their attorney, Mr. Bowley, apologised to the Directors of the Midland Counties' Railway, and the cases were compromised, on defendants paying 5*l.* 9s. 6d., the costs incurred. The same Sampson Frost was also convicted in the penalty of 40s. and costs, for smoking one of the Company's carriages.—*Derbyshire Chronicle.*

Evasion of Fares.—James Lane was charged before the magistrates at Stockport with having knowingly rode on the Manchester and Birmingham Railway, without having paid his fare. Mr. W. Vaughan represented the Company, and after stating the case, observed that the defendant had rendered himself liable to a penalty of 40s. and costs. Thos. Rushton, one of the guards proved that, on returning to Stockport by the last train on Saturday night, he found the defendant in the third class; and on passing Rushford asked him for his ticket. He answered "I have paid my money, and that is enough for you;" he said nothing about losing his ticket, until he had varied his statement. The consequence was, that on arriving at the Stockport terminus, the circumstance was related to Mr. Murnane, the superintendent, who demanded the fare in the usual way; and Lane declining to pay, he was taken to the lock-ups. The defendant, (who had his arm in a sling,) said that he had been to the Oldfield-lane doctor; and on his return through the office paid 6d., and received a ticket, but which owing to the crowded state of the third-class carriage, had fallen, he supposed, for he did not know what had become it. The guard observed, that the number of tickets he collected corresponded with the number issued on the way-bill, and therefore the defendant could not have paid for one. The defendant however repeated his innocence of any intention to defraud—having paid his 6d., and lost the ticket. Mr. Murnane, the superintendent, said that these offences were becoming very frequent, and the defences were somewhat different in all the cases. Indeed, they were almost of daily occurrence; it was in consequence of the different statements given by Lane to the guards which led him to treat the case as one of fraud; but, where there were the least grounds for supposing that the parties had really had a ticket, such cases were invariably overlooked. The Bench, feeling themselves called upon to carry out the Act of Parliament, the case having been proved, mitigated the penalty of 40s. to that of 5s. and costs—making in the whole 18s., which was paid.—*Stockport Advertiser.*

The practice of this Company in overlooking all cases where there is no appearance of intention to defraud, evinces a very proper discretion. It prevails also on the Birmingham and Great Western lines.

Death in the Pot.—On Sunday last, as the half-past nine o'clock train was coming from Manchester, a circumstance took place which, had not the engine-driver been on the alert, the frightful death of one of the policemen on the line must have taken place. It appeared that James Painter, the Longsight policeman, was so beastly drunk whilst on duty, that he had fallen across the rails near the tank yard, at Rushford, where he lay some time. The train was at that moment running at a speed equal to 25 miles an hour; and when within only 150 yards from the body, the steam whistle was sounded, the breaks put on, the wheels reversed, and every exertion used for the purpose of checking the progress of the engine; but the fellow was actually unable to avert the death which was approaching him with such velocity. A man and woman, however, who happened to be upon one of the banks, rushed to the rails and dragged the insensible policeman away. Another moment and he would have been a mangled corpse. The train, which did not stop, then proceeded onwards to this town. Painter was, on Tuesday, brought before the Manchester magistrates, charged with being drunk on duty. The Bench considered the case a very aggravated one, and convicted him in the sum of 40s. under the Railway Act.—*Stockport Advertiser.* Of course he has been dismissed also.

The Southampton Again!—[From the *Times.*]—On Tuesday, George Tyerman, traveller to a mercantile house, and Robert Guild, a sailor, were brought up to Union Hall *in custody*, at the instance of the Directors of the Southampton Railway, for *stealing an orange.*

The guard of one of the Company's trains stated, that the prisoners were passengers in a second class train from Southampton, and that on the journey they were observed to get from the carriage into the luggage van, on which were several boxes of oranges. He (the guard) saw them both on the van while the train was in motion, and observed Guild introduce his hand into a hole in the lid of one of the boxes and take out an orange, which he commenced eating. When the train stopped, witness gave information of what he had seen, and the prisoners were taken into custody, when, on examining them, an orange was found in Tyerman's pocket.

Mr. Traill inquired whether the Directors intended to prosecute the accused for stealing an orange?

Superintendent Freshfield replied in the affirmative, and said it was in order to make an example—to stop peculation—which was not unfrequent on the railway.

Tyerman accounted for his being in the luggage van by the fact of his having given up his seat in the carriage to accommodate a female, for whom there was not room until he got out. With respect to the orange found in his possession, he denied most solemnly that he had taken it out of the box in the van; that he had purchased four oranges on leaving Southampton; that he had eaten two of them on the way, had given one away to a child in one of the carriages, and the one which he was charged with stealing was the one he had left in his pocket out of the four he had bought.

The other prisoner said that he had purchased the orange he was seen eating at Basingstoke, and denied that he had taken one out of the box in the luggage van. He added, that he gave up his seat in the carriage to make room for a female, and that was the reason he went on the van.

The guard said, that he did not believe the prisoners gave up their seats as they represented, there being sufficient room in the carriages without their being obliged to do so.

Tyerman, however, declared that such was the fact, and that he had strong grounds for believing that the charge was brought against him in consequence of his having threatened to complain to the Directors of the remissness of their servants, owing to their being unable to find his carpet bag.

The guard, however, said that there was no foundation for such an assertion.

Mr. Traill discharged Tyerman, and made Guild enter into his recognizance to appear on the following day, to answer the charge, in order to know whether the Directors intended to proceed against him for stealing an orange, the guard positively swearing that he saw that person put his hand into the box and take out one.

Wednesday the superintendent attended, and when Guild appeared, the foreman said that the Directors did not intend to prosecute; therefore the accused was discharged.

The taking of Mr. Tyerman into custody was a most abominable abuse of power; even according to

Digitized by Google

the guard's story there was not a tittle of evidence against him, or the slightest ground for imputing to him a participation in the alleged offence of the sailor—and which, if committed at all, was but *sailor-like*, without any wilful criminality in it. The Directors did wisely in dropping the matter altogether; but, according to Superintendent Freshfield, they *had* previously decided on prosecuting the two men for the theft of the one orange, worth not one farthing. Most discreet Directors they! But for Mr. Traill's intervention—but for the opportunity given by him to the Directors to reconsider their decision—it is evident that they had all the inclination to disgrace themselves for ever. We assume, of course, Superintendent Freshfield's statement on this head to be true; but we must frankly confess we have our doubts. The whole affair smacks less of Board-room quality, than of the swelling insolence of some incompetent, good for nothing jack-in-office.]

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BELFAST AND CAVEHILL RAILWAY.

May 28.—Bill reported; Report to lie on the table.

NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY.

May 28.—Report to be taken into further consideration upon Thursday next.

June 3.—Report further considered; amendments agreed to; Bill to be ingrossed.

RAILWAY ADJUDICATIONS.

LIABILITY OF RAILWAY COMPANIES AS CARRIERS.

MUCHAMP V. THE LANCASTER AND PRESTON JUNCTION RAILWAY COMPANY.

Court of Exchequer, May 28th.—This was an action brought to recover the value of a parcel which had been booked at the Preston office of the defendants, for London. It appeared at the trial that the plaintiff knew that the defendants only professed to carry as far as Lancaster, towards London, but as the defendants took the parcel so directed, and the carriage being to be paid on delivery in London, the learned judge before whom the case was tried left the fact of its reception and booking by the defendants to the jury, as evidence from which they might imply a contract to carry it all through to London; and the jury having found for the plaintiff, this rule was obtained to review that direction. [See full Report of the case in the *Railway Times* of 27th March last].

Mr. MARTIN now showed cause, but the Court called on

Mr. CRESSWELL, Mr. BAINES, and another gentleman, to support the same, who contended that the defendants were only liable for any loss which might arise while the parcel was in their own care. The loss, however, had arisen after it had been delivered by them into the hands of another company, by which it was to be carried onwards, and the defendants were not liable, as their contract only was to carry it and deliver it to the other Company at the termination of their line.

Lord ABINGER, however, thought that the case was very properly left to the jury by the learned judge. It was admitted at the bar that the contract of the defendants extended beyond the mere carriage of the parcel, for it was contended that they were only bound to hand it over to the succeeding Company. Now it appeared that the carriage was to be paid for on delivery, and it must be manifest that there was some understanding between the railways as to the division of the profits; so that if one Company received and booked a parcel "all through," the contract would seem to be to carry it all through, and as it was impossible for the owner to ascertain where the loss, if any arose, it was but proper that he should look to that Company at whose office he had booked the parcel, as they by taking it must be presumed to have entered into a contract to carry all through by their agents. The ruling of the learned judge was therefore quite right, for it was a question for the jury on this evidence to say whether that was not the contract, and a very fair presumption it was for them to draw from it.

Rule discharged.

THE QUEEN V. THE MANCHESTER AND LEEDS RAILWAY COMPANY.

Court of Queen's Bench, Westminster, June 2, (Sittings in Banco.)—This was a mandamus to the defendants, commanding them to make a bridge and certain other works for the convenience of the public at a part of their line which crosses the high road in the neighbourhood of Oldham. The case having gone to trial before a jury, a verdict was found for the crown upon some issues, and for the defendants upon others. Both parties to the proceeding being dissatisfied with the verdict, each of them, upon a former occasion, obtained a rule calling upon the other to show cause why the part of the finding which had been adverse to each applicant should not be set aside, and these cross rules now came on for consideration together.

Mr. Cresswell, with Sir W. Follett, Mr. Tomlinson, and Mr. Hildyard, now appeared upon the part of the defendants. The Attorney-General, Mr. Starkie, and Mr. F. Kelly, appeared for the Crown.

The COURT took time to consider their judgment. The argument occupied four hours.

THE QUEEN V. THE GLOUCESTER AND BIRMINGHAM RAILWAY COMPANY.

This was a mandamus, commanding the defendants to do certain works in a certain manner, at a place where their line of road intersects the high road in the immediate vicinity of Cheltenham. The question for discussion was the substantial conformity of the works with the mandate of the writ or the validity of the excuse alleged for the partial want of a specific obedience to the Act of Parliament and the *mandamus*.

The Attorney-General, Mr. Greaves, and Mr. Geal, appeared for the prosecutor; and Sir W. Follett and Mr. Selfe for the defendant.

The COURT took time to consider their judgment.

CASE OF COMPENSATION.

LONDON AND CROYDON RAILWAY COMPANY V. BENJAMIN AYNESWORTH.

Town Hall, Southwark.—An inquisition was held on Monday last, the 31st ultimo, at the Town Hall, before Sir Chapman Marshall and the Recorder, under a precept from the London and Croydon Railway Company, to assess the amount of compensation due to Benjamin Aynesworth, patten-maker, of the Broadway, Saint Thomas's-street, whose premises are required for the joint station about to be erected for the use of the Brighton, Croydon, and Dover Railway Companies. The amount claimed was 919*l.* 1s. 11d.

Sir William Follett and Mr. Austin appeared for the Company; and Mr. Hill (Queen's Counsel) for the claimant.

The case having been called on,

Sir WILLIAM informed the Court that the claimant had agreed to accept 250*l.*, in full of all demands, and a verdict was accordingly taken for that amount—being one quarter of the claim.

SOUTH EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—There is a slight inaccuracy in the Report of the proceedings of the above Company on Thursday last, which, if it remain uncorrected, may lead to misconception on the part of absent proprietors.

Mr. Barlow is represented to have stated (in answer to an inquiry which I made), that the estimate did not include the permanent way, whereas in consequence of that item, of which he had not made any calculation, being comprehended in it, Mr. B. stated, that his confirmation of the estimate must be taken with that exception, and this led me to remark—not as understood by your Reporter, that the cost of permanent way could not be much, but—that the excess above estimate (6,000*l.* per mile) could not be much.

Your Report is in other respects so correct, that I shall be obliged to you to insert this letter in your next paper, and

Remain, Sir, your obedient servant,

J. M. PARSONS.

6, Raymond-buildings, 2nd June, 1841.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—May I be allowed through the medium of your paper to call the attention of the Directors of the North Eastern Railway to the utility of establishing a Station at Stratford, for the taking up and setting down *passengers* to and from Broxbourn and the intermediate stations, (but not from Stratford to Shoreditch, or *vice versâ*, as that would interfere with the Eastern Counties). This would be a great boon to the inhabitants of the populous towns of Stratford and Bow, who are at present totally precluded from making use of the facility of this Railway, from the difficulty they have of getting access to it; the only way at present open to them being to go to Shoreditch, and again retravel the ground which they have already gone over,—otherwise go by the circuitous way of Low Layton to the Lea Bridge Station, a distance of several miles. I trust the Directors will give this their mature consideration, as I have no doubt it will prove equally as beneficial to the coffers of the Company as to the public.

A. D.

Stratford, Essex, June 4, 1841.

RUSTING OF RAILS.—The editor of the *Railroad Monthly Journal* explains in the number for this month, that it was "not the part in contact with the wheel or flange" that he alluded to as not rusting while in use, but "the sides, lower edges, and the middle rib, which in two rails laying within a foot perhaps of each other, such as sidings not used, &c., get very rusty on the rail not in use, and but slightly so in the used rail." Now that we know what our contemporary means, we readily admit the fact stated by him to be curious, and by no means of obvious explanation.

BRAVE SON OF A BRAVE MOTHER. — Some time ago a train of waggons was carelessly left near the top of the Lickey incline, and as even railway Directors cannot control that venerable old gentleman, Gravity, they, according to the invariable laws of Nature, began to descend. Now the first person who saw them was a child only nine years old, and what did he do—run away like the Rugby porters? No; he jumped upon the waggons and put on the break, and then, and not till then, did he roar out like a Trojan for more help. Who comes next? Why, above all beings, his mother, and she jumped likewise on the train and got to a break; and between the mother and child, they brought the train to a stand still, and thus prevented a smash which must have included themselves. We do hope and trust, that although Boards have no souls, the Gloucester Directors have in some measure rewarded the high courage of this woman and her child.—*Railroad Monthly Journal for June.*

SALISBURY RAILWAY.—The following letter from the Messrs. Edward and Charles Castleman, of Wimborne, appears in the columns of a provincial paper:—"May 24. Having seen an article, stating that the South-Western Railway Company was about to undertake to make a Railway from Salisbury, to join their present line at Bishopstoke, and as this would materially injure the road from Wimborne to Piddletown, for making which we have just obtained an act of parliament, we thought it our duty to write to the Directors, and ascertain the truth of the statement; and they have informed us that they have no knowledge whatever of the matter."

THE VOICE FROM THE EAST—EASTERN COUNTIES' RAILWAY TRAFFIC.

To the Editor of the Railway Times.

High-street, Shoreditch, June 3, 1841.

DEAR MR. EDITOR,—I have been called some very ugly names by the people here for what I stated in my last published letter to you respecting the continued loss on the carrying business of this Company. "Liar," "libeller," "calumniator," &c. Be pleased therefore to allow me to show by a little arithmetical detail—*my authority for which shall be the Company's own books*—that I have said nothing but what is to the very letter true. And though for the present, and for the nonce, I am anonymous, I beg to hint to the Bozzes and Sams of this very polite vicinage that a slander should not the less stick in an honest man's throat, that there is nobody *in propria persona* in front of him, to tweak his nose for the offences of his mouth.

To solve truly the question of *loss or no loss*, we must discriminate between the traffic proper to the Eastern Counties' Company, that is, carried *by the Company's own trains*, and the traffic arising from the use of part of the line by the Northern and Eastern Company's trains. The former I am enabled to give you with great exactness, but the latter must be matter of inference or conjecture rather. The Northern and Eastern subsidy *should* amount to the exact sum of the difference between the traffic proper to the Eastern Counties' line and the total traffic returns of the Eastern Counties' Company; but that it does so, there is great reason, as we shall presently see, to doubt.

The following statement shows the number of passengers actually conveyed by Eastern Counties' trains, and the money receipts from them for the last 10 weeks; opposite to which I have placed the numbers given in the official returns published in the *Railway Times*, under the general head of "Eastern Counties':—

	The Traffic Proper.		Total Traffic per Official Returns.	
Weeks ending	Passengers.	Receipts.	Passengers.	Receipts.
March 14	5025	£377 12 1	10,616	£566 19 0
March 21	4943	386 5 10	10,570	576 4 9
March 28	5253	381 19 3	11,319	579 4 4
April .. 4	5870	440 1 9	12,210	641 18 2
April .. 11	7536	590 0 8	15,347	816 7 7
April .. 18	7135	544 5 7	15,163	774 4 8
April .. 25	6350	526 4 7	12,795	729 16 0
May .. 2	7096	542 7 1	14,611	763 15 4
May .. 9	6816	527 7 6	13,990	743 2 1
May .. 16	7828	598 8 6	16,607	840 8 6
10 Weeks	63,852	4,914 12 10	133,228	7,032 0 5
Averages in round numbers	6385.	491 0 0	13322.	703 0 0

To the official weekly returns of the Company there is invariably subjoined a memorandum in these terms [see *Railway Times* April 10, p. 416], "including Northern and Eastern Railway toll, &c." What the "&c." means the shareholders and the public are left to conjecture. As, however, there is only one other thing which the Northern and Eastern do pay beside "toll," namely, a rent for their Shoreditch station and accommodations, we can be under no mistake in concluding that *that* is all which is hidden under Mr. Etcetera's skirts. But, why should it be hidden? Why not say distinctly and openly that there is so much received for "toll," and so much for "rent"? The reason is plain enough. The Directors know perfectly that the sum received for *rent* has nothing to do with the *traffic* account, (any more than any other rents they receive,) and is only smuggled in there in order to swell the apparent receipts from traffic, and thereby to get the Company credit with the public for a greater carrying business than it actually possesses. The sum originally agreed to be paid for rent was 7,000*l.*, but this was some time ago reduced to 5,000*l.*, until the completion of the Shoreditch station—the accommodations which the Northern and Eastern Company possess there at present being merely of a make-shift and very inconvenient description. From the total traffic receipts, therefore, weekly claimed credit for by this Company, we must in every instance take off 96*l.* 3s. 1d. for the weekly proportion of the 5,000*l.* rent. The remaining difference is most probably made up of the toll paid by the Northern and Eastern Company, but on this point I am in want of further information.

We have, then, as the general result of the last ten weeks' traffic—

From the traffic proper an average weekly revenue of	£491 0 0
From the total traffic (Northern and Eastern passengers included) an average weekly revenue of (703*l.*—less 96*l.* 3s. 1d.)	606 16 11

A more miserable—more deplorable—failure than this it is impossible to imagine. It would be idle to ask whether 491*l.* a week will cover the Company's current expenditure for their own carrying business (for they have no right to draw upon the Northern and Eastern subsidy for a single shilling of that expenditure.) It won't half cover it. *Half*, do I say? why, it won't defray one-third of the current expenditure, if all that legitimately belongs to that department is fairly charged against it. Equally idle would it be to ask from what source the money to pay the interest on the Company's bonds and debentures is, under such circumstances, to come. Of course *from capital alone*, and only so long as that capital lasts. When the capital furnished by the shareholders is exhausted, (alas! poor shareholders, about a million and a half of your money irretrievably gone, and the result a carrying business which does not pay its own expenses), then the creditors must pay themselves their interest *out of their own capital*, and when that too is gone, they must be content to go without both principal and interest.

To apply the toll received from the Northern and Eastern Company towards making good the loss sustained on the Eastern Company's own carrying business, is a monstrous aggravation of the evil. All *that* is nearly clear gain—the only deductions to which it is subject being the cost of maintenance of three miles of way, and a few incidental expenses; and were it but treasured up and duly improved, as it ought to be, it would produce a net income of from 5,000*l.* to 7,500*l.* a year, and that would suffice to enable the Company to borrow at common interest—(not before it is wanted) from 100,000*l.* to 150,000*l.* to assist them in the prosecution of the works. But as things are, it is flung away as fast as it comes to hand, on the Company's own all-loss-and-no-profit business—serving no other purpose than to mask from observation for the moment the real magnitude of the loss at which that business is carried on.

But is there no hope of things mending? *None whatever*—so long at least as the affairs of the Company are managed as they now are, and for a long time past have unhappily been. The greater part of the 17½ miles now opened, be it observed, has been at work for nearly two years—no part of it for less than nine months; so that it cannot be said there has been any lack of *time* for a full development of the resources of the line in the hands of its present managers. Observe further, that at no period has the traffic amounted to one-third of what these same managers assured their confiding, but most deluded, constituents they might look forward to "*with the utmost confidence.*" According to the memorable estimate, in the preparation of which Captain C. Moorsom (once a Director of this Company) took so prominent a part,—all the data for which were said to have been "*obtained by actual enumeration at the most unfavourable season of the year*," the receipts on the opening of the line to Brentwood ought not to have been less than 2,000*l.* a week! (wholly irrespective of the Northern and Eastern toll.) Have they ever reached that sum, or even half way to it? The *minimum*, be pleased to remember—the *least possible result of* "*the most unfavourable season of the year.*" Not once—neither before the great slaughter accidents nor since. Never have the gross receipts from the Company's own proper traffic exceeded 600*l.*; and the average of the ten weeks ending 16th May last—ten weeks which were 50 per cent. at least better in point of passenger productiveness than any ten weeks "of the most unfavourable season of the year," was only 451*l.*!!! The average for that period should, according to their own showing, have been not less than 3,000*l.*! Weekly deficiency, therefore, 2,549*l.* Annual deficiency, 130,548*l.*!!!

No person but some knavish stock-jobbing shareholder, very willing to have some ground for pretending to be himself deceived, in order that he may be the less obnoxious to public censure for deceiving others in regard to the value of the Company's shares, can affect to question for one moment that there must be something very "rotten in the state" of things which produces such Dead Sea fruits as these. "The root of the evil," as was well remarked in your journal several months back, by an "Essex Farmer and Shareholder"—that evil "which is preying like a cancer on the prosperity of this Company—lies much deeper" than any passing panic or mere difference of seasons. "If you ask what the public opinion of Essex on the point is, one and all will tell you that it is because *the management of the line is in the hands of strangers and bunglers*—strangers to the county and people, their habits and wants—strangers, moreover, to all those graces of conduct and demeanour by which friendship and support might be conciliated and secured—and such bunglers withal, from ignorance of business, fickleness of purpose, and infirmities of mind and temper, that no undertaking, requiring like this, great experience, prudence, judgment, discretion and steadiness to manage it, *could possibly thrive under them.* They seem never to have any thought of consulting the wishes or feelings of others. Everything with them is to be effected by the high and the strong hand," &c., &c.

Not all "strangers" to be sure, (though "bunglers" all.) Three Essex men there are on the Direction, but who? Not one of them "of the quorum" or gentry of the county—not one of them of any local influence or of any influence elsewhere—and least of all at the Eastern Counties' Board. A gallipot, a beer barrel, and a whipper-in!!! Had a Disney or a Tyrrel been on the Board of the Eastern Counties' Railway, does any one suppose that such things as have been transacted there would ever have been heard of? A Yarmouth man there is, too, on the Board, and how it happens that he is there is a matter of universal wonderment. What interest can Yarmouth have in a railway which is to stop short at Colchester, and divert (if it can) all the shipping business of the eastern coast to the port of Harwich? And what call—official, prudential or otherwise—can the Collector of Customs of the Port of Yarmouth have in promoting an undertaking which, stopped short as it has been, can tend only to the ruin of Yarmouth? Perhaps Mr. Edwards will explain.

For the present,

I remain, dear Mr. Editor,

Very faithfully yours,

Q.

A HINT TO RAILWAY TRAVELLERS.—Persons journeying between St. Helen's and Warrington may save themselves *sixpence* each way by booking to the Newton Junction, instead of to the bottom of Sutton, and what is more strange they travel in the same train to and from St. Helen's as those who pay the extra sixpence.—*Newport Journal.*

Only a few years ago, it was thought expeditious travelling to reach Edinburgh in eight and forty hours after leaving London, which was continuing the journey day and night without stopping: but since the opening of the Great North of England Railway, the journey from London to Newcastle can be performed in one day, viz., in fifteen or sixteen hours; and passengers can then proceed by the *Chevy Chase Coach* the next morning, which runs the remainder of the journey to Edinburgh in nine hours.—*Brighton Gazette.*

RAILWAY DIRECTIONS.

To the Editor of the Railway Times.

Sir,—Some good will, I venture to hope, result from the discussion carried on in your journal on this subject. Time and space enough have been, for the present, devoted thereto, and I now beg leave to close it on my part with a few observations. "A Railway Shareholder" and your present correspondent have not, of course, convinced each other, such a result being unknown in such cases. If, however, any one individual interested in railways has been thus led to reflect more deeply than before on the subject of Directors and their duties, or to regard it in the light suggested by me, I shall be well content.

It is rather unfortunate that the term *Director* was ever adopted in this matter. Their true functions are those of an *Auditor*, and so should they be regarded. *Direct* they do not, nor can they with any effect as now constituted; at the same time they are too much mixed up with the affairs to act as a check on others. But no Directors of any kind can of themselves be depended on by shareholders. To the Auditors they must look for check and protection. The present Directors, indeed, can neither "plough nor drive;" can neither direct others nor check their proceedings. Then why keep them on the staff any longer? The "Managers" are the real Directors. On the principle justly advocated by the "Railway Shareholder" of not having two sets of officers for the same service—let the present managers, or whatever they may be termed, be regularly invested with the effective and responsible direction—each in his department, and let the present Directors, *chosen annually by all means*, act as Auditors of the accounts and proceedings of these managers. That the former should be at once *called* Auditors would be desirable; if, however, the duties of the two sets of officers, viz. Managers and Auditors, be but well defined; and if it be settled as a law that the set now acting as Directors shall have no other functions whatever than those of Auditors—why then, if the name "Director" be the more pleasing of the two to their ears, they may as well retain it. Three Directors on my plan, acting as Auditors only, would be amply sufficient. Let the accounts be examined *half-yearly* by all means. A salary of 200*l.* each is enough for these Auditor-Directors. Thus here some salary would be saved at once.

According, then, to my system, the construction of a railway being determined on, provided an Act for the purpose can be obtained, the shareholders at their first meeting should at once choose their Engineer-Director and their Finance-Director. "No more at present." These two, in conjunction with the Solicitor and Parliamentary agent (who must of course be appointed at the commencement), would be sufficient to direct all matters till the line began to be constructed. A clerk, as Secretary of Direction, would be required also. Then a Way Director must be appointed. The line being completed, a Locomotive department Director and a Train Director would be added to the preceding, and if a general Director were appointed to complete the five and to act as Chairman, the money would not be thrown away. Thus salary would in no case commence before service was required and performed. The workmen, clerks, &c. in each department should be under the immediate direction of their own chief exclusively, and responsible to him; but the whole five Directors should have, under certain conditions and limits, a power of general superintendence.

The shareholders would, at their half-yearly meetings, consulting the Engineer and his brethren, appoint what portions of the line should be first proceeded with, and determine other points belonging to what might be called (as it were) their legislatorial functions.

Thus each Director would become immediately responsible for the conduct of his respective department, instead of there being, as at present, *nobody responsible*. The system pursued in the American Bank and elsewhere, which "A Railway Shareholder" justly denounces, was totally different from this. Thus, e.g., in the case of a certain railway *not* running N. E., the trains, it is complained, do not maintain either speed or punctuality. On my system, the director of trains would have been instantly called on to answer for the irregularity. It might happen, that the locomotive or some other department, or perhaps more than one department, was really in fault. If the Director first called on could show this (and doubtless he would if he could), then in any case the true culprit would ultimately be discovered and punished. And what a punishment! Loss of credit, with ruin of prospects—perhaps loss of salary and situation.

I submit then confidently, that if any system can secure vigilant and energetic Direction, the one here proposed is that system—one by which each Director is furnished with the amplest means of every kind for doing his duty efficiently, and is certain of punishment if he is negligent or inefficient. Until something of the kind is adopted the same ruinous state of things will be perpetuated under which so many already suffer.

In recapitulation then, be it understood clearly, that the Managers are to be the Directors, and those now designated by the latter appellation are to be Auditors. Thus, through the agency of these last, the shareholders would exercise that control over their real Directors, which partners in a private business do over their clerks and servants, and might be said to stand towards them (the Directors) in a similar relation."

Allow me, Sir, before concluding, to suggest that the shareholders should always *themselves appoint* the Parliamentary agent, and not allow the solicitor to do so. The Parliamentary agent would thus be responsible to them, and he and the solicitor would be unable to shuffle off blame from one to the other. And, in money matters, when the bill came to be paid, the solicitor would be deprived of the usual answer to inquiries, "Oh, these are the charges of the Parliamentary agent of which you know nothing, nor I either, and which admit of no discussion." By this method of the Parliamentary agent being chosen by the shareholders, such juggling talk would be put an end to, and very many thousands saved on every Railway Bill.

I am, Sir, your obedient servant,

C. D.

LONDON AND GREENWICH RAILWAY.

LETTER IV.

To the Shareholders.

Gentlemen,—The policy of low fares is rapidly gaining ground in the estimation of the railway public, and scarcely any writer ventures now to uphold the almost exploded notion of obtaining a large revenue by a *high individual charge*. Let us observe what effect the establishment of this principle is likely to have upon your future prospects as *toll receivers*, and what ought therefore to be the policy of your Directors as to toll regulations. This being once determined, it will be your fault if you allow any pre-conceived notions of theirs, or any indirect influence to which they may be subject, to stand in the way of your proper interests. It is now about two years since the first promulgation of the opinion of the "Select Committee on Railways" that your railway, as it then existed, should not be allowed to receive the Brighton and Dover traffic, that either this traffic should be diverted from it, or that the railway itself should be enlarged or widened for its reception. The announcement of this opinion was calculated to spread consternation amongst a proprietary which had already expended so large a capital upon a railway thus likely to be deprived of the greater part of an *expected* traffic, unless subjected to a still further outlay. Under these circumstances what course did your Directors take? They first endeavoured to persuade the parties concerned that the Parliamentary Committee was wrong, and that your railway was all-sufficient for the intended traffic without any additional expenditure; failing in this, they tried to induce the parties who were to use the railway to widen it themselves, and pay you the toll notwithstanding; and failing in this, and having refused several offers of these parties who were willing to make the additional outlay, *but continue*, nevertheless, to pay a portion of the toll,* and being threatened in consequence of such refusal with an attempt of these parties to take the matter out of their hands by paying you for your ground and making the railway themselves, and thus depriving you of all toll for the future, your Directors hit upon the notable expedient of getting an Act of Parliament to enable them to charge a *higher rate of toll* upon all passengers over your line after it should be widened by *you*, in the anticipation that by this means they should be able to *force* where they had failed to *persuade* these parties to pay for the said widening out of their own proper funds. Herein they practised a delusion, if not upon themselves, at least upon you, because they proceeded upon the assumption that a toll is altogether of a compulsory nature, forgetting that the *use* of the railway by the public, upon consideration of which *alone* the toll is payable, must always be, to a considerable extent, of a voluntary character, and will depend very much upon the rate of that toll. In order to elucidate this point, let us suppose that they had succeeded in obtaining power to levy a 6*d.* toll, as they attempted, or to go back to the original powers of their Act to levy a toll of 9*d.* or 1*s.*† Why! they would have stopped the whole traffic of all the three lines, or at least they would have driven them off the Greenwich line, which to you is the same thing, and the consequence would have been, that you would have lost, not only the whole of the present outlay, but a great porportion of the past. Now the object of this letter is to show you that your Directors have made a mistake in supposing that by the power which they have taken to levy this additional toll they have enabled you to escape from that necessity which naturally fell upon you, as it must fall upon all persons in your situation—namely, the necessity of rendering that commodity which you have to sell acceptable to the buyers, both by the accommodation afforded and by the price demanded; and to warn you that, if you persist in seeking to evade this necessity by throwing it upon other parties who have no right to bear it, there is considerable danger of your losing your market altogether. Because, if it be true that the adoption of the course which I have pointed out would have had that extreme effect of driving away the whole of the traffic, so is it likewise true that a partial adoption of such course will have a part of such effect; and that the levying of a toll greater than people are disposed to pay will limit the use of your line, if it do not, by interfering with the legitimate profits of those who bring the greater part of its traffic, eventually destroy the use of it altogether, as far as such traffic is concerned. For instance, the perseverance of your Directors in their refusal to modify the present toll payable by the Croydon Company has already driven away so much of the traffic of that Railway as to have diminished your toll receipts 1000*l.* per annum. Have you any expectation that, if your Directors should proceed to enforce their right to demand 4½*d.* instead of 3*d.*, when your line shall be widened, such demand will restore any part of this traffic? Is there not every reason to expect, on the contrary, that another rise of Croydon fares will take place, which will diminish your receipts still further, in spite of the additional toll you will receive upon the few remaining passengers? And is there not still further danger that the Croydon Company, finding its traffic so much crippled by your conduct, should set itself seriously to work to divert such traffic from your line, either by way of New Cross or Corbet's Lane, as proposed in the last Report of its Directors? You imagine, perhaps,

* For a history of all these proceedings see Second Report of Select Committee on Railways, and printed correspondence between the different Companies from October, 1839, to May, 1840.

† See Evidence of Mr. Moxon and Mr. Young, Report of Select Committee on Railways, page 10.

Digitized by Google

that, although the Croydon Company may find it inconvenient to pay so high a toll, and although you may consequently lose some part, or the whole, of the Croydon traffic, which your Directors once affected to consider as the only traffic worth their notice, yet that you will still retain the Brighton and Dover traffic, which is of much more importance; but which your Directors once affected to despise.* I think it will occur to you, however, upon a little reflection, that the same means which may be taken to divert the Croydon traffic will also serve to lead away that of the Brighton and Dover, if temptation should be offered; and that temptation will not be wanting, if the toll of the Greenwich Company should be excessive, either by reason of its actual amount, or with reference to the great numbers of the passengers: for it must be remembered that it is an axiom in Railway affairs, upon which the whole of this argument is founded, that no Company can expect to receive the same rate per passenger from large numbers as from small ones; and that when an increase of traffic is sought for, it can only be found in an increase of accommodation or a *diminution of the rate of charge*. What then is the policy to be recommended, or, if need be, to be enforced upon your Directors? Not to yield an iota of your just rights to any Company. Not to agree to any reduction of your toll which shall allow other Companies to keep up their rates while yours are diminished; but to go heart and hand with these other Companies in such a joint and fair reduction of charge as is likely to bring additional revenue to all parties. Once more reflect, I beseech you; and ask yourselves whether this doctrine be true or false.

I am, Gentlemen, your well-wisher,

EXPOSITOR.

June 3, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY—EXCESS OVER ESTIMATE.

To the Editor of the Railway Times.

Mr. Editor,—Although I do not profess to be in the secrets of the Directors of the Birmingham and Gloucester Railway, if secrets exist, as your correspondent "Junius," who dates 26th May, in your journal, would insinuate, I still think, that with the ordinary information I possess from having attended some of the meetings, and being myself a shareholder, I can discover what "Junius" might also have discovered, namely, that some of his statements are inaccurate, and calculated to mislead and throw discredit on parties, and to depreciate the undertaking without any good object; and under such circumstances, "Junius" does well to screen his own ignorance or shamelessness under a false signature.†

I will grant that the original Parliamentary capital was 950,000*l.*, with power to borrow 316,666*l.*; but this makes in all 1,266,666*l.*, and not 1,366,666*l.* as "Junius" states it,—showing an error of *only* 100,000*l.* in this part of his statement.

Again in the two statements which "Junius" calls estimates—and which he would lead us to believe mean estimates of the total cost of all the railway, and everything belonging to it—he quotes the sums of 728,874*l.* and 738,774*l.* respectively, as contrasted with the total authorised capital of 1,266,666*l.* whereas his own quotations show that those sums were respectively given by the Engineer as the cost of works, and wholly irrespective of other departments of the railway, such as land, and stock, &c., with which the Engineer could not possibly have anything do. If, therefore, "Junius" really supposes that the entire expenditure of the Company was contemplated to be comprised in 738,774*l.*, he shows his own ignorance, which he should be careful how he publishes to the world in a fallacious form; but if he is as his own apparent knowledge on other points would lead us to suppose, aware that such sum was only contemplated as a *part* of the Company's expenditure, he is liable to the charge of deception, by contrasting it alone with the gross capital to be raised.

If "Junius" had fairly quoted the statements made upon paper at the meeting of the 4th (misquoted as the 5th) of May, (and that those statements were not published from the reporters' notes must be subject of regret to every shareholder, who would not rather have garbled accounts such as "Junius" makes out), he would have told you that the estimates of *works* appear to have been about 10 per cent. less than the actual cost, after having opened the line three months earlier than the estimates contemplated, *including* some liabilities not yet paid, which even "Junius" must admit to leave little open for suspicion on that head.

Again, as to the *imputation* that the Directors will borrow 60,000*l.* more, so as to make up their capital to a million and a half:—"Junius" might have had the ingenuousness to add that the same report of 4th May, which he quotes, expressly guards the Directors upon this point by the veto of the proprietors.

"Junius" alludes to this Railway as "passing for thirty miles through a country almost unrivalled for facilities of laying down a line," but he has not the honesty to add that the remaining 25 miles are almost unrivalled for the very reverse:—I was told by a gentleman lately, who is well known in the railway world, and who has inspected almost every railway in this kingdom, that he was "perfectly astonished at the cost of construction of the Birmingham and Gloucester Railway being so low, after having seen the very heavy works on the line."

But let us now see how the fact really stands, from the following comparative Table which is extracted almost entirely from your own columns, and which "Junius" therefore can refer to as well as myself: (the following railways being the principal ones weekly reported.)—

Name of Railway.	Original capital.	Capital expended or authorised to be expended.	Ratio of expenditure compared with original capital per cent. (in decimals.)
	£	£	
Birmingham and Derby	630,000	1,056,666	1·67
Birmingham and Gloucester	950,000	1,266,666	1·32
Dublin and Kingstown	200,000	370,000	1·85
Grand Junction	1,091,800	1,957,800	1·79
Great Western	2,500,000	5,331,527	2·13
Liverpool and Manchester	796,800	1,832,375	2·30
London and Birmingham	2,500,000	5,750,000	2·30
London and Greenwich	400,000	993,300	2·48
London and South-Western	1,400,000	2,260,000	1·61
Manchester and Leeds	1,300,000	2,599,000	2·00
Midland Counties	1,000,000	1,585,000	1·58
Newcastle and Carlisle	300,000	950,000	3·16
North Midland	1,500,000	3,000,000	2·00
North Union	474,600	730,000	1·54
York and North Midland	335,000	500,566	1·49

Thus it appears that in comparison with 15 principal railways, the Birmingham and Gloucester Company show a ratio of expenditure positively the *smallest* of any; and if "Junius" objects that the additional capital authorized on the 4th of May, is not here shown, this will not help him much, for the ratio of expenditure will then be the *smallest but one*.

I must not trespass too much on your columns, and I will only further observe, that as the weekly traffic on this line, exclusive of mails, nearly makes out "Junius's" magic return of 1,400*l.* it is not going very far out of the way to conclude that the gradual developement of the traffic, and the removal of the terminal impediments to a thorough traffic to which "Junius" alludes, will in due time realise a very fair and substantial return upon all the capital employed.

I am, Mr. Editor, your obedient,

W.

June 2nd, 1841.

* See published Correspondence.

† From a writer who is himself anonymous, such language as this is very absurd.—Ed. R. T.

THE CITY OF WORCESTER AND THE BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—The question of your "Birmingham and Gloucester Shareholder" in the *Railway Times* of the 15th of May, has been answered by your extract from the *Worcestershire Chronicle*, as inserted in your journal of the 29th May; and the answer is so contrary to my knowledge of the facts, that in default of better reply, I hope you will undeceive the *Worcestershire Chronicle* and the "Shareholder" by the following, which is, I believe, the substance of a statement long since made by the Directors of the Railway or by some authorized party, and more than once repeated even in your own columns.

The citizens of Worcester had no bond from the Company at all, but the Chairman of the Grand Connexion Railway received, in 1836, a bond from the Company to the effect that the Birmingham and Gloucester Company would make or do their best to obtain powers to make a branch railway to join the Grand Connexion Railway, which the citizens of Worcester (mainly) at that time were supposed to be really bringing forward.

It turned out, in 1837 or 1838, that the Grand Connexion Railway was a matter of straw which fell to the ground, and the bond fell to the ground with it, and the Birmingham and Gloucester Railway Company very naturally refused to make the branch which was intended to connect with the Grand Connexion Railway.

The Birmingham and Gloucester Company have more than once offered to make a direct and more convenient branch to Worcester, and were it not for such idle threats, as that which the *Worcestershire Chronicle* puts forth, and which the last three years have proved to be but a worse than useless repetition of vain words, it is probable that the citizens of Worcester might even now enjoy that which they never can attain without the cordial co-operation of the Birmingham and Gloucester Railway Company; namely, a good and well-worked branch into the city of Worcester.

It is almost anomalous in the history of railways, exceptionable though that history be, that the citizens of a city should say to a company, "We will not only compel you to expend your own money without giving you any aid, but we will compel you to expend your own money in the way, and in the mode that we think best for ourselves, without leaving you any choice or judgment on the subject."

And yet this is practically what the *Worcestershire Chronicle*, or rather the opposing party who inserts the article, has been saying for years past.

Can it be wondered at if we never get a branch at all under such hostile and party-spirited views? We have suffered enough already, and this is well known to every citizen of Worcester who has travelled by the present omnibus to Spetchley, as well as to

Your obedient servant,

A WORCESTERSHIRE SHAREHOLDER.

June 2nd, 1841.

Eastern Counties Railway Company.—The works are now in progress at Hatfield Peverel, and a fine supply of brick earth in the lane opposite the mansion of A. Johnson, Esq., will be speedily converted into bricks for the various adjacent bridges. The road leading from New-street, in this town, to the Rectory, has been diverted and men are employed in digging the foundations for the new bridge at that part of the line. An accession of hands has been put into the Springfield cutting, and the embankment formed from the soil is rapidly lengthening, nearly fifty yards, comprising between 5,000 and 6,000 loads of earth, having, we are informed, been completed within a week. The Widford cutting is also progressing and fast nearing the high road.—*Chelmsford Chronicle.*

SOUTH EASTERN RAILWAY COMPANY—GENERAL MEETING.

Mr. CUBITT'S REPORT.

To the Board of Directors.

London, May 26, 1841.

Gentlemen,—Having in the early part of last week been favoured with a perusal of the draft of a Report from the Directors to the general meeting of proprietors, in which the state and progress of the works are briefly stated, I deemed it my duty, previous to the meeting to take a view of all the works in progress along the whole line of railway, in order to report the same to the Board, as also to be able to answer any questions relative thereto which might arise at the general meeting; although from the clear and brief manner in which the state and progress of the works were alluded to in the draft Report, I expected to have but little to add by way of information.

Accompanied therefore by one of your body (Mr. Lewis Cubitt) I proceeded to Dover at the latter part of last week, were we commenced our inspection of the works which in this division from Dover to Folkestone are in a very forward state, comprising in distinct portions the following works: viz.—

1st. The temporary station, platform and east face cutting of the Shakespere tunnel.

2nd. The Shakespere double tunnel.

3rd. The west face of tunnel and large platform there.

4th. The small intended supplementary tunnel, now to be superseded by open cutting.

5th. The sea wall.

6th. The Abbott's Cliff tunnel.

7th. The Warren cutting.

8th. The Martello tunnel.

9th. The Folkestone Contract A. comprising the deep cutting, bridges and embankment from the Martello Tower to the Foord Valley at Folkestone.

The above works are all of a very interesting character, all in hand, and the greatest part in a very forward state.

Of the Shakespere tunnels, the northern one is completed and ready to receive the permanent way; and the southern one, including all the preparations, driftways, headings, grommgs, galleries, and end portions of all the workings, in such a forward state towards completion, that the whole of the double tunnel may be taken as two-thirds completed.

The platforms, or open spaces at the east and west ends of this tunnel, will form a most excellent site for stores, engine and carriage houses, workshops, &c. &c., connected with the working of the line at that end.

The sea wall, a very striking feature of the works at this end, is in a very forward state and proceeding most satisfactorily. It is about one-half completed in point of quantity, and at least three-fourths in point of difficulty, a great portion being up to the top or full height, and the foundations for the whole, within a very few yards in length, got in up to high water mark; the whole when completed will form a perfectly straight line of wall facing the sea, nearly a mile in length, and averaging 50 to 60 feet in height above the sea at low water. Upon the top of which, within a large parapet, the railway will be carried from the Shakespere to the Abbott's Cliff tunnel, the next work along the line.

In this work, the Abbott's Cliff tunnel, the preparatory works of shafts and galleries are completed, and a driftway or small tunnel, 7 feet high and 5 feet wide, forming a most excellent footway of 1¼ mile in length, and perfectly straight, is completed, ready for the commencement of excavating and arching the tunnel, which with materials ready is within one year's work.

Emerging from the west end of the Abbott's Cliff tunnel, we enter the Warren cutting, about two miles in length, varying from a few feet to more than 100 feet in depth, and containing upwards of 1,000,000 cubic yards of earthwork; this great work is nearly completed, nine-tenths of the whole being done, and the remaining small portion, at the present limited rate of working, will I expect be wholly done, the cutting cleared out, and the side drains cut, all ready for ballasting, by the end of September next.

The next work, the Martello Tunnel, (which perforates the tail of the chalk ridge, separating the cliff works of the railway from the Weald of Kent,) is prepared for execution, so far as having a small brick tunnel or "adit" driven below the bottom for the whole of its length, and from its eastern end to the face of the cliff, for the purpose of draining the tunnel works.

The next and last work between Dover and Folkestone is the Folkestone Contract A., comprising a cutting of about 300,000 cube yards, a large double bridge, for the Dover and Folkestone, and Folkestone and Canterbury turnpike roads, and an embankment from the said bridge to the deep valley at Folkestone, over which I propose to throw a viaduct of three 200 arches, or of such other dimensions and number of arches as will effect the desired purpose in the best manner and at the least cost.

Such are the works done and doing between Dover and Folkestone, much more might have been done had circumstances permitted, but enough only has been going on for the last year as would ensure the completion of these, the most difficult portion of the works on the line, in the same time and simultaneously with all other parts of the line between Tunbridge and Dover.

As much has been said at various times relative to the difficulties, dangers, cost, and in some cases—impossibilities of these cliff works, and as the difficulties (whatever they might have appeared to many) are now surmounted, the most difficult as well as all the "impossible" parts of the work being done, I cannot avoid stating in this place what has already been the cost, not only upon the whole, but upon each portion of the works as above described, in order that each Director, or every Proprietor, or any other person into whose hands this Report may fall, may, by taking the trouble to walk along the works from Dover to Folkestone, see for themselves what has been done for the money; and the resident engineer, Mr. Wright, will at all times, on a note or card being left at his office, give all facilities consistent with the state of the works for the safe and convenient passage of any person interested in the concern to pass along the line.

The whole expenditure for works in this division, from the beginning up to the 1st of May instant, has been as under—

	£	s.	d.
1st. For sundry expenses coming under no specific head	1,683	2	1
2nd. For benchings and passages along the face of the cliffs for the purposes of making surveys, setting out works, and passing along	1,578	7	11
3rd. Excavating the east face of the Shakespere cliff for the tunnel entrance, and forming embanked platform to the Archcliff Fort for temporary station, and roadway thereto	3,310	15	4
4th. Shakespere tunnel	41,583	15	9

9th Martello tunnel, adits, &c.	2,401	5	11
10th. Folkestone contract A and bridge	12,980	9	6
Total	£119,833	4	9

From Folkestone to the Staplehurst Road, a distance of 28 miles, nothing has been done in the way of works, other than securing the land, setting out the line, and contracting for ten miles of fencing. From the Staplehurst Road to Tunbridge the line is all fenced in, and about one-half the amount of work in the formation of the line already done, viz.: the cuttings and embankments from Tunbridge station to Five Oak Green near Marden, all of which are in hand, and about two miles of the line from the Tunbridge station to Tudeley has been for some time formed and ready for ballasting; in fact I see no difficulty (means being supplied) in doing that which I stated in a former Report, viz. to get the railway opened to Staplehurst Road station by the end of the ensuing summer, that is within a few months after opening to Tunbridge.

At Tunbridge, and from thence to the junction with the Brighton line at Red Hill near Reigate, a distance of about 20 miles, the works are in the most active state of operation, and if two or three of the contractors fail not in their duty and engagements with the Company, I see nothing other than the act of Providence that is likely to prevent the railway being opened to Tunbridge in the spring of 1842 as alluded to in the opening paragraph of the Directors' Report, in referring to my Report made to them at the last general half-yearly meeting in November, 1840. The opinion then expressed, I at present see no cause to alter.

At Tunbridge, the station ground is levelled down, drained and ready for being ballasted; the new approaches and bridge, for the Tunbridge Wells and Hastings turnpike roads over the railway, are completed, and in course of being metalled ready to receive the traffic over them on the 1st of July, immediately after which the whole of the station ground (about 12 acres) will be insulated from all roads and crossings and rendered perfectly safe, and convenient for all purposes, whether considered with regard to the business of the Company or the convenience of the public and others interested in the roads and communications in the locality.

The station buildings and offices at Tunbridge are now under my consideration, and plans are being prepared of a kind which, I trust, will be found to combine more of simplicity, convenience, and safety with respect to railway travelling, than have yet been combined in a large "thoroughfare station," inasmuch as no passenger of any class coming or going to or from the station by whatever conveyance they may, or going or coming either to or from the north or the south of the railway, or up or down thereon, will ever have to cross the railway on the level at the station.

At Tunbridge, rails, sleepers, and all other "*Material*" for the construction of the permanent way, are in course of constant regular delivery, preparatory to laying the line, which will be commenced in the ensuing autumn.

From Tunbridge to the Brighton line there is not a single spot unoccupied with workmen and contractors for cuttings, embankments, brick-yards, bridge-building, &c. &c., the whole of which distance comprises *ten lots* or contracts, some of which will be brought to a state of completion or up to "formation level" every two or three weeks, which means that the requisite fencing, earthwork, and bridges, &c., are all done ready to begin ballasting and laying the permanent way; and I trust in having all this done on every lot during the month of December next; the ballasting done in several, and the permanent way in full progress.

Leaving the station at Tunbridge towards London, the first lot or contract extends about four miles, to a point called Whitepost Farm in the parish of Leigh, and includes cuttings and embankments of very large magnitude, including the main valley of the Medway and the extensive viaducts for crossing the various branches thereof, some of which are completed, and the others in a very forward state, comprising in the whole about 400 feet of water way in arches or spans of 50 feet each. The earthworks in this lot are proceeding very rapidly under the contract of Messrs. Dawson, and will, I expect, be completed to formation level in four months from time.

The next lot, or contract, "Tunbridge, C.," commencing with a very short tunnel under the garden and road of Whitepost Farm, extends to Bow Beach in the parish of Chiddingstone, under contract with Mr. Collis, being in length about two miles, is in great part completed and trimmed off, and will be fully so in about two months hence ready for ballasting.

The next contract, called No. 8 Godstone, is also in the hands of Mr. Collis, joining Tunbridge, C., at Bow Beach, and extends about two and a half miles to a place called Medhurst Row, it contains some heavy works both in earthwork and

Digitized by Google

masony, and will, I expect, be completed in September next.

From the Medhurst Row, still going upwards, follow contracts No. 7 and No. 6 Godstone, both under the execution of Mr. Morris, and comprising an extent of three and a half miles, both in a very forward state, with a prospect of being completed in about three or four months.

The next two lots, No. 5, and No. 4 Godstone, in the hands of Messrs. Weston, Luttley and Perry, contractors, in length about three miles, extending to the eastern end of the Bletchingley tunnel, are both in a satisfactory state of progress; No. 5 will be completed by the end of next month, and their united forces being then devoted to No. 4, it will, in my judgment, be completed some time in or by the end of November next.

Lot No. 3 on the Godstone division comprises the tunnel at Bletchingley, which is being carried on under the immediate personal management of Mr. Simms, the resident engineer, in a manner highly creditable to him, advantageous to the Company, and satisfactory to me; Mr. Simms will attend the board with a descriptive section of the progress of the works, which I have every reason to believe will be completed before Christmas next.

From the west end of the Bletchingley tunnel to the junction with the Brighton line, a distance of about 3½ miles, comprises two lots, Godstone No. 2, and Godstone No. 1, under contracts with Mr. Hubbersty and Messrs. Tredwell respectively. These lots, each containing upwards of 300,000 cube yards of earthwork, are in some measure the gauge, as it were, of the completion of the line as to time; a large portion of this earthwork is done.

Having thus sketched, in as brief a manner as possible to be understood, the state and progress of the various works, it only remains for me to say a few words relative to the resident engineers and their extensive duties, which have all along been performed so much to my satisfaction. Taking into consideration, not long since, the commencement of the works in the Ashford district, and the forward state of those at Dover and Tunbridge, it occurred to me that probably arrangements might be made to carry on the management of the whole line with the same staff of engineers that we now have, instead of instituting another establishment; and on consulting with the parties, I found them, as in all other cases, ready and willing to second my views and extend their labours; and, taking into consideration the onerous duties imposed upon Mr. Sims by having a large tunnel upon his already extensive division, the following arrangement has been made and acted upon since the last Half-Yearly Meeting, with the most satisfactory results, viz.:—

In the Godstone division, to put the No. 8 contract into Mr. Barlow's division, that being the most distant from Mr. Simms, and being under the same contractor as Tunbridge contract C, which adjoins it, rendered it eligible in more respects than one.

The Tunbridge contracts being in so very forward a state as to allow of Mr. Barlow's extending his division, it has been arranged that this division shall extend to Ashford; and the Dover division being so forward at its extreme end, that Mr. Wright shall extend his division so as to meet Mr. Barlow at Ashford.

This arrangement has now been in operation for some time and works very well, it is much better than having more hands and an additional establishment on the line; and on Mr. Barlow's division, which is the longest, temporary assistance in all matters touching surveying, setting out and fencing the line, is supplied as occasion may require by Mr. Thurston, of Ashford, who has been more or less in the occasional employment of the Company from its first establishment.

On the whole, the affairs and works of the South Eastern Railway as far as I can judge of them, were never in so good a state, either present or prospectively, as they are at this time; nor do I now see any cause to alter or retract any statements, either as to cost or time of completion, that I may at former times have put before the Board.

I have the honour to be, Gentlemen,

Your most obedient Servant,

W. CUBITT.

DINNER AND PRESENTATION OF PLATE TO T. J. WOODHOUSE, ESQ., RESIDENT ENGINEER OF THE MIDLAND COUNTIES RAILWAY.

Those individuals who by their liberality in defraying the expenses of public works, or by their genius in superintending their construction, ornamented their city or country by buildings or other labours of universal utility, were considered in ancient times to have the same claims to the respect and affection of their fellow-citizens, as the statemen who governed the commonwealth, or the warriors who defended its territories and enlarged its boundaries. All were alike employed in promoting the general interest, and were appreciated accordingly. In modern times the same feeling prevails, and the civil engineer is always looked upon as a national and local benefactor. Although it is foreign to our habits to decorate our well-deserving countrymen with laurel or ribbands, yet we have another way of showing our estimation of their merits; and a public entertainment is our usual method of evincing our respect for those whom the public delights, because it has reason, to honour. A splendid service of plate is no bad substitute for a wreath of laurel; and the inscription on it speaks as expressively as the ribband of the Legion of Honour, or a medal of civil merit, and much more durably and satisfactorily. A testimonial of this kind took place in this town yesterday, on the occasion of presenting a very gorgeous dinner service to Thomas Jackson Woodhouse, Esq., by whom the plans of the Midland Counties' Railway were designed, and under whose direction they were so successfully carried out. It had been intended that the dinner to celebrate this presentation should have been at the Bell Hotel; but the Committee found that the dining room of that establishment would not be in every respect suitable, and the scene was changed to the Three Crowns, where the plate was exhibited during yesterday morning, and was inspected by many hundreds of visitors. It consists of a lofty centre ornament, or epergne, two ice vases, soup tureen, entrée, and other large dishes, covers, &c. The centre ornament is a candelabrum, bearing moveable branches for six lights; upon its pedestal, which is triangular, are placed three figures, representing Genius, Science, and Philosophy; upon the lower angles of the base are boys, one with surveying instruments, a second with tools of a Navigator, and the third with models representing the Steam Engine and its origin, and its perfection as a locomotive. The first pannel bears the inscription, the second the arms of Mr. Woodhouse, and the third a representation of the Red-hill Tunnel. The whole service, which was manufactured by Mr. B. Smith, of Lincoln's Inn Fields, London, is in unison, and the several articles are surmounted with Mr. Woodhouse's crest. The inscription is in the following terms:—

"PRESENTED TO
THOMAS JACKSON WOODHOUSE, ESQUIRE,
Civil Engineer,

By the Resident Engineers, Contractors, Manufacturers, and other Gentlemen, connected with the Construction of the Midland Counties' Railway, as a Token of their Estimation of his Talent, Zeal, and Integrity, manifested on all occasions, in carrying out the above important Undertaking."

The value of this splendid tribute to professional worth and private merit, is estimated at 750 guineas.

The dinner was served at six o'clock, and upwards of 70 gentlemen sat down to table—William Betts, Esq., principal Contractor, in the Chair; and J. Murphy, Esq., Civil Engineer, Vice President. The Chair was supported to the right and left by Thomas Jackson Woodhouse, Esq., W. Woodhouse, Esq., Messrs. Anson, Binger, Ross, Stevenson, and Horn, contractors; and among the general company we observed Messrs. Mc Henry E. L. Betts, Murphy, Beatty, Rowan, Kearsley, Parsons, Berridge, Macauley, Cort, Waterfield, Smith, Leistman, Mc Leod, Worswick, Easty, and other gentlemen connected with the railway, and the town and neighbourhood. The dinner was considered to be the *chef d'œuvre* of the Crowns and the Bell, who jointly purveyed for the guests, and every delicacy or luxury in or out of season, with the choicest vintages of France and Germany, were in great profusion. On a platform to the right of the Chair, the service of plate was displayed to much advantage, and during the dinner a band of music played the most popular military and moral airs. The room was decorated with great taste and skill, and the *coup d'œil* was very imposing.

The cloth being removed, the usual loyal and national toasts were given; after which,

The Chairman rose and spoke as follows:—It falls to my lot to propose the health of a gentleman immediately connected with the object of our present meeting, and to congratulate all present on the numerous and respectable company now met together to pay the just tribute of respect to the worth and talent of our friend and visitor, Thomas Jackson Woodhouse. The company being composed, with few exceptions, of gentlemen immediately connected with the works and the carrying out the completion of the line of the Midland Counties' Railway, under your superintendence [addressing himself to Mr. Woodhouse], I am deputed, Sir, by a portion of these gentlemen—the Resident Engineers—to tender you their sincere thanks for the unvarying kindness you have at all times evinced, and your solicitude for their welfare in their professional duties and individual comfort. For those gentlemen who have supplied the works with materials, I would convey to you their acknowledgments for your honest and upright conduct to them, and your desire at all times to comply with their fair and equitable demands. For myself and brother Contractors, allow me, Sir, publicly to offer our thanks for your kindness and assistance in all our difficulties—and it will be readily admitted that in the execution of nearly 60 miles of railway very many serious engineering difficulties and obstructions must have presented themselves, which only could have been removed by the untiring perseverance and unlimited energy, coupled with the great scientific and practical knowledge, which has been found in the master-mind of our worthy Engineer, who has been a warm friend and ready adviser in every time of need—and had it not been for this, the Midland Counties' Railway would not have been opened in the year 1840. The important office now filled by our worthy friend, joined with his professional labours, may be hailed as a pledge for the prosperity of the proprietary and satisfaction of the Directors—for in him they have a most faithful and worthy servant, and already owe him a debt they can never pay. I believe it a received opinion, that however brave and courageous may be the army led by an unskilful commander, defeat is certain: but, Gentlemen, the reverse is our case; we have had a bold and skilful commander, and through his talents have fought the battle and won the victory, and are met this night to crown his brow with laurel. It now remains for me, Mr. Woodhouse, to have the gratification and honour, in the name of the present company and our absent friends, to beg your acceptance of the service of plate that now stands before you, and hope you will accept it as expressive of our regard and friendship for you as a gentleman, and as a token of the high estimation we form of your genius and moral worth, and independence as a professional man. Gentlemen, I now beg you all to join me in drinking a bumper to the health and prosperity of Thomas Jackson Woodhouse. (Nine times nine.)

Mr. Woodhouse returned thanks in nearly the following terms:—The state of my feelings puts it out of my power to return thanks in an adequate manner for this display of friendship and estimation. Works, not words, are my *forte*. It is extremely gratifying to me, to see so many parties who have been engaged with me in carrying out this great

Digitized by Google

work (for great it literally has been,) Continued to express their satisfaction with the manner in which I have conducted it. It is necessary that I should say, that for any engineer to carry out such a work successfully, he must be assisted by good brother officers, able assistant engineers, and spirited contractors, and be backed by just and liberal Directors. As to the first, no one could be more happily situated than myself, in having legal assistance of the first order, and ready and indefatigable co-operation, in the Secretary's department. In the engineering department I have been assisted, principally by young men initiated in railway science by myself, and proud am I to acknowledge, the practical and theoretical acquirements which have been generally developed by them in carrying out the construction of the works. The Midland Counties Railway Company have been peculiarly fortunate in having engaged contractors of skill and energy. Had not such been the case, the works could not have been executed in the short time they were. To the manufacturers and others supplying materials for the works, much praise is due, for the prompt and efficient manner in which they fulfilled their contracts and engagements. It is not to be supposed, in a work of this magnitude, that I had not occasionally reason to find fault, and perhaps to take steps which may have been considered harsh, but it speaks well for all concerned, that in an expenditure of one million of money, for work and materials, not a single case of litigation has occurred. As regards the Directors, it would be an act of injustice not to acknowledge the handsome and spirited manner in which the business of the railway has been conducted. I have now been upwards of thirty years connected with the construction of public works, and in no instance have I seen the just demands on the Company more promptly met than in this. If the sinews of war are not supplied liberally, the war cannot be carried on vigorously, and so with railways; but I wish at the same time to bear testimony to the fact that there is not any railway yet made on which the resources have been better husbanded, no unnecessary or ornamental work having been introduced. It now remains only for me to thank you for this mark of your esteem, and to add if at any time I may have appeared to have acted harshly or arbitrarily towards any of you, it has been a strict sense of my professional duties which has compelled me to do so. My maxim is that an engineer should be an impartial arbitrator between the Company and the contractors: such has been my endeavour, and I hope all parties will give me credit for doing so. For the magnificent token of your respect now presented to me, accept my heartfelt thanks; and believe me, I consider this as one of the most gratifying days of my life.

The following toasts were afterwards given and duly responded to.

"The Midland Counties' Railway." (Acknowledged by W. Parsons, Esq.)

"The Solicitors' of the Company."

"Resident Engineers."

"Mr. Robert Stephenson." (Proposed by the Chair and ably responded to by Alexander Ross, Esq., C.E.)

"Mr. Anson and the North Midland."

"Mr. George Stephenson."

The Chairman kept his post till past 3 o'clock, and the general break up was not till past 6 o'clock, and even then many of the company appeared loth to part.

TAFF VALE RAILWAY.—The passenger traffic on this line, particularly in the third class train, has greatly increased. Stopping as they do at so many points on the line, and carrying passengers for such a trifle, the trains have become a favourite mode of conveyance for the country people going to market with their produce, while the prejudices not unnaturally entertained towards a mode of transit, not hitherto known to them are fast fading away, while the advantages are becoming daily more manifest.—*Bristol Gazette.*

NORTH KENT RAILWAY.—LINE FROM GRAVESEND TO ROCHESTER. Office, 42, Lombard Street.

CAPITAL, £300,000. In 15,000 SHARES, of £20. each. DEPOSIT, £1 10s. per Share.

Provisional Committee.

John Humphery, Esq. Ald. M. P. | George Carter, Esq.
John Edward Puddick, Esq. Aldborough Bateman, Esq. | Miles Braithwaite, Esq. George E. Britten, Esq.

Chief Superintendent.—George Walter, Esq.

Bankers.

Messrs. Spooner, Atwoods, and Co., London.
Dartford: Messrs. Hills, M'Rae and Co.
Gravesend: Messrs. Hills, M'Rae and Co., London and County Bank.
Rochester: Messrs. Day and Co., London and County Bank.

Engineers.—Colonel Landmann: Joseph Gibbs, Esq.
Surveyors.—Messrs. Smith and Barnes.
Solicitors.—Messrs. Sweet, Sutton, Ewens, and Ommanney.
Secretary.—Mr. Cresswell.

The object of this undertaking is to connect Gravesend with Strood, Rochester, and Chatham, by means of a railway, taking the whole line of the Thames and Medway Canal, for which purpose the Committee have provisionally agreed for the purchase of the Canal and Works.

The level of the Canal is nearly the same as that of the proposed railway, which will save much expense and time in its completion.

By the arrangements made, the Act of Parliament for carrying the same into effect may be obtained forthwith, and the Canal drained and converted into a railway, and opened to the public in the course of one year from the date of the Royal Assent; leaving the docks at each end for the reception of coals, stone, lime, and merchandize.

There is at present a large transit of passengers between the populous towns of Gravesend, Strood, Chatham, Aldstone, the city of Rochester, and the adjacent parts, averaging daily about 1,000, who now travel between those places by omnibuses, or other conveyances, at a charge varying from 1s. to 2s. each.

The average number of passengers annually landed at the piers at Gravesend, is about 500,000; and when the additional number of iron steam boats, now preparing to run from Blackwall to Gravesend, are in operation (at low fares), the amount will be greatly increased, and very many of those persons will avail themselves of the railway as a cheap and expeditious mode of transit into Kent; in addition to which there will be a very considerable income derived from the traffic in coals, stone, lime, and merchandize, which will insure an ample return to the Proprietors, besides the immediate income to be derived from the docks and groundrents, &c. at each end of the line.

The Property of the Thames and Medway Company comprises, besides the Canal,—At Gravesend, entrance lock from the Thames, for the admission of Colliers; a Basin of considerable dimensions, in which Yachts and other Vessels are laid up during the winter; extensive Coal Yards; Timber Yards; Lime Kiln; Dock Master's Cottage; many Cottages for Workmen; and valuable Ground Rents; besides many acres of unoccupied land; and a Cottage at every Bridge over the Canal.

At Rochester, valuable Building Ground, consisting of upwards of twenty acres of Freehold Land; Lock and large Basin, capable of containing ships of upwards of 300 tons burthen; Steam Engine and Engine House; Dock Master's House, and Cottages, Stabling, Warehouses, &c.

Applications for Shares to be made at the Company's Office, 42, Lombard-street, prepaid.

TRAVELLING TO SCOTLAND AND THE ENGLISH LAKES.—The Cheapest and only Direct Route from London and all parts of the South of England to the English Lakes, or any part of Scotland, is by Railway through Birmingham to Lancaster, being the Grand Mail Road from London to Edinburgh and Glasgow).

Mails and Light Coaches run from Lancaster to Carlisle, Edinburgh, and Glasgow, every Morning and Evening, after the arrival of the Mail Trains from London;—by which, places may be secured in London, at Messrs. CHAPLIN AND HORNE'S Offices, London and Birmingham Railway Station, at very Reduced Fares.

A Mail and other Coaches leave Lancaster every Morning and Afternoon, for Ambleside, Keswick, and the Lake District.

A Mail Coach leaves Lancaster every Morning, on the arrival of the Mail train, for Ulverstone, passing the foot of Windermere and Coniston Lakes.

Arrangements are made with the Innkeepers on this Route to Reduce the Charge for Post Horses to 15d. a Mile.

RAILWAY TIME TABLE.

From Lancaster to Birmingham and London.

At	*2h.	0m.	a. m.	Mail.
"	*4	45	a. m.	First Class
"	*1	0	p. m.	(to Birmingham only).. Mixed Train.
"	5	30	p. m.	Mail.

From London to Lancaster.

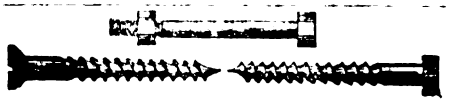
At	9h.	45m.	a. m.	Mail.
"	5	30	p. m.	Mail.
"	*9	0	p. m.	

From Birmingham to Lancaster.

At	1h.	45m.	a. m.	Mail.
"	6	0	a. m.	Mixed Train.
"	*7	45	p. m.	Mail.

The trains marked thus (*) will take private carriages and horses, the others cannot do so.

ASCOT RACES. — GREAT WESTERN RAILWAY.—On Tuesday, the 8th of June, and on Thursday, the 10th of June, 'GOLD CUP DAY,' Extra Trains will run between Paddington and Slough, morning and evening. Special Trains also will be provided early in the morning for the conveyance of carriages and horses, so that they may be at Slough on the arrival of the passengers.



Full particulars of the above can be had at the railway offices.

Early application should be made at the Paddington Station to secure trucks and horse boxes, for those who may wish to send their carriages and horses to Slough.

Paddington, June 2, 1841.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.—A Decided Bargain.—Seventy-five Shares in this prosperous Company, on which £17 per share (making a total of £1,275) have been paid up, are now to be sold for SEVENTY-FIVE SHILLINGS—provided the purchaser will accept a Transfer, and register the shares in his own name before another call is made, so as to relieve the seller from further liability.

Apply, by letter, post-paid, to A. B., 26, Lower Sloane-street, Chelsea, London.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic pistol, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

Planing machine; works by hand, will plane 5 feet by 18 inches.

PROSPECTUS OF THE 7,000 MONEY DIVIDENDS, which will be divided amongst 7,000 Bonds of the Imperial and Royal Polish Loan, contracted in the year 1835, under guarantee of His Majesty the Emperor of Russia.

By the distribution of July 1, 1841.

Dividends.			Florins, Polish currency.
1 of	1,000,000	.....	1,000,000
1 —	300,000	.....	300,000

1,000 -	950	.....	950,000
5,500 —	750	.....	4,125,000
7,000			7,970,000

41 Florins Polish Currency are equal to £1 sterling.

Every Original Bond belonging to the distribution of July 1, obtains at least a dividend of £15 sterling. Largest dividend, £24,400 sterling.

Direct for Original Bonds, without delay, to
HEINE BROTHERS, at HAMBURG.

HIS MAJESTY the EMPEROR of AUSTRIA having authorised and guaranteed several Distributions of Money Dividends, which offer many possibilities of obtaining large Fortunes, HEINE BROTHERS at Hamburgh and at Lubeck, are now Selling Bonds for the said Distributions. Persons desirous of purchasing for the next Distribution may receive, previous to giving any orders, the prospectus and particulars, upon addressing, without delay, a line to

HEINE BROTHERS at Hamburg; or to
HEINE BROTHERS at Lubeck.

The next Distribution contains Dividends of £25,000, £5,000, £1,500, £1,000, £800, £600, £400, £200, £150, £120, £110, £100, £90, £80, £70, £60, and £50 sterling.

Heine Brothers having remitted, during a short time £25,000, £18,000, £9,000, £5,000, £3,600, &c. to London; £3,000, £600, and £700, to Edinburgh; £3,600 to Dublin; £3,600 to Beverley; £3,600 to Halifax (Yorkshire); £1,200 to Portleaven Harbour; £300 and £600 to Liverpool; £900 to Newcastle-upon-Tyne; £900 to Hull; £800 and £600 to Manchester; £600 to Bideford; £600 to Cork; and £600 to Bradford; they shall feel glad to remit many Dividends of the next distribution to England, Ireland, and Scotland. The securities can be cashed at every banker's connected with Germany in every mercantile place of the world.

Lubeck and Hamburg, March 9, 1841.

P.S. Heine Brothers have remitted this day, to London and vicinity, £25,000, being the largest money dividend that has ever been remitted from the Continent to Great Britain. The next distribution contains a Money Dividend of the same amount. Direct without delay to Heine Brothers.

MANCHESTER AND LEEDS RAILWAY COMPANY.—ALTERATION OF PASSENGER TRAINS.

The Public is respectfully informed, that on and after Tuesday, the first day of June, 1841, the Trains will depart from the Station, Oldham Road, Manchester, as follows:—

No. of Train	*2nd.*	*3rd.*	*4th.*	*5th.*	*1st.*	*2nd.*
Morning	7 0	9 0	10 30, and	11 30, (Mail)	Sunday 8 0, and	11 30, (Mail)
No. of Train	*6th.*	*7th.*	*8th.*	*9th.*	*3rd.*	*4th.*
Evening	1 10	4 45	6 30, and	10 0, (Mail)	Sunday 6 30, and	10 0, (Mail)

The Trains will depart from the Station, Hunslet Lane, Leeds, as follows:—

No. of Train	**1st.*	*2nd.*	*3rd.*	*4th.*	*1st.*	*2nd.*
Morning	6 0	7 40	8 40, and	10 16, (Mail)	Sunday 8 0, and	10 16, (Mail)
No. of Train	*5th.*	*6th.*	*7th.*	*8th.*	*3rd.*	*4th.*
Evening	1 20	3 0	4 0	5 45, and 7 15, (Mail)	Sunday 6 0, and	7 15, (Mail)

* The first Train departs from Normanton.

Passengers may proceed from the Manchester station to the following places on other lines by the following Trains:—

	Week Days.					*Sundays.*	
For London* by the....	1st	2nd	4th	0	0	7th	
For Leicester by the ...	1st	2nd	4th	0	6th	7th	2nd
For Nottingham	1st	2nd	4th	0	6th	7th	2nd
For Chesterfield	1st	2nd	4th	0	6th	7th	2nd

* The first Train for London, &c. departs from Sowerby Bridge.

Passengers may be booked at the Company's Office, Market-street, Manchester, for London, Leeds, Leicester, Rugby, Nottingham, Derby, Chesterfield, Sheffield, Burnley, Huddersfield, and Bradford, where they may be conveyed to the Station free of expense.

MANCHESTER AND LEEDS RAILWAY. OLDHAM BRANCH LINE.—TO CONTRACTORS.

The Directors will meet at their Office, Clowes's Building's, Hunt's Bank, Manchester, on Monday, the 28th June next, for the purpose of receiving Tenders for the formation of a branch line from near Mills Hill, in the township of Chadderton, to the town of Oldham, being a distance of about two miles, including all the necessary excavations and embankments, bridges, culverts, formation of roads, fences, laying of permanent way, and all other works appertaining thereto, as described in the plans and specifications, which may be seen at the Engineer's Office, Hunt's Bank, Manchester, on and after the 17th day of June next.

Printed forms of Tender will be supplied to Contractors on application at the Engineer's Office, which must be delivered at the Office of the Secretary, Clowes's Buildings, by 10 o'clock in the forenoon of the 28th June next, and the parties tendering will be required personally to attend at the same place at the hour of 1 o'clock in the afternoon of the same day.

May 31st, 1841.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.

Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton.
Grain, Timber, &c.....	55s.
Beer, Hides, Soap, Sugar, &c.....	60s.
Raw Coffee, Rice, Earthenware in Crates, &c. ..	62s.
Bales, Grocery, Oils, Tea in Chests, Wool, Paper, &c.	65s.
Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.....	70s.
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.....	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,

Agents to the Grand Junction Railway Company.

THE BRIGHTON RAILWAY.

The Official Map and Section of this line is now published price 3s. on a large sheet coloured; folded in a cover 4s.; on linen for the pocket 6s.; and on rollers 5s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 8, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Litts, Royal Exchange, and at the Office of the Railway Times.

THE CIVIL ENGINEER AND ARCHITECT'S JOURNAL, SCIENTIFIC AND RAILWAY GAZETTE,

for June, price 1s. 6d., illustrated with two engravings, and numerous wood-cuts, contains a description of the Kursaal Gebaude at Bruckenau (with two engravings)—Architectural criticisms by Candidus—Ancient Engineering—On setting out Railways on sidelong Ground—Papers on Harbours—On the use of Slate in Buildings and Furniture—Notice of the Architectural Room at the Royal Academy—Alarum Whistle for Steam-boilers—Perkin's Answer to Davis' and Ryder's Report on Warming Buildings—On burning of Gas for Heat or Illumination—Steam Navigation in America—Reviews of several new Books—On the proportion of Steam-power to Steam-vessels—Observations on the Injuries and Repairs of Menai Bridge, 1839—Fourdrinier's Improvements in Steam-engines—Moveable Observatory or Scaffold—Application of Electro-magnetism to Machinery—Boring with Rope Tackle—North of England Railway Rail and Chain—New Steam-vessels—New Patents, and a variety of Miscellaneous Articles.

H. Hooper, Pall Mall, East; Groombridge, Panyer Alley, Paternoster Row; and Weale, Holborn.

HORNE AND CHAPLIN, Agents.

Parcels for 8¼ p.m. Mail Train, viz. Boxes, Trusses and General Merchandise, received at the above Offices until 7 p.m.; Solicitors' and light Parcels until 7½ p.m.

Omnibuses to and from every Train, Fare 6d.

Post Horses for hire may be had on application at the above Offices, to convey Carriages to or from the Railway and any part of London (within 9 miles) including the driver, 10s. 6d. each pair.

SPECIFICATIONS OF RECENT PATENTS.

The MECHANICS' MAGAZINE, No. 930, published this day, price 3d., contains abstracts of the following recent Patents:—

Williams's, for certain improvements in the construction of furnaces and boilers; Whitworth and Spear's, for certain improvements in machinery, tools, and apparatus, for cutting and shaping metals and other substances; Stevens's, for certain improvements in machinery or apparatus to be used as a universal chuck for turning and boring purposes; Henson's, for improvements in machinery for making or producing certain fabrics with threads or yarns applicable to various useful purposes; Condie's, for improvements in applying springs to locomotive, railway, and other carriages. Also descriptions, with numerous engravings, of Pilbrow's condensing cylinder steam engine, and substitute for feed pumps to boilers; Adcock's patent spray pump; Suggestions for establishing a fire police in Dublin; Observations relative to the smoke nuisance; Solution of a mathematical question; Account of some successful experiments with Rennie's Trapezium Paddle Wheels; Abstracts of recent American Patents; Voyage of the "Jane" Lilliputian Steamer from London to Nottingham, &c. &c. &c.

Published at the Mechanics' Magazine, Patent, and Designs Registration Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

TO ENGINEERS of Large Business.—To be LET

a spacious WHARF and large WAREHOUSE ROOM with Residence for superintendent, and Cottages for workmen, at Rotherhithe. The wharf has extensive privileges. Or, well suited to an Engineer requiring a large space of ground, and a frontage of 235 feet next the river, with good approaches from the land. Apply to Mr. W. Woodward, 1, Furnival's Inn, between twelve and two, if by letter, pre-paid.

Important and Extensive Sale of Horses, Fly Boats, Vans, Carts, Tarpaulins, Iron, Tar, Dock Yard Implements, &c. &c.

By T. M. FISHER (by order of Messrs. Morris, Herbert, and Co., who are declining the carrying business), on Monday, Tuesday, and Wednesday, the 14th, 15th, and 16th of June, and following days, at their stables in Castle Field, and their Dock Yard and Wharf, on the Duke's Canal, Castle Field, Manchester; sale to commence each day punctually at eleven o'Clock in the forenoon.

SIXTY Capital Short-Legged Young and Active Horses, in first-rate working condition, suitable for vans, carts, and waggons; 25 very superior Fly Boats, with iron knees, in thorough repair, complete with cloths and cabin furniture, the whole built by Messrs. Morris, Herbert, and Co., in their well-known substantial manner, and of the very best well-seasoned English timber, three spring vans, six broad-wheeled carts, with iron arms; cart and boat geers, trucks, beam, scales, and weights; corn, bean, and hay cutters, stable furniture and utensils, very large and valuable stock of new and second-hand tarpaulins, cart and boat sheets, canvas, chains, ropes; also, the boat-building implements and stock, which includes a very large quantity of the best English oaks, sawn and in balk; timber carriage, tar, nails, wrought iron; carpenters, joiners, and smiths tools; two pair of smiths bellows, two anvils, stocks, taus, and dies, rack jack, and other effects.

Catalogues will be published on Saturday the 5th of June, and may be had at any of the offices following, viz.:—Messrs. Morris, Herbert, and Co.; the *Railway Times*, and *Mining Journal*, London; *Midland Counties Herald*, Birmingham; *Liverpool Standard* and *Mercury*, Liverpool; *Leeds Mercury*, Leeds; or from the Auctioneer, who will forward the same to parties living at a distance, on application by letter directed to his office, No. 17, Princess-street, Manchester.

THE THAMES TUNNEL IS OPEN EVERY DAY

(Sunday excepted), from Nine o'Clock in the morning until dark. Entrance is on the Surrey side of the river, close to Rotherhithe Church. The tunnel and shield are lighted with Gas, and visitors can walk under the entire breadth of the river, up to the shield, which is now advanced as far as the Company's wharf, at Wapping. Admittance One Shilling each.

J. CHARLIER, Clerk to the Company.

Company's Office, Walbrook-buildings,
Walbrook, May, 1841.

N.B. Conveyances to Rotherhithe, by Omnibus, from Piccadilly, Charing Cross, Fleet street, and Gracechurch-street. Also by Steam Boats from Chelsea, Vauxhall, Lambeth, Hungerford, Old Shades Pier and London Bridge, to the Tunnel Pier at Wapping. Books, with plates descriptive of the works, are sold at the Tunnel, price One Shilling.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES,

showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

NORTH MIDLAND RAILWAY.—The Directors of the North Midland Railway Company are ready to receive MONEY on DEBENTURES, under the powers of the Act of Parliament, in Sums of not less than £500, bearing interest at 5 per cent. per annum for periods of 3, 5 or 7 years.

By order,
H. PATTESON, Secretary.

Warnford-court, Throgmorton street,
May 21, 1841.

SOUTH EASTERN RAILWAY COMPANY.—NOTICE OF CALL.—The Directors having this day made a CALL of £5 per share from the Subscribers to and Proprietors of this undertaking, and directed that the same be PAYABLE on Tuesday, the 6th day of July next, at either of the undermentioned places, viz —

Messrs. Glyn and Co., bankers, Lombard-street, London.
Messrs Moss and Co., and Messrs. Barned and Co., bankers, Liverpool.
Messrs. Jones, Loyd, and Co., bankers, Manchester.
Messrs. Beckett, Blayds, and Co., bankers, Leeds.
The Union Banking Company, York.
Messrs. Fector and Co., and Messrs. Latham and Co., bankers, Dover
Messrs. Jemmett and Co., bankers, Ashford
Messrs. Wilmshurst and Co., bankers, Cranbrook.
Messrs. Beeching and Sons, bankers, Tunbridge and Tunbridge-wells.
The Country branches of the London and County Banking Company.

The Proprietors are hereby required to pay the same accordingly.—Dated this 1st day of June, 1841.

JOSEPH BAXENDALE Deputy Chairman
of the Board of Directors.
J. C. YEATS, Secretary.

Railway Office, 10, Coleman-street, London.

BRISTOL AND EXETER RAILWAY.—NOTICE is hereby given, That the Line between Bristol and Bridgwater will be opened for public traffic on Monday, the 14th instant.

Particulars of the Trains, Fares, &c. may be had after Wednesday next, the 9th inst., upon application at any of the Great Western Railway stations, or at the Company's Offices in London, Bristol, and Bridgwater.

By order of the Directors,
CHAS. A. SAUNDERS } Secretaries.
THOMAS OSLER }

Great Western Railway Office, 4th June, 1841.

TO GAS COMPANIES.—A Person aged 30, who has been for several years practically engaged in the Gas Manufacture, has erected and superintended Gas Works, both at home and abroad, and is now Manager of a considerable Gas establishment in an English country town, is desirous of removal to a similar situation in any of the larger towns, as Liverpool, Manchester, Bristol, Bath, &c. Satisfactory testimonials and references. Apply by letter, addressed to P. B., care of Mr. Robertson, *Mechanics' Magazine* Office, 166, Fleet-street.

SIR WILLIAM BURNETT'S PATENT.—For the Preservation of Timber, Canvas, Cordage, Cotton, Woollen, &c. from Dry Rot, Mildew, Moth, and Premature Decay.—The value of this Discovery has been amply proved in her Majesty's Dock Yards and elsewhere. Official Reports and Specimens of Wood, Canvas, and other articles may be seen at the office. The process is simple, inexpensive, and perfectly innoxious in its use; as applied to shipbuilding, it purifies Bilge-water, and retards oxydation of metals. By the process green wood may be rapidly seasoned. The Patent Material may be purchased, or Licences for Tanks granted to Noblemen, Gentlemen, Builders, Upholsterers, Piano-Forte Makers, Sailmakers, and others. When for the purposes of trade, on very advantageous terms to the Licensee. Timber of all dimensions, Planking, Canvas, Cordage, Ships' Sails, Awnings, Rick Cloths, Tents, and all other articles of Linen and Woollen Manufacture are received for preparation at the Proprietors' Waterside Premises Copenhagen Wharf, Britannia Bridge, Limehouse.

Particulars and terms may be obtained on application at the Office, 4, Castle-court, Birchin-lane, Cornhill.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad street, City; 69, Princes-street, Leicester-square; Manufactory, Mill wall, Poplar; and also of the following Agents —

Robertson and Co., 12, Goree Piazzas	Liverpool,
Mathias Dunn	Newcastle-upon-Tyne
Joseph Bothway	Plymouth.
John Thompson and Co.	Wigan.
J. T. Tregellas	Truro.
Thomas Mooney and Son	Dublin.
Coates and Young	Belfast.
James Kibble and Co.	Glasgow.
James Gunn	Leith.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction, the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of nine months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

TO RAILWAY CONTRACTORS.—To be Sold 140 21-yard capital EARTH WAGGONS, 30-inch wheels, 3½ inch axles, 4-feet 8-inch gauge, of the very best construction.

The above are lying near the Great Western Railway, and the Wilts and Berks Canal, Uffington, Berks.

Apply to Mr. M. C. S. Medley, Farringdon.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.—TENDER FOR LOANS ON DEBENTURES.—The Directors of this Company are ready to receive Tenders of Loans of Money on Debentures to be issued under the provisions in the Act of Parliament, and secured on their undertaking, in sums of not less than £200 for terms of four, six, or ten years, on interest at the rate of five per cent. per annum, payable half yearly.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's-street, Bank, London, or Cirencester. A limited sum only is required.

By order of the Board of Directors,
A. MERRICK, Secretary.

Cirencester, 5th May, 1841.

There is a net revenue of £17,000 per annum, payable half yearly, from the Great Western Railway Company, for the use of the line from Swindon to Cirencester, applicable to the payment of the interest on the debentures issued by this Company.

PARIS AND ROUEN RAILWAY.—The Annual General Meeting of the Shareholders in this Company will be held in Paris at No 38, Rue de la Victoire, on Thursday, the 8th day of July next, at half-past two o'clock in the afternoon.

ADOLPHE THEBAUDEAU, Secretary.

Office, No. 52, Rue Basse du Rempart,
Paris, June 2, 1841.

PARIS AND ROUEN RAILWAY.—TO CONTRACTORS AND OTHERS.—The Company is now ready to receive Tenders for the following works:—To construct at Oissel over the two arms of the Seine two bridges of five arches each. To construct a similar bridge of six arches over the same river at Le Manoir; each bridge is to consist of wooden arches one hundred feet span, with stone piers and abutments.

Plans, sections, drawings, specifications, and conditions may be seen at the Office, 52, Rue Basse du Rempart, at Paris, and further information may be obtained on application to Mr. Locke, the Company's Engineer, 20, Adam-street, Adelphi, London. The Company will not be obliged to accept the lowest Tender.

No Tender will be received after Friday, the 2nd July, on which day the parties tendering are requested to attend at the Company's office, in Paris. Security will be required.

ADOLPHE THEBAUDEAU.

Paris, June 1, 1841.

SOUTHAMPTON DOCK COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are prepared to receive Tenders for the Loan of Money, to be secured upon mortgage of the undertaking, and of the rates and tolls arising therefrom under the provisions of the Company's Act of Parliament in sums of not less than £200, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half yearly at the Bank of Messrs. Williams, Deacon, and Co., London. The Tenders are to specify the sums and the term of years for which the same are proposed to be lent, and are to be addressed to the Secretary at the Company's Offices, No. 19, Bishopsgate Within, London.

By order of the Court of Directors,
GEORGE SAINTSBURY, Secretary.

Southampton Dock Office, 19, Bishopsgate Within,
3rd June, 1841.

TO RAILWAY COMPANIES, CARRIERS, AND OTHERS.—RICHARD PARKER (late of Hambro' Wharf), having taken the New Inn Yard, Old Bailey, London, which is very spacious and in the Heart of the City, is desirous to form a Connection with one or more Railway Companies or Carriers, to deliver, receive, collect, and draw their Goods to and from the Railway Station or Stations, and to attend to all matters that may be required; and having had considerable experience as a Carrier, he does not hesitate to pledge himself to transact all such Business equal to any establishment in London, and upon moderate terms.

N. B.—He would not object to take a Share in any respectable concern.

MANCHESTER AND LEEDS RAILWAY COMPANY—SPECIAL MEETING.

PURSUANT to the provisions of an Act of Parliament passed in the fourth year of the reign of her present Majesty, intituled, "An Act for enabling the Manchester and Leeds Railway Company to raise a further sum of money," a Special General Meeting of the Manchester and Leeds Railway Company was held on Thursday last, at noon, at the Railway Company's offices, Clowes's-buildings, Hunt's Bank, "to consider the propriety of, and if so decided at the said meeting, to authorise the said Company to borrow any sum or sums of money not exceeding the amount limited by the said Act, and to secure the repayment of the money so borrowed with interest, in the manner prescribed by such Act." There were about 30 shareholders present at the commencement of the meeting, and the number increased to about 40 during the proceedings.

At a quarter after 12 o'clock—

HENRY HOULDSWORTH, Esq., Chairman of the Board of Directors, took the Chair, and expressed his regret to see so small an attendance on the present occasion, as he felt that it was always exceedingly desirable that the Directors should have the presence of the shareholders on the few occasions when they were called together, in order that the Board might have the opportunity of freely and unreservedly communicating to the shareholders every circumstance connected with the state and prospects of the work; on which unreserved communication, he thought, should be built that confidence which should always exist between the proprietors of a concern and those whom they entrusted with the management of it. This was a special meeting, for the purpose of obtaining the shareholders' sanction to the exercise of the powers of the Act of Parliament recently obtained by the Company, which enabled them to raise an additional amount of capital for the purpose of completing the undertaking. The Act was simply confined to giving them the power to raise capital in two ways—one, by the creation of shares to the extent of 487,500*l.*; and the other, a further amount by mortgage, to the extent of 162,500*l.* It was proposed to confine the application to the shareholders at present, to their sanction for raising 162,500*l.* by mortgage.

Mr. JELLICORSE (the Secretary) then read the advertisement convening the meeting, from the *Manchester Guardian*, of the 22nd May, and stated that a similar advertisement had appeared in the *Leeds Mercury* of the same date.

The CHAIRMAN then said, the amount which the Directors are anxious to obtain the sanction of the meeting to raise on mortgage, is 162,500*l.*; but, before calling on you to adopt the resolution for this purpose, I consider it my duty to place before you a short statement of the present financial affairs of the Company. The total amount of capital which the Company were entitled to rsise by shares was 2,599,000*l.*; of that sum 2,589,000*l.* had been received; the difference, (10,000*l.*), being the amount of outstanding calls unpaid, and of a small balance which has arisen from the difference between the amounts tendered, and the loans actually received; so that in fact only 10,000*l.* of our capital has not been raised; the actual amount raised being 2,589,000*l.*, to which must be added the balance of interest in favour of the Company, 8,000*l.*, making a total amount of 2,597,000*l.*; and there has been expended up to the 27th May 2,692,000*l.*, or an excess of 95,000*l.* beyond the capital we were empowered to raise. This has been met temporarily by raising money by loan notes, by taking the amount of the surplus receipts of the traffic, and by small advances from our banker. The first application of the money that we are anxious to obtain the power to borrow would be of course to repay this 95,000*l.*, and to meet our other engagements; and the Directors consider, that, with this power, they will be able to meet all the engagements of the Company up to the next half-yearly meeting in the month of September next—and they are most anxious to obtain the power they now seek by mortgage; because in the present depressed state of stock of this Company, they consider that it is not for the interest of the company to create shares. By September they have the strongest reason to believe, a considerable change must take place in the public feeling in favour of the Company and at that time the question of creating shares will, of course, come before the proprietors; but even then if the state of trade and other circumstances should render it desirable that they should still further postpone the time of creating shares, the company will be able to do so to a certain extent, by authorizing at that time, application of the surplus receipts to the payment of the Company's engagements; and by that means may postpone for some months, the further issue of shares—that application of the Company's receipts, which of course will only be temporary, to be repaid at a time when it is the interest of the Company to create shares. With this explanation I might submit the resolution prepared for your approbation; but I am anxious to avail myself of this opportunity to allude to a few circumstances connected with the present state and the prospects of the Company; and the more so since the Directors feel that the present state of the stock of the Company, and the heavy fall which has taken place in it since the last meeting, call for the most full and unreserved explanation which the Directors have it in their power to give—(applause); conceiving, as they do, that the depression is unnatural and uncalled for, and that a due allowance has not been made for the short time that the works have been completed and the line opened, for the present state of trade, and for other circumstances, which invariably tend to impede for a time the full traffic and resources of different lines. With respect to the ultimate cost of the line, the estimates which were given to you at the last meeting are not likely to be exceeded. Our Engineer, since that time, has wound up six of the contracts; thirteen still remain to be wound up, the measurements of which are in a forward state; and from his experience of those already wound up, I am authorised by him to say, that he does not see any fresh cause for believing that the amount already stated will be exceeded. Every thing is done to lessen the expenses in the engineering department, and to wind up the accounts in that department as speedily as possible. A very considerable number of individuals in the engineering department have quitted the Company's service since the last meeting; others are under notice; and by the end of June, the close of the half-year, there will not be above two or three individuals remaining who will not be permanently attached to the undertaking, and their services will probably be dispensed with before the next half-yearly meeting; so that every thing has been done in that department to wind up and lessen the expenses. I may allude, while on this subject, to a circumstance which has appeared in print, with reference to the expenses of the engineering department, and to the Engineer-in-Chief. Mr. Stephenson's engagement with this Company ceased on the 1st January last. It has recently been stated in a letter published in some of the periodicals, that the engineering expenses were still going on. That is not the fact, because on the 1st January last Mr. Stephenson's engagement ceased. With respect to the condition of the works, I have the assurance of the Engineer that in that respect they are in excellent condition, and that there is no improvement to be wished for—in fact, that every thing is most secure, and standing in the way we could wish. And with respect to the maintenance of way—an expense which is permanently cast upon the Company—the experience of the last winter enables the Engineer to say, that that will be done permanently for less than the average of other lines. With respect to the traffic, it is unquestionable that the passenger traffic has not come out equal to the expectations of either the board or the public; but there are many reasons, I think, for stating confidently, that the public have very far overrated the smallness of the traffic, and that if we compare our traffic with that of other lines,—if we look at the history of those larger concerns now in a flourishing condition, and look at the small beginnings from which they have risen, we shall see that we have no cause for despondency; but that on the contrary, we have the strongest reasons for expecting that our traffic will come out so as to secure a full return to the proprietors for the risk they have undergone. I may say that our traffic for the first three months has amounted to 43,000*l.* net; and, if we compare this, which is upwards of 3,000*l.* a week, with the other principal lines in the country, I think we shall find that there are strong grounds for looking to the most favourable results in the case of this line. The Manchester and Liverpool Company's line opened in September, 1830, and for the first three months their traffic averaged 1,500*l.* per week; for the whole year of 1831, it averaged 3,000*l.* per week, being 100 per cent. increase on the average of the first three months; and, in 1840, it averaged 5,100*l.* weekly, being an increase of 240 per cent. upon the traffic of the first three months. The Grand Junction Company's line opened in July, 1837, and their traffic for the first 25 weeks averaged 4,450*l.* During the same period in the following year, it averaged 6,500*l.* a week, being an increase of 46 per cent. The average weekly traffic on that line for 1838 was 5,500*l.*; for 1839, 7,750; and, for 1840, 8,400*l.*; being an increase of 90 per cent. in the course of three years and a half, upon the average of the first six months. The London and Birmingham line was opened in September, 1838; and, the first three months, the average traffic was 8,900*l.* per week. During the same period in the following year, it was 12,000*l.* weekly, being an increase of 35 per cent.; and, in 1840, it averaged 14,700*l.* per week, being in two years and a quarter an increase of 65 per cent. on the receipts. The lines more recently opened, of course, do not afford the same results, as it is evident that time is an essential ingredient in the question. The South-Western line was opened on the 11th May last year, and the average traffic of the first two weeks of its being open was 4,730*l.*; that of the corresponding two weeks in this year was 5,470*l.*, being an increase of 15 per cent.; this being the only instance that tells at all against the results on other lines, and it appears to me that it is sufficiently accounted for by the exceedingly depressed state of trade. The North Midland line was opened on the 4th of June, 1840, and the average weekly traffic of the first two weeks was 2,300*l.*, and of the last two weeks, being the 46th and 47th weeks, 3,600*l.*, being an increase of 57 per cent. The Midland Counties, opened about the same time, had an average traffic, for the first and second weeks, of 1,570*l.* weekly; and for the last two weeks, the 46th and 47th weeks, of 2,630*l.*; being an increase of 66 per cent. in the nine months. The Manchester and Leeds line had an average traffic of 2,920*l.* in the first two weeks, and in the last two weeks, the 11th and 12th weeks, of 13 per cent—an increase certainly small if we take the time of year into consideration; but, on the other hand, looking at the present state of trade and at other causes which operate to keep down traffic, it is still satisfactory. There is another class of facts that I also wish to call your attention to. I find that, upon a comparison of the traffic returns of several Companies, a tolerably correct estimate of the traffic of the whole year may be made by taking the average of the traffic for October and for May,—I mean, of course, in the older lines,—and that the traffic for October and that for May nearly correspond in amount. The weekly traffic on the Manchester and Liverpool line was, in October last year, 4,900*l.*; in May of this year, 4,600*l.*; being a decrease of 6 per cent. The weekly traffic on the Grand Junction line was 8,600*l.* in October last year, and in May this year 8,200*l.*; being a decrease of 5 per cent. On the London and Birmingham line, the weekly traffic in October, 1840, was 15,000*l.*; and, in May, 1841, 16,000*l.*; being an increase of 6 per cent. Taking these three as the oldest lines, the receipts in October and May nearly corresponded with each other. But look at the North Midland line. We find that in October last the weekly traffic there averaged 2,900*l.*; and, in May this year, 3,600*l.*; being an increase in that short period of 24 per cent. In the Midland Counties' line

Digitized by Google

the weekly traffic in October last year was 1,750*l.*; in May this year, 2,600*l.*; an increase of 48 per cent.; clearly showing that there is a gradual increase in the traffic during the first year, necessarily arising from the time, and the arrangements which impede, in the first instance, the full development of the traffic. If we can at all judge of the increase of our traffic by the increase during the last six months of the traffic of the North Midland and Midland Counties',—and I see no better ground than looking at what the experience of other lines has been,—it appears that, even if there is no change in the present depressed state of trade, our traffic should amount in October next, to 4,300*l.* or 4,400*l.* per week. But if there is an improved state of trade, which most of us anticipate, we have reason to expect a still higher traffic by that time. And then, inasmuch as the older lines show, that the traffic for October gives about the average for the whole year, we see our way pretty clearly to an average traffic for the next year of something like 5,000*l.* per week. But I do not state these results with a view of taking any responsibility with respect to the amount. I have stated the grounds on which I expect these results myself, and every gentleman can correct them according to his own views. It is an unquestionable fact that the traffic upon all lines which have been open three years has increased very considerably,—upon the average, 60 per cent. in the course of the two or three years: and the traffic of the North Midland and the Midland Counties' lines has increased very much more in the three months than was the case upon the older lines; from which I infer, that in the first few months of a railway there is a very rapid development of traffic. On these grounds, then, I consider that the resources of this Company have been very seriously underrated by the public, and that our shares at their present price by no means bear a true proportion to their real and intrinsic value. There are several other points on which I wish to say a few words. From the inquiries which have been made at the head office, and letters addressed by shareholders to myself and other members of the Board, and also from letters which have appeared in the public prints, I find that there is a very general opinion that our fares are too high. Now, if there is any ground on which we have exposed ourselves to censure more than another, I think it is, if anything, that our fares are, in many instances, too low. But the leading principle which the Company have adopted is this:—In order to repay ourselves for the expenses of this undertaking, we must have a large rental, which must be got by providing the greatest and widest extent of accommodation to the public, and by charging such rates as will ensure a large traffic. The fares which we have adopted are, as you are all aware, of three classes. The highest class of carriages and fares is for those who value comfort and time more than money, and the lower classes are for those who value money more than time and accommodation. As far as the experience of the Company goes, it confirms, in our case particularly, the propriety of this course. We have recently made experiments with respect to the third class fares at this end of our line; and, from the result of the Rochdale traffic for the last two months, as compared with this time last year, I think the returns show that we have rather lessened the receipts of the Company than increased them, by diminishing the accommodation to the public. During the last two months, we have run only three third class trains per day, with the view of promoting the first and second class traffic; and the result shows, that our original views were right, and that by running third class trains frequently, we should best secure the interests of the Company. Then with respect to the high fares, they complain chiefly of the Leeds traffic. Now, I do not find, from the result of the traffic and the proportion of the classes who travel, that these have had the effect of reducing the proportion of first class passengers. There are two points to be borne in mind in fixing fares. The first object is to fix them at such a point as will secure the existing traffic; as will, in fact, compete with the coaches, and take the traffic that is existing. Another point which rests upon other considerations, is that of inducing an increased traffic, by affording additional facilities. Now, we contend that we have done both these. It is not to be expected that the coaches will at once cease to run. The stock of horses, the stock of coaches, and the reduction of tolls, with a view to keep the coaches running, do induce coach proprietors to go on for a few weeks or months. I have a return from the stamp office at Manchester—(I have not got the return from the Leeds stamp office, though I wrote for it two or three days since)—but, at this time last year nine coaches were licensed in the Manchester stamp office to run to Leeds; and at the present time there is only one.—[A Shareholder: That is one independent of the mail.]—Only one coach licensed by the Manchester stamp office. The Leeds stamp office, no doubt, contains the licenses for the others; but in a return from our own clerk at Leeds, he states that there are four coaches running from Leeds to Manchester, two York mails, and the *Umpire* and the *Briton* coaches. Now, the two York mails both drop this week. They were only continued because of their contract with the post-office. On the 1st of June instant we began to carry the mails, and at the end of this week both the York mails will be dropped. The clerk's report is, "The *Umpire*, fares 12s. inside, 8s. out, loads well; the *Briton*, fares 12s. in, 8s. out, loads badly." These are the only four coaches of which I have any account. There are also the coaches running hence to Huddersfield, and the short stage coaches; but it is quite clear that under no circumstances can we expect to run all the coaches off the Huddersfield road, for there is a short stage or intermediate traffic there that will always support one or two coaches. Then with respect to the additional facilities which we have given to the public, if we compare our present fares with the fares at which the coaches are struggling to maintain an existence, it may appear to our disadvantage; but if we look at what the fares were before the railway was opened, we find that a first class passenger could not travel from Manchester to Leeds for less than 20s. or 22s., not including what he had to pay to guard and coachmen. We now run, conveying him for 15s., clear of all these charges; so that we have reduced the cost to the public about 25 per cent. Then the coaches used to take six hours or five hours and a half to go hence to Leeds, and we now run the distance in two hours and three quarters; so that, both as regards fares and time, we have given the public as much inducement as almost any other line, for the purpose of inducing the Leeds traffic to come upon our line. However, if our charges are still too high as regards Leeds, it is not the case in other parts of our line; and it is too generally supposed, that the accusation as to high fares applies to all parts of the line. In fact, the Leeds traffic is circuitous, and our line has to contend with the greatest disadvantages as to the roads; but, on all other parts of the line, the railway has reduced the cost of fares and time almost more than any other railway has done.—[Captain Laws, R.N., Superintendent of the line, here entered with the return from the Leeds stamp offices, and, in presenting it, said that the Leeds and Manchester traffic amounted to something more than two and three quarters per cent.]—It appears from this return, that only two coaches are licensed at Leeds; and this is only a confirmation of our own clerk's return of four, the two mails leaving off this week. I think that the charge of high fares, upon examination, will not bear out the representations made respecting it. Looking at the amount of traffic which we have to Normanton, a reduction of more than 2s. 6d. in our fares to Leeds would bring us under our charge to Normanton, and would then oblige us to reduce our fares to Normanton. Now, a large proportion of the fares to York, Hull, and some parts of the North Midland line, pay the full fare to Normanton, and we should therefore lose more than we should gain by making the change, and at the 15s. fare to Leeds, we have about 2s. 6d. to pay the North Midland Company for running over ten miles of their line; so that the receipts to this Company are only 12s. 6d. to Leeds.—[Capt. Laws: One of the mail fares is 20s. besides guards and coachmen.]—On referring to our Leeds traffic, I find there is 24 per cent. of first class passengers; whereas, looking at the traffic from Manchester to points on the North Midland line, south of Normanton, where our fares are purposely low, because we have to contend with the coaches, the average of first class passengers there is not above 21 per cent. So that in fact we have, notwithstanding the high fares to Leeds, a larger proportion of first class passengers than to points south of Normanton, where the fares are lower. On this subject, then, I do not think there is any foundation whatever for the complaints that have been made. In arranging our traffic, we work at present under disadvantages, which we have every reason to expect we shall in a short time be able to overcome. We have two classes of traffic upon the line,—the through traffic, which requires expedition, and an omnibus traffic, from station to station, which depends for its extent mainly upon running frequently, stopping at every place, and charging low fares. Now, to combine these two, as we were obliged to do in the first instance, is a matter of difficulty, and it is impossible for us to derive the advantages we might derive if we could separate them. But now that we have made arrangements, which I have to announce to you, with the carriers between this town and Hull, and our goods traffic is rapidly extending, there is every reason to believe that we shall be able so to arrange the traffic, that our first and second class trains will pass through with very few stoppages, and at the speed requisite for dispatch, and doubtless with creased traffic to the points which we have hardly yet touched south of Normanton; for our traffic to Derby, Nottingham, Lincoln, and the whole of that district, has hitherto been little or nothing, in consequence of the round-about road, and the want of speed and of arrangement with the North Midland Company; and the difficulty of regulating our trains so as to suit theirs, and the establishment of coaches from the most convenient points on the North Midland line to the points I have named. In a short time, by the arrangements which are made, I have no doubt our traffic will be considerably increased. Again, by running third class trains with passengers and goods, and stopping at every station, I believe we shall be able to give a much larger amount of accommodation to the public, and very much increase our revenue from that source. Nothing has been more apparent in the history of our undertaking, from the time we opened till the present, than that time is an essential ingredient in developing our resources. We have had, with the connecting lines east of us, very considerable difficulty in making arrangements for our mutual advantage, and even at the present time the experiment which has been tried lately of taking passengers to London is for the present suspended, in consequence of a difference of opinion between the connecting lines and ourselves, wherein we think the interests of all are mutual, and that there can be no difference of opinion when all is fairly stated and understood. Recently our deputation waited on the North Midland Company on this subject, their deputation met us, we made our statements, they saw it in a new light, some of their opinions were modified, and they stated that they would take an early opportunity of assembling their Board generally to meet us, with a view of seeing if the arrangement we propose cannot be carried out. Another cause why our traffic has not increased as rapidly as that of some other lines, is unquestionably from the state of trade. I need not say much on that subject, because it comes home at once to every individual present connected with business. We all know how much our business has diminished since this time last year. In confirmation of this, we have returns of exports from Hull, showing the export of twist alone has decreased nearly 25 per cent. as compared with last year (the quantity being 12,800 tons last year, and 9,870 tons this year), and the decrease in the export of goods is 17 per cent. I have also a return from one of the Hull

Digitized by Google

carriers, who told me that in the same time he had carried 2,385 tons of twist last year, he had carried this year only 1,200 tons. And two days ago, when we were negociating with the four principal carriers to Hull, they stated that their trade this year very little exceeded the half of what it was last year. Unquestionably this must have had a very serious effect upon our traffic, notwithstanding which our goods' traffic has come out very near our Parliamentary estimate; and I have no hesitation in saying, that the anticipations we ventured to express at the last half-yearly meeting, will be fully borne out, and that our goods' traffic will be very large indeed. Another resource we shall have will be our two branches—one to Oldham, and the other to Halifax. The Oldham branch is by far the most important. The line has recently been surveyed by Mr. Stephenson and Mr. Gooch; they have determined the best and most economical plans for forming that line, and the plans are now submitted to the contractors. In the course of three weeks we shall contract for that line, and we expect it to require about five or six months to complete it; and then no doubt a very large increase of traffic must arise from that source. If you look at Bolton alone, and take Bolton, Oldham, and Stockport, to represent about an equal amount of population, including their respective districts, and look also at the parts equally connected with Manchester, we may derive from that comparison a pretty accurate measure of our probable receipts from this source. The Bolton traffic is about 600*l.* a week, and though part of that is canal traffic, still there is reason to believe that the larger portion of it is derived from the railway. The Stockport traffic is upwards of 300*l.* a week. Bolton is ten or eleven miles from Manchester, Stockport five by railway, Oldham will be seven miles; so that we may reckon with tolerable certainty upon a traffic of 400*l.*, a week upon the Oldham branch, and the expense of making that branch will not be more than 45,000*l.* For the Halifax branch, the Engineer has orders to complete the survey, and the proper plans and estimates, as early as that can be accomplished. The Company are bound to make that branch; and although we cannot look upon it as likely to be a matter of much profit, still by an economical mode of constructing the branch, we hope to give every facility to the Halifax people that they want, and without much loss to the Company. I may state, that from the time that has passed and the disappointment which has been more or less experienced in reference to the traffic, it has not been without its use in directing the Board to the most economical mode of working the line. Our attention has been particularly directed to that subject; and I have every hope that it will be found, when our arrangements are completed, we shall be able to work our line with a degree of economy that will bear comparison with any other line. I have detained you longer with minutiæ and details than usual, but I felt it desirable to volunteer the fullest information we could give. If there is any other subject on which the proprietors are anxious to obtain information, we shall be exceedingly glad to give it them. The Heywood branch has been opened since the last meeting at a cost of 9,000*l.*, with a little station and other matters, say about 10,000*l.* The Chairman then read the resolution (which has appeared in our advertising columns), and added, that he might state with respect to the probability of raising the 162,500*l.* by mortgage, that the Directors had had a very considerable portion of that sum already tendered—he thought upwards of 50,000*l.*; and he had little doubt that they would be able to raise the whole in a short time. If there was any question the proprietors wished to ask, perhaps they would do so before this was formally put to the meeting.

Mr. William Marshall, of Penwortham Lodge, near Preston, said, this was the first meeting he had attended, though a considerable shareholder; and he begged to thank the Chairman for the able and lucid statement he had given to the proprietors, which he regarded as a most satisfactory one; and he felt great pleasure at having attended the meeting. But he could not help saying that he thought, before the Company borrowed money, it was better to go to the public, and endeavour to appropriate shares. He could not see how mortgagees could have any legal security for the money they might advance to the Company.

The Chairman said, that the Company's Act of Parliament made it legal; and he read the clause which related to the security to mortgages, which clause, he said, gave the Company power to borrow under their new Act, so soon as they had raised one-half of the subscribed capital. The amount of subscribed capital which the Company was authorised to raise by the previous Act was 1,950,000*l.*; and by the present Act they were authorised to raise by subscription 487,000*l.* These two sums amounted to 2,437,000*l.*, and when they had paid up half that amount (1,218,500), they were in a position to borrow on mortgage. They had already paid up 1,300,000*l.*, which was more than half the subscribed capital. The position of the mortgagee would be this—that this Company, which had now spent 2,600,000*l.*, and which had an income this moment of 172,000*l.* a year, less the expenses, had borrowed on mortgage 650,000*l.*, and were now seeking power to borrow 162,500*l.* more; so that when they had taken all they could borrow, the amount would be 812,000*l.* borrowed on mortgage, on a concern which would have cost by that time 3,000,000*l.*, with an income at the present moment of 172,000*l.*, subject to expenses.

Mr. Marshall said, he imagined that under the first clause the Company had borrowed to the extent permitted by Parliament, and therefore that the borrowing of 162,500*l.* must be with the proviso that the Company should previously have paid up one-half of the additional half million now granted.

The Chairman said, he inferred the meaning of Parliament was expressed by the clause itself, by which the Company was guided; and their law-clerk, who was in London on business, connected with the Company, had assured him, before he went, that, under the Act, they were perfectly in condition to raise money by mortgage, and to give the utmost security that men could give. And, under the circumstances of the small amount already borrowed by mortgage, it appeared to him (the Chairman) that the mortgagees would incur less risk (if they could speak of less risk in a matter where there was no risk at all) than the first mortgagees, who had to contend with all the risk arising from the works being still in progress, and when there might be some doubt as to whether they would be completed; but the works were now completed, and the Company were in the receipt of a large and progressively increasing income; with an excess above their expenditure very far beyond the amount necessary to pay the interest on the loans, which would only be 40,000*l.* a year upon their whole mortgage debt, supposing they borrowed the whole amount they sought to do. The Directors were unwilling, in the present state of the money market, to issue shares, and desirous rather to postpone that to the period of the half-yearly meeting, when, he had very little doubt, the undertaking would be more correctly appreciated by the public. It was exceedingly regretted by the Directors, that the proprietors should be called upon to suffer so much as they had done; and to issue shares at the present moment would unquestionably have the effect of increasing that suffering. The Directors thought that, by this plan, they would best promote the interest of the shareholders, sustain the value of their property, and give time for the public to appreciate more correctly the value of their stock.

Mr. Richard Penny asked, whether the Chairman's calculation, as to the weekly receipts reaching 5,000*l.*, was based upon data including the branch lines, or upon the main line alone.

The Chairman said, he took no responsibility as to future results, for railway Directors had hitherto established no claim to particular foresight above other persons; but he had stated the October and May receipts of the long-established lines, which gave an approximation to their year's receipts, and that the North Midland and Midland lines, which were more recently opened, had increased in the last six months in the proportion of 32 or 33 per cent. As this Company were also in a juvenile state, having only opened the line three months, if their traffic increased in the same proportion as these lines had done, in October next their present traffic, without the branches, would be 4,300*l.* a-week; and, if they looked at the present state of trade, and its probable improvement towards the latter end of the year, which, he found, was generally anticipated amongst business men, the traffic would, in all probability, approach 5,000*l.* on the main line alone.

Mr. Penny asked what per cent. the working expenses would be upon the 5,000*l.* weekly.

Captain Laws said, about 72,000*l.* yearly; the probable increased expense would not be more than 10 per cent.

The Chairman said, provided the increased traffic upon the opening of the line throughout was as great as upon the three lines which had had partial openings first, their expenses would be about 42½ per cent.; and he grounded this upon the experience of the Leeds traffic, and upon that of other lines. On the London and Birmingham and the Grand Junction lines, the expenses were under 40 per cent., and on the Manchester and Liverpool line usually about 50 per cent.; but the Manchester and Leeds Company was freed from some heavy charges which the Liverpool line had to bear. This company were not carriers like the Liverpool Company; the toll this company received from carriers was a net toll; they had no carting or carrying expenses of any kind, which diminished very much the net receipts of the Manchester and Liverpool Company; and, in confirmation of the estimate the Directors had ventured to make on that occasion, he might state, that they had a two-months' account of their locomotive expenses which Mr. Gooch had lately drawn up, which, so far, had come out exceedingly low, he thought as low as thirteen-pence a mile for their engines. That did not include preparations, nor interest upon the capital sunk in stock; but merely the expenses of coke and materials consumed, oil, &c. and wages.

Mr. Penny said, if the expenses were not more than 42½ per cent, he should be very happy; but he thought that calculation had been based upon much larger receipts than were now found to exist.

The Chairman said, it was based upon a weekly receipt of 6,000*l.* They had a certain amount of standing expenses, which, whether they had much or little traffic, were permanent. After that, an increased traffic required very little increased expenditure. At all events, their arrangements, compared with those of other Companies, were of such a character, that when a little more time had elapsed to enable the Directors to bring the accounts before the proprietors, they would find them bear a comparison with other Companies. He had the authority of Capt. Laws for saying, that the expenses would be less than those of some other Companies.

Captain Laws said that when they took into account the very great expense of establishing a number of stations, he did not hesitate to say their expenses would be less than those of any other line for passenger traffic.

The Chairman said, that of course these statements were mere matters of opinion. If no other gentleman had any question to ask, he would put it to the meeting whether they would sanction the resolution to take up the mortgage.

Mr. Marshall said that, after what the Chairman had stated as to the law-clerk's opinion, he had great pleasure in supporting the resolution.

It was then put from the Chair, and passed unanimously.

Mr. W. Entwistle having been called to the vacated chair, the thanks of the meeting were voted to Mr. Houldsworth, on the motion of the Rev. R. Basnett, for his conduct in the chair, and his admirable and satisfactory statement.

Digitized by Google

This motion passed unanimously and with applause.

Mr. HOULDSWORTH thanked the proprietors, and the proceedings terminated about half-past one o'clock.—*Manchester Guardian.*

LLANELLY RAILWAY COMPANY—GENERAL MEETING.

THE Annual Meeting of the Proprietors and Directors of this Company was held on Monday last, at the London Tavern, Bishopsgate-street, at One o'clock.

Mr. R. BIDDULPH, on the motion of Sir R. Price, having been called to the Chair, directed the Secretary (Mr. Biggs) to read the advertisement by which the meeting had been summoned.

The SECRETARY then read the advertisement, and stated that it had appeared in the *Railway Times*, the *Mining Journal*, and the Welsh papers.

The CHAIRMAN said the advertisement had appeared in the newspapers, according to the provisions of the Act of Parliament, which had been strictly adhered to; and circulars had been sent round to every proprietor.

The SECRETARY, by the direction of the Chairman, then read the Report, which stated that the Committee of Management, in submitting to the proprietors of the Company the Fourth Annual Report, were happy to inform them, that since the last general meeting the works in progress had been prosecuted with the utmost vigour, and the main line had been completed and opened for traffic. Considerable improvements had been made in the Docks—and an outer basin had been formed for the convenience of the coasting vessels. The meeting had scarcely terminated last year when a negociation was opened with the Company for extending one of the branch lines a distance of a mile and a quarter. The proposal made to the Committee to induce them to perform that extra distance, which was not comprised within the Act of Parliament, was a guarantee to pay 10½ per cent. railway dues for the term of 21 years. The cost of that extra branch would be 4,500*l.* After that arrangement had been made, a proposal was made by Mr. J. Jones to make a branch of a mile and three quarters to his colliery, with a guarantee of 16½ per cent. railway dues. The cost of that branch would be 6,600*l.* The Committee had mentioned at the formation of the Company the prospects of traffic to be derived from that district of bituminous coal on the south side of the river Lucca. A bridge over the river Lucca was necessary before the necessary shipments could be made. The Committee did not think themselves justified in undertaking such a work. A proposition, however, had been made, in the course of the summer of last year, by the trustees of the Carmarthen road, for the Company to advance them the sum of 1,500*l.* at 5 per cent. on a mortgage of their own trust, and then they (the trustees) would build the bridge. The proposition was accepted, and it was arranged that the Company should lend the sum of 1,500*l.* by different instalments. In addition to those outlays the Committee had expended 3,000*l* in building a number of coal waggons, and constructing other work indispensable to a railway, altogether making an outlay of 22,650*l.* necessary. The Committee in consequence determined to borrow on mortgage such a sum as they could procure, but they found it impracticable to take up a larger sum, at the rate of interest they thought it prudent to give, than 21,000*l.*, which amount had been borrowed for the terms of three, five, and seven years, at an interest of 5 per cent. The Committee congratulated the proprietors on the soundity of the works that had been completed. The railway was able to stand the effect of the locomotives and the waggons, in proof of which the expenses for the maintenance of the permanent way, would not exceed 40*l.* per mile per annum. If on former occasions the Committee had held out prospects that had not been realised, they had been induced to do so by the representations of the coal-owners. The Committee not doubting the accuracy of the statements of such respectable men conceived it no more than their duty to publish the information they received to the proprietors. The Committee, however, assured the proprietors that in a short time the returns of revenue would equal the amount they had anticipated. They could export coal and culm to an unlimited extent, and the supply was not yet equal to the wants of the country. Their profits did not arise from the conveyance of passengers, and therefore they had incurred but slight expenses for that species of traffic. A trifling additional accommodation had, however, of late been afforded to passengers. The prosecution of the line to Llandillo had been advisedly postponed. It was intended to apply to Parliament to vary the present line. That application would be made next session, but before that would take place the proprietors would be convened and have their judgment taken upon it.

The SECRETARY then read an account, from which it appeared that 15,000*l.* was the total estimate of the sums that would be required by the Company for the ensuing year.

The Report of Mr. T. Biddulph, the Resident Superintendent, having been read, the Secretary read the general account of the Company's affairs, made up to the 1st May, 1841, and that showed a balance in the hands of the Company amounting to 3,133*l.* 11s. 1d.

The CHAIRMAN then rose and said, it would be only necessary for him to make a few remarks. With reference to the new works that had been undertaken he would state, that when they entered into negociations with Mr. Hopkins and Mr. J. Jones—to whose collieries the Company were to construct branch railways—they bound those gentlemen down to ensure the Company ample returns, the one for 21 years and the other for 14 years, and he thought that when those railways had been used by the collieries for 14 and 21 years, there could be little doubt but that they would be used as long as there was coal to bring down from that district. The Committee were much disappointed, and, as well as many of the proprietors, lamented that the traffic had not come up to what they had expected. The Committee had, however, fulfilled their part of the bargain. They had made the road through the country. They had the works in good and efficient order, and they had locomotive engines and a great quantity of waggons. The disappointment was in consequence of the remissness on the part of the coal owners, but he was sure that if they would not in a country so full of mineral wealth, furnish the necessary quantities of coal, other parties would soon be found to do it. He had no doubt that the traders of Bristol would come to them, and the Navigation Company had said, that if they could see their way clear they would do it, and if any party would establish a trade they would not oppose them; but then, they did not say that they would not oppose them afterwards, because no people would establish a trade if there was a chance of their having it cut from under them by rivals coming in. With respect to the railway carrying minerals, he would only say, that the Stanhope and Tyne Railway, which had been established three years, was now paying its expenses. He would not mention what the profits of that railway were, but from what he had learnt from one of their Directors, he would state that they were enormous. There was only one expenditure that he thought they were likely to exceed, and that was the expenditure for coal waggons. Every colliery owner came down to them for waggons, and it was his own individual opinion that they ought to build a great number of them, for it was surely the interest of the Company that all the traffic should be carried on by their own waggons, instead of allowing other parties to put on their waggons, and thereby cause much confusion and danger.

It was then moved and seconded—that the Report be received, and entered on the minutes.

The motion was agreed to.

Mr. RAE, a proprietor of collieries in the neighbourhood of the railway, said that allusion had been made in the Report to a want of energy on the part of the coal owners. He could not stultify himself so much as to sit still and hear that remark without making a few observations. As for energy on his part, he could safely say that none had been wanting. He had done a great deal more than the Company had a right to expect he should do, considering the situation in which he was placed by a contract he had entered into with the Company, and he was sorry to say that he was so placed with the Company that he had nothing left him but to bring an action against the Company to free himself from that contract. The chief reason for the non-fulfilment of the contract was, that that portion of the railway necessary for the transportation of his coal was so incompletely done that it was impossible to carry on the traffic by that branch. The superintendant had said, that the inclined plane worked well. He (Mr. Rae) had however attempted to send down coal by that inclined plane, but it had never gone down in a proper manner, and the fact was that the lower inclined plane would not work at all. Not one train had ever run to the top. If the railways had been in proper order, he could have sent down five times the quantity of coal he had stipulated for.

The CHAIRMAN said, that the Directors were so confident of their having fulfilled their part of the bargain and Mr. Rae had not, that they were going to bring an action against him for the breach of that contract. With respect to the inclined plane, he had only to remark that coals had been constantly brought down by that very inclined plane, and the more it brought down the better it would work. It could not be supposed without a little wear that all things would work well. Mr. Rae wished the Company to supply him immediately with 60 waggons to send down 20,000 tons of coal, but the Company were unable to supply him immediately, and therefore refused.

Mr. T. BIDDULPH said, that there were two inclined planes. One of them worked very well, and the other, considering that it was nearly a mile long and full of curves, which it was impossible to avoid, being tied up by the Act of Parliament, worked as well as could be expected. Mr. Rae had said that not one train had ever run to the top. Now he (Mr. Biddulph) had with his own eyes seen train after train come to the top. He recollected one of Mr. Rae's men who was intoxicated, saying that the inclined plane would not work. It might be from such sources as those that Mr. Rae got his information. Mr. Rae had made arrangements to send down 50 tons of coal per day. But from that hour he had never sent down an ounce; and then Mr. Rae wished the Company to make 60 waggons for him.

Mr. RAE stated that he was ready to enter into an agreement with the Company under penalties to bring down thousands of tons of coal if they pleased.

It was then moved and seconded that "as a surplus of available profits on the past year's business amounting to 3,133*l.* 11s. 1d. had been realised, a dividend of that sum be declared of 2½ per cent. on the shares on which 70*l.* per share had been paid up to May, 1840, and at the rate of 2½ per cent. on the rateable shares according to the amounts paid up on them within the last year."

The resolution was unanimously carried.

Captain HALLINGHAM asked, if the new line to Llandilo was authorised by the present Act of Parliament.

The CHAIRMAN said it was.

Captain HALLINGHAM enquired if the traffic on the two railways was increasing.

The CHAIRMAN said, it was increasing every week. During the present year the average amount of coal brought down by the two railways was 4,000 tons per week. Last year it was not more than 2,400 tons per week.

Mr. FINNELL recommended the Directors to come to an amicable arrangement with Mr. Rae if possible, and deprecated having recourse to actions at law.

A vote of thanks to the Directors, the Chairman, and the Secretary, having been agreed to, the meeting separated.

MESSRS. COOKE AND WHEATSTONE'S ELECTRIC TELEGRAPH.

We have given many occasional notices of this admirable invention—of its adoption on the Great Western and Blackwall Railways, and its surprising performances in both instances—but it still remains to us, to lay before our readers such a detailed account of the apparatus as may enable them to comprehend fully the mode of its operation, and to estimate duly its great practical efficiency. We cannot help thinking that it must be owing in a great measure to a prevailing paucity of information on the subject of the invention, that it is not making its way more rapidly into use, and believe we shall render good service to the railway interest by doing our best to make its value more clearly, distinctly and generally known. For the following descriptive details, and the numerous engravings by which they are illustrated, we are indebted partly to the evidence given by Professor Wheatstone before the Select Committee of the House of Commons on Railways, and partly to a set of drawings with explanatory letter-press recently published by the Professor's managing partner in the invention, Mr. Cooke. Some doubts it will be recollected were raised respecting the proportions in which Messrs. Wheatstone and Cooke divided between them the merit of the invention; but these doubts have been for ever removed by the statement on the subject which we published three or four weeks ago, drawn up at the mutual request, and (we believe) to the satisfaction, of these gentlemen, by their friends Sir M. I. Brunel and Professor Daniell.

Professor Wheatstone having been requested by the Committee of the House of Commons to explain to them the mode in which he proposed to communicate intelligence between two distant points made the following answer:—

I have here a copy of the drawing of the specification to the first patent taken out by myself and Mr. Cooke; in all essential particulars the instrument here represented resembles the one at the Great Western Railway. Here is what may be called a dial (see fig. A.), with five vertical magnetic needles. Upon this dial 20 letters of the alphabet are marked, and the various letters are indicated by the mutual convergence of two needles when they are caused to move; if the first needle turns to the right and the second to the left, H is indicated. If the first needle deviates to the right, and the fourth to the left, then B is indicated; if the same needles converge downwards, then V is pointed to. These magnetic needles are acted upon by electrical currents, passing through coils of wire placed immediately behind them; here is the representation of one of those coils, with the position of the magnetic needle with respect to it (fig. 6.). Each of the coils forms a portion of a communicating wire, which may extend to any distance whatever; these wires, at their termination, are connected with an apparatus, which may be called a communicator (fig. H.), because by means of it the signals are communicated; it consists of five longitudinal and two transverse metal bars, fixed in a wooden frame; the latter are united to the two poles of a voltaic battery, and, in the ordinary condition of the instrument, have no metallic communication with the longitudinal bars, which are each immediately connected with a different wire of the line; on each of these longitudinal bars two stops are placed, forming together two parallel rows. When a stop of the upper row is pressed down, the bar upon which it is placed forms a metallic communication with the transverse bar below it, which is connected with one of the poles of the battery; and when one of the stops of the lower row is touched, another of the longitudinal bars forms a metallic communication with the other pole of the voltaic battery, and the current flows through the two wires connected with the longitudinal bars, to whatever distance they may be extended, passing up one and down the other, provided they be connected together at their opposite extremities, and affecting magnetic needles placed before the coils which are interposed in the circuit, there must be a similar complete apparatus at every different station.

"There is another very essential part of the apparatus I wish to mention, which is, the means we have of ringing a bell before the communication begins, in order to call the attention of the observer. The general principle of the alarum is this: to the detent of an alarum, on the ordinary construction of a clock alarum, a piece of soft iron is fixed, and opposite to it there is a bar of soft iron bent to the form of a horse-shoe; round this bent bar, wire, covered with silk, is wound, forming numerous coils; it is a property of soft iron to become powerfully magnetic when an electric current passes through a coil thus surrounding it. When the horse-shoe bar thus becomes magnetic, it therefore attracts the detent, and the bell immediately rings; when the current ceases the magnetic power ceases also, and the bell discontinues to ring. There are several other contrivances made to effect this purpose. Some other arrangements there are to which Mr. Cooke has particularly directed his attention, relating to the means of establishing communications at intermediate parts of the line where no fixed stations exist. To effect this, posts are placed at every quarter of a mile along the line, for the purpose of establishing a temporary communication with either of the adjacent stations; the guard of a train may thus carry with him a portable instrument, by means of which he can send up a message to a station either way, whenever it may be required. The wires are kept insulated from each other by a mixture of cotton and india rubber, which is a very good insulating material; then these prepared wires are all passed, with certain precautions, through an iron tube, which in some parts of the line is buried beneath the ground, and in other parts of the line is raised above it."

Lord Granville Somerset put this case.—"Suppose the Great Western Railway were completed between London and Bristol, do you contemplate the possibility of carrying your telegraph through the whole way, so as to signify from London to Bristol anything you wish to communicate, and *vice versa* from Bristol to London?"—Professor Wheatstone replied, "The experiment has not been tried, but I have every reason to believe that it can be done. One very important circumstance I have ascertained is the little power requisite to produce this effect; it was formerly thought, that to send a current to any considerable extent very strong batteries must be employed, but in fact a very weak battery is sufficient, provided only it consist of a number of elements proportionate to the distance. So far as my experiments have gone, I think I should be able to effect a telegraphic communication between Bristol and London. Possibly several stations might be

Digitized by Google

required, but, at any rate, the stations may be at far greater distances from each other than would be required for any ordinary system of telegraphs; my opinion is, that the intermediate stations will not be required."

Mr. Loch asked whether there was any appreciable loss of time in making a communication from the Paddington station to the extremity of the line to which the telegraph is now carried? Professor Wheatstone, "From some experiments I made some years ago, published in the *Philosophical Transactions*, when I first turned my attention to the possibility of effecting telegraphic communications, I ascertained that electricity travelled through a copper wire at the rate of about 200,000 miles in a second; consequently there is no appreciable time lost in the communication of the electrical effect; the only time that would be lost would be at relay stations, if they were necessary.

Chairman—Could you communicate from Dover to Calais in that way?—I think it perfectly practicable.

Professor W. added the following observations:

"An electrical telegraph offers a great many advantages over an ordinary telegraph; it will work day and night, but an ordinary telegraph will act only during day; it will also work in all states of weather, an ordinary telegraph can only work in fine weather. There are a great number of days in the year in which no communication can be given by an ordinary telegraph, and besides, a great many communications are stopped before they can be finished, on account of changes in the state of the atmosphere. No inconveniences of this kind would attend the electrical telegraph. Another advantage is, that the expense of the separate stations is by no means comparable to that of the ordinary telegraph: no look-out men are required, and the apparatus may be worked in any room where there are persons to attend to it. There is another advantage the electric possesses over the ordinary telegraph, viz: the rapidity with which the signals may be made to follow each other. Thirty signals may be conveniently made in a minute: that number cannot be made by the ordinary telegraph. There is one thing I will take the opportunity to mention—I have been confining the attention of the Committee to the telegraph now working on the Great Western Railway, but having lately occupied myself in carrying into effect numerous improvements which have suggested themselves to me, I have, conjointly with Mr. Cooke, who has turned his attention greatly to the same subject, obtained a new patent for a telegraphic arrangement, which I think will present very great advantages over that which at present exists. It can be applied without entailing any additional expense of consequence to the line now laid down, it will only be necessary to substitute the new for the former instruments. This new apparatus requires only a single pair of wires to effect all which the present one does with five, so that three independent telegraphs may be immediately placed on the line of the Great Western; it presents in the same place all the letters of the alphabet according to any order of succession, and the apparatus is so extremely simple, that any person, without any previous acquaintance with it, can send a communication and read the answer."

The drawings and letter-press description to which we have referred as recently published by Mr. Cooke, furnish (we presume) the further improvements referred to by Professor Wheatstone in the preceding evidence.

The engravings on our two preceding pages (fig. 1 to 7, inclusive) are reduced copies of these drawings, and subjoined is

MR. COOKE'S EXPLANATION.

Fig. 1 shews the application of the electric telegraph to tunnels.

1 A, 2 A. Telegraphs fixed in policemen's boxes near the mouths of tunnels.

B. B. Intermediate telegraphs near the shafts within the tunnel, always ready to work with 1 A, 2 A, in case of need.

C. Protecting tube for conducting wires.

C E, C E. Tube leading to engine-warner; *vide* Figs. 2 and 3. with explanation.

Fig. 2. Application of the electric telegraph to level crossings, approaches to stations, and switches, &c.

1 A, 2 A, 3 A. Telegraphs fixed in policemen's boxes, one or two miles from a level crossing or station.

C. Protecting tube for the conducting of telegraph wires, either carried on posts with a railing over it or under-ground.

D. Telegraphs at stations or level crossings, corresponding with 1 A, 2 A, 3 A.

1 E, 2 E, 3 E. "Engine-warners," (for details, *vide* Figs. 3 and 4) by which an engine gives notice of its approach, at the distance of one or two miles, both to A and D. If the station or crossing be clear, D replies to the policeman at A to allow the train to "Go on;" or else to "Stop," according to circumstances; the engine-man never venturing to pass A till the policeman has given the signal to "Go on." This will ensure the watchfulness of the policeman; but even in case of his absence, the conductor would inquire by the telegraph A for permission from D to proceed. In the figure, the policemen at 1 A, 2 A have received permission from D (as is indicated by the pointing of the handles of the telegraphs at D, corresponding with the indications on the telegraph both at D and 1 A, 2 A) to allow their respective trains to proceed. The policeman notifies in the usual manner, by the white flag, or signal that the line is clear. The train 3 e had been stopped by the policeman at 3 A, in obedience to a signal from the station D, in reply to the "warning" given by the engine of its approach from 3 E.

N.B.—The signal given from the "engine-warner" E, at A and D, is "Stop," accompanied by the ringing of an alarum. This signal remains till answered from D.

Fig. 3. Telegraphs for giving two signals, as represented above at A, B, and D, each having an alarum (a), which sounds when a signal is given either from E, D, A, or B.

N.B.—Thirty-one telegraphs, giving two such signals, are working from eight in the morning till ten at night, on the Blackwall Railway, between the stations and the termini, to direct the working of the fixed engines.

E represents the details of the "engine-warner."

An upright bolt passes through one rail of the "approaching line" of road, the upper end rising slightly above the rail, so as to be depressed by an engine-wheel, or other very heavy body passing over it. The lower end of the bolt rests upon the arm of a lever supported by a spring capable of offering a resistance equal to at least half the pressure of one wheel of a carriage.

Upon a train passing, one arm of the lever is depressed, which raising the other arm, breaks the electric circuit at e, and causes the alarum to be sounded and the warning signal to be given at A and D; the other wheels of the train produce no further effect till the warning has been replied to from D, which at the same time restores the electric circuit of the "warner" for another signal. Though the "warner" might be let off by mischievous persons with a crowbar, no inconvenience would be occasioned beyond arousing the expectation of the policeman for the time occupied by a train in passing the space between E and A, when the fact would be discovered, and reported by a signal to D. The object of the "warner" may obviously be attained by a variety of simple mechanical means.

Fig. 4. 1 F, 2 F. Terminal Telegraphs, for more extensive communications than those already described, giving 30 or 60 signals by the pointing of a revolving index-hand at letters on a fixed dial, as in a common clock; the person giving the signal turns the concentric hand (t) till its pointer stands opposite the signal to be given, as shown in 1 F, when instantaneously, the index-hand (g) in all the corresponding telegraphs in the circuit, viz, 1 F, 2 F, 1 G, &c. point at the same signal. 1 G is an intermediate and portable telegraph, to be carried with each train, and applied, in case of need, to convenient arrangements at each mile-post or bridge along the line. The section of a railway below Fig. 4 illustrates this subject. An iron cap to the [illegible] being unlocked and taken off, the portable [illegible] is placed within a ledge fitted to receive it, making thereby the necessary connections with the conducting wires when it is at once fit for working with the "terminal telegraphs." This form of telegraph can be worked by any person at first sight, and requires no battery to be carried with it. [illegible] up with a water-proof cover and lantern, for rainy weather and night use.

N.B.—All forms of this electric telegraph are "reciprocal" in their action, *i.e.* they give the same signals, in the working as in the recipient apparatus, and work equally from either end or from intermediate points.

Fig. 5. Represents a very simple form of Telegraph, on exactly the same principles as Fig. 3 and Fig. 4, but combining the powers of both; the arrow giving two signals, for the purposes explained when applied to tunnels, level crossings, &c., and the small index K being adapted for a more extensive communication, when circumstances require it.

Fig. 6. M is the Electric Detector, for detecting injury caused to the wires, either by contact with the pipe or with each other, fracture, or water; m, is a small battery.

1 m, 2 m, are "feelers," in connection with the battery and detector. Whenever these feelers touch each other, an electric current passes from the battery and influences the index of the detector M, by turning it on its axis. J J are iron boxes which occur at short intervals along the line, each fitted with a screw lid, and so connected as to render them continuous with the tube C. The terminations of each length of wire-rope one introduced into the box, and each wire screwed with its fellow to a piece of wood fitted to the bottom of the box, so that the wire marked 1 is continuous throughout its length and always connected by the screw 1, by which it can be recognized at every box along the line. The openings by which the wires enter the box are hermetically sealed with composition; but a small tube passing through the box admits of a free communication of air from a distant reservoir. Suppose wire 1 to have become in partial contact with the tube, either by the metals touching or the presence of water, upon opening the box at which the wire is to be proved, the screw 1 must be taken out, and the feeler 1 m brought in contact with one end of the separated wires, the other feeler being kept in contact with the pipe. If this portion of the conducting wire is sound, the detector needle remains stationary; but upon removing the feeler, 1 m, to the other liberated end of wire, the detector index moves on its axis, and indicates on the graduated scale the degree of contact existing between that portion of the wire and the tube. Supposing the experiment to be tried again at the next box, and the contact proved to lie between the two boxes, the intervening faulty portion of wire is exchanged for the sound wire marked 0; (which is a spare wire introduced by such repairs) by this means the wire 1 is again restored to soundness; it is obvious that different portions of the spare wire, 0, may thus be employed to repair a damaged wire, at numerous short intervals along the line, without rendering it necessary to disturb the line generally; the minutest changes in the insulation of the wires from dampness, &c. can be detected by this valuable instrument, and corrected by blowing through the pipe a draught of dry air from the reservoir.

When a length of wire-rope has to be removed, in consequence of accidental injury, the connecting screws in the boxes at each end of the length are taken out, and one end of the wires to be removed is bound to the end of a fresh length of wire-rope conveniently wound upon a drum. The further end of the faulty length is then drawn out of the tube and wound upon an empty drum, as the new rope gradually takes its place. The screws again unite the ends of the wires, and the line is restored. The faulty length of wire, after undergoing examination and repair, is again fitted for use.

Each wire is separately covered with cotton and India-rubber solution, and the set of wires made into a rope, which is passed through a hot resinous varnish before being introduced into the tubes.

Fig. 7. Air-pressure Apparatus, employed for ex-

Digitized by Google

cluding water from the tube, when carried underground; and for giving notice of defects in the tubing.

H is an air-pressure apparatus, or air-reservoir, of convenient size, charged with dry air to any pressure. l h is a pressure balance, in the form of a lever; 2 h. a valve communicating, by a minute opening, between the reservoir H and the protecting tube C. Suppose it to be found desirable to keep the interior of the tube under a pressure of two or three pounds (that being calculated as sufficient to exclude the greatest pressure of water to which the tube is liable,) the balance 1 h must then be loaded to that amount; on any escape of air taking place from the tube, the lever-arm, 1 h, would descend, and open the valve 2 h, till the high-pressure reservoir had increased the pressure in the tube, which by raising the pressure balance 1 h, would close the valve 2 h. A barometer, L may indicate the change of pressure either in the reservoir or tube. The reservoir is supplied by an air-pump, when nearly exhausted by any leakage, which under the light pressure of two or three pounds should be very trifling. Should the barometer, however, indicate a sudden escape of air, attention must immediately be directed to the proving-boxes, J, which occur at short intervals along the line.

In or near the box, conveniently connected with the tube, is a three-way stop-cock, to the pipe of which a portable barometer or detector, L, can immediately be applied. When the tube is faulty, upon turning the cock in one direction, the pressure on the barometer will remain steady, but in the other direction it will rapidly diminish, from the escape of the air. By proceeding with a similar experiment at other proving-boxes, the two boxes, will be readily ascertained between which the escape of the air takes place; when the tube lying between the last-proved points must be carefully examined, to discover the faulty part.

EASTERN COUNTIES' RAILWAY COMPANY—SPECIAL MEETING.

A Special General Meeting of Shareholders was convened on Tuesday, the 8th instant, at the Company's Station, Shoreditch, for the purpose of authorising the Directors of the Company to raise by loan the sum of 100,000*l.* under the powers of an Act passed in the present session empowering the Company to raise that sum, and to issue debenture bonds, &c. or such terms as they might think fit.

The advertisement convening the meeting having been read,

The Chairman (H. Bosanquet, Esq.) said, this was the only purpose for which they had been called together; and he need not state that to this subject their discussion must be confined. The Act referred to authorised the raising of this sum of 100,000*l.* in the manner specified: and the power was to be used in order that the shares, which had been forfeited, &c., might not be sacrificed at this early stage of the undertaking, when the railway had been opened only 18 miles, and when it had not began to command much of the traffic of the great eastern road which runs parallel with it; and in the present very depreciated state of the money market, owing to the various events which were transpiring in the political and the commercial worlds. He was at the same time fully satisfied that ere long the Company might expect to see better days. He had now only to congratulate the proprietors that they were met for the first time on their own soil and freehold. The Directors had prepared a short Report, stating exactly the position of the case.

This Report was then read. It stated that in the Report presented at the general meeting in February last, it had been represented that in order to prevent any risk of delaying the completion of the line as far as Colchester, or any undue sacrifice of unappropriated shares—the Directors were under the necessity of bringing a Bill before Parliament, to enable them to raise, if necessary, by new shares, mortgage, &c. the additional sum of 400,000*l.* The Act received the Royal Assent on the 10th May, and they were authorised to raise the sum of 300,000*l.* by issuing new shares, and also the sum of 100,000*l.* by bond, debenture, &c. The latter power it was necessary immediately to exercise: the resolution to be proposed was confined to that. They were happy to inform the proprietors that it was not requisite to call on them to invest the Directors with authority to raise the other sum of 300,000*l.* It would be inconsistent with the special object of the meeting to enter into other matters. But they could not resist the opportunity of congratulating the proprietary on the progress of the works, and the improvement of the income from that portion of the line now opened.

The following resolution was then read:—

"That this meeting does order the Directors of the Eastern Counties' Railway Company to borrow—and the said Directors are hereby authorised and directed to borrow in such parts as they shall think proper, the sum of 100,000*l.* which they were authorised to raise under the Act 4th Victoria, chap. 14, entitled, 'An Act to amend certain of the provisions and powers of the Act relating to the Eastern Counties' Railway,' and to secure the payment of the sum so to be borrowed, either by mortgage, debentures or bonds, as they shall think fit."

The Chairman said, this was the resolution the Directors proposed to have passed, and they would feel obliged to some gentleman to move and second it.

Mr. Ching then moved, and Mr. Baxter seconded the resolution, the latter stating that he was very happy to do so, thinking it would be exceedingly advantageous.

The resolution having been passed,

The Chairman said this was all the business to be transacted, and he hoped the proprietors would now inspect the works of the Company.

DUNDEE AND ARBROATH RAILWAY COMPANY—GENERAL MEETING.

The Annual General Meeting of the shareholders of the Dundee and Arbroath Railway Company was held in the Town-Hall, on Wednesday, 3rd June, Alexander Key, Esq., in the Chair.

The Report of the Directors was read to the Meeting, from which it appeared that,

The revenue of the past year amounted to	£12,874
The revenue of the preceding year was	9,285
Showing an increase upon the gross income for the year of.....	£3,589

The Report was unanimously approved of; and a dividend of 5 per cent. declared, payable upon Friday the 2nd day of July next. The sum of 1,057*l.* was placed to the reserved fund.

A considerable degree of excitement was occasioned by this meeting, inasmuch as the question of Sunday traffic was to be formally brought forward. The interest was further increased by the circumstance of several deputations having arrived from a distance—one of which was headed by the celebrated Sir Andrew Agnew—for the purpose of tendering remonstrances against the carrying of the mail by the railway on Sundays.

After a good deal of preliminary discussion, occasioned principally by the presence of the deputations, it was agreed that the stranger gentlemen should be admitted, on the understanding that one from each deputation should be allowed to speak shortly on that particular question. The election of Directors was deferred till the vote as to Sunday travelling was disposed of.

Letters were then read from Sir Andrew Agnew, Mr. Hog of Newliston, and Mr. C. M. Ghristie of Durie, who respectively represented the "Scottish Society for the due Observance of the Lord's Day," the "Sessional Union of Scotland," and the "General Assembly of the Church of Scotland." A memorial was also handed in from three individuals in Arbroath, recommending a discontinuance of all Sunday traffic by the railway on Sundays.

The deputations having been formally introduced by Messrs. David Martin and Andrew Low, who had been deputed for the purpose,

Mr. Hog, of Newliston, first claimed the notice of the meeting. He stated, in reference to the Edinburgh and Glasgow Railway, that the Sessional Union, composed of upwards of fifty Kirk Sessions—including Edinburgh and Glasgow, with the intermediate districts—had passed a series of resolutions, condemnatory of the practice of Sunday traffic; and, at a subsequent meeting, a deputation had been appointed to remonstrate with the Dundee and Arbroath Railway Company on the subject of carrying the mail on Sundays. He humbly and respectfully begged that the Company would take this momentous matter into their most serious consideration.

Mr. Christie, the delegate from the General Assembly, next presented himself. He advocated the same views respecting Sunday travelling,—it was not only with a view to condemn the present practice, but put a stop to what might afterwards take place. Railways were in the course of being constructed, from one end of the country to the other—from the south of London to the north of Aberdeen—and the example of the present Company might be the means of establishing Sunday traffic on all the lines. It was idle to talk of eight passengers—there might in that case be eighty or eight hundred, and how were they to select the mere mail passengers? Such an awful spectacle of a national desecration of the Sabbath should be averted. Mr. Christie concluded by referring to the hardships which might be imposed on the servants of the Company by being compelled to work on the Sunday.

On the memorial from Arbroath being read, one of the deputation, in a low tone of voice, concluded a few remarks by recommending to the consideration of the Meeting the Fourth Commandment—"Remember the Sabbath Day, to keep it holy."

Sir Andrew Agnew, after adverting to the statements advanced by the preceding speakers, said, that as Christian men and as fathers they ought to set their faces against Sabbath desecration. He read a petition from the the Society which he represented to the General Assembly, on which he commented at considerable length. He referred to the efforts he had made in Parliament in reference to various Railway Bills, with a view of putting a stop to Sunday travelling on railways. He had done his utmost to get proper clauses introduced, but he was met by the argument that such restraint was altogether unnecessary for the people of Scotland—the common law of the land being sufficient. The Postmaster-General might now compel railways to convey the mail, but he had nothing to do with passengers, and in this case the law was over ridden. Sir Andrew next adverted to the circumstance that the Postmaster-General would no doubt agree to give up the conveyance of the mail by the railway on Sundays, if a petition to that effect from the Company, backed by the religious bodies, were presented to him; and mentioned that the Greenock Railway Company would not a submit to such degradation. What he and his party were engaged in was up-hill work, but it was for the honour of God, and he trusted it would be successful. It was no trifling matter to consider that 30,000 people were already employed in Great Britain in consequence of the mail running on Sundays, and that the proposed innovation would greatly extend the evil. He was not indifferent to the prosperity of the country, but he conceived that the greatly increased facility of communication should altogether supersede the use of the Sabbath for such purposes, which was not man's day. There were two ways of curing the evil—either by the mode he recommended, or by throwing open railway traffic altogether on the Sundays, and thereby creating such a disgust in the public mind as would bring about the desired effect. Sir Andrew next referred to a recent arrangement by the Western States of America, by which the running of the mail by the railway on Sunday was rendered unnecessary, by the great facilities afforded during the other six days—concluding with an earnest appeal to the meeting to give effect to his views.

Mr. John Baxter, coal-agent, said, that the proposed measure was only a half measure—they should petition to discontinue running the mail altogether on Sundays.

Sir Andrew Agnew replied, that petitions had been already presented for stopping the mail alto-

Digitized by Google

gether on the Lord's Day, but, as they did not possess the sovereign power of the State, they should remedy that portion of the grievance over which they had controul. He was quite convinced that a petition to the Postmaster-General would cure the evil complained of. He begged to impress upon the meeting that the Fourth Commandment was a solemn established truth, long before they were born, and would remain so long after they were resting in their graves.

The deputation then withdrew.

Previous to the election of Directors, the Rev. Mr. Miller asked the Clerk to read various minutes connected with the decision respecting the conveyance of the mail on Sunday.

It was moved by Mr. GARLAND, and seconded by Mr. CARGILL of Arbroath—

"That this meeting strongly disapprove of the opening of the railway for travelling or traffic of any kind on the Sabbath; and resolve to apply to the Post-office authorities for exemption from carrying the mail on that day."

Mr. WILLISON proposed the following amendment, which was seconded by Mr. GEORGE WEBSTER, Forfar—

"That the Directors of the Company, for the ensuing year, be instructed to allow passengers to be carried by the mail trains on the Sundays; but the Company consider it inexpedient to run any other trains on Sunday except the mail train, with one first and second-class carriage."

A good deal of desultory conversation followed, Mr. Willison contending that the conveyance of the mail by the railway was a less desecration of the Sabbath than otherwise; while Mr. Flowerdew and others maintained a different opinion.

Mr. JOHN BELL (of the Stamp Office) could not approve either of the motion or the amendment—both went to extremes. He held that the fourth commandment should be interpreted as were other passages of Scripture. This commandment enjoined that no work should be done on the Sabbath. Another passage said "Take no thought for to-morrow." Did the Rev. Mr. Miller act in accordance with this? Again, there is the passage against laying up riches for yourself. Now, if Mr. Miller acted up to the strict letter of this precept he would not be sitting here to-day as a shareholder of this Company. (Laughter.) [Mr. Miller here observed that he should not be made the scapegoat of the party holding similar opinions.] Mr. Bell went on to notice the lost sheep, and the cure of the withered hand, illustrative of the principle of necessity and mercy, and also, according to his interpretation, conveying a rebuke to the Pharisees, to whom he likened some of those who take a lead in discussions upon similar subjects, in the present day. He at the same time justified the necessity of surgeons and relatives of distressed persons being allowed to receive letters or travel on Sunday. He repudiated the idea of any wish to desecrate the Sabbath, and recommended that those holding his opinions should not be operated upon by fear in giving their votes on the present occasion.

Mr. WILLIAM THOMS said, that a simple departure from principle would lead them into endless difficulties, so that they should strike at the root of the evil at once. Were the public mind once reconciled to Sunday travelling by the railway, there would be no end to the extent of Sabbath desecration. The proposal formerly made to run trains twice a-day—avoiding church-going hours—was far superior to the present one, and, in coming to a decision, the meeting should abide by a firm adherence to principle.

After a few remarks from Mr. FLOWERDEW, who said that he could not give a silent vote on such an occasion—(he spoke in favour of the motion)—there were loud cries of "Divide, divide!" Tellers were then appointed, and on the votes being taken, the motion was carried by a majority of 277 to 273—being a balance of 4 in favour of intolerance.

The meeting then proceeded to the election of Directors for the ensuing year. The length of the debate had wearied out the patience of numbers, and there was every inclination to have the election carried through without the tedious form of voting. Even Mr. Miller of Monikie gave way, contenting himself with proposing that Messrs. Andrew Low and William Curr should be appointed in place of two who had resigned.—*Dundee Paper.*

HERTFORD AND WARE BRANCH RAILWAY.

A MEETING of the inhabitants of Hertford took place on Saturday evening, at half-past seven o'clock, in the Town Hall, and was very numerously and respectably attended. The Mayor, J. Lawrence, Esq., having been called to the chair, proceeded to state why the meeting was convened; he had only that morning been informed that some of the inhabitants of Ware had petitioned to be heard at the bar of the House of Lords by counsel, against the clause in the Railway Bill, which required that the line should be *completed to Hertford*, before the Company should be allowed to take toll or receive any profit from passengers, &c., thereby preventing the line terminating at Ware instead of Hertford; and he had, consequently, felt it his duty to call this meeting, as it was a subject of much importance to Hertford.

After several appropriate speeches, a series of resolutions were moved and seconded by J. M. Carter, Esq., T. Chambers, Esq., J. J. Gripper, Esq., Mr. Y. Crawley, Mr. Gardener, and others, to the effect that it was highly desirable for the interests of Hertford that a petition should be presented, praying to be heard at the bar *in defence* of the clause against which some of the inhabitants of Ware had petitioned; and that the Marquis of Salisbury and other noblemen connected with Hertford, should be respectfully requested to support such petition, and E. R. Spence, Esq. was directed to give the necessary instructions to counsel, &c. The petition was at once most numerously signed by all classes of the inhabitants, who appeared to feel the greatest anxiety upon the subject; and after a vote of thanks had been unanimously voted to the mayor, the meeting, which appeared to be actuated by the most perfect unanimity, broke up. —*Essex Mercury.*

RAILWAY PLEASURE EXCURSION FROM DARLINGTON TO YORK.

ON Whit-Tuesday, the Directors of the Great North of England Railway gave to an immense number of the inhabitants of Darlington and the intermediate places, a cheap trip to York, the fare being only five shillings from Darlington to York and back. At an early hour in the morning the station at Darlington was besieged by parties wishful to avail themselves of the Company's offer; and at half-past nine o'clock, the time appointed for starting, the trains were filled by a respectable company, a great number of whom had come from Hartlepool, Middlesbro', Stockton, Shildon, &c., by special trains furnished by the Stockton and Darlington and Stockton and Hartlepool Railway Companies. All the second class carriages the Company could muster were put in requisition, as well as a number of second and third class carriages, borrowed from the York and North Midland Railway Company; and, in order to provide accommodation for all, a large number of spring-mounted merchandize waggons were fitted up with seats for the occasion. The morning was beautiful, the sun smiling pleasantly, and the party all appeared well pleased with the prospect of their excursion. About ten o'clock the engines were put in motion, and went off surrounded by a host of spectators, who cast a long lingering look at the lengthy trains as they began to leave them in the distance. The trains were propelled at a great speed, and the engines soon were "careering in thunder along"—

> On, on to the goal, over valley and mound,
> How wond'rous and rapid his race!
> Afar as he speeds, rock and river resound
> 'Neath the tread of his fire brightened pace.

At the stations at Croft, Cowton, Northallerton, Thirsk, Alne, and Shipton, the number of the party was considerable augmented, especially at Northallerton and Thirsk, where carriages were ready filled to be attached to the trains. At all the stations there were immense crowds drawn up to see "the folks," and the bridges along the line also had their share of visitors. The party arrived at our city soon after twelve o'clock, the bar walls were occupied by numbers of our fellow-citizens, and when the visitors had alighted from the train the spacious and splendid station presented an appearance not easy to be described, and therefore we will not attempt it. The streets of Old Ebor were soon thronged by the party wending their way towards the various "lions" of York, our noble Minster being the chief point of attraction, which seemed to strike many with surprise. Next was the Museum, with the delightful grounds attached, which were thrown open gratuitously to the public. Here we observed many of the "canny lasses" of the north promenading the gardens, admiring the ruins of St. Mary's Abbey, the fountains in full play, and inspecting the curiosities located within our Museum. The Castle, too, had a goodly number of visitors, many of whom viewed with astonishment the massy walls which encircle that receptacle of malefactors. Some few went as far as the Cemetry; but in short, we may say that although the time allowed in York was short, every one seemed to dispose of it to the best advantage. At a quarter-past four the station in Tanner-row again presented a scene,—the platform was literally covered with a moving mass of human beings; when the bell rung, people might be seen running in all directions, climbing over the waggons; and the first train left Old Ebor completely laden; there was not, we believe, a spare inch anywhere. A second train soon afterwards followed with the remained of the party, and the station again presented its ordinary appearance. This is the first pleasure excursion which the Directors have given, but from the success which has attended it, we need not hesitate to prophesy that it will not be the last; though, by the by, we hope on the next occasion more time will be allowed at York. The novel character of the excursion—the perfection of the arrangements—the good spirit which animated the whole of the party—together with the favourable nature of the weather, that marplot to holiday lovers!—all tended to bring about the desired end—"the greatest happiness of the greatest number."

The trains reached Darlington about eight o'clock, having gone at a slow rate, and having many stoppages to put down passengers. Trains were ready at Darlington, for Stockton, Hartlepool, &c., which started immediately on the arrival of the trains from York.—*The Yorkshireman.*

CHASE OF DOGS ON THE TAFF VALE RAILWAY.—On Wednesday last, as the eleven o'clock train was proceeding to Cardiff from Merthyr, on nearing Newbridge a fine greyhound and a terrier were observed by some of the passengers running at the top of their speed between the rails, a few yards in advance of the train. After running some 500 or 600 yards, they crossed the left rail, and, still side by side, continued the race, evidently in great terror—the terrier, singular to relate, being about a head in advance of the greyhound. The train was going at a fast rate, and the little distance between the dogs and the engine rapidly diminishing, when the engineer attempted ineffectually to drive them off the road by throwing large pieces of coke at them. The poor creatures, however, seemed fascinated, and whilst the writer of this paragraph (a passenger, feeling assured that both would be killed) was anxiously awaiting the issue, he suddenly lost sight of the terrier, whilst the greyhound, being passed by the engine, crouched down on the road with tongue extended, evidently all but exhausted. The writer's conjecture as to their fate was partly verified, for on looking back he beheld the poor terrier extended between the rails with his head cut completely open, and his more fortunate companion, the greyhound, standing over him.—*Hereford Times.*

A NEW "TONGUE."—The *Journal de Rouen*, of 22nd May, states that the best understanding exists between the numerous English and French workmen employed on the Rouen and Paris Railway. They have organized a kind of language which is neither English nor French, by means of which they are enabled to converse with each other.

1. Toll to London and Birmingh am 184*l.* 16s. 9d., to be deducted from gross receipts. The receipts are exclusive of those for the mails.

2. The receipts are exclusive of those for the mails.

5. Receipts include the Northern and Eastern toll, &c.

7. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

8. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,233*l.*

10. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet.

12. The 27*l.* 4s. 1d. from goods, &c. is for toll only.

13. Ten per cent. is the maximum dividend allowed by the Company's Act.

14. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

17. The capital of 741,000*l.* includes the new capital for London and Brighton station.

18. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

19. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

21. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

22. The 4180*l.* 3s. 4d. are the receipts after deducting the toll to the North Midland Company.

23. The receipts for goods, &c. include, carriages, 37*l.* 5s. 0d.; horses, 98*l.* 9s. 0d.; dogs, 1*l.* 7s. 0d.; parcels, 217*l.* 3s. 8d.; cattle, 62*l.* 2s. 3d.; corn, 29*l.* 13s. 5d.; heavy goods, 375*l.* 8s. 5d.; coal, 56*l.* 8s. 10d.—Total, 877*l.* 17s. 7d.

26. The receipts stated are after deduction of Liverpool and Manchester toll.

27. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

28. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

31. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

An original article on Railways in Ireland is unavoidably deferred.

The information kindly given by H. D. of Darlington, will be used on the first opportunity.

We are obliged to the Chester and Birkenhead Railway Company for their compliance with our request to supply us with traffic returns; our list, however, was made up for the present week before their letter reached us. In future weeks they will of course be duly inserted.

Communications received from Onesimus.—Mr. Prior—A Shareholder in Three Lines—J. C.

We are obliged to leave out for want of room, editorial notices of the proceedings of the abolitionists of Railway Sunday Traveling, and of the project of a railway communication by Lancaster between the metropolis and Scotland.

THE RAILWAY TIMES.

SATURDAY, JUNE 12, 1841.

We proceed to fulfil the promise we made in our last, to examine the principles on which a *uniform system of keeping railway accounts* ought to be constructed—desiring, however, that it may be kept in mind, that we contend for uniformity only inasmuch as there can be but *one best way* of keeping accounts, in order to draw the greatest amount of economical information from them, and to secure to shareholders the utmost amount of profit for their investments.

Like many other arts that of book-keeping has developed its capabilities very gradually; as it has accomplished one purpose, another, of which it had exhibited some glimmerings, has been required of it, until it has produced effects of which its first inartificial attempts gave no promise.

The first and simplest object of a book—we can hardly yet say, of a set of books—is to set down such dealings as were not settled at the time, and just this, is still the only purpose for which the country shopkeeper keeps his book. When his labouring neighbour comes in on Saturday night to pay for the week's groceries, and mayhap, a yard or two of flannel or print, the whole week's business of the shop is looked over to pick out the items of the required account, and each article receives the ancient mark of payment—the simple and significant cross. In time, care, diligence, and the good opinion of his neighbours, increase our dealer's trade, and to save time in the weekly settlement, the purchases of a customer of larger demand than the rest, are put down on a leaf by themselves at the end of the book: the plan is convenient, and presently a few more are managed in the same way; the practice grows until the book is almost a series of separate accounts, but is now as inconvenient from the difficulty of finding the needful page, when half a pound of sugar or an ounce of tea is to be set down as it was before from the necessity of looking over all the entries for the settling of the weekly bill. Long, however, does this state of things remain; for by this time the honest chapman has passed the years when change is easy, and sits too comfortably in the corner from which he can just see when a customer wants to be served, to think of encountering the mysteries of book-keeping, which he has done so long without. At length, however, his rising son or the smart assistant, his increasing years have compelled him to engage, import the novel plan and the old book gets an index; a few sheets of cap paper stitched together received the dealings as they occur; and lo! a day book and ledger start into play for the first time in the village history.

Our object in exhibiting the growth of our country friend's dealings and records has not been merely to furnish a recognisable picture of humble life (but what indeed is there of that which pertains to the history of human feelings and human improvement which is not deeply interesting to the heart of every rightly constituted individual?) but to show that book-keeping is not an art of bounded capabilities or of limited use. In our imagined primitive instance the only object was to ascertain the state of affairs between the owner of the book and each of his customers. He conducted his trade himself, and therefore wanted no check on the honesty of his servants; his matters were few, and he managed each prudently, and finding himself increasing in comfort he needed not his books to tell him of his profits: his customers were neither numerous nor distant, and their transactions were simple, and therefore his unpretending plan—helped out perhaps with an occasional appeal to memory—sufficed to settle all questions without the proof of accuracy, which more artificial systems are made to furnish for themselves. Such systems, however, become not merely desirable, but indispensable, objects in the complicated and momentous business by which the products of all classes and all climes are interchanged for common benefit. It must be known that subordinate agents have performed their trust faithfully—it must be shown what is the result to the owners of profit or loss—and the books must of themselves furnish the strongest presumption the case affords that they tell the truth.

Indispensible every where else as these purposes of book-keeping are, they are not less so to railway business; but here the utility of the art does not stop, although it may be that some accountants think their practice sufficiently elaborate if it come up to this. It is beyond this point, that the chief advantage is to be found to new and complicated affairs, where experience is yet unripe, and is only to be gathered from the business in which the capital is risked. The utmost care is to be employed to deduce from the consequences of the measures taken already, what ought to be taken in future. A set of accounts rightly framed for this purpose, would soon be recognised as the best ally of the most sagacious observation, and would shorten the time—at best the inevitable expensive and anxious time—during which the want of facts gives the propriety of the undertaking over to the chances of mere shrewdness. The accountant, if he pleases, may rank among the best and safest advisers of the proprietary, or, contenting himself with the formalities and routine of his office, he may merely record transactions of whose bearing he is idly ignorant, and have to report losses, the warning against which lay unheeded under his own hand.

The nature and contingencies of the business form, in each instance, the only guide to the needful classification of events. Following out then, the indications afforded by the knowledge of the subject already possessed, we venture to suggest some hints on the form and purpose of a set of railway accounts, so far as they seem to require peculiarities adapted to those of railway business. We dismiss all questions relating to invested capital, and address ourselves entirely to the living question of *current cost, receipt, and profit.*

We premise, that for purposes vital to the prosperity of an undertaking, it is necessary to know not only the exact annual cost, as of so much to be paid out of receipts, but of the cost per mile of the conveyance of each passenger; and not only so, but to know how that cost will be affected by any given increase or diminution of the number of passengers. Nor must these matters be hastily grouped and generally stated, but given with such particularity of item as shall furnish opportunity of comparison or contrast with similar facts, wherever they may be found. We are assisted greatly, but not entirely guided, by the Belgian statement of the expenses of 1840, in furnishing the following sketch of a system of accounts of current expense:—

It is clear that a large class of railway expenses is not proportionate to the number of passengers—whether a thousand or a million be conveyed, it matters nothing. Others depend chiefly on the number of trains, some on the number of carriages, and some chiefly on the number of passengers. The first business is to separate all these classes—if not exactly, yet as nearly as the nature of the case permits.

On a railway of business beyond a certain amount, an expense of *General Direction* will be incurred, which will be but slightly affected by any increase in the number of passengers. This item must be paid for out of current receipts, and goes evidently into the first class. We say nothing in this, as in other cases, of the propriety of any given amount of expense: we are dealing with it only in kind.

So long as the line is worked at all, it must be kept in repair. Now, the chief expenses of this kind are brought on almost exclusively by the elements and time; it is therefore also justly grouped with current expenses. But here it is necessary to observe, that the expenses of every separate stage of the line should be kept distinct. Jobbery and negligence require this precaution, to say nothing of the importance of keeping a close watch on the expenses incurred by the peculiar nature of some sites of ground or some particular erections. The expenses of repair of buildings should be kept apart from each other and from the expenses of the road. Until it is known how long the rails will last, an estimated amount (stated separately as an estimate) should be added every year for their renewal.

Again, on this head; if a police is maintained at all on the line, its cost is but little influenced by the number of passengers; it clearly goes to the current branch of the account.

A serious class of expenses is affected chiefly by the number of trains. Of this, the largest is that of locomotive engines and their attendant cost. It will not be asserted, we presume, that an engine will be as much injured, or ab-

Digitized by Google

sorb on the whole so great a sum, by taking one heavy load, as by taking the same load over the same distance and with the same speed at two journeys. If not, it follows that a separate head should be established for the expenses of each mode of transit. Repair of engines, wages of engineers and stokers, cost of cleaning, purchase of coals, and working of coke ovens—in short, the whole of the expense which would cease on the cessation of the working of the engines, goes clearly to one and a separate account, distributed under heads which shall distinctly show the nature, amount, origin, and variations of every kind of charge; together with the place where it is incurred, wherever such a distinction will tend to furnish useful comparisons. Whatever other expense is found on inquiry to be proportionate, or nearly so, to the number of trains, should be added here in separate items. We pretend not here to guide as to particulars, but to point out principles.

The next heads, although to be separated in practice we may describe together; they consist of expenses proportionate to the number of carriages and of passengers. In the first of these, that of carriages, it will be necessary to distinguish between expenses common to all kinds of carriages, and those peculiar to each class. A first class and third class carriage may cost the same in every thing which merely constitutes it a moving structure; but one incurs charges for elegance or comfort which do not belong to the other. With striking experience from some quarters, and equally remarkable theory from others before our eyes, we cannot avoid seeing that much depends on knowing for how small a sum the lowest class of passengers can be carried, as well as how much will be given willingly by others for select company, or more luxurious accommodation. Every device in accounts should be resorted to by which the effect of fares on the different classes of the population can be ascertained, and it is of corresponding importance to know what is the cost of supplying the kind of accommodation each class will pay for. If the necessary arrangements cannot be made for keeping the charges entirely separate, at least experiments may be made from time to time by which the proportion of charge to each may be nearly ascertained.

The expense of the booking offices, of superintendents, and porters, though it may not be strictly according to the number of passengers, will probably follow that ratio more nearly than any other. There will be other charges too of this kind, which it is needless to enumerate. The principle and object of the arrangement once pointed out, the rest is easy.

The three heads of expense last specified, require that their results should be compared with the number of miles travelled by the engines and carriages; and with the effect of speed. Without these data the experience of different railways cannot be compared. It must be kept steadily in view that the object of the whole arrangement is to furnish materials for judging from past expenses of the propriety of proposed future proceedings.

This is perhaps the best place for suggesting a mode of approximating beforehand to the sum necessary for renewal of *wearable stock*, an item in respect to which more serious errors have been committed than perhaps concerning any other in the whole compass of manufacturing or commercial enterprise. We do not here profess to solve the question completely, but only to give the basis of a theory which may often be usefully applied. From the day of a new machine coming into use, the repairs it requires go on increasing in a ratio having some relation to the time from the beginning. Up to any given point of time the original cost of the machine may be considered as evenly spread over the time up to that point. The repairs also (classing the estimated disadvantage, if any, of imperfect usefulness with them) which have been incurred up to that time, may be averaged for the same period in like manner. Thus the cost consists of two parts—one, the original cost, diminishing every month; the other, the average repair, increasing every month. For some time the united sums per month will be found to diminish, from the decrease of the monthly share of the original cost being greater than the increase of the monthly share of the total cost of repair to that time. But after a while it will be found to increase again from the increased expense of repair; as soon as it is certain that the maximum point is turned, you should throw away the machine—it will evidently do more harm than good to keep it. Our mathematical readers will readily know how to deal with this question, so that the cost of a sufficient number of the early periods being given, they may deduce, with some approach to accuracy, when the machine must be abandoned; they, as well as our practical ones, will see also that we have pointed out only a simple fundamental case—that varieties of cases will occur which will require discrimination in the use of the theory—and that good accounts alone can furnish the data for its application, but that with such accounts it may in many cases anticipate years of costly experience.

It is to no purpose for officers, or even Directors, to say such plans as these require too much labour. Well-arranged plans make labour light; and, if they would not, be it remembered, we are not dealing in fancies, which may be neglected without injury, or opposed by other fancies of equal value. It is from the nature of the case we think we have deduced the necessity of this system, or some other very much like it, to the well being of the whole railway system; if we are right in our belief that our deduction is sound, the event will show that it is useless to contend against facts. No expense or labour can be too great in a case like this.

THE Eastern Counties' Directors (meaning always by that term when we use it, Directors *de facto*, but not *de jure*,) are happy in the sort of people they have for constituents. Do what they please—misconduct themselves as they may—go madly on from bad to worse—endanger every interest committed to their keeping—they rejoice in shareholders who find no fault. Though all the world condemn them, they have their consolation in the continued support and applause of a most submissive, most subservient, most pluckless, most senseless proprietary. No line of railway which has been so long in hand has made so little progress in proportion to the capital expended upon it—none which so far as it has been yet opened, has, in point of traffic, so utterly disappointed the hopes entertained of it—none which has in the judgment of all impartial lookers on, been altogether worse managed—none, the future prospects of which are more clouded and gloomy—and yet among the proprietors themselves (judging of them at least from their bearing and deportment when in general meetings assembled,) all would seem to be perfect contentment and satisfaction. Not a murmur or complaint is ever heard, or if whispered occasionally by one or two faint-hearts, only to be overwhelmed by a shower of plaudits from the majority. Instead of votes of censure we have votes of thanks; instead of resolutions of inquiry, protestations of unabated confidence; instead of recommendations of retrenchment, incitements to continued profusion and extravagance; instead of information either asked or given as to the real state of the Company's affairs, a mere interchange of empty compliments, and civilities. O rare Directors! O rarer shareholders!

We suggested, in our last, a few home questions which common prudence seemed to us to dictate should be put to the Directors at the special general meeting held on Tuesday last, before acceding to their request for power to borrow more money. Afraid evidently of what the putting of such questions might lead to, the Chairman (as instructed of course by his colleagues), took special pains to impress on the meeting, in his opening address, that "discussion *must* be confined" to the specific object of the meeting—the granting of the authority required, and took care to allow as little breathing time as possible for discussion of any sort. The proceedings were hurried through, and the meeting declared at an end in less than twenty minutes. The Directors need not have been in such alarm. No mind any one to teaze or trouble them. Not a little finger wagged sign of rebellion against them. Theirs is a constituency which will stand a good deal more kicking and cuffing before it is roused to any thing like a manly resistance. The *Ultima Thule* of their forbearance is yet a far way off. It would have been easy even without deviating from the *special* purpose of the meeting, and in spite of all the eagerness manifested by the Directors to hurry it through, to have elicited much *necessary* and *useful* information, but no one made the attempt! So ready indeed were all present to gulp down, at the bidding of their sovereign masters, anything however ridiculous or absurd, that when the Directors told them "they could not resist the opportunity of congratulating the proprietary *on the improvement of the income from that portion of the line now opened*," not a man of them was moved either to laughter or shaking of the head. "Improvement of income" forsooth! A few months ago the traffic exclusive of any contribution from the Northern and Eastern Railway Company had reached 753*l.* a week: if we except Whitsun week, (which must of ccurse be left out of view in talking of any general and permanent "improvement") the traffic proper of the Eastern Counties' Railway has never, during any week of this year, produced so much as 753*l.*, and generaally has fallen greatly short of that amount. Nor at any time from first to last have the traffic receipts of this Company equalled, far less surpassed, its traffic expenditure. "Income," in the common acceptation of the term, there has never been any; and what these Directors, with matchless effrontery, congratulate their constituents upon as an "improvement of income," means really and simply a *diminution of weekly loss*. Again we say, O rare Directors! O rarer shareholders!

THE Manchester and Leeds Company have had a Special Meeting this week, for a purpose of precisely the same description as the Eastern Counties'—namely, the empowering of the Directors to raise by loan a farther sum of money for the completion of their works. But mark the difference. The Manchester and Leeds Chairman, before calling on the share-

Digitized by Google

holders to grant the authority required, gives, unasked, a long and most circumstantial exposition of the Company's affairs—answers all objections to the conduct of the Directors, whether made privately, or through the medium of the public press—invites and encourages discussion—welcomes questions—and answers them frankly and unreservedly. In all these respects this meeting presents a striking contrast to the Eastern Counties'. All is right on one side, all wrong on the other. We enter not into the merits of the questions raised between the Manchester and Leeds Directors and some of their proprietary; we have neither the information requisite to qualify us to give an opinion upon them, nor present leisure, if we had, to give them due consideration; but we cannot lay before our readers the full account of the meeting of this Company, which they will find in another part, without placing on record at the same time our admiration of the open, candid, sincere, upright, and businesslike *manner* in which the Chairman, Mr. HOULDSWORTH, and his colleagues, have submitted themselves and the whole of their proceedings to the judgment of their constituents and the public.

THE railway visit of the Mechanics' Institution of Belper to that of Chesterfield "came off" in capital style on Wednesday. We extract from the *Derbyshire Chronicle* (published at Chesterfield) such parts of the proceedings as may interest our railway readers; asking them to bear in mind that pleasures like these are the *creation* of the railway system. The delight lay much in the numbers, and no other mode of conveyance could have carried so numerous a company, even at *any* price, to say nothing of the excluding effect of the price in money, time, and comfort, which any other kind of conveyance would have required:—

"A few minutes before two o'clock, the Chesterfield and Brampton Band, who had kindly offered their services gratuitously, assembled at the Angel Inn, and shortly afterwards proceeded to the station, preceded and followed by fifteen splendid banners, the majority of which had been lent for the occasion by the Committee of the Derby Institution. On arriving at the station, we found every eminence commanding a view crowded with spectators, the platforms in front of the station being occupied by the members and friends who intended to join the procession, among whom we were pleased to notice a large number of honorary members of the Institution—and we may here mention the cheerful alacrity with which the tradesmen generally acceded to the request that was made to them to close their shop doors from one o'clock until three, in order to allow the young men and apprentices an opportunity of joining in the procession. The sun shone delightfully; and what with the appearance of the banners, the cheerful countenances of the assemblage, the melodious strains of music, the merry peals of the church bells, we do not remember witnessing a more enlivening scene than that which presented itself at the station. At about 20 minutes before three o'clock the special train (which consisted of 11 carriages) came in sight, and was instantly greeted with cheers. A number of ladies and respectably dressed females accompanied the Belper members, and evinced no slight interest in the proceedings by walking in procession to the Assembly Rooms. Honour to the WOMEN of *Belper!*"

The gay procession and exhilirating band proceeded to the Assembly Rooms, where nearly 500 sat down to tea, after which, the advantage of knowledge, the right of men to its acquisition, the example of illustrious success in arts achieved by men who have struggled to gather knowledge for themselves, the advantage of having a common ground for intellectual activity and neighbourly kindness for men of all shades of political and religious opinions, the position and prospects of the two institutions, and a variety of other agreeable and connected topics, furnished matter for speeches from the Chairman, E. T. Coke, Esq., R. Daniel, Esq., the Mayor of Chesterfield, George Stephenson, Esq., of Tapton House, (our great Railway Stephenson,) Sir Arnold James Knight, and other gentlemen.

From a brilliant speech delivered by Mr. Coke, we quote the following exciting passage:—

"To the objection, that early education alone formed the mind, he would ask whether the want of early education, or reverses of fortune, prevented the name of Bunyan the tinker and soldier, the author of "Pilgrim's Progress," from being immortalised—or that of Brindley, their own Derbyshire mechanic—cheers—or of Ferguson the astronomer, who, wrapped in his shepherd's plaid by night, scanned the heavens and marked the positions of the stars with his beads and cotton thread—or of Harrison, the Yorkshire carpenter, who, beginning with the making of wooden clocks, at last received 20,000*l.* for his improvements in chronometers, granted by Parliament for the discovery of the longitude at sea—or of Guy, the founder of the celebrated hospital of that name—or of Prior, the joiner's son, the poet and secretary of state under Queen Anne—or of Sir Cloudesley Shovel the cabin boy and distinguished admiral—or of many men of the present day, whose names were familiar to the company,—of some to whom he would not more particularly allude, beyond saying that they had this day afforded a practical proof to their helper guests that "Knowledge is Power." (Loud Cheers.) They had seen that time and space were subdued by railways and steam, so that they scarcely entered into the calculation of man. At such a period, when the material world was progressing at so rapid a rate, should the intellectual system alone remain unimproved? But they could not all attain the proud and lofty eminences occupied by the names he had mentioned; some must content themselves with the recesses and the valley, unsuccoured by patronage, uncheered by distinction. They might still however live honourably, if not brilliantly; they might live happy in the knowledge that they had 'lent their feeble aid to extend the power of knowledge over ignorance—of virtue over vice—of moral good over moral evil—in one word, the power of civilisation, of education.' (Much cheering.)"

Mr. Joseph Palmer, of Belper—

"noticed in complimentary terms, G. Stephenson, Esq., one of the first engineers of the day, who, by his application of the powers of steam to machinery, had been the means of propelling along the railway three hundred ladies and gentlemen, and honest artisan, from Belper and its neighbourhood to Chesterfield, in little more than half an hour, and that by a transition so quick, and at the same time so agreeable, that he hoped the inhabitants of the two towns would become better acquainted with the localities and advantages of each place, both in a scientific and commercial point of view. Cheers.) Mr. P. concluded by expressing the delight and happiness which he and the whole of the company from Belper felt in the cordial reception they had met with from their Chesterfield friends, and hoped they would soon reciprocate the visit. (Loud Cheers.)"

Afterwards Mr. Stephenson was introduced to the meeting, and was received with several rounds of cheering. He gave a lecture to the young mechanics present on the mechanical powers, and, amidst great applause, promised further instruction to the members. He gave his opinion on the properties of the crank, and the mistake which has generally been made on that subject; then showed the necessity of apportioning rubbing surfaces to the weight they have to bear; and concluded as follows:—

"Before concluding, as an encouragement to young mechanics, I may state to them that I commenced my mechanical career with scanty means, and by close application and study, have succeeded in establishing a manufactory which sends machinery to almost every kingdom in Europe—(loud cheers)—and I may add, nothing conduces in my opinion, so much to the success in life of a thinking mechanic as sobriety, coupled with a steady, and persevering application to his employment, never, however, in the midst of all his engagements, forgetting to contribute by every means within his reach to the comfort of his wife and family. (Mr. Stephenson resumed his seat amidst immense cheering, again and again renewed.)"

Mr. Brotherton, in the course of an animated speech, defended the assertion of Mr. M'Kerrow, in his pamphlet on Lyceums, that "the arts have been indebted for some of their noblest improvements, and the sciences for some of their most important discoveries and beneficial applications *to the mind and intelligence of the working man.*"

"Newton, who discovered the mechanism of the planetary system, the composition of light, and the courses of those alternate movements which take place on the waters of the ocean; Newton, 'who (to use the beautiful language of Dr. Chalmers), by the pure force of his understanding, rose to such a gigantic elevation above the level of ordinary men, that the kings and warriors of other days sink into insignificance before him—he at this moment, stands forth to the public eye, in a prouder array of glory, than encircles the memory of all the men of former generations—and while all the vulgar grandeur of other days is mouldering into forgetfulness, the achievements of our great astronomer are still fresh in the recollection, and they carry him forward on the stream of time, with a reputation ever gathering, and the triumphs of a distinction that will never die!' Newton, whose glories have been thus vividly pourtrayed, was a man of comparatively humble origin. And if we wish for more modern illustrations, need I cite a more notable instance than that of the illustrious man who now sits below me,—(loud cheers)—George Stephenson—vehement cheering)—who has justly been termed the great father of railways—a man, who, by the force of his great enterprise and mechanical genius, has conferred benefits on his country, which justly entitle him to the respect and admiration of an intelligent and grateful people! (Protracted cheering.) And doubtless there are multitudes of diamonds now in the mine, which though dark, unpolished, and encrusted with earthy matters though they be, may yet be as valuable in themselves, and may yet shine forth with as much brilliancy as any of those that have been cut and brought to light, and which now flash forth their radiance beneath the sunshine of day! (Cheers.)"

Mr. Busby, in expatiating on the rapid progress of invention, adverted again in the following terms to the railway system and Mr. Stephenson:—

"Mr. George Stephenson presents a living proof to the mechanic of the power of industry, the resources of a practical and reflecting mind, and the dignity of an unvarnished simplicity of character. (Cheers.) Known as he is, wherever steam and iron have opened the swift lines of communication to our countrymen, and regarded by all as the father of railways, he might be called, in the most honourable acceptation of the term, the first and greatest "leveller" of the age. (Loud laughter, in which Mr. Stephenson heartily joined.) To us, in whose days the system of railways has been realised, who have seen the commencement and result of the experiment of locomotion by steam, it might be curious to look back upon the times when such a power was undreamt of. Sixty years ago, Sheridan, the brilliant wit of his age, in his admirable and familiar drama of "The Critic," had introduced the well known character of Puff—(laughter)—a gentleman whose genius lay in the manufacture of romantic paragraphs and insidious advertisements. Full of business, he hurries away from the scene, apologising for the abruptness of his departure, for he has to announce "a very ingenious design for a self-acting air pump, to be fixed in the confined streets, which is to supersede the necessity of country excursions for the benefit of health." "and here (he exclaims) is an invention for running our mail coaches by steam and lighting them by gas". (Laughter.) It is not (continued Mr. Busby) only for the purpose of raising a laugh that I make this quotation—its practical bearing is to show us how in the progress of improvements one age is incapable of imagining the systems of succeeding ones. The ludicrous and impracticable speculations which the wit of Sheridan strained to devise, have been brought already into practical operation. If we have not actually the self-acting air pump, a system of ventilation is introduced in our large towns, by throwing down the wretched and squalid haunts of misery and disease, and building wide and healthy thoroughfares in their stead, by establishing parks and promenades, and bringing the delights of the country almost within the walls of our towns. (Cheers.) The other scheme has been even more literally fulfilled; day by day are our mails wafted by the wings of steam, and whether or not they are actually lighted by gas, depends only upon the convenience, and not the practicability of the plan. Inventions that to us appear equally visionary, may find their bearing in future times, and being as they must be the offspring of intelligence, it is a wise and benevolent duty to widen the sphere from which they are to spring, to facilitate the development of faculties, which are always pregnant with important results."

* * * * *

Mr. Adams stated—

"that it was proposed that the members of the Chesterfield and Brampton Institutions should visit their friends at Belper, on Tuesday, the 6th of July, in the Belper wakes week; and that it had also been suggested that they should extend their trip to Derby, and visit the Arboretum, returning to Belper in time for the Festival. He hoped this suggestion would be adopted, and was sure the members and friends would derive great pleasure from a visit to those delightful grounds. (Loud cheers.)"

After other speeches, and a vote of thanks proposed by Mr. Stephenson, and given with hearty cheers, to the Earl of Burlington for accepting the office of President of the Institution—

"The band struck up 'God save the Queen,' the company singing in chorus. At the conclusion three cheers were given, and the members and friends of both institutions, headed by E. T. Coke, Esq., the Mayor, J. G. Barnes, Esq., James Brotherton, Esq., the vice Presidents, Secretaries, and Committee, went in procession to the station, which place the special train left about half-past nine o'clock, amid the cheers of the assembled thousands. And thus ended this interesting festival."

A correspondent of the *Derbyshire Chronicle* adds—

"Such is the anxiety manifested at Belper to give a suitable reception to the Chesterfield and Brampton Institution in July, that preparations are already commenced, and it is expected upwards of a thousand tickets will be sold. A marquee will be erected in the Market-place or some adjacent field."

We have already said that on such delightful occasions the pleasure depends on the numbers present, and *particularly on the numbers from a distance.* No mode of conveyance shares the honour in this respect with the railway except the steam-boat. Driven by one impulse, and derived

Digitized by Google

alike from modern genius and enterprise, they seem destined to extend the pleasures as much as they increase the power of man. The owners of steam-boats have profited largely by the tendency to gregarious enjoyment; but they are only waterside inhabitants who can benefit by their capabilities. We trust that the equal power of the railway to contribute to social pleasure will not be suffered by its Directors to remain useless to their interests, nor be neglected by the myriads within whose reach it lies.

THE notes we appended to Mr. Bernard's Strictures on Mr. Ellet's Essay on the determination of the most advantageous fare for passengers, have called forth a rejoinder from Mr. B., which will be found in a preceding page. These notes, we beg to say, were designed simply to elucidate the scope of Mr. Ellet's paper, and to prevent erroneous impressions of them gaining hold of the public mind, during the interval that must necessarily elapse, before Mr. Ellet can reply for himself from the other side of the Atlantic; and though in introducing that paper to the notice of our readers, we did speak of it in terms of strong commendation, the "*litera scripta*," as quoted by Mr. B. himself, shows that while we praised it for its "masterly" character, (which Mr. B. admits,) we regarded it as but presenting a general *approximation* to the truth, and *so far* only as of practical value. If we do not greatly deceive ourselves, the very fact that this production has turned the attention of men of such ability as Mr. Bernard to this hitherto neglected subject, will be deemed a sufficient proof of its value. Reply were easy, we think, to many parts of Mr. B.'s present communication, but having in consideration of the circumstances of the case, somewhat overstepped the limits of editorial usage in volunteering our former notes, we hope to be excused from prosecuting the discussion further in its present form. The subject is before our readers, and open like all others, to be canvassed by our many talented correspondents.

—o—

ON Thursday night, Sir F. Trench brought before the notice of the House of Commons the following motion, which, however, was afterwards "by leave withdrawn,"—"That the Select Committee on Thames Embankment be re-appointed, for the purpose of considering evidence in support of a plan to form, upon the embankment, a quay of communication from Blackfriars bridge to Hungerford market; *the whole expense of which can be provided for by a railroad between the same termini, without any demand for the public money, or any reference to the value of the land recovered from the river.*" A railway between such termini would be a novelty indeed. We greatly doubt the truth of the allegation which we have printed in *Italics*.

—o—

THE *Liverpool Courier* states, that Braithwaite Poole, Esq., of that town, "has been appointed to the management of the goods' department in the carrying concern of the Grand Junction Railway Company." The same paper highly commends the fitness of Mr. Poole for this responsible office.

—o—

THE Bristol and Exeter Railway is to be opened for public traffic, as far as Bridgwater, on Monday next. The anticipated event gives much satisfaction to the residents in the district.

—o—

RAILWAY OFFENCES AND OFFENDERS.

WE regret again to have to charge the Manchester and Leeds Company with most ill-judged lenity towards a railway offender. The case to which we refer is thus noticed in the *Halifax Guardian* of last Saturday:—

"John Smith, a porter of the Manchester and Leeds Railway Company, at Brighouse, was charged with a breach of his duty in not having properly turned the "points" at that station, so that a passing train went over them. Mr. Higham, on the part of the Company, said that as the engine was going slowly no accident occurred; *nevertheless the rules of the Company were so strict that for even the slightest offence their servants must be brought before the magistrates.* He believed the man had been a very trusty servant, and therefore a small fine would perhaps be a sufficient warning to him never again to offend. He admitted the offence, but said that on the day before some one had altered the points in his absence; he could not, however, be sure whether on this morning he had left the points right or wrong. The magistrates said that under these circumstances, they should let the case drop on the payment of 5s. to the Infirmary."

No thanks to the culprit that "no accident occurred." An accident—and a very serious one too—*might* have occurred, and it was the duty of the Directors to have the man adequately punished as an example to his fellow-servants. They may circulate among their workpeople as many cautions and cases of warning as they please, but so long as they allow parties who even "admit" that they have been guilty of gross negligence, to escape with a nominal punishment, they cannot reasonably hope to have the business of their line properly attended to. We are told that so strict are "the rules of the Company, that for even the slightest offence their servants *must be brought before the magistrates*," but where is the good of going through this farce, if, when "before the magistrates" the Company's professional adviser is to become an advocate for the culprits?

A man named Sadler was a few days since brought before the Brighton magistrates at the instance of the Directors of the Railway for having assaulted a policeman because that officer very properly refused to allow either him or his wife to enter the train at Shoreham, both being "in a beastly state of intoxication." The man was fined 40s. and costs, and in default of payment was sent to the House of Correction for a month.

Under this head we must include an occurrence which, as we learn from the *Dundee Warder*, recently took place on the Dundee and Arbroath Railway. It appears that an accident having happened to the engine of one of the ordinary trains through the bursting of a pipe, the train in question was overtaken by the mail train which had started at a later hour. Fortunately, none of the passengers were injured, and some of them got into the mail train in order to proceed to their destination, *but were not permitted to remain until they had paid the difference between the fares of the two classes of conveyance!* Surely this shameful conduct cannot have been countenanced by the Directors or superior officers of the establishment? The least they could do was to convey forward, without extra charge, as many of the passengers as could be accommodated in the mail, seeing that it was through no fault of *theirs* that the first train broke drown.

ACCIDENT ON THE STOCKTON AND DARLINGTON RAILWAY.—On Monday last, as a man named William Whitedale, from Middlesburgh, was riding on an engine up to Stockton, he had by some means or other fallen off, and the waggon wheels passing over both his legs, he died about three hours afterwards.

RAILWAY ADJUDICATIONS.

THE QUEEN *v.* ROBERTSON AND OTHERS.

Court of Queen's Bench, Friday.—The ATTORNEY GENERAL said, he appeared to support the rule in this case, for a criminal information.

Mr. KELLY showed cause against the rule, which called upon the defendants—the proprietors and editor of the *Railway Times*, to show cause why a criminal information should not be issued against them, at the instance of the Directors of the Eastern Counties' Railway Company, on account of a libel alleged to have been published against the Directors in the defendants' journal. Before going particularly into the case, it might be convenient to state the general nature of the libel complained of: which charged the governing body of the Company, (mentioning no names—but the present Directors set forth that they were the managing body, and they alone,) with having endeavoured wilfully to mislead and deceive the public by putting into circulation certain printed papers, calculated to induce the public to believe that they were carrying on the railway at a very considerable profit, whereas that they well knew that they were carrying it on at a loss. With what object these statements had been set forth by the Directors it was not material then to inquire—probably to enhance the price of shares in the market. He contended, however, that by their own affidavits they were clearly proved to have published statements perfectly illusory and deceptive. It seemed that the Eastern Counties' Railway had been opened a small distance in 1839, and that it had been the practice of the Directors to publish half-yearly Reports given to the Shareholders at the general meetings—accompanied by balance sheets of accounts. The first of these Reports had been published in August, 1839—a short time only after the railway had been opened; the second in February, 1840; the last in August, 1840. Now it would be proved that all these Reports (which by their publication doubtless had a considerable effect upon the market and the public mind), represented the railway to be carried on at a considerable profit. But a different test was soon to be applied to the prosperity of the Company—from their being rated to the poor in one of the parishes through which their line passed, (Romford, in Essex) at a sum just and proper, if their accounts of the profit they were realising had been correct; they appealed, and on investigation before the magistrates it clearly appeared, from the evidence of their own servants, that the real condition of the Company's affairs was very different from what might have been expected on examining their Reports and accounts—that, in fact, they were working the line at a loss; and in consequence the rate was considerably reduced. Under these circumstances, the Editor of the *Railway Times*, (a paper peculiarly—indeed exclusively—interested in railways, and one in which, for a long time, articles had appeared discussing the subject of this as of other railways,) published the article complained of—animadverting severely on the inconsistency of the Directors, in deceiving the public by representations of a profit which was quite illusory; and though strongly written, the article was in the main well founded. Now in the balance sheets the Directors published, they had omitted, on the side of expenditure two most important items, which, had they been inserted, would have turned the balance the other way, and shown a considerable loss. These items were for the maintenance of the way and for the depreciation of stock. The Directors sought to explain this omission, and in the Report of February, 1840, they alleged that there was this allusion to it in a reference to the balance sheet—"not, of course, including during the first year the maintenance of way and depreciation of stock." This they urged was a sufficient explanation to the public. But why these items were not included in the balance sheet they did not tell the public.

Lord DENMAN—Still they do tell the public the fact that they are not introduced. Mr. Kelly, are you showing cause upon the ground of these statements being proved to be true?

Digitized by Google

Mr. KELLY—I am my Lord. Now, the qualification implied in the statement thus introduced into the balance sheet of February, 1840, was not to be found in that of August, 1840. And of course persons desirous of knowing the condition of the Company, would look not to the old Report, but to the last one published. Then the Directors stated, that they gave an explanation verbally to the meeting of shareholders—an explanation, which not being printed could not of course avail as regarded the public, and the shareholders not present. This explanation itself was deceptive: it was that the items alluded to were not introduced into the balance sheet, because contractors agreed to answer them for the past year. The effect of this obviously was to induce the shareholders to think that these items were not properly the subject of charge—that in fact, however depended upon, whether in this case the contractors were of the nature mentioned—that the charges in question were to be defrayed the first year by the contractors. All that they stated, was that they knew the practice of other Railway Companies was not to have such items in the balance sheet, on the principle as they said, of the contracts being for the contractors to meet these items. He submitted that this was a fatal objection to the rule that the Directors did not state whether or not these contracts were of this nature. For if not, it was plain that these items should have been introduced into the accounts; their defence was not made out, and they could not ask the intervention of the Court. Nothing could be more easy than for them to have done so. Their not having done so—their leaving it in doubt as far as the absence of any direct and candid statement of their's, one way or other went, whether it were so or not, raised every presumption that it was not so, that it did not rest here, though if it did, he apprehended it would be enough to decide the case; as the parties coming to that court for its interposition were bound to make their case out clearly. There was this important confirmatory evidence, however, which thoroughly established, though in an indirect way, what they had carefully avoided stating plainly, that the contracts were not made with the condition referred to. At the hearing before the magistrates in Ilford sessions, the servants of the Company stated, that the charge for maintenance of way was 350*l.* per mile, and for depreciation of stock had been between 2,000*l.* and 3,000*l.* the first year. Now, here was sufficient to show that had these items been placed on the disbursement side, there would have been a considerable loss exhibited instead of a great gain, as the Directors by excluding these items from their balance sheet meant to be understood was realised.

Mr. Justice COLERIDGE—Did the Directors represent a profit in their Reports as well as their balance sheet?

Mr. KELLY—Certainly, my Lord: they represent "that under all the disadvantages of a first and partial opening, and a terminus most inconveniently situated, &c. the expenditure has only amounted to 50 per cent. upon the receipts, a result that cannot fail to be highly satisfactory to the shareholders." How "satisfactory" it would have been to the shareholders to know that there were large items of 350*l.* per mile, and of nearly 3,000*l.* in addition, to add to the expenditure for the first year. On the balance-sheet of August 1839, was exhibited a profit of 22,199*l.*, an excess to that amount of receipts over expenditure. On that of February, 1840, there was a statement that the average passenger receipts were 28*l.* per mile per week, and that the ordinary expenses, not including the maintenance of way and depreciation of stock, was not above 50 per cent. But even with this statement, there being no explanation of the cause why these items were not included, it was left to be inferred that they were not at all objects of charge to the Company the first year; and as this entirely depended on the nature of the contracts which were not explained, the question was left in ambiguity whether or not the balance of profit they exhibited in the Report, of 7,702*l.* was real. Then in the balance sheet of August, 1840, there was a similar exhibition of excess of receipt over expenditure to the amount of 3,948*l.* No explanation of the omission of the serious items referred to occurred here, and the public were left to infer that the balance of receipts was perfectly net. Now, the difference which these items made was so great that in the parish of Romford alone it produced a reduction of from 800*l.* to 500*l.* in the rating, upon the representations of the very Directors who now maintained that their statements, omitting these items, were quite correct and fair. Under these circumstances, surely, the Court would hold that upon the merits the rule must be discharged. Further than this, however, Mr. Robertson in his affidavit stated that he had at various times, since September, 1839, published articles in the *Railway Times* against these Directors, and upon the very point now at issue; and that they had never commenced any proceedings against him till now, and had in fact entered into a discussion in the paper with him.

Mr. HENDERSON followed on the same side, dwelling chiefly on the last point; saying that it was against the well-known rule of the Court to extend this species of interference on behalf of parties who had acted for themselves. Let the Directors avail themselves of the fair means of explanation to which they had before this repeatedly had recourse—the publication of counter-statements in the *Railway Times*—which was now, as it had been, open to them for that purpose. It was not fair for them to interpose in this stage of a discussion they had themselves taken part in, and attempt now to stifle it.

The ATTORNEY-GENERAL, in supporting the rule, said the last argument of his learned friend was substantially that because the Directors had been libelled before they must consent to be libelled for ever.

Mr. HENDERSON intimated that he argued nothing of the sort.

The ATTORNEY-GENERAL proceeded to animadvert on the affidavit of Mr. Robertson, whom he represented as claiming a right to notice and remark on all railway proceedings.

Mr. KELLY read on—"Don't give part of a sentence, that is unfair."

The ATTORNEY-GENERAL—Well, he asks—"As far as they affect the interests of shareholders and the public." But (contended the learned gentleman) Mr. Robertson had not brought any case of his own to prove that the Directors' statements were false—professing to rely on their own affidavits to show their falsehood. Now those affidavits he (the Attorney-General) urged, quite established the perfect worth of those statements, and showed the entire harmony between the balance sheet reports and the evidence before the magistrates. And in this way, they showed the balance sheets to be statements merely of receipts and disbursements. Now the items for maintenance of way, and depreciation of stock, neither of them came under the one or the other of those two heads. The maintenance of way for the first year was included in the contractor's estimate of the work—which of course came not into this balance sheet of regular receipts and expenditure on account of traffic. And if these items had been introduced into the balance sheet, the accounts would have been indeed deceptive, for as to the maintenance of the way being already in the contractor's estimate for the works, (they charging extra for it, as bound to meet it for the past year,) it would thus be charged twice over; and as to the depreciation of stock that was no item either of receipt or expenditure. His learned friend had indeed asked why the Directors did not disclose whether their contracts provided for the meeting of these charges of the contractor's for the first year. Surely the Directors were not bound to exhibit the particular nature of their contracts. Now, to reconcile the statement he had thus given with the representation of the Directors before the magistrates, that their charges should be taken into consideration as grounds for reducing the rating—it was right, he remembered, that though not a part of the regular expenditure for the first year, they were certainly clearly to be deducted from the estimate of the Company's profit. And it distinctly was stated, that the accounts of the Company represented them in items, not of payment but of estimate—and were forced to calculate them. The Directors had never said they were working at a profit—that word had been introduced by Mr. Kelly—they had only stated that there was an excess of receipts over expenditure. This was true; because, though the items alluded to were proper to be taken, the estimate of the Company's receipts as a ground of rating, they did not form items of actual expenditure. On this explanation, he trusted their Lordships would think that the Directors had sufficiently vindicated their honour and veracity—and not only so, but their correctness and accuracy. He urged, therefore, that the rule might be made absolute.

Lord DENMAN said, the Court would look to the accounts, reports, and affidavits, before they gave judgment.

ROSS *v.* THE RAILWAY TIMES.

Court of Common Pleas, Thursday, June 8.—This was an action for an alleged libel in the *Railway Times*, to which the defendants pleaded "not guilty," and a justification. The cause was tried before Lord Denman, at the last Surrey assizes, when the jury found a general verdict for the defendants. It appeared that there had been an undertaking by the plaintiff to give material evidence in Surrey, and in support of that undertaking, evidence was offered to show that copies of the *Railway Times* had been bought at the office in Fleet Street, and had been sold in Surrey, but no comparison of those copies had been made with the libel declared on. Lord Denman held that this fell short of the material evidence the plaintiff had undertaken to produce. A rule *nisi* for a new trial having been obtained in Easter term last, upon the ground of misdirection, and also upon the ground of the verdict on the plea of justification being against evidence,

Mr. Serjeant CHANNELL showed cause to-day against the rule; and Mr. Serjeant Bompas was heard in support of it.

The Court, however, stopping the latter learned Serjeant in his argument, threw out a suggestion that the verdict on the plea of "not guilty of the publication" should be entered for the plaintiff, leaving the verdict on the plea of justification with the defendant; and,

Mr. Serjeant CHANNELL acceding, the rule was drawn up accordingly.

[The effect of this decision is that the plaintiff is entitled to the costs of proving that we published the article complained of, but has on the other hand to pay us the much larger costs of proving that what we published was true. We hope we may get them.—ED. R. T.]

THE QUEEN *v.* THE YORK AND NORTH MIDLAND RAILWAY COMPANY.

In this case a rule had been obtained for quashing an inquisition taken by the Coroner's jury, where, after having been in form discharged, the Coroner had again assembled the jurors, and they had found a verdict imposing a deodand of 500*l.*

The ATTORNEY-GENERAL, who was to have shown cause against this rule, was obliged to admit that the objection was too formidable to be resisted. He believed that the legislature must interfere on the subject of these inquisitions, but he was afraid it could not be done by the present Parliament.

The inquisition was then quashed.

EASTERN COUNTIES' RAILWAY.—On Saturday, the Dog row station, Mile-end, was opened for the first time. The station was much wanted, and it will be found to be a great convenience to that densely populated neighbourhood. The Devonshire street station, which was merely temporary, will be closed as soon as possible.—*Essex Mercury.*

MR. ELLET'S LAWS OF TRADE APPLIED TO THE DETERMINATION OF THE MOST ADVANTAGEOUS FARE FOR PASSENGERS.

To the Editor of the Railway Times.

LITERA SCRIPTA MANET.

SIR,—With all due deference to your superior editorial capacity, I still think that my opinion of Mr. Ellet's Essay is a correct one. However much I may be disposed to applaud the manly generosity that dictates your acknowledged leaning to the absent party, yet, justice to myself demands a reply to your comments on my paper; and with this view I now beg leave again to address you.

The opinion of the essay in question, as expressed by you in the *Railway Times* of the 24th April, runs thus: "It appears to us to be a very masterly production, and to bring out results which, if not always wholly free from doubt, approximate in every instance so closely to the truth, as to be of the utmost practical value." Again, on the 22nd of May you state, "In this view we think we can scarcely recommend too strongly a careful study of the paper of Mr. Ellet, and we press this recommendation on account of *its intrinsic merits and practical value*, although it is not improbable we may have to dissent from some of its positions."

From these lavish encomiums I was induced to read the paper, and much surprised was I to find, that the whole process was based upon a supposition—the law of increase or decrease of travel—and, that even with this advantage, the object of the essay—the determination of the most advantageous fare—was not fulfilled. Such being the fact, I am at a loss to conceive in what consists the intrinsic merit and practical value of the paper. Can we, by its means, make any, even the smallest, approximation to the amount of the most advantageous fare, on any given railway? And if not, what is its degree of usefulness? In your comments on my letter you admit, that "it is quite true, and must be carefully borne in mind, that the law on which the whole calculation is based is a supposition, not a set of observed facts. It is very probable, also, that in the end it will turn out to be an erroneous supposition, and that the whole theory must be hereafter re-constructed upon the facts hereafter ascertained." It appears to me, Sir, that contrasting this admission on your part with your previous commendation, my letter appears already to have had the desired effect of attracting pointed attention to the fact, that the whole investigation is founded on a supposition, and which supposition, I further contend, is insufficient and erroneous. Your readers being now alive to the fact, will be perfectly competent to form an opinion for themselves, as to the practical value of the results, derived from those investigations. Though I may not indulge the hope of convincing you that my views are correct, I trust that by your readers I shall be acquitted, *in foro conscientiæ*, of having endeavoured to overstate the case, or of any attempt to undervalue the author's production. To them I leave the further estimate of its merit, requesting them to bear in mind this maxim, *nunquam aliud natura, aliud sapientia dicit.*

I shall now go through your *index expurgatorius*, seriatim; and endeavour, if possible, satisfactorily to answer your objections, and that, without any attempt at special pleading.

(*a*). I really cannot comprehend how "the Company effecting a reduction in the expense of carrying each passenger, they will promote their own interest by employing *half the saving* in reducing the fares," is to be inferred from $\frac{\pi}{3} + \delta h =$ gross charge; and which the author has himself expressed at length in words, thus "add to the constant quantity which experience dictates for the profit per passenger, *the actual cost* of his transportation, for the gross charge." If the author did not know his own meaning, surely we may be excused from differing upon the point. But in the present instance, he is sufficiently explicit to prevent any misconception.

(*b*). You state, "that there is much truth in this remark, but it seems to require some qualification;" and the explanation you give is perfectly consistent with Mr. Ellet's hypothesis, but does not at all invalidate my objection, that the value of the constant cannot be determined from the essay, without the aid of experiment. If we necessarily must have recourse to experiment, we can determine the most advantageous fare itself, by means of the law deduced from that experiment. This would render the constant π altogether unnecessary, together with the hypothesis upon which its value is to be computed by the aid of experiment.

(*c*). In reply to my observation, that the author in dismissing the consideration of the limit, had evidently forsaken the substance in pursuit of an empty shadow, you state, that in the present state of the argument, all it was necessary or even proper to show, was the existence of such a limit; *where* it might be found was another matter. Granted, but I should not have made the observation if the author had determined the limit *elsewhere*. The case *is* very like inserting the unknown quantity in an algebraic equation; the equation *not* being solved until an expression he found for the unknown; in terms of known quantities. Applying your simile to the problem to be solved in the essay—the limit—is it expressed in terms of known quantities? Certainly not. Consequently, my remark, that the author in dismissing the consideration of the limit, forsook the substance and pursued the shadow was perfectly correct. Having followed an *ignis fatuus* through the whole of the investigation, he arrives at the exact point from whence he set out. The result of the inquiry is the announcement, that there is a certain fare—the most advantageous—made up of the actual expenses and a certain constant quantity! This is nothing more than telling us, that there *is* a limit; exactly what the author required us to admit before he undertook the inquiry.

(*d*). This requires no comment, as no difference of opinion exists.

(*e*). Your supposition as to Mr. Ellet's meaning is most ingenious; but does not at all show that the limit can possibly be a function of the distance, though it might appear to the author as probable.

(*f*). Your remarks explain the author, but make no specific objection to my position.

(*g*). You admit the whole of the conclusions to be founded on supposition, and that the suppositions may very probably turn out to be incorrect. An hypothesis, I grant, is a powerful help in the investigation of truth; but as soon as the hypothesis has been assumed, its correctness can be tested by facts. Such is the process universally adopted when recourse is had to the assumption of a supposed law. The question, then, resolves itself into this; is Mr. Ellet's hypothesis confirmed by actual experience. Surely, no great difficulty exists in testing it, by applying the law of travel to the determination of the most advantageous fare, on any given railway. The only real difficulty to be surmounted is the induction of the law; but that has been assumed, and, if correct, will apply to any practical example.

(*h*). I have here taken the author's own words, whom I supposed to know what he wished to impart to the reader.

(*i*). It is quite correct that in the investigations of the higher geometry certain properties occur only within prescribed limits, and not under other circumstances. But the present is not a similar instance. Here the *reductio ad absurdum* is unconditional; for the subject is without any of those properties peculiar to curves, which might be sufficient to affect the result.

(*j*). You state that if Mr. Ellet had done no more than call attention to the *fact* that there *is* a fare corresponding to the greatest profit, and that the loss increases more rapidly than the departure from it, he would have done us service. Certainly, if it were a *fact;* but by what authority are we warranted in considering it as such? By assumption only. Having assumed a certain law, this property follows merely as a consequence of that law; and, therefore, if the law be proved to be erroneous, this property of it must also be erroneous. To say the least, it is premature to consider a function of the general law as fact, before the law itself can be proved to be correct. I shall, however, presently prove that even this reputed fact is in itself erroneous and absurd.

(*k*). This is merely a reiteration of Mr. Ellet's reasons for divesting the equation of $f h$; and does not at all lessen the impropriety of having introduced it into the problem to be afterwards discarded as valueless.

(*l*). In estimating the value of the paper under discussion, I would ask, Sir, what are the circumstances that should govern our decision? The truth, or untruth of the law, and of the conclusions derived from it. Also their degree of usefulness when applied to practice. The law, in my opinion, is erroneous. By your own admission it probably is so. Applied to practice it is utterly valueless—the author himself has not ventured to apply it. In what, then, consists the merit of the Essay? Does it dwell in the science with which it is decked out? Or, is the *cacoethes computandi*, so observable throughout its greatest ornament? Analysis is only valuable in its results, to be seen and appreciated by the understanding, not from any inherent virtue in the characters themselves. What then are the results obtained from the preceding elaborate calculations? The concluding announcement of the result of the inquiry is, in fact, precisely that to which the author demanded our assent before he entered on the investigation. To what purpose all this display and parade of science? I confess I am at a loss for a satisfactory answer to the question.

The author's assumed law—that the increase or decrease of travel is proportioned to the diminution or augmentation of fare—if true at all, will be true in a particular example. Let us seek to apply it to a particular instance:—Suppose a railway upon which the fares are at present 10*s.* each person for the entire distance—the number of individuals who travel amounting to 100,000*l.* By the hypothesis adopted in this Essay, if the amount of fare be diminished one-tenth, the number of passengers will be augmented one-tenth; if the fare be reduced one-fifth, the number will be augmented one-fifth; and so on, in proportion. Tabulating these results, we obtain—

	Passengers.	£.
10*s.* fare, by	100,000	50,000
9*s.* ,,	110,000	49,500
8*s.* ,,	120,000	48,000
7*s.* ,,	130,000	45,500
6*s.* ,,	140,000	42,000
5*s.* ,,	150,000	37,500

Let us now increase the fares: we shall then have—

	Passengers.	£.
10*s.* fare, by	100,000	50,000
11*s.* ,,	90,000	49,500
12*s.* ,,	80,000	48,000
13*s.* ,,	70,000	45,500
14*s.* ,,	60,000	42,000
15*s.* ,,	50,000	37,500

You now perceive, Sir, that by this law the *reduction of receipts* and not the *loss*, as the author states, are exactly the same for corresponding reductions or augmentations of fare; and that the *reduction* in the *receipts* varies as the square of the variation from the original charge. It is apparent in the example before us, and may be shown of any other instance whatever.

The author supposes this law of reduction to obtain only when the departure is from the charge producing the maximum profit. But, Sir, if the hypothesis of increase or decrease be at all correct, it must be applicable to any particular instance, and be always perceptible. We have now seen that the same property which the author supposes to belong to the deviations from the most profitable charge, is applicable to any example, and indeed from its nature, must be so, to any example whatever; thus giving to *every separate charge* the benefit of that property which shall yield the *maximum profit;* or, in fact, proving, *that every existing charge is that of the maximum profit.* A palpable absurdity. I need scarcely, I hope, dwell any longer on

Digitized by Google

the fallacy of the condition; or adduce any further examples in confirmation. *Instar omnium.*

When, Sir, we meet with results so evidently absurd as these unquestionably are, what other conclusion can we possibly arrive at, than that the suppositions from which those results were deduced, must be very far indeed from the truth? Such is my deliberate conviction, and I regret my inability to arrive at any other. It would have been a much more pleasurable task to assist in developing a probable theory, and in endeavouring to cast additional light on a matter of such vital importance to railway interests and to the public at large, as the determination of the most advantageous fare for passengers, confessedly is. My object in addressing you, was to point out the unphilosophical method of procedure that the author had adopted. Though, as you very properly remark, no more powerful auxiliary exists in the discovery of truth, than an hypothesis; where do we ever see results deduced from hypothesis, given to the world as *facts*, when the assumptions themselves cannot be substantiated? No one having any regard to reputation in science would attempt it. But if it be essayed, by one evidently possessed of talents of a high order, and who ought, therefore, to know better; shall such an attempt to impose on the ignorance and credulity of the public be passed over without censure? No one will withhold from the author their admission of his ingenuity and skill. But impartial justice also demands that some degree of blame should attach to the publication of an incomplete and unsatisfactory paper, by one possessed of such talents and acquirements.

In the present state of marine locomotion, as you observe, it is not improbable, that the author may be induced to reply to my remarks on his essay; if so, I shall be happy, and I trust also be able, to maintain the positions which I have advanced, with the sole object of setting that paper before the public in its true light.

I remain, Sir, your obedient servant,

C. E. BERNARD, C.E.

Cardiff, June 7, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY—EXCESS OVER ESTIMATES.

To the Editor of the Railway Times.

SIR,—I admire the impartial spirit which leads you to open your columns at the bidding, *Audi alteram partem*, even when the language of the communications evinces, as in the case of the letter from "W.," in Saturday's *Times*, that the writer must belong to the humbler and less educated portion of the community.

Whatever be the acquaintance, whether "professed" or not, of your correspondent "W.," with those secrets of the Directors of the Birmingham and Gloucester Railway whose existence he has been the first to intimate, he has yet to learn that abuse is not argument, and that invective is the wonted recourse of men of peevish temper and inferior calibre when conscious that they have nothing better to offer. The angry man is ever in the wrong.

And if the tone of "W.'s" letter is rather calculated to excite ridicule than to carry conviction, the substance of his letter is in somewhat a similar predicament.

"W." is very kind to "grant" that the original capital was the same as that authorised by the Act of Parliament, and his arithmetical sagacity in discovering that 950,000*l.* added to 316,666*l.* makes 1,266,666*l.* is wonderful; but I can see nowhere in *my* copy of the *Railway Times*, the "error of *only* 100,000*l.*," that he so triumphantly points out, as I have no where complimented your readers by giving them so very abstruse a calculation, nor do I "state" the sum, 1,366,666*l.*, once in my letter.

With regard to the estimated sums of 728,874*l.* in April 1836, and 738,774*l.* in February 1839, my only authority is Captain Moorsom's letter to the *Railway Times*. The expression he there uses, "the *cost* of the entire line and branches, exclusive of carrying establishment, but including stations *of all kinds*," would certainly, to any ordinary apprehension, convey the idea that the cost of land was included, and I have carefully stated the sum as exclusive of the carrying establishment. But that with "departments of the railway, such as land and and stock, &c.," "the Engineer would not possibly have any thing to do," is entirely a new doctrine, and one in which "W." will find very few supporters. Who has "*any thing to do*" with the locomotive stock *but* the Engineer? Who introduced the American engines? If "W." is prepared to prove, from authorised statements, that the above estimates were exclusive of land, and of *et cetera*, as well as of stock, I can have no objections to urge, but such certainly is not the fair conclusion from Captain Moorsom's letter, nor will, in such a case the small margin left in the second estimate for the Worcester and Tewkesbury branches be easily explained.

With "the statements made upon paper at the meeting of the 4th of May," I have no more acquaintance than the rest of your readers. My authority was the advertisement issued by the Company; and if the *works* have only exceeded the estimate 10 per cent., in what has the other 40 per cent. been melted—in engineering, direction, or law charges? Perhaps "W." can inform us, as he dislikes garbled accounts.

With regard to the additional 60,000*l.* I repeat that the statements published in the report of the 4th of May are ambiguous; and to suppose that this sum will in any way be adequate to complete the terminal stations, and the "any new works," is contrary to all railway experience. The million and a half, therefore, must fall considerably short of the capital requisite to complete the line.

As to "25 miles of the line being almost unrivalled for the very reverse" of facility for laying down a line, I certainly have not the "honesty" to make such a statement, as I am accustomed to confine myself to facts. If we take the earthwork on those lines which "W." has adduced in his table, or at least on such of them as have given the public accessible information on the subject, as a pretty fair criterion of the engineering difficulties of the several lines, we shall find them to be, in round numbers, as follows:—

	Cubic yds.
Birmingham and Gloucester Railway, per mile	85,000
Liverpool and Manchester Railway, per mile..	90,000
Midland Counties' Railway, per mile	94,000
London and Birmingham Railway, per mile ..	108,000
North Union Railway, per mile	116,000
North Midland Railway, per mile.....	131,000
London and South Western, per mile	143,000
Manchester and Leeds, per mile	156,000

The table that "W." has been at the pains of extracting "almost entirely from your own columns," needs but one remark,—he has compared the *original parliamentary capital* of the Birmingham and Gloucester Railway with the *final* capital required for the other lines.

But even were it otherwise, we must remember that for the excess over estimates on the great lines the public have in a great measure had value received. Increased earthwork to secure better gradients—enlarged stations demanded by increasing traffic—extensions of the line (as on the Birmingham and Great Western) through expensive localities—increased weight of rails—these and similar items have swelled the cost of railways, and by such increased expenditure, the public and the proprietors have been benefited. Can *one* of these causes of excess be pointed out on the Birmingham and Gloucester? An unfinished line, without a terminus or a station of any magnitude, and with the *deduction* of the Worcester and Cheltenham branches.

I can only in conclusion congratulate "W." on the happy way in which he "nearly makes out" my *net* return of 1,400*l.* per week by a *gross* receipt of a similar sum—an approximation about as striking as that between Captain Moorsom's estimate of 728,874*l.*, and Mr. Weedon's minute calculation of 1,441,666*l.*

I am, Sir, your obedient servant,

JUNIUS.

9th June, 1841.

CHELTENHAM AND GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I am glad to see the public attention called to the situation of this Railway, and that its Directors have paused in their career, and have determined on undertaking no new works without the previous sanction of the shareholders. This pause *must* do good, and it will now be the fault of the proprietors, if by an obstinate adherence to their original plan they allow a good practical result to escape them whilst grasping at a shadow. The great depression in price which the shares of this line have experienced, I believe mainly to arise from the conviction which is felt by the great majority of persons possessing local knowledge of the undertaking. "That an error has been committed in the original laying out of the line, which, whilst involving an immense expenditure, actually endangers the traffic, upon the receipt of which alone, the undertaking can possibly pay."

The London traffic from Cheltenham, Gloucester and South Wales is very large, and of the most valuable kind, consisting almost entirely of passenger traffic and light goods—Cheltenham is distant from Cirencester by the Turnpike-road *fifteen miles*—by the Railway it is distant *thirty miles*, in consequence of its circuitous course by Gloucester and Stroud. Now is it likely that passengers will consent to travel by railway for *thirty miles and pay for that distance*, when coaches will perform the journey almost as soon, and much more-cheaply? And yet upon securing this traffic the return to the shareholders entirely depends.

Again, a line to London from Cheltenham may be had *via* Tring, or *via* Steventon, effecting a saving in distance of twenty miles as between Cheltenham and London. Make the railway by the round-about way of Stroud and the shareholders will always be open to the very serious evil and expence of a competing line being brought forward and being engaged in a continual fight for their existence.

What is the remedy? That which was suggested more than a year and half ago by a writer in the *Railway Times*, "Abandon the line from Cirencester to Cheltenham *via* Stroud and Gloucester, and obtain powers for making it direct from Cirencester to Cheltenham." The country has been surveyed, the distance will not exceed sixteen miles, a saving in expence of 300,000*l.* may be effected as compared with the original line, and the traffic from Cheltenham infallibly secured by the lesser expenditure. These are the direct advantages of the suggestion, whilst there are indirect ones of no little weight glanced at by your correspondent, "F.," last week. The subject is of great importance to the interest of the Company, and I should be glad to see it considered calmly by the shareholders, as upon its correct determination depends, in my opinion, whether this railway will prove a profitable undertaking, or one of the most ruinous of railway speculations.

ARGUS.

ACCIDENT ON THE LLANELLY RAILWAY — MIRACULOUS ESCAPE.—On Tuesday last, as a train of stone coal from the Mynydd Mawr Anthracite Colliery was being conveyed from the incline which leads up to the mountain to Llanelly, the rails and wheels being alike wet, the breaks lost their power, and the waggons went off at a frightful rapidity. The conductors, continuing their efforts, did not see the danger which threatened them; but feeling a sudden jerk in the train, looked, and lo! the mangled bodies of three cattle stretched across the rails were presented to their view,—one killed without evincing a struggle, the other two so far injured as to make it advisable to destroy them. The waggons continued still on the rails, and went on their wayward course for Llanelly New Dock, which they possibly would have reached but for a timely obstruction at Parkyrhyn bridge, which at once stopped their progress, and saved the lives of the conductors from further danger.—*Cambrian.*

HIGH AND LOW FARES.

To the Editor of the Railway Times.

SIR,—The subject of high or low fares on railways seems still to be a *quæstio vexata* to some of your correspondents, not the less so, that many of them seem to be rather in the dark as to the real conclusion to be sought, and that not a few have, I conceive, taken up erroneous views of the premises from which only just results can be obtained.

The public generally are willing to pay a certain sum for the accommodation of a railway; this being obtained, the larger the cost of the railway the smaller the dividend, and the worse for the proprietors, and *vice versâ*. This you will perceive is only a very general proposition to start with, although it clearly demonstrates the fallacy of supposing that the public are at all concerned in the original expenses of construction. But in unravelling the details there are discovered various complex interests involved in the question, which may, I fear, have deterred many most ably qualified for the task, from the consideration of the subject, and may possibly have induced the above specious fallacy, in the vain hope that it might lead to a more ready and easy mode of solution. I would here notice two errors which might perhaps arise from this general proposition, as they serve to show with what an entangled web the whole subject is surrounded. The first is, that the largest gross receipts from a railway do not *necessarily* give the highest net receipts from which dividend may be declared. Secondly, there must always be some point at which additional cost of construction may be advantageously incurred, to secure greater economy in cost of transport. The former of these applies only to the instances in which exceedingly low rates of charge are enforced—cases I fancy we are not very likely to be troubled with; and the amount of deviation from moderate calculations in the latter, is such an intricate and uncertain quantity that it may be very safely overlooked. I would therefore only remark that *in this case the cost of construction has "per se" no influence on the amount of fare, except only as it influences the cost of transport.*

Thus far, Mr. Editor, I had written before your paper of the 22nd instant, and I was tempted to throw it by, partly from an unwillingness to intrude on your space by any crude and imperfect lucubrations, and partly, I will own, because I am somewhat suspicious of the amount of effect produced on railway affairs by the efforts of *individuals* merely contributing to your valuable paper, the more especially as the want of the said visible effect is, with all due deference be it said, a little apt to produce, either a tiresome reiteration of private opinion, or else rather personal altercation on the part of some who very periodically figure in your columns. I was, however, very agreeably surprised to find how nearly we agreed as to the real enunciation of the proposition to be solved, and, encouraged by your courteous invitation, I resume my pen, though I must crave pardon for so unwarrantable a preamble.

Railways may, I conceive, be divided into three classes, to all of which the general principles we are labouring to ascertain will apply, with modifications in the case of the first and third.

First, then, I would place such as the Manchester and Leeds, where a return is sought to be made from a small profit on a large number of passengers.

Secondly. The great bulk of railways, either connecting two termini or a string of towns, and having traffic of the usual varieties passing along them.

Thirdly. Where a rate of fares somewhat higher than those for class No. 2 may, I think, be allowed. Where a large proportion of traffic from other lines passes along it—as along the London and Birmingham—where the first branch, in itself an important railway, is 80 miles from London. This last class I would advance diffidently, though I still think it may be found most profitable so to act.

On all railways, Mr. Editor, there should be, I think, three classes of conveyance; and the second class may, I conceive, be fairly taken as the average.

The rate of charge sanctioned by Parliament is at the rate of 2d. per passenger per mile. Most railways have, it would appear, been in some measure guided by this in their present rates of fares.

Let us take *causâ exempli* the London and Birmingham.—The fares from London to Birmingham, 112 miles, are for first class passengers 30s., or at the rate of 3d. 3-14ths of a penny per passenger per mile; for second ditto 20s., or at the rate of 2d. 1-14th of a penny per passenger per mile. Of the third class, although I have mentioned it as essential, I am not quite sure of their rates, and if I recollect right the third class accommodation on that railway might be made far more productive.

These charges, Mr. Editor, judging from all we have to judge by (which in fact amounts to little more than general appearances, the current of popular opinion all setting the same way, and a mere rag of experience), are too high for realizing the greatest possible amount of clear profit.

The theory, or rather theorising, by which I have arrived at the conclusion I would now lay before your readers, is of so exceedingly an uncertain a nature, that I could not venture at present to place it in any systematic form; but what I would briefly propose, is a very gradual and careful reduction to the following rates, which are, I think, as low as can be consistent with the interests of proprietors. First class, per passenger per mile 2d. and 5-8ths of a penny; second class ditto ditto, which I would take as the average, 1d. and 7 8ths; and third class, 7-8ths of a penny; exclusive in each case of the Government tax, in whatever shape or form it may be required.

In railways of the first class a lower rate of third class fares must be taken, but I would expect that by the total amount of expense being then divided over a larger number, the cost per passenger would be proportionably less.

In those which I have classed as No. 3, I am convinced that they have it more in their power to command a certain advance on the whole fares, within, I admit, very narrow limits. In recommending the above rates I have taken the cost of conveyance per passenger per mile as 3-4ths of a penny, which is rather above what is generally assumed; I have done so, as I entirely agree with you in the want of experience as to the actual amount to be allowed for depreciation of stock, and can quite participate in your fears that it will prove a serious drawback to the amount of profit made on some railways.

I am very far from advocating the full reduction of fares at once to anything like the above prices, but would submit that such alterations should be brought about gradually, and with exceeding care: interests so vast, so important, and withal so complex, must be handled tenderly by those on whose shoulders rests so heavy a load of responsibility, especially as there cannot at present be said to exist that confidence between railway proprietaries and their Directors necessary to ensure the success of their respective undertakings.

I would also point out, though it can hardly be necessary so to do, that fallacious results may very possibly be deduced from the effect of a reduction in price, now that the best four months in the year are coming on—when passengers are most numerous, and the cost of conveying them both apparently and actually least.

Again apologising for trespassing so long and to so little purpose on your columns,

I am, Sir, yours, obediently,

W. H.

May 31, 1841.

P.S. In the case of goods the subject may be a little simplified, but we require, I opine, more experience than we have at present to arrive at any just conclusions.

I must express regret that a temporary absence from home deprives me of access to papers and documents for statistical information, and renders what I have advanced, I fear, but bare and unsatisfactory.

ELECTION OF RAILWAY OFFICERS.

To the Editor of the Railway Times.

SIR,—As one much interested in railways, I am greatly indebted to you for the fearless avowal of your opinions on all matters particularly affecting railway shareholders.

It is well known that Directors have much in their power, and unfortunately too often grossly abuse their numerous privileges.

My object in addressing you on the present occasion, is to call attention to the shameful practice of advertising for officers, (for the purpose of deceiving the shareholders, by making them suppose that the individual elected, is fairly chosen) whereas the person is fixed upon generally before the advertisement appears in the papers, because he is the relation or friend of some of the Directors, and but rarely because of any personal fitness for the office.

I call to mind at present, two instances of this wilful disregard to truth occurring in the railway world, viz., a superintendent of traffic for the —— and a general superintendent and other officers for the —— Railways. It is high time that the eyes of people were opened.

That this has been done in the two cases above alluded to, there cannot be the least doubt, and I trust that the shareholders of the two lines referred to, will in each case sift the matter to the bottom at the next half-yearly meeting.

The expense, inconvenience and disappointment that numerous parties are put to on each occasion by these mock elections, surely ought to cause the most searching enquiry, and I am sure, Sir, your efforts to put an end to so iniquitous a system, will not be wanting when now so loudly called for.

I am, Sir, one of your very first subscribers,

A LARGE SHAREHOLDER.

London, May 24, 1841.

KELVEDON AND BURY PROPOSED RAILWAY.

To the Editor of the Railway Times.

SIR,—In reply to the remarks of your correspondent on the above project, inserted in your last number, allow me to state that the Standing Orders of Parliament do not require deposits of plans and sections to be made with borough clerks of the peace; and this is the reason that no plans were deposited with Mr. Holmes, the clerk of the peace for the borough of Bury St. Edmunds. With respect to his assertions, that the plans deposited consisted partly of tracings, and were altogether of too sketchy a character to comply with the Standing Orders, I beg to state that out of 186 detailed sheets of plans and sections deposited at Bury and Chelmsford, *one* only is a tracing, and that one is mounted, which circumstance occurred from the plan having been sent to Chelmsford by mistake. With respect to the other part of his assertions, I have only to say, that all the plans and sections are on a scale of five chains to the inch, and are, from my own knowledge, scrupulously accurate. Your correspondent's remarks on the references, I cannot reply to, the matter being in his opinion already decided. I may, however, observe that Messrs. Roy, Blunt, & Co., the solicitors, under whose directions the references were deposited, are known to be too safe in their practice to have acted in the manner stated; and from my own knowledge, I can affirm that the circumstances are altogether different from these alleged in your correspondent's letter. In conclusion, however, allow me to allude to the fact, that your correspondent is asserting matters correctly, which you, of course, cannot be assured of as correct, and as you have in this same discussion refused to give insertion to an anonymous correspondent, I will, with great respect, suggest that any future communication of your correspondent be accompanied with his name; otherwise however gross the assertions may be, I shall not think necessary to contradict them.

I remain, your obedient servant,

PETER BRUFF.

Charlotte-street, Bloomsbury, 27th May.

FATAL ACCIDENT ON THE SHEFFIELD AND ROTHERHAM RAILWAY.

It is our painful duty to record a shocking accident which took place on the line of the Sheffield and Rotherham Railway, on the evening of Thursday last, by which the engine man and stoker came to a most painful death. It appears that, on the evening in question, the *Victory* engine, belonging to the above company, was proceeding, under the management of the deceased, with the half-past seven o'clock North Midland down train from Sheffield to Masborough, there to meet the train from London, &c., and when near the Holmes Bridge, a short distance on the Sheffield side from the Holmes Station, the axle of the tender suddenly broke, and a dreadful crash was the consequence. The engine was thrown over, the tender was smashed to pieces, the carriages thrown from the rails, and the stoker, John Richardson, aged 24, killed on the spot. The engineman, James Bates, aged 28, was so dreadfully injured that he was conveyed to the Sheffield Infirmary, where he died about one o'clock on the following morning. Fortunately, none of the passengers sustained any injury, except the fright caused by the concussion.

An inquest was held on the bodies at the Station Inn, Sheffield, on Saturday last, before Mr. Lee, the coroner, from Wakefield, in consequence of Mr. Badger, the coroner for the district, being one of the solicitors to the Sheffield and Rotherham Company. The jury was highly respectable, consisting chiefly of merchants. Mr. Vickers, the joint solicitor with Mr. Badger, attended to watch the proceedings. After viewing the bodies, the jury proceeded to take the evidence.

The first witness called was Samuel Pritchard, who deposed:—I am station-master at the Sheffield Station, for Sheffield and Rotherham and the North Midland lines. The North Midland carriages are worked by the Sheffield and Rotherham Company down to Masbro'. I started with the half-past seven train, on the evening of Thursday last, from Sheffield to Masbro'. Bates was the engineman, and Richardson the stoker. The name of the engine is "*Victory*," and it took down the train on the evening in question. I saw that all was right before the train started, and both the men were perfectly sober. The tender was placed before the engine, in consequence of the turn-tables not being in proper order to turn the engines as they were undergoing some repair. The train went off in the usual manner. Bates was 28 years of age. I do not know the age of Richardson. I was at the station when the bodies of the men were brought back, about half-past eight, and assisted in removing Richardson to the station. Bates was taken to the Infirmary. The train has been in the habit of starting with the tender before the engine for about three months. Bates has been an engine-driver for some time, understood his business perfectly, and was very careful. There is no guard to that train. There are no breaks to the carriages in that train.

By a Juryman: I have not considered it so safe for the tender to be before the engine. I should consider it so because of the pressure of the engine from behind. Every exertion has been made by the company to get the tables properly finished. We have now managed to get the carriages turned, but only temporarily. I cannot say whether the tender going first contributed to cause the accident.

Edward Brookes deposed, I live in Rock-street, Sheffield, and am a snuffers-manufacturer. I went by the half-past seven o'clock Rotherham train, on the night of Thursday last, following immediately after the train to Masbro', which I saw start. I looked out of the second-class carriage, in which I was nearly all the way, and saw the carriages of the train before us stopping, when the train in which I was also stopped, and I jumped out about a hundred yards from the place of accident, thinking there had been an accident. I saw there was an obstruction on the line, and when I got near, I found the engine of the Masbro' train had upset, and was lying on its side. The first person I noticed was Richardson, who had just been got from under the tender; and I then went to Bates, who was calling out. Bates was near the gutter, trying to get his coat off, assisted by Rhodes, the guard of the Rotherham train. His clothes were wet. I saw the wheel of the tender on the side of the line. The accident happened about thirty yards from the Holmes Bridge nearer Sheffield. I came back with Bates to Sheffield, and went with him to the Infirmary, where I left him. He was much scalded, and at the time of the accident he had some cold water thrown upon him. He said, as we were carrying him to the Infirmary, speaking of the accident, "All he knew was, that the axle-tree broke." The were only seven passengers in the train. I did not hear that any of them was hurt except a lady who had her foot a little injured, but not seriously. I did not hear them attach any blame to the engine-driver.

Simon Lough sworn: said he lives at the Holmes and is a plate-layer, in the employ of the Sheffield and Rotherham Company. On the evening of Thursday last, he was in his garden near the railway—heard the train coming—heard the crash—and immediately went to the spot. My garden was perhaps 400 yards from the place. The engine was lying on one side, and one of the carriages on the embankment. I saw one part of the tender, which was separated from the engine, lying upon the engine. One of the rails was torn up. He saw Richardson laid on his back, and the tank had fallen upon him. Witness got assistance and removed him from under the tank. He did not move after they had got him out. Other persons were assisting Bates. Witness was one of the first on the spot.

They were put in a carriage and brought to Sheffield. Both the engine and tender were upset. Witness knows that there was nothing loose in the line to cause the accident. He left it in proper order at six o'clock, and trains had passed between six and the time of the accident.

Jane Lough, wife of the last witness, accompanied him to the place of the accident, and corroborated his statement.

Ruth Barlow, of the Holmes, deposed: At the time of the accident I was at my own house. I heard the noise and went to the place, and assisted Bates, who was laid, double, at the bottom of the sough, near to the engine. I assisted him in getting up. He appeared as if he had been thrown against the bank. His clothes were very wet. He expressed a wish to see his wife, and said he hoped the Lord would have mercy upon him. I assisted in putting him in the carriage to come to Sheffield.

Mr. Isaac Dodds, of Sheffield, deposed: I am superintendent of the Sheffield and Rotherham line, and it is my duty to see that the line and carriages are in proper order. I saw the train to Masbro' start on Thursday evening, when all appeared right. Bates has been employed as a regular engine-driver above twelve months, I always considered him a careful, steady driver; and Richardson was a particularly steady man. I went up the line, at twelve o'clock on that day, as far as Masbro', and walked back to below the place of the accident. All was right, also at four, when I went down in one of the carriages. The engine and tender had just undergone a thorough repair, and had been repainted. It was the front wheel of the tender which broke, viz., the fore wheel, as the tender was then running. The axle-tree is of wrought iron. The cause of a flaw in the axle I cannot make out, the existence of which could not be ascertained. I examined them all last week. They were manufactured by Stephenson and Co., of Newcastle, and this one has worked three years. I think the iron of which it is made is good, and the axle not of bad manufacture. The axle has once been taken out and returned, but not altered at all. It is not so desirable for the tender to precede the engine, but no danger was apprehended. I should have been on the tender myself, had I been in time. We might, at a great loss of time, have turned the engines, but, from the alterations of the station, the tables could not be got to. On long lines it is quite common to run the tender first. My instructions have always been, to turn the engine where it was practicable. I have always told the men to take off the steam at a certain point on approaching the Holmes station, about 100 yards from the place of accident, and before they applied the tender break. It is on the application, that the greatest resistance is felt. I think it probable that the resistance of the break had, in some degree, been the cause of the accident. We test the axles by ringing them with a hammer; but this can only be done when the wheels are off. The axle was not rung when the wheels were off a short time ago. The axles were not contracted for. The makers had their own price for them, and also for the engines and tenders.

Joseph Ball, engineman on the Sheffield and Rotherham Railway, deposed: On Thursday evening he took down the Rotherham train, which followed the Masbro' train; confirmed the statement of Mr. Brookes. He had the care of the *Victory*, but had never observed the flaw in the axle. Witness could not learn from Bates how it happened. The passengers walked forward to Masbro'. The enginemen had instructions from the last witness to put the engine first, where it was practicable. Witness considered it safer to have the tender follow the engine.

Dr. Ernest, house surgeon to the Sheffield Infirmary, deposed that Bates was brought to the infirmary about half-past eight on Thursday evening. Witness thinks the death was more the result of the concussion than of the scalding, and that the shock was the principal cause of death. He was sensible to the last, and wished to be remembered to his wife and mother.

Mr. Dodds, in answer to a question from the Coroner, stated that no unnecessary delay had taken place in getting the turn-plates properly fixed.

Mr. Vickers here intimated that the witnesses who had been examined were all, as far as he knew anything of the matter, but if the Coroner or any one else knew of any other of the Company's servants, either at Sheffield or elsewhere, who could give any information, he should be most ready and glad to bring them forward to be examined. This terminated the evidence, and the Jury, after a short consultation, returned a verdict to the following effect:—"That the deceased came to their death from accidental causes, owing to a defect in the axle of the tender, and they recommend the Company not to allow the tender to precede the engine." —*Sheffield Patriot.*

The Lickey Incline.—There is a real danger in this incline in the way it is worked; and, if it is not amended, there will be a smash some time or other, as sure as the world. It arises thus: the assistant engine hooks on before the train engine by a trip hook detachable by the foot; and when all arrives on the top, the first engine is let go, and shoots off, at an increased speed, to the points which let it pass on to the other line. Now the train is still going on; hence the switchman has to hold the swivel of the points in his hand, and as soon as the first engine has passed through, he turns them back for the train to go on in its proper direction; but the danger is that the distance between the first engine passing these points and the train arriving at them is hardly ever more than fifty yards—a most awful fact. A ten seconds' job, even at ten miles an hour: during which ten seconds the points have to be turned, which a mere stave would stop, or there is a smash.—*Railroad Monthly Journal for June.*

—o—

Eastern Counties' Railway.—We hear that some difficulty has been experienced by the Directors in their attempt to improve the locality of Cock-hill. This is a public thoroughfare to which the parishes of Bethnal Green, Shoreditch, and Spitalfields jointly lay claim. The two first parishes have taken the matter into consideration, and after some discussion, have acquiesced in the plans of the Directors. But we are sorry to learn that a feeling of hostility exists in the parish of Spitalfields.—*Essex Mercury.*

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BELFAST AND CAVEHILL RAILWAY.

June 7.—Motion made and question put "that the Bill be re-committed;" House divided, Ayes 69; Noes 201.

BRISTOL AND EXETER RAILWAY.

June 8.—Message from the Lords that they have agreed to the Bill with amendments.

June 9.—Lords' amendments agreed to.

GREAT LEINSTER AND MUNSTER RAILWAY.

June 10.—Message from the Lords, that they have agreed to the Bill without amendment.

LONDON AND GREENWICH RAILWAY.

June 9.—Bill reported; ordered to be ingrossed.

June 10.—Bill read a third time and passed.

NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY.

June 4.—Bill read a third time and passed.

SOUTH-WESTERN RAILWAY (No. 2).

Jnne 8.—Message from the Lords that they have agreed to the Bill without amendments.

RAILWAYS IN IRELAND.

House of Commons, 8th June, 1841.—Lord MORPETH rose to move for leave to bring in a Bill for the making and maintaining of public railways in Ireland. He merely wished, at this period of the session, to have the Bill printed, for the sake of giving information to the public, and especially to the people of Ireland, on the subject. He should, therefore, make no lengthened statement on the present occasion. The right hon. Baronet the member for Tamworth, in his concluding speech in the recent debate, had alluded to the late period of the session at which he (Lord Morpeth) chose to bring this question forward, as if it were done with the view of gaining popularity on the eve of a general election; but he could assure the right hon. Baronet, in the first place, that the agreement upon which the measure was founded had been entered into during the Easter recess, and previous to the late Parliamentary defeats; and in the next, that it was not a matter for which the Government had reason to claim credit, as any credit that might be attached to it was due to private individuals, who were not connected with the Government, but to whose proposition the Government had acceded. The general construction of railways in Ireland under the management and control of the Government, with the aid of the state and the full security for the repayment of the sums advanced, as proposed by the Government on a former occasion, still appeared to him to be the most desirable and expedient mode of establishing railways in that country; but, having reason to believe that that proposition would not meet with the assent of the Legislature, he had declined to renew it. In this state of things a proposition was submitted to the Government on the part of certain individuals of great character and station, both in a financial and commercial respect, the heads of which were, that the Government should raise a capital of 1,300,000*l.* to be applied, in the first instance, to the construction of a main line, as projected by the commissioners, from Dublin to Limerick, crossing the whole breadth of the island, and communicating from one sea to another; that the work should be executed by commissioners to be appointed by the Government (and to obviate any jealousy that might arise to the selection of the Government, he would insert their names in the Bill, namely, Sir J. Burgoyne, Mr. Griffith, the late commissioners, and Colonel Jones, the late secretary to the railway commission); that the capital should be raised in debentures signed by two of the committee; that a Board of Control be constituted; that the debentures bear interest at 4 per cent. per annum; that in case that should not be made good by the profits of the undertaking, the deficiency to be charged upon the counties benefited; but that in case of surplus profits, after the payment of all expenses, the holders of debentures to be entitled to a share in such profits in addition to the 4 per cent. interest; and that the commissioners named in the Bill should have the sole direction of the works, and the entire management and arrangement of the lines when formed. They would likewise be empowered to make other lines. The main feature of the proposal was the uniting the aid of private capital with the responsible control of public officers. As he did not want to elicit the opinion of the House upon the subject at present, and merely asked for leave to place the Bill upon the table, he should abstain from entering upon any of those arguments which might be adduced in support of the proposition. His object was to afford a facility to the present Government, or any Government that might succeed it, to bring into final and practical operation a measure which, he believed, was really calculated to be of essential service to the people of Ireland. (Hear.)

Mr. SHAW, without pledging himself to all the details of the bill, felt great pleasure in seconding the motion, and expressed his gratification at finding one measure for Ireland, proposed by the Government to which he could give his hearty support.

Lord STANLEY inquired whether the assent or dissent of the owners of land through which the projected lines would run were first to be obtained, how they would be remunerated, or what mode of defending their rights they could have if they thought fit to object.

Lord MORPETH could not say that he intended to proceed upon the principles observed in all private railways, of making the assents or dissents essential to the success or defeat of the measure; but he intended that compensation should be granted to the landowners upon the precise principle adopted in the Shannon Navigation Bill, which had been found to work most satisfactorily.

Mr. SHAW asked if the noble lord meant to confine the power of making railways to the south, or to extend it to other parts of Ireland.

Lord MORPETH said his wish was to give a general power in that respect.

Mr. Serjeant JACKSON inquired how the bill would operate upon counties along the margin only of which the railway might pass, and which should derive no greater benefit from it than adjoining counties through which it did not pass, in case an assessment became necessary to make good the 4 per cent. interest on the debentures?

Lord MORPETH said, that the counties would be assessed according to the benefit they respectively derived from the railway, without reference to its course.

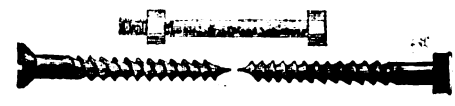
After a short conversation leave was given to bring in the bill.

BAD ARRANGEMENTS OF THE RAILWAY COMPANIES FOR PASSENGERS TRAVELLING NORTHWARDS FROM MANCHESTER.—*(From a known correspondent.)*—The Manchester and Leeds Railway Company advertise that they convey passengers to York, at half-past seven and twelve o'clock every morning (and no other hours in a morning). All persons wishing to go to Newcastle-on-Tyne would therefore prefer the early train, as by the twelve o'clock they could not reach the end of their journey before midnight. A gentleman who has twice recently gone by the 7 30 train, noticed, on Monday last, the time they were detained at each station after leaving Wakefield, viz. 50 minutes at Normanton, 26 minutes at Castleford, and ten minutes at Taylor's Junction, all within ten miles. On a former occasion he waited at the different stations named, an hour and a half; indeed, such is usually the case, and in addition to this there is a further detention of two hours before a North of England train leaves for Darlington. The most annoying part is the detention at Normanton, and the stations before reaching York, which might be avoided if the Manchester and Leeds Company would make their nine o'clock train a fast train, to meet the York train, that the half-past seven train now does, which might also possibly afford time for passengers from Liverpool to meet it, and there is now no chance of their being in time for even the 2 30 North of England train from York.—*Manchester Guardian.*

WONDERS OF STEAM.—Two gentlemen left Brussels at three o'clock in the afternoon of Friday, and arrived in Liverpool by a quarter before seven, p.m. on Saturday, being a distance of upwards of 430 miles, performed in the short space of 27¾ hours. The whole of the journey was performed by steam. The travellers left Brussels by the railway on Friday afternoon, arrived at Ostend in time for the packet, were landed at Blackwall, proceeded from thence to London by the railway, and just caught the train from London to Liverpool as it was starting.—*Liverpool Times.*

THE TRAFFIC FROM CHELTENHAM TO LONDON.—The opening of the railway to Cirencester has diverted the greater part of our London traffic in that direction; coaches, so numerous that it would be a work of labour merely to name them, pass through or proceed direct from this town to the Cirencester Station daily, and the passenger in little more than five hours finds himself wafted from our High-street to Euston-square; but notwithstanding this increased facility, great complaints are made. The fares for passengers are too high—22s. outside, while the coach on the road runs for 16s.,—and the charge for parcels we hear, has been considerably increased. We make these remarks out of no ill feeling to the railway company, but in the hope that they may see that increased rates do not always bring increased receipts; that there is a point at which traffic would be encouraged, and there is also a point at which it would be considerably decreased; it is the direct interest, in a pecuniary point of view, for the Company to be reasonable in their charges. We trust the hint will be taken in the proper quarter.—*Cheltenham Journal.*

DIVING BELL, CRANES, TIMBER, IRON, &c. &c.—To be Sold by AUCTION, upon the North Quay, at Whitehaven, on Thursday, the 1st day of July next, at noon, 1 Diving Bell, with Carriage, Air Pump, Two Crab Winches, Hose, and Four Pair of Boots. Two moveable Cranes, 2 large Standing Cranes, 2 small Standing Cranes; about 2,000 feet of Yellow Pine Timber, in Logs 30 Feet long and upwards, and a Quantity of Short Pieces. Eight Tons, or thereabouts, of (common) Iron, in Bars, Two and a half Inches broad, and ⅜ths of an inch thick. A Quantity of Bolts (scrap) One and a quarter inch thick, in different lengths. 120 Fathoms of Patent Chain, 1¼-inch thick; 2 Large Anchors, and 1 pair of Smith's Bellows.



For further particulars apply to Mr. Ebenezer Stiven, or to

E. H. HEYWOOD,
Clerk to the Harbour Trustees.

Whitehaven, 7th June, 1841.

NOTICE.—SALE ALTERED.—TO RAILROAD CONTRACTORS AND OTHERS.—Messrs. JOHN FIDEL & SON are instructed to sell by auction, on Thursday the 24th of June, 1841, about 200 excellent Earth Waggons, Three Cart Horses and Harness, Five Strong Carts and Waggons with Iron Arms, a Stone Truck and other effects, on the premises at Uffington, between the Farringdon Road and the Shrivenham Stations on the Great Western Railroad. The Wilts and Berks Canal runs within a few yards of the same.

Messrs. Fidel and Son beg to observe to persons requiring railway waggons, they will find the above of the very best construction, having been built by Mr. Cogswell, and many of them nearly new. The axle-trees are 3¼ inches in diameter, and 4-feet 8½-inch gauge, and 30-inch wheels. The Sale will commence at Two o'Clock.

T. H. RYLAND AND CO., OZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic pistol, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

Planing machine; works by hand, will plane 5 feet by 18 inches.

A COMPANY for ESTABLISHING RAILWAYS in IRELAND, under the Guarantee of the Counties, and under the Superintendence of a Board of Control nominated by Government.

PROSPECTUS.

The construction of a general and comprehensive System of Railways in Ireland has of late years been universally regarded as a measure of vast importance to that portion of the Empire, and as calculated to produce, by the employment of the population and the creation of an extensive, expeditious and economical mode of conveyance, the greatest benefits to that country.

As a commencement of the system, it is proposed, with the approbation of Government, but subject to the sanction of Parliament, to make the Southern line in the direction indicated by the Report of the Railway Commissioners, and proposed by the Government in 1839, to Limerick, by way of Holy Cross.

The works to be executed by Commissioners to be named by Parliament in the Bill.

A Board of Control to be constituted by Government to superintend and control the proceedings of the Commissioners.

For this purpose a capital of 1,500,000*l.* is to be raised, under the direction of the Committee, on the part of the subscribers.

The capital to be raised in shares, or sums, of 1,000*l.*, 500*l.*, 200*l.*, and 100*l.* each, on debentures, to be signed after the passing of the proposed Act of Parliament, by two of the Committee, and to be countersigned by two of the Board of Control. A deposit of 10*l.* per cent. to be paid on the subscriptions being allotted; the remaining 90*l.* per cent. to be paid in nine instalments of 10*l.* each, on the 15th January, the 15th April, the 15th July, and the 15th October, 1842; and the 15th January, the 15th April, the 15th July, and the 15th October, 1843; and on the 15th January, 1844. On non-payment of any instalment, the previous instalments to be forfeited.

The Debentures to bear interest at 4 per cent. per annum, such interest to be guaranteed by Act of Parliament by a charge on the counties to be benefited by the measure, in such porportions as shall be settled by the Commissioners, and approved by the Board of Control.

The Debentures may be, after payment of all the instalments, converted, at the option of the holders into stock.

The Debenture and Stockholders to form a Corporation and to be represented by a Board of Directors, and the Committee to form the first Board.

In addition to the interest of 4 per cent. per annum the Debenture and Stockholders to be entitled to half the surplus profits, after payment of interest and all outgoings.

The other half of the surplus profits to be appropriated, from time to time, for the benefit of the counties guaranteeing the interest, in proportion to their liability to the interest.

The Commissioners to have the direction and execution of the works, the regulation of the Tolls within limits to be fixed by the Act; and the entire management of, and arrangements on the lines, when formed, subject to the control of the Board of Control; and to remit the interest, and half the suplus profits, half-yearly, to the Directors.

The Act to contain powers to enable the Commissioners to vary or modify the proposed line, with consent of the Directors, and subject to the approval of the Board of Control.

This plan having been based on the estimates of the Railway Commissioners, provision is to be made, in the event of the estimates being exceeded, and any additional capital being required, to secure the same interest and profits to the Company, as they would have had on their original capital, had no such additional capital been required

RAILWAY COMMISSIONERS.

Nominated by Government.

Sir J. F. Burgoyne, K.C.B.
Richard Griffith, Esq. F.R.S.
Col. Harry D. Jones, R.E.

Being Members of the Irish Railway Commission of 1836-38.

DIRECTORS.

I. L. Goldsmid, Esq., F.R.S.
John Abel Smith, Esq., M.P.
Mr. Alderman Thompson, M.P.

Board of Control—To consist of Noblemen and Gentlemen to be named by the Government, and appointed by the Act of Parliament.

Bankers—Messrs. Smith, Payne, and Smiths.

Standing Counsel for the Company — Francis Henry Goldsmid, Esq., Stone-buildings, Lincoln's Inn.

Solicitors — William Stephens, Bedford row, London; M. Barrington, Son, & Co., Dublin.

*** Persons desirous of subscribing may apply by Letter to Messrs Goldsmid, Smith, and Thompson, 38, Broad Street Buildings, City.

TRINITY COLLEGE, DUBLIN.—The Board of Trinity College, Dublin, having determined on founding a SCHOOL OF CIVIL ENGINEERS in connection with the University, give Notice, that they intend to elect Two Professors, who shall Lecture, one upon the Application of Chemistry and Geology to the Art of Construction, the other upon the Practice of Engineering.

The Registrar of the University, who will give all the necessary information with regard to the salaries and duties connected with the Professorship, will receive applications from Candidates for the Professorship of Chemistry and Geology until the 2nd of July, 1841, and for the Professorship of Engineering until the 10th of June, 1842.

J. H. SINGER, Deputy Registrar.

Trinity College, June 5, 1841.

NORTH KENT RAILWAY.—LINE FROM GRAVESEND TO ROCHESTER. Office, 42, Lombard Street.

CAPITAL, £300,000. In 15,000 SHARES, of £20. each.
DEPOSIT, £2 10s. per Share.

Provisional Committee.

John Humphery, Esq. Ald. M. P.
John Edward Puddick, Esq.
Aldborough B. Henniker, Esq.
George Carter, Esq.
Miles Brathwaite, Esq.
George K. Britten, Esq.

Chief Superintendant.—George Walter, Esq.

Bankers.

Messrs. Spooner, Atwoods, and Co., London.
Dartford: Messrs. Hills, M'Rae and Co.
Gravesend. Messrs. Hills, M'Rae and Co., London and County Bank.
Rochester: Messrs. Day and Co., London and Count Bank.

Engineers.—Colonel Landmann; Joseph Gibbs, Esq.
Surveyors.—Messrs. Smith and Barnes.
Solicitors.—Messrs. Sweet, Sutton, Ewens, and Ommanney.
Secretary.—Mr. Cresswell.

The object of this undertaking is to connect Gravesend with Stroud, Rochester, and Chatham, by means of a railway, taking the whole line of the Thames and Medway Canal, for which purpose the Committee have provisionally agreed for the purchase of the Canal and Works.

The level of the Canal is nearly the same as that of the proposed railway, which will save much expense and time in its completion.

By the arrangements made, the Act of Parliament for carrying the same into effect may be obtained forthwith, and the Canal drained and converted into a railway, and opened to the public in the course of one year from the date of the Royal Assent; leaving the docks at each end for the reception of coals, stone, lime, and merchandise.

There is at present a large transit of passengers between the populous towns of Gravesend, Stroud, Chatham, Maidstone, the city of Rochester, and the adjacent parts, averaging daily about 1,000, who now travel between those places by omnibuses, or other conveyances, at a charge varying from 1s. to 2s. each.

The average number of passengers annually landed at the piers at Gravesend, is about 850,000; and when the additional number of iron steam boats, now preparing to run from Blackwall to Gravesend, are in operation (at low fares), the amount will be greatly increased, and very many of those persons will avail themselves of the railway as a cheap and expeditious mode of transit into Kent; in addition to which there will be a very considerable income derived from the traffic in coals, stone, lime, and merchandise, which will insure an ample return to the Proprietors, besides the immediate income to be derived from the docks and ground-rents, &c. at each end of the line.

The Property of the Thames and Medway Company comprises, besides the Canal,—At Gravesend, entrance lock from the Thames, for the admission of Colliers; a Basin of considerable dimensions, in which Yachts and other Vessels are laid up during the winter; extensive Coal Yards; Timber Yards; Lime-Kiln; Dock Master's Cottage; many Cottages for Workmen; and valuable Ground Rents; besides many acres of unoccupied land; and a Cottage at every Bridge over the Canal.

At Rochester, valuable Building Ground, consisting of upwards of twenty acres of Freehold Land, Lock and large Basin, capable of containing ships of upwards of 300 tons burthen; Steam Engine and Engine House; Dock Master's House, and Cottages; Stabling, Warehouses, &c.

Applications for Shares to be made at the Company's Office, 42, Lombard-street, prepaid.

TRAVELLING TO SCOTLAND AND THE ENGLISH LAKES.—The Cheapest and only Direct Route from London and all parts of the South of England to the English Lakes, or any part of Scotland, is by Railway through Birmingham to Lancaster, (being the Grand Mail Road from London to Edinburgh and Glasgow).

Mails and Light Coaches run from Lancaster to Carlisle, Edinburgh, and Glasgow, every Morning and Evening, after the arrival of the Mail Trains from London;—by which, places may be secured in London, at Messrs. CHAPLIN AND HORNE'S Offices, London and Birmingham Railway Station, at very Reduced Fares.

A Mail and other Coaches leave Lancaster every Morning and Afternoon, for Ambleside, Keswick, and the Lake District.

A Mail Coach leaves Lancaster every Morning, on the arrival of the Mail Train, for Ulverstone, passing the foot of Windermere and Coniston Lakes.

Arrangements are made with the Innkeepers on this Route to Reduce the Charge for Post Horses to 15d. a Mile.

RAILWAY TIME TABLE.

From Lancaster to Birmingham and London.

At	2h. 0m.	a. m.	Mail.
"	9 45	a. m.	First Class.
"	1 0	p. m.	(to Birmingham only).. Mixed Train.
"	5 30	p. m.	Mail.

From London to Lancaster.

At	9h. 45m.	a. m.	Mail.
"	8 30	p. m.	Mail.
"	9 0	p. m.	

From Birmingham to Lancaster.

At	1h. 45m.	a. m.	Mail.
"	6 0	a. m.	Mixed Train.
"	2 45	p. m.	Mail.

The trains marked thus (*) will take private carriages and horses, the others cannot do so.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR COKE.—The Directors of the London and Brighton Railway hereby give Notice that they are ready to receive tenders for a supply of coke, for the use of their locomotive engines. The coke must be of the best quality, hard and well burnt, freed from all dust or screenings, and must be made from Tanfield Moor, Pontops or Townley Main; but if the parties tendering should propose any other quality of coals to make the coke from, they must in their tender distinctly state and describe the quality of the coal from which they propose to make it. The tender must state the price per ton (of 2,240 lbs.) at which they will undertake to deliver the coke, either in sacks of 112 lbs. each, (the sacks to be provided by the London and Brighton Railway Company) or in the bulk, at the London and Croydon Railway Company's Wharf on the Grand Surrey Canal, or at the Railway Station at New Cross—sixty tons of coke will be required to be delivered as above, on or before Saturday the 26th June inst. The supply required for the present use will be about fifty-tons per week, and the parties tendering may tender for the whole supply or any part thereof. The contractor will be required to enter into a bond to make the coke of the quality agreed upon, and to keep up the supply to the full extent of this contract.

The tenders must be addressed to the Secretary, London and Brighton Railway Company, 10, Angel Court, Throgmorton Street, and sent in or before eleven o'clock of Thursday the 17th June inst.

By order,
THOMAS WOOD, Secretary.

London and Brighton Railway Company's Offices, 10, Angel Court, Throgmorton Street, 10th June, 1841.

LONDON AND BLACKWALL RAILWAY.—The Directors of the London and Blackwall Railway Company are ready to receive Loans of Money on the security of Debentures issued under the powers of the Act of Parliament in sums not less than 200*l.* for periods of Three, Five, or Seven Years, bearing interest at 5 per cent. per annum, payable half-yearly at the London and Westminster Bank.

Tenders to be addressed to the Secretary.

WILLIAM ROUTH, Chairman,
J. WARMINGTON, Secretary.

Offices, 60, Fenchurch-street,
10th June, 1841.

DOUCEUR OF FROM £20 to £50 will be given to any gentleman who will procure the advertiser a situation.—To Civil Engineers and Railway Contractors, &c. &c.—A most respectable young person, having been engaged for many years on Railways and public works, wishes to obtain a situation, either at home or abroad, where a practical knowledge of levelling, setting out and measuring of works, and engineering generally, would make himself useful.

Highly satisfactory testimonials, from eminent Engineers &c. &c., will be produced.

Address E. K. L., care of Mr. Bingham, Broad-street, Bristol.

L & OO STEEL.

MESSRS. JOS. SYKES and SONS, the Sole Contractors for and only importers of, these descriptions of STEEL IRON, being determined to adopt every practicable expedient to protect the fair trader in and consumer of these several marks, HEREBY GIVE THIS PUBLIC NOTICE, that, from the 31st March, 1835, no iron of the above marks has been, or will be, delivered by them, without the additional mark of | S Y K E S | being impressed thereon; such last-mentioned mark having been adopted by Messrs. Jos. Sykes and Sons for the further Protection of themselves and the public; and all persons who shall impress such mark upon any bar iron, either with or without the additional mark of | S Y K E S | will be proceeded against.—Hull, May 11.

GLOUCESTER WAGGON HORSES, WAGGON, AND HARNESS.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, the 18th of June, 1841, commencing at One o'clock precisely, Thirty Fine shaped, Active, Powerful, Seasoned Cart Horses, a Broad-Wheel Waggon with Tilt and Cover complete, Twenty five Sets of Harness, &c., &c., being a portion of the known superior Stock that have been employed in the London and Gloucester Waggon Business, and are now, by order of Messrs. W. P. Budd and Co., for Sale without the least reserve, in consequence of the further Extension of the Cheltenham and Gloucester Railway.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.

The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200. for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

THE BRIGHTON RAILWAY.

—The Official Map and Section of this line is now published price 3s. on a large sheet coloured; folded in a cover 4s.; on linen for the pocket 6s.; and on rollers 5s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 8, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Litts, Royal Exchange, and at the Office of the Railway Times.

CANTERBURY AND WHITSTABLE RAILWAY SHARES.

—To be sold by Auction, on Monday, 5th July, 1841, at the Fountain Hotel, Canterbury, by Messrs. Whites and Goulden, 100 Shares in the Canterbury and Whitstable Railway, in 10 lots of 10 shares each. By order of the Executors of the late General Sir H. T. Montresor, K.C.B.

Inquire of Messrs. Hughes and Henslow, Clement's Inn, London; Messrs. Curteis and Kingsford; or Messrs. Whites and Goulden, Canterbury.

TO CAPITALISTS, ENGINEERS, MILLWRIGHTS, IRON-FOUNDERS, AND OTHERS.

—To be disposed of, an old-established Engineer's, Millwright's, and Founder's concern, the present Proprietor retiring from the manufacturing branch; situated in London; arranged for a most extensive business. The premises will be let on lease at a rental of £1,600 a-year. The machinery, plant, and tools are valued at about £14,000.

Applications, with real name, to be made to Messrs. Kerley and S. Ware, Solicitors, 5, Gray's Inn Square.

TO ENGINEERS of Large Business.—To be LET a spacious WHARF and large WAREHOUSE ROOM with Residence for superintendent, and Cottages for workmen, at Rotherhithe. The wharf has extensive privileges. Or, well suited to an Engineer requiring a large space of ground, and a frontage of 235 feet next the river, with good approaches from the land. Apply to Mr. W. Woodward, 1, Furnival's Inn, between twelve and two, if by letter, pre-paid.

Important and Extensive Sale of Horses, Fly Boats, Vans, Carts, Tarpaulins, Iron, Tar, Dock Yard Implements, &c. &c.

By T. M. FISHER (by order of Messrs. Morris, Herbert, and Co., who are declining the carrying business), on Monday, Tuesday, and Wednesday, the 14th, 15th, and 16th of June, and following days, at their stables in Castle Field, and their Dock Yard and Wharf, on the Duke's Canal, Castle Field, Manchester: sale to commence each day punctually at eleven o'Clock in the forenoon.

SIXTY Capital Short-Legged Young and Active Horses, in first-rate working condition, suitable for vans, carts, and waggons; 25 very superior Fly Boats, with iron knees, in thorough repair, complete with cloths and cabin furniture, the whole built by Messrs. Morris, Herbert, and Co., in their well-known substantial manner, and of the very best well-seasoned English timber, three spring vans, six broad-wheeled carts, with iron arms; cart and boat geers, trucks, beam, scales, and weights; corn, bean, and hay cutters, stable furniture and utensils, very large and valuable stock of new and second-hand tarpaulins, cart and boat sheets, canvas, chains, ropes; also, the boat-building implements and stock, which includes a very large quantity of the best English oaks, sawn and in balk; timber carriage, tar, nails, wrought iron; carpenters, joiners, and smiths tools; two pair of smiths bellows, two anvils, stocks, taps, and dies, rack jack, and other effects.

Catalogues will be published on Saturday the 5th of June, and may be had at any of the offices following, viz.:—Messrs. Morris, Herbert, and Co.; the *Railway Times*, and *Mining Journal*, London; *Midland Counties Herald*, Birmingham; *Liverpool Standard* and *Mercury*, Liverpool; *Leeds Mercury*, Leeds; or from the Auctioneer, who will forward the same to parties living at a distance, on application by letter directed to his office, No. 17, Princess-street, Manchester.

16th June, 1841.

TO CAPITALISTS, ENGINEERS, MILLWRIGHTS, IRON-FOUNDERS, AND OTHERS.—To be disposed of, an old-established Engineer's, Millwright's, and Founder's concern, the present Proprietor retiring from the manufacturing branch, situated in London; arranged for a most extensive business. The premises will be let on lease at a rental of £1,600 a-year. The machinery, plant, and tools are valued at about £14,000.

Applications, with real name, to be made to Messrs. Morley and S. Ware, Solicitors, 5, Gray's Inn Square.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad-street, City; 69, Princes-street, Leicester-square; Manufactory, Mill-wall, Poplar; and also of the following Agents:—

Robertson and Co., 12, Goree Piazzas	Liverpool.
Mathias Dunn	Newcastle-upon-Tyne
Joseph Bothway	Plymouth.
John Thompson and Co.	Wigan.
J. T. Tregellas	Truro.
Thomas Mooney and Son	Dublin.
Coates and Young	Belfast.
James Kibble and Co.	Glasgow.
James Gunn	Leith.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of nine months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

MANCHESTER AND BIRMINGHAM RAILWAY.—WANTED a person conversant with Railway Management to Superintend the Passengers and Goods Traffic, between Manchester and Birmingham.

Application to be made by letter *only*, addressed to the Board.

By Order of the Directors,
49, Piccadilly, Manchester, 17th June, 1841.

GREENWICH RAILWAY BONDS.—Notice is hereby given, that NEW COUPONS, or Interest Warrants, for a further term of seven years, from the 1st of July, 1841, will be ISSUED to the holders, at the offices of the Company, London Terminus, every Tuesday, between the hours of 2 and 4 o'clock.

By order of the Board,
J. Y. AKERMAN, Sec,

London Terminus, June 15, 1841.

SOUTH EASTERN RAILWAY COMPANY.—NOTICE OF CALL.—The Directors having this day made a CALL of £5 per share from the Subscribers to and Proprietors of this undertaking, and directed that the same be PAYABLE on Tuesday, the 6th day of July next at either of the undermentioned places, viz:—

Messrs. Glyn and Co., bankers, Lombard-street, London.
Messrs. Moss and Co., and Messrs. Barned and Co., bankers, Liverpool.
Messrs. Jones, Loyd, and Co., bankers, Manchester.
Messrs. Beckett, Blayds, and Co., bankers, Leeds.
The Union Banking Company, York.
Messrs. Fector and Co., and Messrs. Latham and Co., bankers, Dover
Messrs. Jemmett and Co., bankers, Ashford.
Messrs. Wilmshurst and Co., bankers, Cranbrook.
Messrs. Beeching and Sons, bankers, Tunbridge and Tunbridge-wells.
The Country branches of the London and County Banking Company.

The Proprietors are hereby required to pay the same accordingly.—Dated this 1st day of June, 1841.

JOSEPH BAXENDALE Deputy Chairman of the Board of Directors.
J. S. YEATS, Secretary.

Railway Office, 10, Coleman-street, London.

PARIS AND ROUEN RAILWAY.—TO CONTRACTORS AND OTHERS.—The Company is now ready to receive Tenders for the following works:—To construct at Oissel over the two arms of the Seine two bridges of five arches each. To construct a similar bridge of six arches over the same river at Le Manoir; each bridge is to consist of wooden arches one hundred feet span, with stone piers and abutments.

Plans, sections, drawings, specifications, and conditions may be seen at the Office, 52, Rue Basse du Rempart, at Paris, and further information may be obtained on application to Mr. Locke, the Company's Engineer, 20, Adam-street, Adelphi, London. The Company will not be obliged to accept the lowest Tender.

No Tender will be received after Friday, the 2nd July, on which day the parties tendering are requested to attend at the Company's office, in Paris. Security will be required.

ADOLPHE THEBAUDEAU.

Paris, June 1, 1841.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton.
Grain, Timber, &c.	55s.
Beer, Hides, Soap, Sugar, &c.	60s.
Raw Coffee, Rice, Earthenware in Crates, &c.	62s.
Bales, Grocery, Oils, Tea in Chests, Wool, Paper, &c.	65s.
Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.	70s.
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company.

RAILWAY RETURNS.

Returns made to the Board of Trade by the different Railway Companies, under the provisions of the Act 3 and 4 Vic., c. 97, (Lord Seymour's Act.) Printed by order of the House of Commons.

(Concluded from page 572.)

BRANCH IV.

Returns made to the Committee of the Privy Council of the Aggregate Traffic in Passengers, in Cattle and in Goods on each Railway, made up to the latest period under the Provisions of the Act 3 & 4 Vic. c. 97.

[These returns are for the last six months of 1840, and given in a tabular form. We have but room for the following abstracts of their contents.]

1. ULSTER RAILWAY.

Passenger trains all mixed, consisting of first and second class carriages. Twelve trains per day. Average speed 26 miles per hour. Number of first class passengers, 14,679; of second class ditto, 89,745. Total number of miles travelled, 25,760. Gross receipts from passengers, 4,972*l.* 9s. 8d. Total gross receipts from passengers' luggage, cattle, sheep, and pigs, 121*l.* 19s. 8d.

2. ARBROATH AND FORFAR RAILWAY.

Passenger trains all mixed. Number of trains 689. Average speed 20 miles per hour. Number of passengers, first class, 1,494; second ditto, 5,643; third ditto, 54,089. Total miles travelled by passengers—first class, 14,386¾; second ditto, 57,868¼; third ditto, 472,500¼. Average fare per mile, first class, 1.7008; second class, 1.2673; third class, 0.8749. Gross receipts from passengers—first class, 101*l.* 19s. 2d.; second ditto, 305*l.* 11s. 3d.; third ditto, 1,711*l.* 4s. 7d. Average speed of goods' trains 12 miles per hour. Total weight of goods carried, 35,048 tons. Total receipts from goods, 2,774*l.* 14s. 11½d.; from cattle, sheep, and pigs, nil.

3. NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY.

Of first class trains there are both open and close—two trains of each kind daily each way. Of second class there are the same two kinds, and of each three trains daily each way, besides one for 28 miles, Sundays excepted. Average speed—first class, 25 miles an hour; second ditto, 19 miles an hour. Number of passengers—first class, close, 5,611; ditto, open, 35,248; second class, close, 7,373; ditto, open, 120 293. Fares per mile, first class, close, 2½d.; ditto, open, 1½d. (?); second class, open, 2d.; close, 1½d. Gross receipts from passengers, 17,555*l.* 9s. 9d. Goods' trains, five per day, and one for 28 miles; three conveying passengers also for 17 miles. Average speed 12 miles per hour. Gross receipts for carrying goods, horses, carriages, passengers' luggage, and mails, 27,409*l.* 18s. 10d.

4. DUMPERMLINE AND CHARLESTOWN RAILWAY.

Two one-horse omnibuses; average speed eight miles per hour. Only one class of passengers; number of passengers, 8,687. Fare 6d. each passenger going, and 3d. returning, if in the same day. Length of railway apparently 3¼ miles. Total receipts from passengers, £208 2s. 9d. Total weight of goods carried, 18,553 tons. Total receipts for ditto, 2,013*l.* 2s. 9d.

5. GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY.

Five mixed trains each way per day, except Sunday. Average speed 25 miles per hour. Number of passengers—first class 40,157; second ditto, 103,146; third class, 169, 297; total number of miles travelled, 3,396,711. Fares per mile—first class, 2d.; second class 1½d.; third class, 1d.; gross receipts from passengers, £18,892 9s. 9d. No return of goods carried.

6. MANCHESTER AND BIRMINGHAM RAILWAY.

Number of trains (apparently mixed) 4,336; average speed 25 miles per hour. Number of passengers—first class, 7,399; second ditto, 29,479; third class, 269,202; total mileage of each class, first 34,890; second, 189,8666; third, 1,802.444. Average fare per miles—first class, 3d.; second ditto, 2d. and 2-5ths; third ditto, 2d. and 1-5th; gross receipts from passengers 8,506*l.* 12s. 1d. No return of goods carried.

7. NORTHERN AND EASTERN RAILWAY.

Returns from 15th September to 31st December, 1840. Mixed trains, 1,238; average speed 30 miles per hour; number of passengers (not distinguished as classes), 73,660½. Total mileage of each class, 697,945; total number of miles travelled the same. No return of fares, but locomotive power stated at ½d. Gross receipts from passengers, 5,457*l.* 8s. 4d. Receipts for conveyance of horses, 5*l.* 8s.; carriages, 57*l.*4s.; cattle, 12 shillings. No return of goods conveyed.

8. MANCHESTER AND LEEDS RAILWAY.

All mixed trains; 10 trains per day each way, except Sunday, when there are four each way. Average speed 3 minutes per mile. Number of passengers, first-class, 16,124; second ditto, 72,328; third ditto, 311,335. Total mileage of each class—first, 265,969; second, 850,747; third, 2,349,269. Average fare per mile—first class, 3d.; second ditto, 2d.; third ditto, 1d. Gross receipts from passengers—first class, 3,609*l.* 4s. 3d.; second ditto, 8,119*l.* 6s. 11d.; third, 13,163*l.* 0s. 3d.; total. 24,891*l.* 11s. 5d. Goods, horses, &c. carried at same speed as passengers. Rates per mile—horses, 3d. each; carriages, 6d.; cattle, 2d.; sheep, 1-5d.; pigs, 7-16d. Gross receipts for conveyance—horses, 53*l.* 10s. 3d.; carriages, 23*l.* 19s. 3d.; excess of passengers' luggage, 83*l.* 19s. 3d.; cattle, 57*l.* 1s. 11d.; sheep, 72*l.* 11s.; pigs, 119*l.* 2s. 11d; goods—first class, 5,638*l.* 5s. 8d.; second do. 486*l.* 1s. 6d.

9. ST. HELENS AND RUNCORN GAP RAILWAY.

One carriage, 2,600 trains; average speed 10 miles per hour; number of passengers, 15,559; number of miles travelled, 38,656; average fare per mile, 4¾d. Gross receipts from passengers, 624*l.* 13s. 3d. Receipts for conveyance of 97,962 tons of coals shipped at Deck, 4,898*l.*; charge per ton per mile, 1¼d. Receipts for conveyance of 28,233 tons of other goods of all kinds at various charges, 1,062*l.* 11s. 7d. Speed same as that of passengers.

10. GRAND JUNCTION RAILWAY.

First class trains, 1,708; mixed ditto, second and third class, 2. Average speed in the distance run by first class trains in 4.25 hours; by second ditto in 5.22 hours. Number of passengers—first class, 165,050; second ditto, 71,884; third ditto, 16,750; total mileage as returned to stamp-office, equal to 15,111,663 passengers carried one mile each. Gross receipts from passengers—first class, 121,941*l.* 18s. 7d.; second ditto, 28,694*l.* 14s. 8d.; third ditto, 7,934*l.* 13s. 4d. Receipts for conveyance of horses, 3,030*l.*; of carriages, 4,891*l.* 7s.; cattle and sheep nil; of pigs (23,200), 3,008*l.* 10s. 11d.; of goods generally (of which 27,024 tons were carried by the Company, and 5,375 tons by other carriers), 40,486*l.* 18s. 4d, Toll on coal, &c. carried by persons using their own engines and waggons, at ¾d. per ton per mile on coals, 765*l.* 14s. 2d. No return of fares or of charges for goods.

11. LIVERPOOL AND MANCHESTER RAILWAY.

Number of first class trains 5 per day, equal to 1,765 in six months; second class same as first. Average speed—first class, 1 hour 20 minutes for 30½ miles including stoppages; second ditto, 1 hour 50 minutes for the same distance. Number of passengers—first class, 186,390; second ditto, 208,321. Total number of miles travelled, 8,406,115. Average fares per mile—mail passengers, 2.56d.; first class, 2.32; second ditto, 1.77d. Gross receipts from passengers—first class 40,932*l.* 13s. 6d., second ditto, 29.502*l.* 3s. 4d. Receipts for the conveyance of 897 horses, 401*l.* 8s. 1d.; for ditto of 650 carriages, 482*l.* 19s.; for 66 waggon loads of cattle, and 273 ditto of sheep, 362*l.*; ditto, for 33,545 pigs, 1,833*l.*; ditto, for 88,843 tons of goods carried in 1,622 journeys of 30 miles each, in about 2 hours and 25 minutes each journey, 46,275*l.*; and for 46,809 tons of coals to Liverpool and Manchester from various parts of the line, 2,709*l.* No return of the charges on goods.

12. LONDON AND CROYDON RAILWAY.

All mixed trains. Number of trains, 4,769. Average speed 30 miles per hour. Number of passengers, 256,300. Total mileage of passengers, 1,501,040—no return of fares; gross receipts from passengers, 16,741*l.* 1s. 9½d. Nothing received for carriage of cattle, sheep, or pigs. Receipts for conveying 9,286½ tons of goods of various kinds at various charges, from iron at 5s. per ton to coals at 1s. 9d. per ton, 1,897*l.* 15s. 9d.; and for ditto, 90 qrs. of oats, at 8d. per qr., 3*l.*

13. PAISLEY AND RENFREW RAILWAY.

One train; first and second class carriages. Average speed 20 miles per hour. Number of passengers—first class, 4,686; second ditto, 70,650. Total mileage, 117*l.* 14s. 3d.; total number of miles travelled, 12,816. Gross receipts from passengers—first class, 117*l.* 3s.; second ditto, 1,177*l.* 10s. No cattle, sheep, or pigs carried. Receipts from carriage of 2,373 tons of grain at 1s. 4d. per ton, 941 puncheons at 1s. 2d. each and 100 hogsheads at 10d. each, 210½ tons of pig iron at 11d. per ton, and 447 tons of manufactured goods at 5s. per ton, 377*l.* 8s. 5d.

14. DUBLIN AND KINGSTOWN RAILWAY.

Mixed trains. Number of trains 11,203. Average speed 24 miles per hour. Number of passengers—first class, 17,857; second ditto. 358,261; third ditto, 407,729. Total number of miles travelled, 67,218. Average fare per mile—first class, 2d.; second, 1¾d.; third, 1d. Gross receipts from passengers, 20,955*l.* 5s. 11d. No goods carried. Receipts from parcels and luggage, 253*l.* 3s. 1d.

15. LONDON AND BIRMINGHAM RAILWAY.

Description and number of trains. Night mails—first and second class 184, first class 342, mixed first and second class 1,590, third class 76. Average speed in miles per hour, exclusive and inclusive of stoppages, night mails 25 and 20½, first class 25 and 22½, mixed 25 and 18¾, third class 20 and 13½. Number of passengers and total mileage—night mail, first class 28,670 passengers 2,975,840 miles, ditto second class 11,754½ passengers 1,009,295 miles, first class trains 134,509 passengers 9,691,884 miles, mixed trains, including first and second class, 205,923 passengers 11.236,172 miles, soldiers, &c. 5,977½ passengers 626,857 miles, third class trains 7,853 passengers 391,115 miles. Total number of passengers 394,688 ditto of miles travelled 25,931,163. Fares in pence per mile—night mail first class 3.482, ditto second class 2,679, first class train 3,214, mixed train 2,143, soldiers, &c. 1,125, third class train 1.25. Gross receipts from passengers—night mail, first class 43.062*l.* 5s. 3d., ditto second class 11,236*l.* 19s. 10d., first class train 129,453*l.* 2s. 5d., mixed train 100,068*l.* 17s. 0d., soldiers, &c. 2,938*l.* 7s. 10d., third class trains, 2,438*l.* 1s. 10d.; total receipts from passengers 289,197*l.* 14s. 2d. Receipts for carriage by the Company of 2,316 horses at 7.895d. per mile 6,815*l.* 16s., for ditto 2,912 carriages at 9.556d. per mile 10,351*l.* 5s., for ditto of 2,349 dogs at 0.509d. mile 358*l.* 9s. Receipts for carriage by other carriers of 7.309 cattle at 1.489d. per mile 2,821*l.* 8s., for ditto of 39,069 sheep at 0.289d. per mile 2,533*l.* 17s., for ditto of 1,568 pigs at 0.338d. per mile 764 8s., and for 50,665 tons of goods of various classes by 816 trains, at 3.009d. per ton per mile, 56,070*l.* 10s. 2d. Total receipts from horses, carriages, live stock and merchandise, 79,027*l.* 13s. 2d. Cost of locomotive power per mile per passenger 0.25d., per horse 2d., per carriage 3d., per cwt. of luggage 0.1d., per ton of goods 0.751.

16. LLANELLY AND LLANDILLO RAILWAY.

All third class trains. Number of trains 213. Average speed 8 miles per hour. Number of passengers 1,261, total mileage 12,148, average fare per mile 0.8d. Gross receipt from passengers 41*l.* 2s. d. No horses, carriage, passengers' luggage, cattle, sheep, or pigs conveyed. Receipt for conveyance of 143 tons of parcels, &c. 7*l.* 11s. 7d., for ditto of 5,593 tons, 15 cwt. of coals, stones, &c. carried by the Company, and 2,079 tons by other carriers 717*l.* 3s. 2d., ditto, for 2,471 tons of culm 276*l.* 0s. 9d. Total receipts for conveyance of goods and merchandise 1,000*l.* 15s. 6d.

17. LEICESTER AND SWANNINGTON RAILWAY.

Passengers conveyed in the same trains as coal, stones, and merchandise. Number of trains 468, Average speed 15 miles per hour. Number of passengers—first class 771, second class ditto 11,958. Number of miles travelled—first class 7,276, second ditto 115,099½. Average fare per mile—first class 1.7664, second ditto 1.3332. Gross receipts from passengers—first class 53*l.* 11s., second ditto 523*l.*11s.11d.; total 577*l.* 2s. 11. Number of trains for merchandise 1,176. Receipts for conveying 88,139 tons 7 cwt. of coals, lime, &c. at 2d. per ton per mile 9,808*l.* 3s. 7d., ditto for moving 3,090 tons 16¼ cwt. of ditto up and down the incline at 4d. per ton 51*l.* 11s. 9d., for ditto of 4,216 tons 1 cwt. of road stone, &c. at 1¾d. per ton per mile 105*l.* 8s. 1d., for ditto 1,293 tons 8 cwt. of building sand, &c. at 2½d. per ton per mile 37*l.* 6s. 7d., for ditto 862 tons of goods of various kinds at charges from 2d. to 4d. per ton per mile 218*l.* 11s. 11d. Total receipts for conveyance of goods 10,221*l.* 1s. 11d.

18. BRANDLING JUNCTION RAILWAY.

Trains mixed. Number of trains 6,864. Average speed 20 miles per hour. Number of passengers—first class 29,367, second ditto 319,280. Total mileage 2,743,690. Average fare per mile (not distinguished in this return for the classes) 1¾d. Gross recei[illegible]

28. EASTERN COUNTIES' RAILWAY.

Each train consists of first, second, and third class carriages. Number of trains 2,944. Average speed 24 miles 46 chains per hour. Number of passengers, first class 14,600, second ditto 86,615, third ditto 89,311. Total mileage, first class 175,789, second ditto 585,100, third ditto 748,797. Total number of miles travelled 1,509,686. Average fares per mile—first class 3.20, second ditto 2.17, third ditto 1.66. Gross receipts from passengers—first class 2,347*l.* 13*s.*, second ditto 5,304*l.* 11*s.* 8*d.*, third ditto 5,203*l.* 16*s.* 6*d.* Total 12,856*l.* 1*s.* 2*d.* Since February 1, 1841, the fares have been reduced as follows—first class 2.64, second ditto 1.84, third ditto1.35 each per mile. Receipts for conveyance of 143 horses over 2,574 miles at 5*d.* per mile 53*l.* 12*s.*, for ditto of 608 carriages over 10,944 miles at 4.66*d.* per mile 222*l.* 16*s.*, for ditto of 70 cattle over 770 miles at 2.42*d.* per mile 7*l.* 15*s.* 9*d.*, for ditto of 48 sheep over 528 miles at 0.54*d.* per mile 1*l.* 4*s.*, and for 2,540 pigs over 27,940 miles at 0.36*d.* per mile 42*l.* 6*s.* 8*d.* No return of goods conveyed.

29. DURHAM AND SUNDERLAND RAILWAY.

First and second class in the same carriages. Number of trains 2,824. Average speed 14 miles per hour. Number of passengers 54,288. Number of miles travelled 401,718. Worked by fixed engines. Toll or fare 1¼*d.* per mile. Gross receipts from passengers 2,554*l.* 0*s.* 10*d.* No horses, carriages, cattle, sheep or pigs conveyed. Receipts for conveyance of passengers' luggage 41*l.* 3*s.* 5*d.*, for ditto of 194,263 tons of coals at 1 1-16*d.* per ton per mile 10,413*l.* 9*s.* 4*d.*, for ditto of 7,364 tons of other merchandise, at charges varying from 3*d.* per ton per mile on timber, deals, iron, &c. to 6*d.* per ton per mile on groceries, &c., 80*l.* 12*s.* 2*d.*

30. LEITH BRANCH OF THE EDINBURGH AND DALKEITH RAILWAY.

Carriages all alike: more roomy than stage-coaches, 32 passengers in each. Number of trains 2,128. Average speed about 9 miles per hour. Number of passengers 38,184½. Total mileage 127,821. Toll per mile 0.710*d.*, horse power per ditto 0.345*d.* Total fare per mile 1 056*d.* Gross receipt from passengers 56*l.* 4*d.* 2½*d.* No demand for conveyance of horses, carriages, cattle, sheep, or pigs. No charge for passengers' extra luggage. Total receipts for conveyance of 17,200 tons of goods over 68,315 miles at 2.497*d.* per ton per mile, 66*l.* 9*s.* 5½*d.*

31. ARDROSSAN RAILWAY.

Return from its opening on the 17th of August to 31st December, 1840. Number of first class trains 584, ditto second ditto not given. Average speed of first class 25 miles per hour, that of second ditto not given. Number of passengers—first class 3,963½, second ditto 13,514. Total mileage—first class 22,254, second ditto 63,112. Total number of miles travelled 85,366. Average fare per mile—first class 2*d.*, second 1½*d.* Gross receipts from passengers 58*l.* 1*s.* 11*d.* No horses or carriages have yet been conveyed along this railway, and no charge has hitherto been made for passengers' luggage. From December 23, the date of opening for coals, to 31st December 1840, there were conveyed 834 tons of coals by 18 trains, over 4½ miles, at 6 miles per hour, under a charge for toll of 2*d.*, and for locomotive power 13·19*d.* per ton per mile. Total charge per ton per mile 2.13·19*d.* Receipts from this source 4*l.* 0*s.* 1½*d.*

32. MIDLAND COUNTIES' RAILWAY.

All mixed trains. Seven trains per day each way, north and south, 6 ditto each way east and west. Average speed about 28 miles per hour. Number of passengers—first class 45,709½, second ditto 129,639, third ditto 69,062½. Total number of miles travelled by trains 172,776. Average fare per mile—first class toll 1*d.* per mile, locomotive power 1*d.* per mile; total 2*d.* per mile; second class toll 1*d.*, locomotive power 1*d.*; total 2*d.* per mile (?); third class toll 1*d.*, locomotive power 1*d.*; total 2*d.* per mile (???). Total receipts from passengers 33,214*l.* 15*s.* 2½*d.* Receipts for conveyance of 996 horses at a toll of 2*d.* per mile, and cost of locomotive power of 5*d.* per mile, and for ditto of 795 carriages at a toll of 3*d.*, and cost of locomotive power of 7*d.* per mile, 1,832*l.* 10*s.* Receipts for carriage of 31 (suppose carriage loads of) cattle, sheep, and pigs, from 15th to 31st December, 26*l.* 2*s.* 10*d.* Receipts for conveyance of 582 tons 8 cwt. of goods, at a toll of 1*d.*, and cost of locomotive power ½*d.*, per ton per mile, and for 12,016 tons 11 cwt. at a toll of 2*d.*, and cost of locomotive power of ½*d.* per ton per mile, 4,185*l.* 10*s.*

OLDHAM BRANCH OF THE MANCHESTER AND LEEDS RAILWAY.—The Oldham station of this important line of railway, will be erected betwixt Manchester-street and Lyon Mill, Oldham; the entire line of its course from Lyon Mill-road to its junction with the Manchester and Leeds Railway, near Lane-end, in Chadderton, has been marked out. The inhabitants of Oldham are extremely anxious that the Directors should cause the trains to pass betwixt Oldham and Manchester without stopping; if they should do this all competition with the coaches must cease.—*Manchester Courier.*

NORTHERN AND EASTERN COUNTIES' RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL Meeting of this Company was held on Wednesday, at the London Tavern, to consider of the forfeiture of shares, and the enactment of bye-laws.—WILLIAM CRAWSHAW, Esq., in the Chair. The Secretary having read the advertisement summoning the meeting,

The CHAIRMAN said, the following was the Resolution which had been drawn up by the Directors on the first of the subjects they were summoned to consider, and which was now to be submitted to the shareholders:—

"Whereas, by a resolution of the Board of Directors, made on the 11th March, 1841, reciting that certain calls made upon such shares as in the said resolution were recited, had not been paid, it was resolved that such shares should be forfeited, on notice given of their forfeiture to the proprietors of said shares; and whereas such notice has been given of such resolution to the shareholders in the manner required by the Act of Parliament; and whereas upon certain of the said shares calls have been paid, but upon none of those now to be specified, viz., from No. 701 to No. 750, and from No. 6,154 to No. 6,173, being in all 70 shares—it is proposed that the declaration of forfeiture so made by said Directors be, and the same is, hereby confirmed, so far as regards the last recited set of shares."

This resolution was proposed by the Board to the proprietors, and if any gentlemen would move and second it, it would be put. He was happy to be able to add that these were all the shares on which forfeiture had been incurred; and on these, he had no doubt, to-morrow a cheque would be received.

A PROPRIETOR—But they are forfeited.

The CHAIRMAN—Yes; if sold, however, instantly, we could only take to ourselves the calls due and should have to pay the rest to the party. Therefore should, as I expect, a cheque be sent for the amount due, that will save the trouble of selling.

A PROPRIETOR—How much is paid on these shares?

The CHAIRMAN—35*l.* on each.

The PROPRIETOR—Held by one or more persons?

The CHAIRMAN—By one. It is not usual to mention names. (No, no.) I have not the least doubt the calls will be paid to-morrow morning. It has been an oversight. (A laugh.)

A DIRECTOR—And if not paid, they will be sold as usual.

The CHAIRMAN—Certainly.

The resolution was put and carried unanimously.

Mr. SEWARD—Does not the Chairman think it necessary to take a power from the meeting to dispose of these shares as the Directors may deem proper?

The CHAIRMAN—I think not. That Mr. Maynard, the Solicitor, will tell us.

Mr. SEWARD—I think it is customary.

Mr. MAYNARD on referring to the Act, said, "I think it is necessary, the words being 'And the said Directors shall, by order to be made at the same or at any subsequent meeting, have power to sell or dispose of the same,' &c.; so the power can be given now or at any future meeting."

The CHAIRMAN—I shall be glad to receive the directions of the meeting as to the mode of disposing of the shares.

Mr. SEWARD—No. That we will leave to you; but as it seems to be necessary, I shall be happy to move—that power be given to the Directors to dispose of the shares as they may think fit.

This addition to the resolution was seconded, and then carried unanimously.

The CHAIRMAN then read a list of bye-laws, which he said had been carefully framed on the model of those existing in other Companies, and were he believed necessary, and no more than necessary. Still he would be happy to have any suggestions from the proprietary.

One or two proprietors intimated that it would be well to leave the matter wholely to the Directors.

The bye-laws were then put, and confirmed without a dissentient voice.

The CHAIRMAN—Gentlemen, this closes the stated business of the day. The Directors will now feel happy to hear any observations, or answer any inquiries, as to the present state of the Company's works, or their future prospects.

A PROPRIETOR—How does the traffic get on—if it is not irregular to ask?

The CHAIRMAN—I dare say we all read the *Railway Times*. (Hear.) Still I shall be happy to give you an average. From September to June, 454*l.* per week. It varies from 967*l.* to some very unfortunate weeks; as for instance during the flood, when the receipts were only 112*l.* in one week. Taking the average, however, from February to June, it is 584*l.* a week, and it is still increasing.

A PROPRIETOR—Now, Sir, can you tell us the average expense of that traffic?

The CHAIRMAN—Anxious to afford all the information in my power, I will give you a rough estimate of my own, which, however, you must not take as officially accurate, seeing that though the groundwork I know to be good, the detailed figures are necessarily somewhat guess work. It is about 600*l.* a week. Of that we pay about 200*l.* to the Eastern Counties' Railway Company, leaving 400*l.* for our own traffic expenses. Now these expenses do not, I am persuaded, exceed 50 per cent. on the 400*l.* That is more, I am sure, than we are warranted in calculating upon; but at that estimate there is a sum of 200*l.* per week profit.

A SHAREHOLDER—Does that estimate of expenditure include the maintenance of way?

The CHAIRMAN—No; it should have been borne by the contractors; but I believe it will be included in the expenditure I have estimated after the first year—for few Companies reach an average expenditure of 50 per cent. of the receipts. In our case, too, the charge for maintenance of way will be peculiarly small as we are on level ground entirely. The charge, however, for the first year ought to have been defrayed by the contractors. It is virtually the same thing to be sure, seeing that our work is done cheaper in consideration of the charge not being included in the contract price. In the first year, therefore, it ought clearly to be carried to capital. Afterwards it will be placed to current expenditure. Of this, however, the shareholders will have full opportunity for consideration. Now it strikes me that I shall be correct in saying that by August there will be 5,200*l.* profit in hand, which on 4,500 shares, will be 1*l.* a share to be divided at our next half-yearly meeting.

A SHAREHOLDER—A good beginning. Does the estimate of expenditure include the interest on the borrowed money?

The CHAIRMAN—No. A good deal was borrowed for works beyond where we now are running; it ought not, therefore, plainly, to be placed against our present traffic?

The SHAREHOLDER—But it will affect our dividend.

The CHAIRMAN—No; whatever is borrowed for work not within the portion we are running should go to capital clearly.

A DIRECTOR—The fact is, we could, if we had chosen to wait the course of calls on the shareholders, have got the money without interest; but we wanted it quicker.

A SHAREHOLDER—How does the road progress? Where are we now?

The CHAIRMAN—Why, we have had a dispute with our contractors—responsible and respectable men—but still we considered they had behaved improperly, and the result would have been great delay in the opening of the line had we not decisively availed ourselves of the power we possessed of entering upon the stock, &c., of the contractors, and putting the work to be completed into other hands. We have, by the able management of our solicitors, been carried through the business perfectly safe and correct as to the law—which now our contractors, I believe, are satisfied of: and I doubt not, it will soon be satisfactorily arranged. From all we are able to judge by, I believe there is no doubt that at all events in the first week of August—perhaps sooner—we shall open to Harlow: and in September, to four miles further.

A PROPRIETOR—I believe the contractors professed to raise some difficulty about land?

The CHAIRMAN—You may rely upon it, Sir, they were wrong, and the Directors right.

The PROPRIETOR—I have not the least doubt of it: the best proof of it is, that the contractors now employed are going on all right.

A PROPRIETOR—How does the question of the dividing the shares stand?

The CHAIRMAN—There will be a new register soon: then it can be done very easily. Mr. Maynard will tell us, if it is compulsory on the shareholders, or voluntary only, to change their 100*l.* shares into 50*l.*

Mr. MAYNARD—It is compulsory. The Act runs thus: "be it enacted, that the said sum of 720,000*l.*," (the sum to which the capital had previously been reduced), "be divided into 14,400 shares of 50*l.* each; and such shares of 50*l.* shall as far as possible be subject to the same provisions as the former shares of 100*l.*, and every proprietor shall be deemed the holder of two shares of 50*l.* in respect of every share of 100*l.* formerly," &c.

A PROPRIETOR—What is the object of dividing the shares?

The SOLICITOR—There were reasons for the measure: it tended to make the shares more negotiable. Recollect, your capital being reduced one half, it was but reasonable proportionably to reduce the amount of each share.

The CHAIRMAN said, he could not help telling the meeting they could open to Stortford in January, if the Directors could get another 10*l.* per share over and above the calls they were entitled to make up to January. Anything additional could not be compulsory, and must be voluntarily offered by the shareholders.

A PROPRIETOR—Really this is a consideration of vast moment. It is of such great importance that we should open to Stortford as quickly as possible. (Hear, hear.) I should think it would be the general feeling that a voluntary contribution of another call would be exceedingly proper.

The CHAIRMAN—Beyond all doubt, I should think. One large shareholder has offered this call of 10*l.* voluntarily, and over that a loan of 1,000*l.* in order to get on towards Cambridge.

Mr. SEWARD—May I ask whether we are able to anticipate with certainty the possession of the Cambridge traffic, and at what point?

The CHAIRMAN—There will be 10 coaches on at Harlow in August, if not before.

A PROPRIETOR—Suppose you offered 6 per cent. on a voluntary advance of calls?

The CHAIRMAN—I may as well state that the last call of 5*l.*, when paid up, will enable us to borrow on debentures; but not in this year, as perhaps the whole of that call will not be paid within that period.

A PROPRIETOR—Let it be borne in mind that July and August are two of the best months for traffic, and I doubt not that by our half yearly meeting every difficulty will have vanished. I am certain we shall have then 1,200*l.* a week from the traffic.

Another SHAREHOLDER—Let us make the Directors a present of the dividend.

The CHAIRMAN—It would help us.

A PROPRIETOR—It had better be devoted to the works.

The CHAIRMAN—I am decidedly of opinion that whatever is *bona fide* profit should be divided.

A PROPRIETOR—How stands the Hertford and Ware Bill?

Mr. MAYNARD—Waiting the Royal Assent.

On the motion of Mr. SEWARD a vote of thanks was passed to the Chairman unanimously for his urbanity and frankness in giving every possible information.

The Chairman briefly replied, and the meeting separated.

The Committee of the Birmingham Mechanics' Institution have made arrangements for the conveyance of their members to Cheltenham and Gloucester on the 29th instant, by the railway; on which occasion there will be a public breakfast in the gardens at Pittville, Cheltenham.—*Wor. Jour.*

THE LONGEST RAILWAY IN THE WORLD.

[From the Chevalier De Gerstner's Letters in the *Franklin Journal*]

THE railroad which may be regarded as the longest in the world, extends from Boston, in Massachusetts, to Greensboro', in Georgia, and is composed of the following sections :—

From	To	Communication.	Distance in miles.	Weight of rails.	No. of locomotives.	Cost of construction. Whole road.	Cost of construction. Per mile.
						Dollars.	Dollars.
Boston	Providence	railroad.	42	55 lbs.	11	1,600,000	38,095
Providence	Stonington	do.	47½	58 „	6	2,500,000	52,632
Stonington	New York	steamboat.	130				
New York	New Brunswick	railroad.	31	38 „	7	1,752,200	56,522
New Brunswick ..	Trenton	do.	27½	41 „	4	497,800	18,102
Trenton	Philadelphia	do.	30	13 „	4	400,000	13,333
Philadelphia	Wilmington, Del....	do.	28		( )	500,000	17,857
Wilmington.....	Havre de Grace	do.	35	35 „	14	800,000	22,857
Havre de Grace ..	Baltimore.....	do.	36	40 „	( )	950,000	36,390
Baltimore.....	Washington.....	do.	39	10 „	4	2,040,330	52,316
Washington.....	Aquia Creek	steamboat.	60				
Aquia Creek	Fredericksburg	stage.	13				
Fredericksburg ...	Richmond	railroad.	61½	10½ „	12	1,200,000	19,512
Richmond	Petersburg	do.	22½	9½ „	5	700,000	31,111
Petersburg	Weldon	do.	60	9½ „	12	766,267	12,771
Weldon	Wilmington, N.C. ..	do.	160	12 „	10	1,360,000	8,500
Wilmington.....	Charleston	steamboat.	160				
Charleston	Augusta	railroad.	136	25½ „	27	2,000,000	14,706
Augusta	Greensboro'.....	do.	84	17 „	10	1,176,000	14,000
			1203				

On this line of 1,203 miles in length, therefore, 853 miles are travelled upon railroads, and 350 miles in steam-boats. The whole distance is performed in 5 days, or 120 hours, or at an average 10 miles per hour. This includes all stoppages for meals, and besides 10 hours in New York. This is a considerable speed for such a long voyage, on which 5 nights are spent, and if the railroads did not belong to 13 different Companies, whereby much time is wasted in passing the baggage from one train to another, a speed of 15 miles per hour, including stoppages, could be attained.

The Americans, however, are not satisfied with the above railroad and steam-boat connection of of 1,203 miles, and are establishing an opposition line between Stonington and Weldon, consisting of the following parts :

From	To	Communication.	Distance.	Weight of rails per yard.	No. of locomotives.	Cost of Railroad. Total.	Cost of Railroad. Per mile.
			Miles.			Dollars.	Dollars.
Stonington	Greenport	steamboat	25				
Greenport	New York	railroad	94	21 lbs.	10	2,033,850	21,636
New York	Amboy	steamboat	25				
Amboy	Philadelphia	railroad	61	41 „	12	2,101,500	34,450
Philadelphia	Elkton	do.	44			885,712	19,675
Elkton	Somersetcove.....	do.	118	9½ „	8	1,024,378	8,681
Somersetcove	Portsmouth	steamboat	85				
Portsmouth	Weldon	railroad	78	9½ „	7	850,000	10,897

The railroad from Greenport to New York is not yet completed, therefore the steam-boats now go direct to New York; the railroad from Elkton to Somersetcove is also yet under construction.

If this line be compared with the above described between Stonington and Weldon, it appears that the first consists in 383½ miles of railroads and 198 miles of steam navigation, and the second in 395 miles of railroads and 155 miles of steam navigation.

The above described line of railroad and steamboat communication of 1,283 miles in length, is now being continued at both ends. From Boston to Portland, in Maine, a railroad of 100 miles in length is under construction, and will be completed in the course of two years. From Greensboro' to Montgomery, in Alabama, 210 miles, a railroad is also under construction, and may be completed in the course of three years. From Montgomery, steam-boats go upon the Alabama river to Mobile, and others from there to New Orleans. In the course of three years, therefore, the journey from Portland to New Orleans will be made in eight days, while six years ago the journey by land took 40 days. The steam navigation along the sea coast has been nearly given up, in consequence of the dangerous navigation round the Capes. New Orleans is situated 13¾ degrees south, and 19¼ degrees west, of Portland, and the distance in a straight line is over 1,400 miles. The whole line of communication will consist of 1,195 miles of railroads and 884 miles of steam navigation, making together 2,080 miles, which is certainly the most gigantic internal communication of this kind in the whole world, and will remain so for a long time to come.

VISIT BY RAILWAY TO EDEN GLEN.

(From the *Yorkshireman.*)

ONE of those rare but pleasing unions so necessary to ensure the genuine pleasure of excursions, was the happy lot of those who, on Monday, wisely united in a visit to Castle Eden Dean. The day was delightful. The spot chosen combined some of the most rich, magnificent, and enchanting scenes in the kingdom, and the Company appeared resolved to make themselves happy. To enhance the gratification, the President of the Mechanics' Institution, R. Rayson, Esq., invited Professor Johnson, of Durham, to accompany the members of the Institution there, to which he kindly consented. The Directors of the Company [Great North of England] very generously agreed to take the company at one-third of the usual charges. The company had the choice of two trains—one about seven, and the other at half-past nine o'clock in the morning. About twelve o'clock the company arrived at the Dean, and after wandering through a part of this beautiful glen, a number of them encamped at the top of a bank comfortably shaded by the trees. The travelling tent used by the much-lamented missionary Williams, (who, it will be remembered, was cruelly murdered in one of the islands of the South Sea) was taken to Dean, and on this elevation erected, or rather suspended from the trees, for those of the Company who wished to avail themselves of its protection and shade. The repast being over, the company resumed their rambles, through the grotto, the "Garden of Eden," "Guaness Pool," &c., whilst others pursued their course to the sea shore, to view the bold and rocky opening of Dean to the broad and shining expanse of the German Ocean. On returning, the company assembled at a spot selected by the president and the professor, on the dry bed of the rivulet, overhung by an immense cliff, and opposite a perpendicular rock, richly covered with ivy and shrubs, at the base of which a shaded bank formed an amphitheatre. Here the professor delivered to the company arranged about him a lecture on the geological constructions of the rocks around them, selecting the most pleasing and popular features of the science for the notice of his romantically grouped audience. The professor's knowledge was here poured forth in genuine eloquence, directing the attention of the Company to the various strata of the rocks around them, from the granite to the alluvial soil; and it may be said in reality the *rocks echoed back the truth* of his statements. The scene would furnish ample and rich materials for the poet and the painter. After the lecture, the Company directed their way towards the railway station; several groups visited the glen of the "Gunner's Pool," a deep cut in the rock through which the waters rush in their entrance to the Dean, the ascent to which is attended with no little scrambling up the rock and some danger. After crossing the Devil's Bridge, the party soon reached the outer skirts of the Dean. The day will be long remembered by all who were happy enough to unite in the excursion. The only regret was, that the members of the institution did not more generally avail themselves of this pleasing and instructive visit to the Dean; it may probably direct attention to this favoured spot, and tempt others to avail themselves of its beauties, with this proviso, that leave be asked of the owner of the property, R. Burdon, Esq., who, as in the case of the Stockton Institute, will most probably not have to be asked in vain.

ACCELERATION OF THE IRISH MAILS.

AT the meeting of the Town Council of Liverpool the MAYOR read a petition from the Liverpool Guardian Society, in which they stated that the circumstance of Liverpool having been the Irish mail-packet station had been of great value to the town; that the sum of 100,000*l.* by this means had been annually expended in the borough; that the distance, which was alleged to be 15 miles shorter from the metropolis to Birkenhead than it was from the metropolis to Liverpool, was in reality only 7½ miles shorter; that it only amounted to a saving of a quarter of an hour in point of time; that if it were intended to have another mail-packet, besides the one from Birkenhead, to sail from Liverpool, an expense without any benefit would be incurred; and that the mails could be accelerated by a quarter of an hour, if that were considered of any advantage, on the present line. The petition was signed by "George Walker, President," and 13 of the officers of the Guardian Society, and it concluded by praying the council to resist the attempt.

The DEPUTY TOWN-CLERK read a letter from Mr. Deane, of Liverpool, in which that gentleman stated that he was concerned for the hotel and shopkeepers of the town, who had expressed themselves adverse to the proposed removal of the station to Birkenhead; that though the change was about to be made in order, as it was said, to obtain a speedier communication between the two capitals, the difference in point of length was only seven or eight miles, and in point of time about a quarter of an

Digitized by Google

hour; and that in respect of convenience nothing would be gained by the change. Mr. Deane concluded by saying, it was to be hoped that the corporation would take up the subject and oppose the proposed scheme. A letter from Lord Sandon to Mr. Deane was next read, in which his Lordship gave it as his opinion that he saw no means of moving in the matter unless the corporation, charged as they were with the interests of the whole community, took it up, and urged the Government to state the reasons by which they had been induced to make the change.

Mr. Case said that according to a return, moved for by Mr. Stanley, it appeared that the Irish mail packets had been 90 days too late in their arrival in Dublin, in the year 1840, to forward the letters through the provinces—and that up to the 14th of February, 1841, they were 26 days too late in the Irish metropolis to effect the like purpose. He apprehended that those detentions had caused the alteration to be effected. There were, he remarked, two Irish mail packets sailing from Liverpool in the day; one was in the morning and the other in the evening. The former, and the former only, it was intended to alter to Birkenhead. The evening mail would go as usual from Liverpool.

Mr. Woolright suggested the propriety of having a strong memorial sent from the council in opposition to the change.

Mr. Aikin thought it was in vain for the council to be applying for an increase of mail packets unless all the facilities of landing were given to the public of which that port was capable. The difficulty of landing in Liverpool was a great cause of complaint, and until that evil had been removed passengers would be sent elsewhere. A great many of the evils were capable of being removed without much trouble or expense. Almost all the packets congregated, at present, at one spot; by reason of which passengers had to pass through two or three packets before they could reach the quay, whereas, if a distribution took place, greater facilities to landing would be afforded. Attached to the present slips stages for cargoes might be constructed, similar to the one for foot passengers, by which they could be landed at low water. Under those circumstances he begged to move—

That a Committee be appointed to take into consideration the best means of facilitating the landing and embarking of passengers at Liverpool, and to report to the council thereon, with instructions to take immediate measures to secure the continuance of the passing of the Dublin mails through Liverpool.

Mr. Earle seconded the motion.

Mr. Evans thought there could be but one opinion on the matter. With regard to the conduct of the Government in reference to Liverpool, he thought there was great reason to complain. In the present instance, the interests of Liverpool had been given over to the nobles and squires of Cheshire. Everything great in railways had originated in Liverpool; and therefore he thought that mere decorum ought to have induced those in power to make the people of the borough acquainted beforehand with their intentions, and to ask them whether they could make out a case that would obviate supposed necessities.

Mr. Birkett presented a petition from a large number of the publicans of the town, which had been got up in the morning of that day, and in which they alleged that the contemplated change would cause serious injury.

Mr. Aikin expressed his conviction that the Government could facilitate the trains along the present line by two hours, if they were so inclined. There was an unaccountable delay of three quarters of an hour at Birmingham, for instance, which might be availed of.

Mr. Joseph Hornby said, as connected with the railways, he had no hesitation in saying there would be no difficulty whatever in carrying the mails in two hours less time. It had been considered exceedingly desirable, and had frequently been discussed by the Board of Directors, who would be glad to carry it into effect immediately.

Mr. Sheil was anxious for inquiry to be instituted before anything decisive were resolved upon. The council should recollect that a quarter of an hour gained by the despatch of the mail from Birkenhead might be of great importance, the whole kingdom of Ireland being involved in the question.

The Mayor informed the council that arrangements had been made whereby the letters for Ireland would be sorted without going to the Post-office, and that this system, by which considerable dispatch would be gained, would come into operation either in the present or the next week.

Mr. Sheil expressed himself unwilling to divide the Council on the subject, but thought it extraordinary that the members should, on the mere idea of some trifling injury to Liverpool, commit themselves to a proposition without having first appointed persons to make suitable inquiry.

Mr. Aikin's resolution was then passed unanimously, and the following Committee was appointed for carrying it into effect:—Messrs. Woolright, Bright, Houghton, Henry Lawrence, Evans, Benn, and Aikin.

RAILWAY TRAVELLING ON SUNDAY.

To the Shareholders of the Glasgow and Ayr Railway.

Gentlemen,—I wish to call your attention to a subject connected with this railway which appears to be deserving of your serious consideration. You are probably all aware that the Glasgow and Ayr Railway trains do not travel on Sunday—that various communings took place between the Directors and the Post-office authorities on the subject of carrying the mails—that the offer by the Directors at first included Sunday, or, at least, did not except it—that latterly that offer was withdrawn, and another substituted, excluding the conveyance of the mail on Sunday—and that the result of the whole is, that there is upon that day no means of communication between Glasgow and Ayrshire.

Are you satisfied either with this result, or with the conduct of the Directors in this matter? If you are as a body (which I believe you are not), I confess I cannot agree with you.

I am aware that many respectable individuals, including the clergy, generally object to Sunday travelling, as being a desecration of that day. This objection has been wonderfully overrated, and were the trains once in operation for a few Sundays, I believe these worthy individuals would themselves admit that their fears had been altogether groundless. Trains ought to start at so early an hour as to arrive at Ayr and Glasgow before 11 o'clock. The accommodation this would give even to the church-going part of the community would be of much advantage. The line of the railway is interspersed with villages at distances of about three or four miles from each other, and the trains would afford a ready and expeditious mode of conveying parties to hear the clergyman from whose ministrations they derived most benefit; and the next train would not start till after the close of the afternoon service, affording them the same easy mode of returning. Others, no doubt, would avail themselves of the opportunity to travel from Glasgow to Ayr, or from Ayr to Glasgow, for the purpose of healthful, and I will say innocent, recreation; but who are the parties, generally speaking, who would do this? You would have, in the first place, gentlemen visiting their families; secondly, hard-worked clerks and tradesmen—many of them, no doubt, sprung from Ayrshire originally, and having no other day upon which they can visit their friends and relatives; and, lastly, the worn-out mechanic, who, during the preceding six days, had been inhaling the noxious vapours of some pestilential factory. But do you think that the persons of this last class at present devote the Sabbath to attending the city churches? By no means. Look at the whiskey-shops—you will find them crowded; look at the Green and the river side—you will see them wandering in thousands, engaged in the manly diversions of dog-fighting and other noble amusements; and is it for the sake of preserving such habits that you would refuse to the labouring mechanic the gratification of a Sunday ride in a railway carriage?

So much for the advantages or disadvantages of railway travelling on Sundays. With regard to the conduct of the Directors themselves, I cannot help observing that it has been characterised by a degree of indecision, or vacillation, quite unworthy of their characters as to men to whom the conduct of a great public undertaking has been intrusted. According to the published letter of their Chairman, they first considered it their duty to offer to the Post-office authorities to carry the mails along their line every day in the week. But as soon as the Post-office authorities appeared disposed to avail themselves of such accommodation to the public, they withdrew that offer, hoping, no doubt, that the carrying of the mails would be forced upon them, and thus that, if animadversion from any quarter arose, it would fall not upon them (cunning little Isaacs), but upon the horrid Post-office authorities, whose arbitrary power, under the Act of Parliament, made them run against their wills, just like a coy little maiden who wishes to be made to sin against her inclination. The gentlemen of the Post-office, however, seem to have been fully as wide awake as the Ayrshire Directors, and to have thought very naturally that, if blame was to attach to any party, it should fall upon those who were to reap the benefit of it. And so, like too cunning people, they have missed that chance.

Now, my fellow shareholders, was this a manly straightforward course? I do not think it was. But let us look a little further, and I think you will agree with me in asking what right these gentlemen have to come to a decision upon this question—one so important to the prosperity of the undertaking entrusted to their charge—without having consulted their shareholders, or ascertained their sentiments and wishes. Are they entitled to say, as was rather foolishly said by a very respectable gentleman, the Chairman of another railway, "This railway shall be closed the whole of Sunday," as if they were talking of their own private property, and not as trustees for the general body of proprietors, and bound to turn the charge committed to them to the best account. While I utterly deny all the principal evils which it has been alleged the running of trains on Sunday would produce, look at the evils which the non-running produces. All communication between Glasgow and Ayrshire on that day is virtually shut out, except to the man who can afford a carriage and post horses. No matter how urgent the case may be, or how fatal a delay, the poor man must remain where he is. So again, in regard to communication from Ireland or England, both are excluded from the Ayrshire coast, while the route by Greenock and Glasgow is open, and even a small steamer is employed at Greenock, on that day only, for bringing them forward on their journey.

We have hitherto been too inert, and trusted too much to the good sense of the Directors, which, in some degree, has made them forget they have a constituent body to account to, the effect of which certainly has not tended to the benefit of the railway. If, therefore, you wish to see things placed upon a different footing, you must make your sentiments understood by the Directors in a way they cannot mistake, when I have little doubt you will soon see a change in this do-nothing system. Or, the remedy is in your hands.

I am, Gentlemen,
A SHAREHOLDER.

—*Glasgow Argus.*

MIDLAND COUNTIES RAILWAY.

I would ask the attention of the Liverpool and other proprietary, to support a motion at the next meeting for a committee to examine the accounts; and although I have the satisfaction of seeing from the receipts the evidence of great prosperity to this undertaking, we are not to be deterred from making good better, and this can be done by reducing our expenses. The first week in January the published receipt was 1703*l.*, the last week's receipt was 2664*l.*, amount to date, 39,762*l.*, to which, if I add 2600*l.* per week to the end of June, would produce the sum of 55,362*l.* for six months, exclusive of (as

Digitized by Google

I am given to understand) about 120*l.* per week for mail-carriage; but as I am not certain on this subject I have not noticed it. From the printed circular of Mr. Bell to me, dated Leicester, 21st February, 1841, I find the sum of 20,101*l.* 13s. 3d. balance in hand and outstanding, making the sums together 75,463*l.*, available for expenses and dividend. I am aware that a number of quarter shares were not taken up, and these having been always at a premium, if not disposed of by the Directors, leaves a smaller number to be divided amongst. The fair way to dispose of the unclaimed quarter shares (if not sold) would be for the Directors to divide them amongst those proprietors who came forward to support them at par. Mr. Bell states the expenses at 55 per cent., and leaves an inference that a great reduction may be looked for. The York and North Midland expenses are below 40 per cent. If our expenses are reduced to 40 per cent., which will be the case under proper management, 2700*l.* per week on 12,500 shares, will allow 5 per cent. and a surplus fund for the gradual reduction of the borrowed money, or a higher dividend. From the evidence before us (the receipts) I do expect far better things, and strongly recommend proprietors to withhold the sale of their property at such very low prices. Mr. Bell, in his account, deals in round numbers, and I cannot grapple with him. The amounts are of a most serious nature, for instance:—

Interest			£7,622	3 9
Maintenance of way			907	15 0
Salaries, wages, &c. &c., and all other charges			12,026	8 6¼
And immediately after comes—				
Police Account—Wages, &c., again			3,236	9 9¾
Coaching Account—Salaries, &c. &c., again			2,146	13 8¾
General Charges—Law, £.90, Insurance, £72 17s. 11d.			162	17 11
Advertising, Printing, Stationery	£820	13 6		
Direction, £600; Office charges, £1,413 5s. 4d.			3,007	14 4
Sundries, including travelling expenses, £173 15s. 6d.	2,187	0 10		
Rates, Taxes, and Mileage			2,719	13 3
			£32,19	15 3¼

These charges are only upon six months, so the Direction costs 1200*l.* per annum; and if my recollection serves me, the good-natured proprietors voted 2000*l.* as a present to the Directors, although they were unable to pay a dividend to them. There is one very curious charge for offices, 1413*l.* 5s. 4d.; I believe an agent is in Liverpool, surely we are not to be saddled with his office, at a distance of so many miles from the line, and totally inexpedient—and wages multiplied in every manner and form—and as for stationery, &c., I dare say, Mr. Editor you would print and supply a goodly quantity for 820*l.* 13s. 6d. for six months. I do hope some other influential proprietor will consider the subject, and be prepared to support the appointment of a committee.—*Correspondent of the Liverpool Mail.*

BRISTOL AND EXETER AND GREAT WESTERN RAILWAYS.

To the Editor of the Railway Times.

Sir,—Having been one of the party who made an excursion on the Bristol and Exeter Railway as far as Bridgwater last Tuesday, the 1st instant, I can bear ample testimony to the stability of the works and unprecedented smoothness of the line; I say unprecedented, because in all my experience I have never travelled on any railway which could contrast with it in this respect—arising, perhaps, as well from the flatness of the chief part of the country through which it passes, and the want of curves, as from the excellence of the works. On this account I apprehend the working expenses will be very low. The part opened to Bridgwater has been executed below the average of railways, amounting to little more than half of its great parent—the Great Western; and I can hardly doubt the remaining portion to Exeter will be finished on equally reasonable terms, so that although our traffic will not come up to some more favoured lines, still we may anticipate as good returns on our comparatively small capital.

The present marketable value of the shares in this railway is not easily to be accounted for, now that a certain income, *without risk*, has been guaranteed by the Great Western Railway Company, amounting to nearly a thousand pounds a mile exclusive of the toll on passengers and goods, which along with the rent to be hereafter paid to Exeter will bring in about 100,000*l.* per annum. To Bridgewater now opened a rental of 30,000*l.* a year is agreed to be paid, and a toll of 8½d. on each passenger travelling the whole distance; a toll which is calculated will amount to above 10,000*l.* a year—making, say 40,000*l.*, to which add 50 per cent. for expenses defrayed by the Great Western Company, and we have a gross revenue of more than 1,500*l.* a week. This appears to be a very good bargain for the Bristol and Exeter Company.

Whatever may be said for or against paying interest on calls, it is practised by this Company, and any one purchasing shares at their present price, secures a *certain* return of about 7 per cent. on the money laid out, besides having a very good prospect of his shares rising to par soon after the railway is fairly set afloat.

My opinion is, Sir, as the Directors have agreed to pay interest on our advances, we ought now to receive 5 per cent. instead of 4 per cent. till such time as the railway is completed to Exeter, in consideration of the rental and tolls to be received from the Great Western Company. This would, in my opinion, give every proprietor so beneficial an interest in the concern that he would hereafter have no inducement to sell his shares; and to many who have invested for the sake of realizing a better income than the funds allow it would be a great boon, to say nothing of others who look to the interest on their capital for their entire income. I am satisfied if this plan were adopted many wealthy and influential parties would join our Company to whom 4 per cent. is not a strong enough temptation. The Act of Parliament allows the Bristol and Exeter Company to pay 5 per cent. on calls paid up.

The Bristol and Exeter line is likely to be a favourite with the Bristol folks, as it traverses a beautiful open country, and conducts, by a short branch, to the very shores of the channel. Any one having any taste at all for rural beauty, or a breath of the invigorating sea-breeze, cannot hesitate to prefer a ride down this railway to one on the Bath road between high excavations, and through masses of ugly houses, to be at length shot out in the heart of a city nearly as large as the one he has just left.

I may safely say the whole line of railway from the mighty metropolis to the quiet town of Bridgwater is the most magnificent in the whole world. What a gigantic undertaking is that Great Western! What an idea of perfect solidity and permanence is given by the mode in which the rails are laid! The ease and smoothness of the motion is such as to satisfy any one of the exceeding excellence of the works, to say nothing of the saving in the expenses of wear and tear. The trains on this line seem actually to *sail* along instead of being drawn by that modern fire-god, the locomotive-omnipotent almost, but insensible of power. On other lines the engines seem to exert themselves, to pull, and snort, and pant, furiously indeed, but still indicative of comparative impotence. On the Great Western, the gliding motion, and insensible, because gradual increase of speed to the maximum velocity, diverts the mind from the great origin, the engine, which rests in a sort of passive conviction of power without any limits. There seems, in a word, to be no effort, no straining of a single nerve of that wonderful machine, carrying us on through every change of scene and variety of country at a speed so amazing.

The capabilities of the Great Western are enormous. The passenger traffic now far exceeds any other line of considerable length. From the 31st May to the 6th June no less than 50,000 were conveyed, exceeding in numbers those carried on the Blackwall or Greenwich lines during the same week. It is a remarkable fact, that agricultural districts develope more passenger traffic than manufacturing ones, as any one may see by comparing the returns of the Manchester and Leeds and North Midland Railways with the Great Western. The short, or local traffic on the latter railway is a fact which no one, I believe, ever contemplated to the extent to which it is already arrived.

I am, Sir, your most obedient servant,
A SHAREHOLDER.

London, 14th June, 1841.

LONDON AND GREENWICH RAILWAY.

To the Proprietors.

Gentlemen,—I have seen several letters addressed to you lately in the *Railway Times*, by which I hope you will profit, but it strikes me that there is another circumstance connected with your traffic which has a great tendency to interfere with its profits, and this is the slovenly manner in which it is conducted. Every body who travels by your railway complains of the disgraceful state of your carriages. If remonstrance be addressed to your Directors, the answer is, that they have a contract with the carriage-builder, or that they have no money; surely, if there be a contract in the way, it should be put an end to, and the penalty paid; and as to the money—why this is the way never to have any money; it is this niggardly false economy that will be the ruin of your railway. In all business, and particularly in railway business, something must be risked in order to obtain much; and of this nature is the risk of charging low fares, where a certain outlay is made to ensure a large return. But is there no cause for all this? Is there nothing in the constitution of your board of direction which will account for the appearance of its councils being swayed rather by the narrow notions of some petty-fogging interests, than by the liberal conceptions of a body of British merchants? Ask yourselves this question, and the answer will probably be, that the majority of your Directors are holders of new or preference shares, and that the liberal policy which would eventually ensure some dividend upon the old shares, might peradventure momentarily jeopardise the five per cent. interest upon the new or preference shares. Such a circumstance as this would account for much that is enigmatical in the present conduct of your Directors. It would explain how it happens that all parties with whom they have dealings,—parish authorities, commissioners of sewers and pavements, Croydon Directors, governors of hospitals, &c., universally complain of being met in a mean and unconciliatory spirit; such a spirit is inexplicable in a body of gentlemen, except upon the ground that the whole bent of their energies is directed to the securing of a certain small dividend which is to be divided in a certain manner, rather than to the obtaining a less certain but larger advantage to the great body of the shareholders. I counsel you therefore to look narrowly into this matter. Do not allow any of your Directors to hold any preference shares. This is perfectly fair to the preference shareholders, because we are quite sure that if the old shareholders be taken care of, the new cannot be hurt by reason of their preference, while the converse of the proposition is not true. If your Directors were exclusively holders of old shares, we should probably see an early change to a large and liberal policy; any measure which could be shown to be for the interest of the shareholders in general would be instantly adopted, and among others a reduction of fares, because then the question would be what is for the ultimate advantage of the Company, and not what may possibly put to hazard the certainty of a five per cent. interest upon preference shares. I do not wish to accuse your Directors of being influenced by any motives which are not the universal motives which govern mankind, but certainly it is of the last importance to shareholders that they, and their Directors, should have but one interest.

I am, gentlemen, your obedient servant,
INQUISITOR.

THEORY OF RAILWAY FARES.

To the Editor of the Railway Times.

SIR,—Mr. Bernard says that "very few engineers ever venture on the study of the differential calculus." I should be glad to know that this assertion applies only to the circle of Mr. B.'s own acquaintance. If (as I hope not) it be true to a greater extent, may it not account for clever civil engineers occasionally putting themselves in very ridiculous situations?

It is not, however, for the sake of helping out professionals of this quality, if such there be, nor of disparaging the profession in general by the implied supposition that they need this aid, that I attempt to popularise Mr. Ellet's argument by exhibiting it in a geometrical form. I wish to put the argument within the reach of every person of moderate acquirements connected with railway business, who will afford the subject a decent measure of attention; and I think it will be found, at least in the simple state of the question in which Mr. Ellet has discussed it, that all which the calculus would be wanted for may be done near enough for practice by a few trials. I will try also to exhibit fairly Mr. Bernard's objections to the argument. If you evince your approbation of my effort by the insertion of this, I purpose to go on to show in which respects Mr. Ellet's theory is imperfect (not false) and what is necessary to complete it.

In the subjoined diagram let any lengths taken on the horizontal line A B represent proportionate numbers of passengers in any chosen period, and on the

perpendicular line A F let any lengths taken represent proportionate sums of money either fares or cost per passenger, and these latter may at pleasure be either per mile or for a whole journey, only when once adopted they must be adhered to. For the sake of clearness, we will suppose each of the divisions on AB to stand for 1,000 passengers per week, and each on AF to stand for one penny per mile per passenger whether of cost or fare. It is understood that we always begin to reckon on each line from the angle A.

For the present, let us suppose it known that if the fare were reduced to nothing, 4,000 per week would ride, and that if 4d. per mile were charged, nobody would use the railway. Mr. Ellet says, in effect, draw the straight line *b f* from the point signifying 4,000 on AB to that signifying 4d. on AF, and then you may learn what number of passengers will travel at any fare you may propose to charge: for if at the point on AF, which answers to the proposed fare, you will draw an horizontal line to the hypothenuse *f b*, the length of that line, according to the scale on AB, will show the number of passengers. Suppose, for instance, the fare fixed on is 2¾d. per mile; from the point *v* answering to that sum draw the line *v g*, and its length measured on AB will give 1,250 for the number of passengers willing to pay that fare. Now draw the perpendicular line *g m*, and the whole area A *v g m*, or A *v* × A *m* representing 2¾d. × 1,250, will give the entire receipts under those circumstances.

But the matter sought is not entire receipt but profit, to ascertain which we must subtract the cost from the receipt. Now, let us suppose that the cost to the Company for each passenger is 1¼d. Draw the line *c t* from the corresponding point *c*, and the rectangle *c v g n* will represent the profit. Now, the business is to ascertain the fare which will make the largest profit possible, that is the point in A F from which, if lines be drawn as above described, the largest parallelogram possible will be cut out of the triangle *c f o*. That there is such a point is evident, and it is also clear that it will take some pains to find it; for if the fares be fixed too low, or the point *v* be taken too near *c*, there will result a long narrow parallelogram (I omit to draw it in order to avoid confusion in the figure), which contains very little space; or in other words, many passengers will occupy the railway, but very little will be gained by each; if on the other hand the fare on the point *v* be fixed too high, the consequence will be a tall but narrow figure having in like manner a small area from there being but few passengers although the profit on each might be large. Between them is a point where the product of the profit on the individual by the number of passengers is the greatest it can be. Now drawing a few parallelograms on different supposed fares and calculating the area of each, would soon find whereabouts this point lies, and it is only to accomplish this latter purpose at once and with exactness, that the calculus is wanted at all. Whether or not it is a very profound and puzzling application of that renowned instrument of investigation, may perhaps be inferred from the fact that the question is perfectly identical with that in the third example of the very first book of one of the oldest and best works on the subject, viz., Simpson's Fluxions.

But the argument is met in this stage by the objection that we know neither of the points *b* or *f*, that is we know neither the number who would travel if you would carry them for nothing, nor the fare which nobody would pay; how then can we draw the line *b f*, or learn anything from it?

Mr. Ellet says we may learn that from experiment in this way,—by lowering the fares we shall increase the number of passengers. (Mr. Ellet says "raise," I say "lower" your fares; they are the same to the argument, and I make the change to call attention to that fact.) Knowing the number carried before, and the number carried under the reduction, we may find the points *f* and *b*. Suppose the old fare was 2¾d. per mile, and the number of passengers 1,250, as shown by the line *v g*, now lower it to, say 2¼d., and draw an horizontal line through the corresponding point *v*, and set off on it a length denoting on the scale of A B the number of passengers who are found to use the railway under the reduced fare; then through the point *s* thus found and the point *g* draw the hypothenuse, and it will cut A F in the point *f*, and A B in the point *b*. The arithmetical process, which comes to the same thing is this: as the increase of the passengers is to the diminution of the fare, so is the number carried under either fare to the sum to be added to exclude all; and as the diminution of the fare is

Digitized by Google

to the increase of passengers, so is either fare to the number excluded by it; the latter found number added to the number actually carried would evidently give the number which would travel if the fare were nothing.

These are incontestable results of Mr. Ellet's fundamental supposition, that equal numbers are excluded by equal increments of fare, or what is the same thing, that the line *f b* is a straight line.

Another objection is now made: how do we know that equal numbers are excluded by equal increments of fare, or that *f g* is a straight line? It may be, that the true line is a curve like K *g* L or K′ *g* L′, or some other curve, we know not what. Mr. Ellet says, it may be so, but in all probability the true curve near the part where we want to use it corresponds very nearly to some straight line, and if so, and we can ascertain what that straight line is by the experiment above directed, we can reason as safely from it, or nearly so, as if we knew what the curve is throughout its whole length. Of what consequence is it to us what it is at the two ends, where we should not use it if we knew it? Although we are often so much out of our way in respect of fares as to do ourselves much harm, we are not so far out as to render useless the rule founded on the supposition of *f b* being a straight line.

The mode of procedure which would follow from Mr. Ellet's conclusion is this:—1st. Note your fares and number of passengers, as well as your cost per passenger; set them off on a figure like that given, and draw the lines *v g* and *g m*. 2nd. Alter the fares, and insert the new fare and its number of passengers in like manner. 3rd. Draw the hypothenuse through the points *g* and *s* thus found. 4th. The point half way between *c*, which shows the cost per passenger, and *f* where the hypothenuse cuts the perpendicular is the fare which will give the greatest profit. All this of course may be done arithmetically. It would evidently be necessary that the effects of season, &c. &c. should be excluded by properly timing the experiment.

I think, Sir, I have now exhibited the substance of Mr. Ellet's argument and of the objections against it. Perhaps I need only add that on his supposition it will always be found that all we want to know is the cost per passenger and the fare which just excludes everybody; that is, the values of A *f* and A *c*, and then the most profitable fare will be half the excluding fare added to half the cost per passenger. If the population should become richer or for any other reason more inclined to travel, the most will be gained by adding only half the increase to the fares if its amount were known: if the cost per passenger to the Company vary, the fares should vary half as much be it by increase or diminution. The point *v* will always be found to give the greatest parallelogram of profit when half-way between *c* and *f*.

I said this theory is imperfect, not false. It is so, first, because it applies to but one class of fares—which is probably to be attributed to its being intended only for American practice. Secondly, because its fundamental supposition is without proof; which circumstance might not seriously discredit its argument as applied to one class of fares, but affects it considerably as applied to several. And thirdly, it supposes the expenses per passenger to remain the same, whatever number may be carried; a supposition which may be admitted when we are already near the truth, but not when we are yet uncertain whereabouts the truth lies.

With your permission I will try next week to show how these additional and necessary matters may be represented in plane figures. And though I should raise my voice heartily, if the occasion required it, against any disparagement of the fluxional calculus, I hope to put into the hands of those interested in these affairs a ready and convincing, though not very exact, method of investigation which does not require its aid.

I am, Sir, yours very respectfully,

HEN. EUSTACE.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—The position of this railway in the share-market is unprecedented, and believing that you are disposed to do justice to this, and all other undertakings tending to the common weal, is my excuse for thus addressing you. I find in the *Railway Times* of the 7th March, 1840, a very able report from that eminent Engineer, Mr. Locke, who a short time previously had entered upon his duties as Engineer-in-chief, from which I extract the following particulars, containing his views as to the works on this line:—

"From Manchester to Glossop Vale is about 10 miles, and I would strongly advise you to confine your operations to this part together with the tunnel in the first instance. The works are not very heavy, and there is the prospect of a profitable return for the outlay; for, independently of the local population, there is little doubt that the Sheffield traffic would join the railway even for this short distance. The tunnel should be proceeded with systematically and regularly, and by the time the driftways have proved the nature of the material through which the tunnel will be driven, the remainder of the works may be proceeded with, so as to complete the whole simultaneously, and without that extraordinary push which is always attended with a considerable increased expense.

"*I know of no railway on which the works, if proper time be allowed, may be so economically executed as on this.* The quantity of preparatory material, such as rails, sleepers, waggons, &c., will, as compared with other lines, be very trifling; and with proper preliminary arrangements, most of those heavy contingencies, which are too often met with on great works, may, I think, be avoided."

The Directors upon receiving this Report appear to have awoke from their dreamy slumbers, and *now* supported their Engineer by contracting for that portion of the line as recommended in his Report; also, proceeding systematically with the works at the tunnel. And that the Directors found Mr. Locke's views supported by facts is recorded in their Report published in the *Railway Times* of February 27th, 1841, from which the following are extracts:—

"During the time which has elapsed since the general meeting in August, the Directors have been actively engaged in forwarding the erection of the works then announced as contracted for, which, with the Etherow viaduct, now also under contract, completes the letting to Glossop. Although extending only over 11 miles on the rails, these works contain more than one-half of the earthwork of the whole line, and the contractors are proceeding rapidly with them, for the purpose of opening about eight miles to the crossing of the Hyde and Mottram turnpike road in September next (which will accommodate the traffic of Mottram, Godly, Hyde, Newtown, Dunkinfield, Staly Bridge and Ashton,) and the remainder of the line to Glossop in the spring of 1842. The tunnel works are steadily and satisfactorily progressing.

"The Directors being anxious to give full information to the shareholders upon all matters connected with this undertaking, have caused an account to be taken by competent persons of the present traffic between Manchester and Glossop, and the intermediate places.

"On the 31st of December, 1840, the outlay amounted to 168,077*l.* 13*s.* 6*d.* For the completion of the contracts to Glossop, tunnel works, management, payment for the purchase of land, the Manchester station, and all incidental expenses, a further sum of 318,020*l.* is estimated to be required, making the total outlay on the 1st of May, 1842, 486,097*l.* 13*s.* 6*d.* From that part of the line from Manchester to Glossop, then ready for opening, a net annual income of 31,914*l.* 2*s.* 4*d.* may be safely calculated upon, which will yield a profit of 6½ per cent. per annum upon the whole expenditure then incurred; *and it must not be forgotten that in this sum is included nearly* 180,000*l. paid on account, and forming a part of the estimated cost of the whole line.*"

Since the issuing of the February Report in 1841, the estimated outlay up to May, 1842, is reduced about 60,000*l.*, consequent upon an agreement with the Manchester and Birmingham Company for them to erect a joint station for the accommodation of the two Companies.

The question now arises—have the holders of railway stock lost their wonted confidence in Mr. Locke, and are the Directors carrying out the recommendations contained in his Report? I answer, nothing of the sort; the public are of opinion Mr. Locke's views, as expressed in his Report, are not being *carried out*, and that the Directors have not the means of doing it. Now, for the purpose of placing that important personage "The Public," in his true position (that of acquiring knowledge for public good), have I ventured to draw upon your patience with the extracts contained in this letter. I call at the same time upon my brother shareholders not to sacrifice their property, but to hold fast by their shares; and whenever the Directors, in their wisdom, re-issue the few shares that have been forfeited, to adopt the system of the *Manchester men*, and "hook 'em in," for I am assured that the Directors feel confident in being able to open the line for traffic on the 1st of September, from Manchester to the Mottram road, and that they are making arrangements for bringing upon the line at that point the passenger traffic of Glossop, Mottram, &c., in addition to the local traffic through which the railway passes.

I am, Sir, your's most obediently,

A SHAREHOLDER.

8th June, 1841.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY COMPANY.

To the Editor of the Railway Times.

Sir,—I am one of those "who like honesty in all plans," and it would be some satisfaction to the shareholders in this Company to know *who* the parties are that constitute the Directory.

The *present* line of railway, when complete, will not exceed *one mile and a quarter* in length. A period of about *five years* has elapsed since the works were commenced. The shares are 20*l.* each, *of which* 19*l. per share* have been now called for.

Such is the present state of the case, and as far as I can learn, the line is as incomplete as ever.

I was much amused a short time since in reading a letter inserted in the *Railway Times*, and bearing the signature of Mr. Richard Dawson, of Liverpool, and in which that gentleman went out of his way to taunt Mr. Robert Cadell, of Edinburgh, with *inconsistency* in relation to the Edinburgh and Glasgow Railway matters. Now, Mr. Richard Dawson has figured as a prominent character in the Edinburgh, Leith, and Newhaven Railway Company, and unless I am much mistaken, he constitutes the Directory. I therefore trust he will afford some explanation to the shareholders on the following matters.

In the London *Times* of the 29th January, 1839, there is the Report of a case, "Edinburgh, Leith, and Newhaven Railway Company *v.* Dawson," which was an action by the *then* Directors for recovery of 1,500*l.* for calls. That action was *suspended* till security for costs had been given. Messrs. Clay and Swift were the *defendant's* attornies.

Now, what has become of this action?

During this suspension, Mr. Dawson, by means of proxies, succeeded in turning out the Directors and Secretary who had sued *him*. He represented them to the shareholders as inefficient and incapable. Upon this representation he obtained the proxies. In September, 1839, he proceeded to Edinburgh, *moved a vote of thanks to those Directors for their past services*, and substituted others. Nay more, his own attornies, Messrs. Clay and Swift (who opposed the former Directors) have been substituted as the attornies for the *present* Directors.

And now I come to the material point—Mr. Richard Dawson stood registered for 493 shares, or 9,860*l.* *His* attornies, Messrs. Clay and Swift have been employed to sue the other shareholders in arrear. Up to the present moment, Mr. Dawson, as I am informed, *has not paid his arrears*, and Mr. Dawson has been exempted from those proceedings which his attornies have instituted against others.

I ask, is such treatment as this respectable on the part of a public Company, or fair towards the general body of shareholders?

Mr. Dawson, who appears to be such a stickler for "consistency" can perhaps explain all this.

A VICTIM.

P.S. Every English Director, without a single exception, has with drawn from the Directory. This fact alone speaks volumes.

HIGH AND LOW FARES—THE CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your last number contains a leading article on the receipts of the Croydon Railway Company, which you put prominently forward "for the sake of the remarkable illustration it furnishes of the truth and importance of the principles for which you have of late been contending." Latterly you have been contending for low fares; and the statement to which you invite attention is in a few words this—that the receipts between New Cross and Croydon in a given period (of three days only) increased from 63*l.* 14s. in 1840, to 83*l.* 13s. 1½d. in 1841; and that the receipts on the same three days at all the stations showed a reduction in gross receipts; but owing to the Government duty and Greenwich Railway toll being levied per head, and the numbers having been less, the net receipt was equal. So far good. You then go on to say, that it is necessary to explain that—"in consequence of the high toll required for the use of the Greenwich line, the Croydon Company have this year raised their fares," and you infer that the number of passengers along the whole line would have increased after the ratio of the limited portion had the fares been alike. You finally add, that "where the Croydon Company have had the entire control the traffic has been so conducted as to reach downwards to classes of the community who were heretofore excluded from it, and where the Greenwich high notions have prevailed" the reverse has been the case.

Now in these assertions, though the inferences you draw from your premises are correct, you are greatly in error; and I doubt not will be glad to be set right by that most unerring rule—an appeal to facts and figures.

The fares between New Cross and Croydon, which seem to have been so remarkably successful (the distance being 7½ miles), are—	1st class s.	1st class d.	2nd class s.	2nd class d.
New Cross and Croydon	1	0	0	9
Of which the Government duty absorbs	0	0¾	0	0¾
Leaving, to pay all expenses, *including* maintenance of way, parochial rates, and police	0	11¼	0	8¼
Being at the rate per mile of	0	1½	0	1 1/12
The Fares between New Cross and London, which have not been so successful (a distance of 3 miles), are	1	0	0	8
Of which the Government duty absorbs	0	0¾	0	0¾
Making	0	11¾	0	7¾
And the Greenwich Railway toll absorbs	0	3	0	3
Leaving, to pay all expenses, *except* maintenance of way, parochial rates, and police, over 1½ miles of this distance	0	8¾	0	4¾
Being at the rate per mile of nearly	0	3	0	1¾

Allowing for the above charges, incidental to the former rate and not to the latter, you will see the Croydon Company, besides paying the Greenwich Railway toll, keep for themselves upwards of twice as much per first-class passenger, and half as much again per second-class passenger, over the Greenwich line, as they do over their own line. (A.)

Again: the fares from Croydon to London (a distance of 10½ miles) are—

	1st class. 2s.	1st class. 0	2nd class. 1s.	2nd class. 6.
Less Government duty for 8 miles	0	1	0	1
	1	11	1	5
Toll to Greenwich Railway Company	0	3	0	3
Which gives per mile nearly	0	2	0	1½

And without allowing as before for maintenance of way, &c., not being for the whole of this distance, the result gives the Croydon Railway Company one-third more on the first-class passengers, and one-fourth more on the second-class, *after deducting the Greenwich Railway toll*, than they charge on that portion of their line "which is under their own control."

Now, Mr. Editor, you see the true cause of the total net receipts of the Croydon Railway Company not having increased; and that it is not, as you assert, "simply because the effect of the Greenwich toll neutralises that of the improved arrangements." The improved arrangements (meaning thereby reduction of fares) not only have not been carried into effect, over the most important part of the line, but whilst the Croydon Railway Company have reduced the fares everywhere else on their line, they have actually raised the *net* fares to London, (I mean *in addition to the toll they pay the Greenwich Company)*, so that they are now from 25 to 100 per cent. higher than on those parts of their line where this toll is not paid. (B.)

Had the Croydon Company been disposed to give a fair trial to the system of low fares which they consider so beneficial, they should have applied the same scale throughout, adding thereto the additional charges where they are made, thus— (C.)

	1st class.	2nd class.
Fare throughout per mile	0s. 1¾d.	0s. 1 1/12d.
Which gives for 10½ miles from Croydon to London	1 3¾	0 11¾
Add Government duty for 8 miles.	0 1	0 1
Greenwich Railway Company's toll	0 3	0 3
	1 9¼	1 5¾

Now, where the Croydon Company, after trying fares not exceeding 20d. per passenger, for first class, and 16d. for second, for the whole distance to London, can show a less increase of traffic than the low fares between Croydon and New Cross exhibit, I will admit there will be some ground in laying the cause to the Greenwich Railway toll, which prevents them from reducing to 17d. and 13d.—at present the comparatively high fares for the whole distance, *independent of the Greenwich toll* give no possibility of comparing the results. (D.)

And after all, Mr. Editor, where is the sense of speaking of reduction of fares, if you reduce them to a place which nobody wants to stop at, and raise them to the place which everybody wants to go to? Is it not a mere quibble or hoax on the public? (E.)

Your obedient servant,

STRAIGHTFORWARD.

REMARKS.

Availing ourselves of the delay occasioned by press of matter last week, we communicated a copy of the above letter to a gentleman well capable of explaining the principles of the Croydon policy, and have received from him the following notes. On all hands it is admitted that high fares are injurious to the interests of a railway; the only question is, to whom in this case are the injurious high fares to be attributed.

It cannot be doubted that a rate per passenger has a strong tendency to prejudice the interest of the Greenwich Company: it deprives them, as far as it goes, of all the advantages to be derived from spreading the constant expense of the Croydon line over a greater number of passengers, and thereby encouraging the growth of its traffic, nor is it easy to see what can be said in its favour; for although the maximum gross receipts are not derived from the same number of passengers that yields the greatest profit, the two circumstances coincide so nearly, that the gross receipts would furnish the best simple rule for the government of this transaction between the two Companies. An arrangement which renders contraction profitable to the Croydon, cannot be profitable to the Greenwich: that which best admits of expansion is to the interest of both.

(A.) Nobody disputes the fact, that 3d. is better than 1½d., if you can get it upon equal numbers:—what we contend for is, that you cannot; and that it is better to have 100 passengers at 1½d. than 10 at 3d., the expenses being the same. It is precisely because the Croydon Company "keep themselves twice as much per 1st class passenger, and half as much again per 2nd class passenger, over the Greenwich line, as they do over their own line"—that they get less by it—and what impells them to it is the Greenwich toll.—Q. E. D. The reason why the Croydon Company is obliged to depart from its rule of seeking remuneration from large numbers at a low rate over the Greenwich portion of the line is, just because *there* the expenses (in the shape of toll) increase *per passenger*, which, on other parts of the line they do not. It might be worth the while of the Croydon Company to carry passengers from New Cross to London Bridge at Blackwall prices, or at 3d. per passenger, if the toll were commensurate; but it never could be while it had to pay the whole 3d. to the Greenwich Company.

(B.) This is precisely what we say, as quoted above, namely, that "where the Croydon Company have had the entire controul," &c.

(C.) This is just what the Croydon Company did. It started with its fares a fraction *under* this mark —for the 1st class, and what is more material, considering the respective numbers, *very much* under the 2nd class, and the charge at present, recommended "as a fair trial," is in fact but a fraction below the high fare actually now charged for the 2nd class (the *largest* class) of passengers; but they soon found that the number of passengers was much greater than had been anticipated; and likewise that, as the effect of the Greenwich toll was to increase the expenses *per passenger*, a *great number* of passengers did not answer, and they applied to the Greenwich Company to modify the toll, *i.e.* to take it in some other mode, without diminishing its *gross amount*. This the Greenwich Company refused; and as the Croydon Company was paying over to the Greenwich Company the *whole* advantage which it derived from *large numbers* at *low fares*, in the shape of a toll *per passenger*, irrespective of the *rate* of such fares, it was obliged to resort to the expedient of raising its fares, which has had the effect of obtaining almost the same amount of money from much smaller numbers, while a very considerable saving of toll has been produced in consequence of the diminution of these numbers. It is true that this raising of fares has checked the natural increase of numbers which was to have been expected upon the Croydon, as upon all other lines, in the second or third year of their working; but this increase of numbers would have been comparatively valueless to the Croydon Company while burthened with a corresponding increase of expense per passenger, in the form of toll. At very low fares, the whole portion of such fare left for profit might be only 3d. per passenger, and this, upon very large numbers, would produce a very large revenue; but, as we have said before, if the whole of this 3d. upon these *large* numbers, as well as upon *small* numbers, were demanded in the shape of toll or duty, how could it be for the advantage of any company so to lower its fares as to attempt to obtain them? Nothing can more convincingly prove the absurd policy of the Greenwich Company than the certain tendency it has to make it the interest of the Croydon Company to limit the number of passengers passing over the Greenwich line.

(E.) This again is an argument—namely, that low fares produce "increase of traffic"—the whole question is, what makes increase of traffic *profitable?* This can only be a *non*-corresponding increase of expense. Any *un*varying impost *per passenger* must be therefore prejudicial (in proportion to its amount) to railway success; and when it rises to any considerable proportion of the fare charged, it must be fatal. Nothing but the *very small amount* of the government duty has rendered it bearable so long; and it is already become almost intolerable where *low* fares are in operation.

(F.) The great proof of our case is, that *notwithstanding* the fares have been reduced "to a place which nobody wants to stop at," and "raised to a place which every body wants to go to,"—so great has been the influence of *low* fares—that greater numbers have travelled, and more money has been taken in proportion, from a "place which nobody wants to stop at," than "from *the* place which every body wants to go to."

DISCRIMINATING OBSERVANCE OF THE SUNDAY.—The travelling public will be glad to learn that the Directors of the Stockton and Hartlepool Railway have resolved to run two trains on Sundays, up and down from Stockton to Hartlepool, thus giving the benefit of a visit to Seaton and Hartlepool without interfering with the hours of Divine service.—*Hull Advertiser.*

THE RAILWAYS REGULATION BILL—THE LATE SHEFFIELD AND ROTHERHAM RAILWAY ACCIDENT.

To the Editor of the Railway Times.

Sir,—Though by no means inclined to overlook the fact that the railway system owes its present advanced state to private exertion, and not to legislative encouragement; and that its future improvements are to be looked for from the same source; I cannot but feel deep regret at the abandonment of the general Railway Act of this session; feeling thoroughly convinced that nothing but *coercion*, either from a Government Board, or from that more powerful engine, public opinion, will induce that constant vigilance in working out approved plans, or promptitude in adopting new inventions for the promotion of safety, which it is the duty of railway managers to exercise. That railway travelling is, under present circumstances, far safer than any other mode of vehicular locomotion, is a fact which needs no proof; but this is not enough. The system offers facilities for the attainment of a degree of safety as absolute as any thing human can be—and until this is attained in practice, the intelligent part of the public neither will be, nor ought to be, *satisfied*.

Let it not be thought that I would join the ranks of those who magnify the fearful consequences of railway accidents, in order to depreciate the advantages realized by the new mode of travelling. It is rather an ardent and zealous desire for the increased extension and greater perfection of a system which deserves the admiration of the world, that prompts me now to make use of expressions that may appear somewhat harsh towards those by whose enterprize it has been called into successful operation. If time and space permitted, I might enumerate many facts illustrative of the assertion that the railway system is yet far from having attained that degree of perfection, as regards immunity from accident, that it is capable of, *and that the public have a right to expect*; but at present an allusion to one very reprehensible practice, which has more than once led to accident, and at length, on the Sheffield and Rotherham Railway, occasioned the loss of two lives, must suffice. The practice alluded to, that of running the tender before the engine, is one so evidently fraught with danger, that it would be matter of surprise how it could have been allowed, except in cases of emergency, were it not notorious how indifferent persons become to danger, till roused by some terrible catastrophe like that just alluded to. In passing round curves the tender, when preceding the engine, can keep the proper course only by the grinding of its flanges against the rails, while its shortness must, I should conceive, render it more likely to run off the rails than another vehicle. The application of the breaks to the wheels of a tender in such a situation, must be another, and a very material aggravation of the evil—an evil of such fearful character that it appears to me to form a legitimate subject for legislative interference, if the control of Government is to be extended as has been proposed. It may be pleaded that this practice has been followed for years on the Greenwich and other railways, without any very serious consequences; but this cannot be a sufficient excuse for continuing it, if proved to be really dangerous. The additional expense and trouble attending the use of turn-tables of sufficient size to reverse the engine and tender, without separating them, cannot surely be urged as a sufficient justification. On a short line like the Greenwich, or the Sheffield and Rotherham, the saving of trouble is undoubtedly great, but not such as to counterbalance the risk of running tail foremost at the rate of 20 miles an hour. In the case of the Rotherham line, it appears that better arrangements are in progress; but the indifference of the managers on the subject is evinced by the fact stated by Mr. Pritchard, the station master, that the trains had been in the habit of starting with the tender before the engine *for about three months*. On the Greenwich line, if I mistake not, there is no means provided for reversing the engines, except at the Greenwich terminus; so that, under present circumstances, the dangerous custom is inevitable; but, if fully alive to its risk (might I not add, and its mechanical absurdity?) I cannot but think that the Directors would provide some means of overcoming the difficulty. The Rotherham Company has escaped scatheless on this occasion; but, now that attention has been attracted to the subject, it is not likely that a jury would, in case of a similar accident, fail to impose a heavy deodand as a mark of disapprobation.

Feeling the subject to be one of great importance, I beg leave to suggest to those who may be concerned in framing a future Bill for the regulation of railways, the propriety of prohibiting the running of any train or engine with the tender in front, excepting in case of accident; or in any case, at a rate exceeding ten miles an hour. It would, of course, be necessary to provide for the movements of engines at a station, which, being slow, are unattended with danger. If these observations are deemed worthy of a place in your valuable paper, their insertion will oblige,

Your constant reader,

Q. U.

Chelsea, June 15, 1841.

RAILWAY ADJUDICATIONS.

THE QUEEN v. W. WEST AND THE HULL AND SELBY RAILWAY COMPANY.

[We are indebted to the *Leeds Mercury* for the following Report of this case, which had somehow or other escaped the notice of the reporters for the metropolitan press, and was therefore not included in our last month's collection of "Railway Adjudications."—Ed. R. T.]

Court of Queen's Bench, (Sittings in Banco,) May 28.—This was a case of a Coroner's Inquisition, which had been brought before the Court on a motion for quashing it. An accident had occurred on the railway by which three persons were killed, and an inquisition was held on the bodies, when the jury returned a verdict, finding that these three persons were travelling in a carriage drawn by an engine called the *Collingwood*, and it happened that a large piece of cast-iron having worn through a rope—fell upon the railway, by means whereof these three persons were forced to the ground, and thereby injured, so that they died, and that the carriage and engine were moving to the death. The inquisition further stated that the engine and carriage were the property of the Hull and Selby and the Leeds and Selby Railway Companies. The jury levied a deodand of 500*l*. There were three objections taken to the inquisition—first, that it was taken on all the three bodies together, instead of there being a separate inquisition on each. Secondly, that the deaths having been occasioned by the upsetting of a railway carriage, which was so upset by the piece of iron being in the way, the inquisition found that the carriage was moving to the death, but took no notice of the piece of iron; and thirdly, that the carriage which was found to be moving to the death was not correctly described as the property of any one, the name of the Company alone not being a sufficient description. A *certiorari* had been obtained to bring up this inquisition, and the sufficiency of it was now to be argued on a *concilium*.

The Attorney-General (with whom were Sir F. Pollock and Mr. Waddington) contended that the form of the inquisition was sufficient.

Sir W. Follett (with whom was Mr. Baines) was heard on the other side, and insisted that the description of the ownership of the property moving to the death was insufficient.

The Court thought that upon this objection alone the inquisition must be held to be insufficient. Unless the persons in whom the property of the thing moving to the death was vested were properly described, there could be no regular enforcement of the order of the inquisition. The rule for quashing the inquisition must be absolute.

THE QUEEN v. THE MIDLAND COUNTIES' RAILWAY COMPANY.

Court of Queen's Bench, June 14, *(Sittings in Banco.)*—This was a rule calling upon the defendants and the coroner of the borough of Derby to show cause why an inquisition, which had been taken upon the body of Richard Livesay on the 26th of January, should not be quashed. The deceased had met his death by an accident which had occurred in the parish of Chadsden, in the county of Derby, where also the death itself occurred. The rule *nisi* had been obtained by Sir F. Pollock upon several grounds, which were all of a technical character.

Mr. Macauley now appeared to support the rule.

Mr. Waddington appeared to oppose it.

The Court was of opinion that the inquisition was nonsensical and informal, and therefore made the rule for quashing it absolute.

MORSE v. THE EASTERN COUNTIES' RAILWAY COMPANY.

Secondaries' Court, Basinghall Street, 14 *June, (Before Mr. Secondary James and a Special Jury.)*—This action, which was brought to recover compensatory damages for injury done to the plaintiff, a traveller by the Eastern Counties' Railway, came on before the above gentleman this day, in consequence of the defendants having suffered judgment to go by default. The case excited deep interest, and for the convenience of the parties the Court adjourned to the Exchequer Chamber in the Guildhall.

Mr. Fitzroy Kelly, Q. C., and Mr. Tomlinson appeared for the complainant; and Mr. Thesiger, with Mr. Butt, for the Railway Company.

Mr. Tomlinson, in opening the pleadings, said that Mr. John Morse was the plaintiff, and the Eastern Counties' Railway Company the defendants. The declaration stated that the defendants were possessed of a certain railway known as the Eastern Counties' Railway, which was made by them under the sanction of an Act of Parliament, and by the provisions whereof they were entitled to collect tolls and take rents and profits, and to convey passengers and goods by the same; and the defendants were further entitled to the carriages which were worked on that railway; and while they were so possessed of them, the plaintiff, on the 19th of August, 1840, became a passenger, and was conveyed by the said railway from Brentwood to London, and he alleged that, from want of care on the part of the persons who had charge of the company's carriages, he received certain injuries, which had caused him great bodily suffering, and put him to a large expense for medicine and the attendance of a surgeon, whereupon he laid his damages at 3,000*l*.

Mr. Thesiger here interfered, and a consultation took place between the learned Counsel and the managing Director of the railway company, which terminated in a verdict being entered for the plaintiff by consent—Damages 210*l*.

This, it was said, is the first action that has been brought to recover damages for an accident received upon a railway, and hence the interest that was manifested in the issue.

Accident to a Railway Guard.—On Wednesday afternoon last, Mr. Thomas Bramley, of York, railway guard, met with an accident when returning with the train from Wakefield to that city. It appears that, when passing from carriage to carriage along the foot-boards, on taking hold of one of the doors it gave way. Finding himself falling, and likely to go under the wheels of the train, which was proceeding at a rapid pace at the time, by a great effort, he threw himself on his face clear of the wheels, but in doing so, of course, received many severe contusions and bruises about the head and face. His situation being very soon after discovered, he was taken to one of the station houses, and has since been conveyed home. The guard has since recovered, and resumed his usual avocation.—*Yorkshireman.*

2. Toll to London and Birmingham 184*l.* 16s. 9d., to be deducted from gross receipts.

3. The receipts are exclusive of those for the mails.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is 114 (83×31.)

12. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 155½ (104½×18×33.)

14. The 28*l.* 15s. 7d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

21. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 4,543*l.* 1s. 4d. are the receipts after deducting the toll to the North Midland Company, and exclusive of receipts from carriage of mails.

25. The receipts for goods, &c. include, carriages, 29*l.* 11s. 6d.; horses, 32*l.* 4s. 0d.; dogs, 1*l.* 3s. 0d.; parcels, 298*l.* 16s. 11d.; cattle, 19*l.* 13s. 3d.; corn, 42*l.* 11s. 1d.; heavy goods, 456*l.* 12s. 9d.; coal, 61*l.* 8s. 7d.—Total, 852*l.* 1s. 1d.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

THE RAILWAY TIMES.

SATURDAY, JUNE 19, 1841.

We lay before our readers to-day the Report of the Select Committee of the House of Commons appointed to inquire into the expediency of adopting the eleventh clause of the new Railways Regulation Bill; and we shall in subsequent numbers make such extracts from the accompanying Minutes of Evidence as may seem to us to bear most directly on the subject of inquiry.

The Committee, we are glad to find, concur entirely in the opinion we expressed several months ago (in nearly the same words) that "the existing power of supervision vested in the Board of Trade by the Act of last Session for Regulating Railways has worked well hitherto, and promises considerable advantages for the future." But they think that no sufficient case has been made out for increasing the powers of the Board, and "prefer that the supervision of this department should be exercised in the way of suggestion (as before) rather than that of positive regulation." When we have gone through the evidence, we may possibly be brought round to the same conclusion, but we need not tell our readers that our present impressions point all the other way.

The witnesses examined were—

Sir Frederic Smith.	Mr. Laing,
Mr. Booth,	,, Geo. Stephenson,
,, Swift,	,, Bury,
,, Brunel,	,, Baxendale,
,, Chapman,	,, Saunders,
,, Entwistle,	Captain Lawes.

The Report was drawn up by the Chairman, Lord Seymour, and unanimously agreed to.

The fanatical outcry which has been raised against Sunday travelling on railways is beginning to exert a degree of pressure which we were some time ago far from anticipating. We placed more dependance on the general diffusion of just and rational views of religious duty, than it would seem we were warranted in doing. Already have the abolitionists succeeded in procuring the closing of several of the Scottish railways to all but the mails on Sunday; and they boast, though not very consistently with the truth, of having also brought one considerable English line (the Birmingham and Gloucester) under their *close* system. But not content with this, we find they are now bent on stopping the mails also. At the General Meeting held this month of the Dundee and Forfar Railway Company (one of those which had previously restricted themselves to the conveyance of the mails), deputations attended from four different religious bodies, headed by that eminent spiritual Quixote, Sir ANDREW AGNEW, and were heard at length in support of a proposition to "discontinue entirely" travelling of every sort on Sunday, mail trains included; and though nothing could well be more unsound than the arguments they made use of, yet such was the want of ability, or rather, we suspect, the want of courage, among the proprietors present, to assert the cause of religious liberty and true piety, that the pharasaical squad actually carried the meeting along with them. A majority of 277 to 273 resolved, "that this meeting strongly disapprove of the opening of the railway for travelling or traffic of any kind on the Sabbath; and that application be made to the Post-office authorities for exemption from carrying the mails on that day."—(See report in *Railway Times* of last week.)

Of course, as the *Dundee Courier* justly observes, this must be regarded as "an attempt to prevent the mail being run *at all* on Sunday," whether by railway or by the old common road, "for there is no distinction betwixt the old mode of travelling and the new which is not directly in favour of the railway;" there being "no animal labour connected with the railway and fewer workmen employed than on the common road." Our contemporary states that the question is, *therefore*, "whether or not it is sinful to run *the mail* on the Sabbath-day?" We submit that the question takes a much wider range, and amounts, in fact, to this—*whether carrying and travelling of every sort on the Sabbath* (or rather *Sunday*, for that is what the Resolutionists mean,) *is or is not sinful?* Or, to state it in the more ecclesiastical terms of the petitions of some of the Scottish Presbyteries to Parliament, *whether carrying and travelling on the Sabbath (Sunday) is or is not a breach of the Fourth Commandment of the Decalogue?* It can make no difference, so far as regards *the principle* involved in the question, what *the mode* of carrying and travelling may be—whether by steam power on railways or water, or by animal power on common roads. Neither is it possible to establish any case of exception in favour of the mail, as a work of "necessity or mercy," which would not equally embrace every sort of *public* conveyance which conveys passengers, parcels, and letters of all sorts without distinction. Indeed, we must do the Anti-Sunday-Transitarians the justice to say, that they are quite right in insisting that nothing short of *total cessation* will meet the *sin* of the case (if sin there be any.) They are in regard to the Sunday observance question, what the Teetotallers are with respect to the intoxicating liquor one. *All or none.* And such being the ground they take, we meet them most willingly upon it.

We should have been glad to be spared the necessity of involving our journal in a theological discussion, but since it is forced upon us by the onward march of a fanaticism which, if triumphant, will absorb, in one "fell swoop" *one seventh of that property* which it is our business and bounden duty to protect and defend, we propose to encounter it manfully—feebly, perhaps, at best, but still—with all our might. We count, as rank and rampant bigotry, the outcry which has been raised against the *free use of railways on Sundays*, and think it our wisest course to take at once (if we can) the bull by the horns.

We know the authorities against us on this question to be numerous and of great account—including, probably, a large majority of the clergy of both establishments, Episcopalian and Presbyterian, and, doubtless, a still larger portion of the body of Dissenting Ministers (all of whom ought to know the Bible-law of the case better than we can tell them); yet neither are there wanting ecclesiastical authorities in favour of the views we take, of great consideration throughout the whole Christian Church. Indeed, we have but to make a good use of weapons furnished to our hands out of the armoury of the Church itself, to secure an easy victory. We shall have to regret that our convictions compel us to differ from those great lights of the day, the Candlishes of the North and Closes of the South, but it is some consolation to us to know that if we do err, it is with such men as Calvin, South, Horsley, and Paley.

For the custom which has existed through all time, of setting apart one day in seven—be it the Sabbath as among the Jews, or Sunday as among Christians—to purposes of public worship, and to rest from the ordinary occupations of life—we have the highest possible reverence and affection. We regard it as being beyond all other customs fraught with benefits, both spiritual and temporal, to the human race, and would do all in our power to promote an earnest observance of it among all ranks and classes of men. But it is *not* on the beneficial uses of the day that the Anti-Sunday-Transitarians take their stand—at least, if they refer to them at all it is only as a class of secondary considerations; they insist on the observance of Sunday among Christians with the same strictness as the Sabbath among the Jews, because they say there is a *divine commandment* that it should be so observed. Implicit obedience to the commandment is urged as a matter of imperative duty, and disobedience denounced as one of the deadliest sins. For all the success they have hitherto had they have been entirely indebted to this arbitrary and unreasoning view of the subject; they have frightened people into compliance with their exhortations, rather than convinced or converted any.

Now, before discussing what the duties of Christians are with respect to the observance of Sunday, we require our opponents to prove the existence of the Divine commandment on which they profess to take their stand. We deny that any such commandment exists; we challenge them to show that it does. They cite the "Fourth Commandment of the Decalogue," but that was a commandment to observe the *seventh* day of the week (Saturday), not the *first* (Sunday). We admit, that if every part of the Decalogue, ceremonial as well as moral, is to be held as binding on Christians, travelling on the Sabbath, or Saturday, is a breach of the Fourth Commandment; but that is not the received doctrine of the Christian

Digitized by Google

Church—neither is Saturday travelling what our Agnewites seek to abolish. They wage war against *Sunday* travelling only; and the way in which they make that out to be a breach of the Fourth Commandment is, by assuming that under the Christian dispensation, all the duties and penalties formerly attached to the *seventh* day were shifted to the *first*. But, how do they prove this? By no proof whatever. All they are able to show is, that it has been the usage of the Christian Church from the earliest days to assemble on the first day of the week, (Sunday) for public worship, (founded, it is supposed, on "some precept of Christ or his Apostles, though none such be now extant,"—*Paley*,) and that the observance of the original Sabbath Day was thus practically abrogated under the new dispensation, though nowhere in Scripture do we meet with any such abrogation in express terms. Now it by no means follows that because the original Sabbath was abrogated, it was intended to substitute another of the same extensively prohibitory character, and fenced in with the like severe penalties. We cannot take so much for granted on any mere human authority; we cannot tinker in that way the tables of the Commandments. We are rather entitled to conclude from the absence of any new law on the subject, that it was intended to leave man under the new dispensation to the freedom of his own will in all that regards religious forms and ceremonies; a view of the subject which derives strong confirmation from the precept of St. Paul:—"Let no *man* judge ye in meat or drink, or in respect of a holy day, or of *the Sabbath day*, which are a shadow of things to come, but the body is of Christ."—(Col. ii. 16, 17.) Besides the usage of the early Christian church, in regard to the observance of Sunday, extended no further than to the assembling on that day for public worship. "A cessation from labour, beyond the time of attendance upon public worship, is not intimated in any passage of the New Testament: nor did Christ or his Apostles deliver, that we know of, any command to their disciples for a discontinuance on that day of the common offices of their professions."—(Paley.)

At the same time we must not omit to remind the reader that though the great majority of Christians have, from the earliest period, repudiated the original or Jewish Sabbath as of no obligation under the new dispensation, yet that there is a respectable class of Christian separatists, called Sabbatarians, (including, we believe, both the General and Particular Baptists,) who hold that the Fourth Commandment of the Decalogue is still as binding on Christians as Jews, and who accordingly observe Saturday as *their* Sabbath, equally with the Jews. We have no occasion, however, to discuss here the grounds of this belief; for our modern Agnewites at least are no Sabbatarians. No—they would willingly give both Jews and Sabbatarians every possible facility for travelling on the seventh-day (Saturday), and so committing what these religionists conscientiously believe to be a breach of the Fourth Commandment, and which truly is so, if we suppose that Commandment to be still obligatory on all mankind; while they would punish them under the self same Commandment, for not keeping holy a certain other day which is not once named in it, and to which the reason therein assigned for resting on the Sabbath-day (God's rest from the creation) has no imaginable application. And this is modern toleration!—this true and undefiled religion! "The Decalogue—Commandment Fourth" is inscribed on their banners; but it is Commandment Fourth with the principal parts left out!

The general conclusion to which a careful and anxious examination of the whole case leads us, differs in little from that to which a like examination had conducted the illustrious Paley. "The conclusion," says he, "from the whole enquiry (for it is our business to follow the arguments to whatever probability they conduct us) is this: The *assembling* upon the first-day of the week for the purpose of public worship and religious instruction is a law of Christianity of Divine appointment; the *resting* on that day from our employments longer than we are detained from them, by attendance upon these assemblies, is to Christians *an ordinance of human institution*; binding nevertheless upon the consience of every individual of a country in which a weekly Sabbath is established, for the sake of the beneficial purposes which the public and regular observance of it promotes, and recommended perhaps, in some degree, to the Divine approbation, by the resemblance it bears to what God was pleased to make a solemn part of the law which he delivered to the people of Israel, and by its subservience to many of the same uses." We subscribe to its being a law of Christianity, that we should assemble for public worship and instruction on the first day of the week, and would earnestly deprecate any use of railways that would interfere in the least with the holding of such assemblies, or tend to keep people away from them; but we must dissent from the positive assumption that it is a law of "Divine appointment,"—for the facts of the case, as previously admitted by Paley himself, warrant no more than a *strong presumption* that the custom "originated from some precept of Christ *or of his Apostles*, though none such be now extant." We subscribe, also, to the doctrine that it is entirely a matter of human or civil regulation to what extent men should rest on Sunday from their usual occupations, beyond the time required for attendance on public worship; and having reduced the question to this simple, worldly-sort of issue—stripped it of those high religious sanctions by which ignorance and bigotry have unwarrantably sought to take it out of the province of human reasoning and judgment—we shall in our next inquire what the state of our civil law is on the subject of Sunday labour, and how far it is affected, for good or for evil, by the new system of railway travelling.

We return to the subject of railway accounts, for the purpose of addressing ourselves more particularly to the passenger department.

The art of book-keeping is, in fact, the art of tabulation. A plain record of facts, jotted down time after time as they occur, might effectually preserve evidence of their occurrence—nay, even more perfect and unquestionable evidence than could be supplied by more advanced systems of book-keeping, which involving necessarily much shifting and changing for purposes of classification, offer facilities for interpolation and simulation which a continuous diary or journal does not admit of. But then such a diary would be nearly valueless—no general results could be deduced from it. In ordinary cases, the most persevering exertion of disentangling acuteness must be foiled in the attempt to show from such a record, how the state of matters at any given moment arose from what had previously been done. But it is beyond this that our complaint lies against not only want of plan in such diaries, but against systems of higher pretensions; *they confer no power of foresight*,—they are founded on facts simply *as* facts, and not on facts as means to an end. Where they tabulate, they do it apart from the view of this indispensible relation, and the consequence is that experience, instead of growing strong and ripening fast under the shelter of ascertained facts and detected causes, is left to advance or decay, as it may, on mere acuteness of supposition or glaring results of blunders.

We have called book-keeping the art of tabulation; we have done so in order to call attention to the fact, that if the immature experience of the railway system requires, for safe guidance, more than ordinary extent and minuteness of information—if it needs that the same facts should be presented in diverse combinations, and under different lights—if it asks for conclusive, or at least probable predictions under new circumstances and on various suppositions—the zealous accountant need not fear to find, within the limits of his art, all that will enable him to meet these demands. But then he must untrammel himself; he must look beyond routine for his resources; he must apply himself to the nature of the subject, and take his measures accordingly.

It is true we have said much of this before; we repeat it, however, as an introduction to our remarks on the accounts of that part of railway business, the nature of which is least understood—the laws of which are as yet but most vaguely guessed at—and the consequences of which, although most momentous, we yet have scarcely the slightest means of tracing—we mean the passenger traffic, its cost, and its yieldings.

What is it which induces a man to travel? No one single consideration. It is neither cheapness of transit, nor ease in the mode of travelling, nor swiftness in the transition from one place to another, nor yet business or pleasure, which would singly induce him to travel; a fact, proved by this, that however strong may be the inducement under any one of these heads to travel, it is possible enough to pitch the drawbacks under the other heads, or the major part of them, so high as quite to extinguish that inducement. It is not therefore from any one of such of these matters as are within our knowledge or control, that we can beforehand deduce the price which will be paid for a journey: nor is it from any comprehensive combination of them, for besides our ignorance of their respective amounts as elements, their compounds are of most confounding and unclassable variety. But this may be done; the effect of a given state of things, and of changes from that state, may be noted. Efforts are now making, as our readers are aware, to deduce from data thus obtained what is the general law which governs the amount of railway fares and the profit to be derived from them. It is true the most elaborate and satisfactory theory must be mere dead and useless skill, without the data which only Railway Companies themselves can afford; but give enough of the data derived even from mistaken management, and science will soon tell what course should be taken. Another thing, too, may be done; the effect of contemporaneous differences of circumstances may be carefully registered. Every railway has a variety of trains, with different degrees of accommodation, different hours of starting, different rates of speed, and different rates of fare. Now each of these will attract different numbers of travellers, and probably different proportions of classes; and much may be learnt from these facts. Here, however, it must

Digitized by Google

be remarked that these incidents may be so completely changed and re-compounded in every case that nothing can be learned with certainty of the effect of any one of them. The argument requires simplicity of comparison. If two trains otherwise exactly alike started at different hours, the effect of the times of starting would be discovered from the numbers of passengers; but if this were combined with difference of accommodation, we should lose the basis of comparison except we could otherwise determine the effect of the latter difference. If trains otherwise the same, start at different hours and their fares are different, it is clear we can infer nothing as to the effect of difference of fares except we can ascertain that of difference of hours, and so also of speed. Now it is clear that the eliminating process by which alone we could arrive at a sound general law, will require data which only the utmost vigilance and most careful classification on the part of the accountant can furnish.

But this is not all: it must be known what is the effect of density and proximity of population; not so much, perhaps, for the immediate guidance of a railway already laid down, and which therefore must take its chance of population (though even in this case it is not without its use), but that this particular railway may furnish its share of facts towards the establishing of a general rule by which we may judge, from the efforts and profits of other railways, whether it is itself doing what it fairly ought to do. We may learn much from the different classes and quantities of business done by the several trains at the several stations, compared with the density, condition, and habits of the surrounding population. Besides, it is very important to know the effect of length of journey on frequency of travel, which is in no way to be so well ascertained as comparing the accounts station by station.

We said, "give science enough of facts." Can any one railway furnish enough? We think not. Yet it is of great moment to be able to compare the results of one railway with those of another, and this cannot be done without a clear and comprehensive knowledge of the local peculiarities of each. If the general law of travel be the same in each case considered, so as to give the proportion of the population to the traffic which would supply the greater profit, it by no means follows that the fares in each case would be the same per mile; that may depend on the share, in that particular district, which cheapness may have in the complex sum of inducements to travel. With cheap and ready intercourse, indeed, we may reckon that eventually local differences will greatly diminish, but at present it ought to be ascertained whether they are of a kind and magnitude to require that they be taken into account, and if so, how far, and in what manner, they affect the result. If then it were certain that no such differences existed, or if their amount and influence were ascertained with some precision, the effects of changes of fare and arrangements, or of their contemporaneous variety as supplied by one railway, would furnish a useful test of the efficiency as to profit of another; and still more satisfactory would be the comparison with the average of all the others; but this evidently cannot be done without corresponding care and considerable uniformity in the method of classification; with such care and uniformity, however, there is nothing of importance in the subject which may not be known.

We have pursued this argument of particulars far enough, we think, to show the importance and the general character of the passenger accounts whose adoption we would urge; we will now briefly specify the items according to which we think the matter of account should be distributed.

The basis of account is the transactions of each train at each station; the object is to know how these transactions are affected by attendant circumstances; these latter seem to be four,—fare, speed, time of departure or arrival, quality of carriage. Now the accounts necessarily taken for the current business of the railway supply all the *materials* required for the best system of accounts, so far as the working of the railway itself can furnish them; *classification* alone is wanted.

First, an account should be rendered from each station at short fixed periods of the numbers of passengers received and entered there, distinguishing the trains, the classes, the fares, the hours of departure, and the places to and from which the passengers travelled. If this were made daily, and returned with a weekly summary, all the better.

From these station accounts would be derived, by simple summing, the number of passengers from each station, the number by each train, by each class, under each fare, at each hour of departure or arrival, travelling each distance, and at each speed. The effect consequent on each of these incidents would appear with great prominence, if not with perfect accuracy, and attention would soon be attracted to the principal points which needed improvement, as well as to peculiarities of effects brought about by special combinations of these causes of variation. Monthly accounts summed in each of these ways would show how the season of the year affected the travel, as well as point out the general progress of the undertaking.

There can be no difficulty in tabulating these facts. If no better device can be resorted to, at least each station may be furnished with printed forms to fill up with the proper numbers. A rectangular space three inches by two, and properly divided, would be more than sufficient to contain all the above-mentioned particulars with respect to the traffic of any one station with any other, and a sheet of very moderate size would contain, of such spaces, one for every other station on the line of the most extensive railway. At head quarters, a large chequerwise table would exhibit monthly, the classified results and circumstances of the traffic of each station with each, throughout the entire line.

But there remain to be ascertained the circumstances out of the line itself which influence its traffic. Of these, we have already spoken of population, habits, and comparative means. At present we can only point out the necessity of carefully collecting the necessary information on these points. We apprehend that the enquiries hitherto made, though valuable and extensive, have been too vague in their objects and too little under the guidance of ascertained principles, to serve the purposes for which they are wanted in the present more advanced state of the railway system.

It is scarcely necessary to say that much of the value of these accounts will arise from the uniformity of their plan and their publication. It is for no idle or unimportant purpose the former is urged—it is no prying into forbidden privacy to require the latter. The railway companies are public bodies, constituted not more for their own particular profit than for the general good: and though we fully believe that their best profit will be found at or near the point which will produce the greatest public benefit, yet, as long at least as the position of that point is uncertain, the public has no doubtful right to be put in possession of the means of judging of it. But not to insist on this, we should be content to rest the matter of publication on the argument we have often used and once again repeat, that it is the interest of each railway to be enabled to judge of the propriety of its own proceedings, by comparing their effects with those of every other.

It must be gratifying to all the well-wishers of Ireland to observe the cordial reception given by the public at large, and by men of all political parties, to the plan lately developed by Lord Morpeth, for the progressive introduction of the railway system into that country. True the plan has been merely propounded for discussion just now, and with no intention of asking legislative sanction for it, during the existence of the present Parliament; but if the promulgation of it had done no more than elicit the favourable opinions which have been expressed of it, that would have been a great advantage gained. After what fell from Mr. Shaw, and other Conservative Members of the House of Commons, on Lord Morpeth's motion for leave to bring in a Bill to carry the project into effect, no person can doubt, that whichever party may hold the reins of Government during the next winter, that Bill—little, if at all, altered in its leading features—will be passed. The plan therefore, is, already so far *accredited* by the ruling powers, both *in esse* and *in posse*, that the capitalists, (Messrs. Goldsmid, Smith, and Thompson,) under whose auspices it was matured before being submitted to Lord Morpeth, and is now brought into the money market [see advertisement] will have but little difficulty in filling up their subscription list before the re-assembling of Parliament—whereas, if the introduction of the Bill had been deferred till that Parliament met, all the intermediate time, thus so well made use of, would have been so much lost, in the progress of a measure, which all must admit, cannot be too speedily brought into practical operation.

We have not noticed, as yet, any movement in respect to the Bill on the part of the Irish landowners, who are to guarantee the 4 per cent. on the capital invested. Our respectable contemporary, the *Dublin Monitor*, which possesses a large share of the confidence of this class of the Irish community, seems, however, to be of opinion that there is no opposition to be feared from them. Indeed, it would be passing strange if there should. Good to them, and nothing but good can come of it. "The plan," says the *Monitor*, "is an admirable one—wholly unobjectionable—and will, we are sure, be received with lively satisfaction by the country. It combines the two great principles of efficiency—private enterprise and Government control—giving free scope to the one, and securing the public from monopoly by the adoption of the other. All parties will be benefitted—the capitalist, the landlord, and the agriculturist. With regard to the 4 per cent. payable on the capital, it is a fair remuneration, and when the immense advantages derivable from the enterprise are considered—the employment it will give to labour—the augmented value it will give to land, and the impetus to the development of the national resources, few will question the fairness of the amount. If it should fall on the land through which the line passes, the sum to each county will be inconsiderable, and far from commensurate with the

Digitized by Google

splendid advantages which the project will realise. But it will not; the profits of such an undertaking, passing through the centre of the island, and connecting one of the finest of European rivers with the metropolis, will amount to double the interest on the capital required."

We announced two weeks ago the commencement of a strong movement in favour of the establishment of the Western line of railway communication between the metropolis and Scotland *via* Lancaster—being that recommended by the Government Commissioners, Sir Fred. Smith and Professor Barlow, as best combining in one undertaking the great interests of London, Manchester, Glasgow, and Edinburgh. The movement originates, we find, with the landed proprietors of the south-west of Scotland, of whom Colonel Graham, is the able and efficient representative; and in this point of view it contrasts favourably with the demonstrations made in favour of the other or Eastern route by Newcastle, which have been altogether confined to the Directors of the English railways leading to Newcastle—nobody beyond that place, on either side of the Border appearing to take the smallest interest in the extension of the line of communication to their own doors; and some of the largest proprietors on the route, such as the Duke of Northumberland, Duke of Buccleugh, and Earl Grey, being known to be strongly opposed to it. The Western project has, we understand, been extremely well received both in Manchester and Glasgow, and there, doubtless, it may expect to find its most hearty and efficient supporters. The intimate and extensive mercantile relations of these two towns, make a direct railway communication between them of the utmost importance to the prosperity of both. The proprietaries of the London and Birmingham, Manchester and Birmingham, Grand Junction, and Lancaster Railways, are likewise all deeply interested in the establishment of the Western route; since that will secure to them a vast through traffic from Scotland which the Eastern route would divert from them for ever. Of the comparative claims of the two routes in an engineering point of view we say nothing. We have not forgotten the able letters which appeared in our journal some time ago from "A Glasgow Citizen" and "A Citizen of Edinburgh," having for their object to show that the Eastern route is the easiest and cheapest of execution; but if the districts of Scotland which would be the most benefitted by the adoption of the Eastern route, will not make the slightest effort in its behalf, it is idle to discuss its superior capabilities. The best route to Scotland will be that which soonest combines the greatest number of interests, and the greatest amount of wealth and influence in its support; and such appearing to us to be the case with the Western, it has our best wishes for its success.

On Wednesday last a large party of distinguished and scientific persons assembled at Wormwood Scrubs, to witness a further series of experiments on the Atmospheric Railway of Messrs. Clegg and Samuda. Among those present we observed Right Hon. Lord Morpeth, Sir Henry Parnell, the Hon. Mr. Ponsonby, Sir James South, the Hon. W. Sturges Bourne, Mr. W. Tooke; Mr. James Pim, Treasurer of the Dublin and Kingstown Railway; Mr. Baxendale, Chairman of the London and South-Eastern Railway; Mr. Johnson, of the Forth and Clyde Canal; Mr. M'Mullen, of the Irish Grand Canal; Mr. Barrington, Solicitor to the Irish railways; Mr. M'Neill, C.E; Mr. Vignoles, C.E., besides other gentlemen connected with railway interests or general science. The interest taken in the day's proceedings by Lord Morpeth and many of the above-mentioned gentlemen arose from the probability that this invention will be put to proof on the tramway from Kingstown to the village of Dalkey, with a view to its adoption on an extended scale in the projected Irish railways. One of the lines of this tramway is at present unused, and affords, therefore, a convenient opportunity of testing the merits of the system, under the immediate eye of the Irish Government.

Desirous as we are of calling the attention of the railway proprietary and the public to whatever inventions may seem likely to promote the improvement of this late-born progeny of enterprise and science, we think we cannot more effectually do so than by recording the experiments we witnessed, and stating a few of their incontestable consequences.

The plan itself is too well known to need more than a very slight description here. Midway between the rails of an ordinary railway lies secure to the sleepers a continuous pipe of suitable diameter; let a piston attached to a carriage for passengers run in this pipe, and a stationary steam-engine exhaust the pipe before it. It is clear that if the parts of the machinery are sufficiently perfect, the atmospheric pressure on the back of the piston will move the carriage and its load with a velocity resulting from the proportion between that pressure and the resistance to be overcome. So far the theory is an indisputable one of naked science; the rest of the mechanical investigation lies in this question;—Are the parts of the machinery sufficiently perfect to produce with certainty the theoretical effect? We will first describe the road and machinery we saw, and then state the experiments which were designed to answer this question.

The rails and pipe (of half a mile in length) are laid on an embankment belonging to the West London Railway Company, and having an incline of 1 in 115. The rails themselves are old ones discarded from the Liverpool and Manchester Railway, and in their present state on the ground present a kind of zig-zag caricature of a railway; certainly no locomotive engine would venture over them. Not only have they sharp deep hollows in many places, but if we are not mistaken, the inclination of the carriage in passing over them changes continually from side to side.

The pipe, which is a cylinder of 9 inches internal diameter, is as irregular as the rails, but its irregularities do not by any means correspond to theirs. We mention this for the sake of the proof it affords that contrary to what might have been expected, much less than ordinary accuracy of workmanship seems to provide sufficiently for the necessary action of the parts. The pipe has been laid down about 14 months, and has received no repair during that time; it has consequently undergone changes of temperature as great as any to which such pipes are likely to be subject, without injury to its effectiveness.

The air pump is of 37½ inches diameter, and is worked by a steam-engine in very inferior condition, said to be of 16 horses power.

Throughout the entire length of the pipe there is of necessity a slit in its crown to afford the needful connection between the piston and the carriage: it appeared to us that it was most important to ascertain whether the means adopted to make and keep this opening air tight after the passage of each train were found to be effectual. Between therefore the third and fourth trials hereafter described, and therefore after this slit had been opened and closed three times, we observed that the air pump in making 16 2-feet strokes per minute, slowly improved the exhaustion, it being at the beginning 16, and at the end 17 inches of mercury. The effect of the air pump therefore balanced, and a little more, the total leakage into the pipe, of which that from the flexible valve which covers the slit is part.* We were informed that the engine and pump now in use exhaust the half mile of pipe to 18 inches of mercury in 1¼ minutes, and that the pipe refills from leakage in 8 minutes. This takes place at the present time, that is, after the pipes have undergone whatever changes could be effected by the variations of temperature in 14 months and the settlement of a new embankment.

In each of the following trials the carriage went down the incline by its gravity alone, and was propelled up it by atmospheric pressure. The distance by which the speed was ascertained is situated a little beyond the middle of the half mile, reckoning from the end at which the carriage starts, and is one-seventh of a mile in length; the time of passing this distance was accurately taken with a seconds watch.

	Time of passing over one-seventh of a mile. Seconds.	Speed in miles per hour.
First trial carriage nearly filled with persons	27 ..	19.05
Second ditto, carriage loaded as before	25 ..	20.6
Third ditto, lightly loaded	20 ..	25.7
Fourth ditto	22 ..	23.4

Our belief at the time was, that in consequence of the wretched state of the rails the carriage did not acquire its uniform velocity until after it had passed the measured space, and perhaps not at all during its trip.

During the last experiment the mercurial gauge showed an exhaustion of 18 inches, which was steadily maintained during the transit of the carriage by the engine working 25 strokes per minute. It was probably similar to this during the other trials. It will be observed that the performances improved during the experiments as we understand they usually do.†

It seems to us to follow from these facts that by the invention of Messrs. Clegg and Samuda, atmospheric pressure is rendered available for the propulsion of railway carriages through machinery of a cheap, common, and even coarse construction—that the weight of the locomotive engines being dispensed with (often half that of the entire profitable train which it draws), lighter rails and less costly roads may be used, as well as that greater *profitable* weight may be propelled by the same power—and

* We should not omit to state, that for the particular satisfaction of Lord Morpeth, a leak was sought for, but in vain; an attempt was then made to remove some cement from the joint so as to make one for the sake of showing that its peculiar whistle would always give notice of its existence; but it was not found practicable to produce a leak in this way, the cement having insinuated itself between surfaces held fast together by the atmospheric pressure.

† It is scarcely necessary to remark that the velocity is not limited to that actually attained in these experiments; we see it stated that 40 miles per hour have been reached with this apparatus: but all this depends on the size of the engine and pipes relatively to the load and resistance.

Digitized by Google

that whatever saving results from the substitution of stationary for locomotive power may be obtained. It follows also from the peculiar mode of working rendered necessary by the construction of such a railway, that no collision of trains could take place.

These results, and others less obvious (and, perhaps, without further experience less certain) are worked out by Mr. Samuda, in a pamphlet on the "Adaptation of Atmospheric Pressure to the purpose of Locomotion on Railways." We do not like his book the worse for its exhibiting a little of the sanguine spirit in which inventors and their backers necessarily indulge, and we do not the less for, it advise our professional readers to make themselves acquainted with its statements. After describing the apparatus with the help of two plates, and giving a table of experiments made in the last twelve months, he contrasts the expense of the working of the atmospheric pressure with that of the locomotive engine plan; and instances the traffic of the Liverpool and Manchester Railway, whose locomotive department now costs 50,000*l.* per annum, while the same work, he asserts, would be done on the plan proposed for 10,320*l.* The power consumed by the locomotives themselves on the London and Birmingham line, he maintains, would suffice to carry goods whose freight at present rates would amount to 306,000*l.* per annum. After the adoption of the proposed system the same Company would divide as great a profit as they do now, if they carried passengers from London to Birmingham at 5s. each, and goods at 6s. 3d. per ton. Mr. S. points out the dreadful consequences, and apparently unavoidable causes, of collisions on locomotive lines, and claims for the new system the credit of entire exemption from these calamitous occurrences. He proposes to place rails and pipes on turnpike roads, leaving part of their width for its present use; on these turnpike railways he would ascend the hills, at 12 miles per hour, and carry passengers and goods at very reduced charges.

Another pamphlet on the subject has appeared in the shape of a Letter to Lord Morpeth, by Mr. J. Pim, junior, Treasurer of the Dublin and Kingstown Railway Company, the object of which is to urge the adoption of the plan on the contemplated Irish Railways. Mr. Pim assumes, that for all the traffic which many parts of Ireland can at present furnish, single lines will be sufficient, and therefore best, if they can be worked without danger. He looks to this plan as supplying the desideratum of safety, and being one which in his judgment will be worked more economically than any other, and require less cost in construction. His sincerity its evinced by his offer for experiment, if needed of the railway of which he is Treasurer. It has been also urged that the plan is peculiarly fitted for Irish use, since peat may be used in stationary, but cannot in locomotive, engines.

On the whole, the invention stands in a position to claim fairly, the careful examination of all who are interested in the prosperity and extension of the railway system. Its success may fall considerably short of the calculations of its enterprising proprietors, and yet enough be left to render it a great public advantage. Whether it will be found applicable to lines whose amount and kind of traffic require very complicated arrangements, we cannot foresee; but we apprehend the mechanical question is so far set at rest, as to show that it may be used, at least without failure, and probably to considerable advantage, on lines of less crowded business.

We observe that the results as to speed, furnished by the experiments made on Wednesday, although equal to the average velocity of railway travelling, were not quite so high as those obtained in the previous trials detailed in Mr. Samuda's pamphlet, nor nearly equal to those the apparatus is capable of producing. We attribute this to the increased irregularities of the rails; and would advise the patentees to lay out a few pounds in readjusting the road. These experiments, like all others made in public, will be witnessed by many persons who are not able, or will not be at the trouble to separate the principles of the invention from the mere incidents of its application. The invention may therefore be unfairly discredited, merely because it is unfairly tested.

—o—

It is not, we believe, generally known that there is at this moment a complete line of railway between London, York, Sunderland, Shields, and Newcastle-upon-Tyne. It has been supposed that the railway communication terminates with the Great North of England Railway at Darlington, and that consequently between Darlington and Newcastle, a distance of 35 miles, the traveller *must necessarily* exchange the ease and comfort of a railway carriage for the confined, and, in many other respects, inconvenient accommodation of a stage-coach. This, we learn, is not the case, as upon arriving at Darlington a person can proceed direct on the coast lines of railway by Stockton, Hartlepool, and Sunderland, by several through trains in the course of the day, and though the distance by this route is somewhat longer than by the common road, he can reach Newcastle in the same time as by the horse coaches between Darlington and Newcastle, and at considerably less expense.

REPORT OF THE SELECT COMMITTEE OF THE HOUSE OF COMMONS ON 11TH CLAUSE OF THE RAILWAY REGULATION BILL.

The Select Committee appointed to consider whether it is desirable for the Public Safety to vest a Discretionary Power of issuing Regulations for the Prevention of Accidents upon Railways, in the Board of Trade; and if so, under what Conditions and Limitations;—— Have considered the Matters to them referred, and have agreed to the following Report.

The discretionary power which is especially referred to the consideration of your Committee, is contained in the 11th clause of the Bill.

"And be it enacted, that it shall be lawful for the Lords of the said Committee to issue from time to time such regulations as they shall deem necessary for the prevention of accidents upon railways: Provided always, that such regulations shall not prescribe anything of an experimental nature, nor interfere with the number of trains, nor with the times of starting, nor with the stoppage of trains, nor with the speed of travelling on any railway further than may be necessary for the purpose of preserving an interval of not more than 15 minutes between succeeding trains; provided also, that any such regulation shall be, as nearly as circumstances may render it expedient, the same upon all railways: provided also, that no such regulation shall be in force after the first issue thereof for a longer period than six months, unless at the end of such six months the Lords of the said Committee shall direct its further continuance; provided also, that no such regulation as aforesaid shall be binding upon any Railway Company, unless the Lords of the said Committee shall have given to such Company one calendar month's notice in writing of their intention to issue the same, in which notice the precise nature of such intended regulation shall be specifically stated, and if it be intended to apply to particular railways, or in a different manner to different railways, the reasons for such special application shall also be stated; and any Company shall be at liberty to memorialise the Lords of the said Committee against such intended regulation, which memorial shall be filed by the said Lords in their proper office for such purpose, and submitted to Parliament as hereinafter mentioned."

The reasons which were alleged as making it desirable that this discretionary power should be given to the Board of Trade, are stated by Sir Frederic Smith, who has been appointed to the situation of Inspector-General of Railways. He observes, that the question of Government supervision having been settled by the Act of last session for regulating railways, it now only remains to determine the extent to which that supervision shall be carried.

He states, that it appears from the returns of accidents made to the Board of Trade, and from the inquiries instituted by the Board into their causes, that a considerable number have been occasioned by the want of proper regulations, and might have been prevented if a power of issuing regulations had been vested in the Board of Trade. He also considers it important for the public safety that a power should exist somewhere of preventing what experience shows to have occasionally happened, the disregard of points so essential to the safety of the railway traveller, that there can be no rational doubt as to their necessity.

It is impossible, however, he says, to define the powers which should be granted to the Board of Trade as to the course they should pursue for the prevention of accidents, until it can be defined what are all the various causes having a tendency to endanger the safety of travellers by railway.

In the present state of railway knowledge, if any positive and definite enactment were made, as to the particular cases in which the Board of Trade should or should not issue precautionary regulations, the effect would be that powers might be given where experience would prove them to be unnecessary, while the authority would probably be fettered where it might be required to have the widest scope.

The various differences in local circumstances existing in the different railways of the kingdom necessarily occasion a great variety in their systems of management, so as to render many regulations which are highly proper upon some lines inapplicable to others without occasioning injury to the proprietors and inconvenience to the public.

The real interests of the Railway Companies, as well as the safety of the public, would therefore, Sir F. Smith considers, be best preserved by vesting a discretionary power in officers responsible not only to the chief of an important branch of the public service, but also to the public and to Parliament.

It will be observed that in the clause above quoted, the discretionary power is limited in regard to several matters which are intimately and unavoidably connected with the public safety, such

Digitized by Google

as the number, speed, and times of starting and stopping of trains.

These limitations have been introduced in order to meet the views of different Railway Companies, who represented them to be important for the protection of their interests; but your Committee believe that the evidence they have collected clearly establishes the inexpediency of any such limitations, and they have therefore considered the propriety of giving to the Board of Trade a general unrestricted discretionary power in all matters connected with the public safety.

With reference to the expediency of vesting such a power in the Board of Trade, widely different opinions have been expressed by witnesses of great practical experience in the management of railways.

On the one hand, it has been stated by witnesses extensively connected with railways, that they consider it very desirable for the public safety that there should be some power to regulate a great number of things which cannot be regulated in any other way, and to enforce a greater degree of uniformity of system than now prevails in matters essential for the public safety; and that they view the proposal to vest a discretionary power in the Board of Trade without any apprehension of injury to their interests as railway proprietors. On the other hand, it has been strongly urged that the existence of such a power in a Government department would be injurious to the railway interests, and might tend to diminish rather than increase the safety of railway travelling, by interfering with the responsibility of those entrusted with the management.

It is established by evidence to the satisfaction of your Committee, that the existing power of supervision vested in the Board of Trade by the Act of last session, for regulating railways, has worked well hitherto, and promises considerable advantages for the future, from the continuance of the amicable spirit and cordial co-operation which seem to have happily prevailed on the part both of the Inspector-General and the Directors and Engineers of railways.

This amicable spirit, it has been represented by several witnesses connected with railways, is likely to continue uninterrupted so long as the supervision of the Board of Trade is exercised as at present, in the way of suggestion; but if an absolute power of enforcing regulations under pain of a penalty were given, it might, although exercised with the greatest judgment and forbearance, have the unfortunate effect of engendering on the part of Railway Companies a desire of concealment and feelings of jealousy which would not otherwise arise.

Influenced by these considerations, your Committee recommend that the Board of Trade should not at present have the discretionary power contemplated in the 11th clause of the Bill above quoted, and prefer that the supervision of that department should be exercised in the way of suggestion rather than in that of positive regulation. At the same time, they propose that minutes should be made of the various suggestions which may from time to time be offered to Railway Companies; and your Committee make this recommendation with a view to the suggestions themselves and the correspondence arising therefrom being submitted to Parliament whenever they may be called for.

Your Committee therefore suggest, that in lieu of the 11th clause, a clause should be substituted, requiring that Railway Companies shall enter in the minutes of the proceedings of their Boards of Management, or in some book to be brought under the notice of the Directors at their periodical meetings, all such suggestions as may be addressed to them by the railway department.

Your Committee are of opinion, that one great source of danger to the public may arise from a want of harmonious proceeding on the part of the Managers of connecting railways, in reference to their regulations and arrangements at the junctions; and your Committee, with a view to remove the difficulties which are likely to exist in this matter, consider it expedient that whenever the Directors of connecting lines of railway shall not be able to agree upon arrangements for conducting, with safety and convenience to the public, their joint traffic, it shall be lawful for the Directors of either of such railways to demand that the arrangements for carrying into effect the above object, so far as they can be deemed to relate to the safe and convenient transference of passengers and goods from one connecting railway to the other, should be referred to arbitration, each of the companies nominating an arbitrator; and in the event of the disagreement of the arbitrators so nominated, the the railway department of the Committee of Privy Council, on application in writing by either party, should be authorized to appoint an umpire, whose decision should be conclusive on such points as may be submitted to him in furtherance of these objects.

Your Committee are therefore of opinion, that clauses for the objects above stated should be added to the Bill.

RAILWAY OFFENCES AND OFFENDERS.

The first three cases on our list this week are remarkable for the samples which they furnish of the diversity of punishment which sometimes awaits offenders in this country, for precisely the same offence. In all the three cases, the offenders were railway labourers—the cause of complaint the leaving of articles on the lines on which they were respectively employed, by which the safety of trains subsequently passing were endangered,—and the degrees of blame as nearly as may be the same. But in the first case the offender was discharged on payment of expenses and damages amounting to 11s. 6d.; in the second he was fined 5*l.*, and in default of payment was committed to prison for one week; and the third, he was fined 5*l.*, and in default of payment committed to the House of Correction *and to hard labour* for seven days! It is idle to talk of "setting examples," as long as the law is thus unequally administered. No man can tell how much or how little he has to fear under such a state of things; and the uniform tendency of uncertainty of punishment is to produce an increase of crime and offence.

1. [*From the Stockport Advertiser.*]—At our County Court, on Thursday, Adam Bradley, a contractor's labourer on the line of the Manchester and Birmingham Railway, appeared before P. E. Marsland, Esq., to answer a summons granted against him for wilfully and negligently leaving a wheelbarrow on the line, at Blackbrook, on Thursday the 13th May last.

Mr. W. Vaughan appeared for the Company, and stated, as a reason why the case had not been brought up earlier, that the defendant had absconded, and the process had since been renewed. He then read a clause in the Company's Act, by which any person leaving anything upon the line, so as to endanger the life or limb of any passenger, subjected himself to a penalty of 10*l.* or three months' imprisonment. It transpired in the evidence that the wheelbarrow was left so near the rails that the train in passing Blackbrook came suddenly upon it; the step of the first third class carriage coming in contact with the barrow, threw it fortunately a considerable distance, and the step-iron itself, a bar two inches diameter, was nearly doubled by the collision. Had the wheelbarrow passed the iron guards in front of the engine, and continued upon the rails, the consequences might in all probability have been very serious. The defendant, who had surrendered himself to the Court, made no defence. In consideration of his good character, and his mother, who is an aged widow, and others being wholly dependent for support upon the fruits of his industry, the Directors did not press the case further than by bringing the subject before the Court, for the satisfaction of the public. The magistrate observed that it was fortunate for Bradley he had fallen in such hands, and commended the Directors for their lenity. He hoped the present inquiry would operate as a warning to others, and discharged the defendant on payment of the expenses and damages, amounting to 11s. 6d.

2. [*From the Lancaster Guardian.*]—A railway labourer named Leonard, was charged by one of the policemen employed on the Lancaster and Preston line, with neglecting to remove his barrow, and with overturning a quantity of marl on the rails, thereby greatly endangering the safety of the train which immediately after passed.

Samuel Given, a labourer on the line, deposed that he was at Burton Bank, on the railway, on the previous afternoon. The prisoner was there, and was wheeling his barrow between the two lines of rails. Witness heard the train coming, and called to the prisoner, telling him to run his barrow off immediately. Instead of doing this, he dropped his barrow through fear, and ran away. The barrow capsized, and the marl was emptied on to the rail over which the coming train would pass. Witness then ran to the barrow, and, at the risk of his life, snatched it from before the train when it was only a few yards off.

John Holme, police on the line, said that he had given all the men instructions to clear the line half an hour before each train was due. He did not see the barrow overturned, but was there immediately afterwards, and saw that the train had passed over the marl, by which it might have been overturned. Witness stated that the men were careless as to what they did. The contractor engaged them at 2s. 4d. a day, but never gave them any money, always paying them in "tommy," (*i. e.* very bad provisions, accounted for at enormous prices.)

The Rev. J. Mackreth said that this was a most disgraceful system, and ought to be put a stop to.

Mr. Bolden, Secretary to the Railway Company, said that it could not be hindered. The Directors had tried, but without success.

The prisoner was fined in the mitigated penalty of 5*l.*, and in default of payment, was committed to the Castle for one week.

3. [*From the Derbyshire Chronicle.*]—On Friday, the 4th of June, 1841, Joseph Brindley, of Belper, a platelayer on the North Midland Railway, was taken before J. B. Crompton, Esq., and Dr. Peach, at the County Hall, Derby, by Inspector Churchill, for leaving a large wooden mallet on the line near the Belper Pool Bridge. On account of his previous good conduct, and believing it not to have been done intentionally, he was fined in the mitigated penalty of 5*l.*, being the lowest penalty they could inflict according to Act of Parliament. In default of payment he was committed to the House of Correction for seven days, to be kept to hard labour.

---

4. Case of Trespass.—On Sunday last, Thos. Croft, of Hunslet, was apprehended for trespassing on the North Midland Railway, and being convicted next day before C. Beckett, Esq., one of the magistrates of the West Riding, in the penalty of 40s., was in default of payment committed to the House of Correction for one month. The evidence showed that he applied at the Woodlesford station for a

Digitized by Google

ticket to Leeds, in a state of intoxication, which was refused him, as he was not in a state to take care of himself. He afterwards persisted, contrary to the warning given him, to walk upon the railway, and providentially escaped being run over by one of the porters dragging him from the line just as a train approached him.—*Leeds Mercury.*

5. Assault on a Railway Policeman.—A man named William Staunton, a coppersmith in the employ of the Railway Company, was charged before the borough magistrates, on Thursday, with the following assault on William Chapman, a railway policeman. Staunton had been sent up to the Andover station with another man to work for the Company. They returned by one of the evening trains, and being unknown to the officer who collects the tickets at the terminus, he asked them for their tickets. Staunton, instead of explaining that he had been up in the Company's service, used very abusive and violent language to the officer, who gave him in charge to the policeman. Staunton struck the policeman and drew a knife open, using at the same time very violent expressions. The prisoner pleaded guilty, and said he was intoxicated at the time of committing the offence. He produced a five years' good character. He was fined 10s. and costs, or to be imprisoned for 14 days and put to hard labour in default of payment.—*Wiltshire Independent.*

6. [*From the Essex Standard.*]—Observance of the Sunday.—Joseph Payne, a Superintendent of the workmen who are engaged on the railway works at Springfield, was charged with having, on Sunday, the 13th inst., set men to work on the Railway, and aided and assisted them.

Defendant said it was not in service time, for the men left off before nine o'clock in the morning, and did not recommence till six in the evening. They worked all Saturday night, and if they had not been so employed they would have been idling about and drinking all Sunday and Monday.

Mr. Bartlett observed that on Sunday morning, just as people were going into church at Chelmsford, he saw one of the men very much intoxicated and noisy in the street. Yesterday that man was fined for being drunk, and he pleaded as an excuse that he had been at work all night, and coming into the town about nine o'clock, he being tired, went into a beer shop, and there got drunk.

Defendant said that man had not been at work all night.

The Chairman. The Magistrates must draw a line somewhere, and we are determined to put a stop to it.

Defendant said that some Magistrates about Chelmsford allowed them to do little jobs on the Sunday.

Mr. Mildmay said this was a very bad case, as at the time the men were at work, Divine Service for their benefit was actually going on, and they were, therefore, prevented from attending it. It was setting a very bad example to the neighbourhood, and the men were kept at work against their will.

Defendant. Not against their will.

Mr. Mildmay. If you speak to them about it they say they would be discharged if they refused to work on the Sunday.

Mr. Pearson said that when the work was one of necessity no notice was taken of it; but that was not the case in the present instance. When they had been obliged to pump out water that had broken into the works, that was a matter of necessity, and no notice was taken of it.

Defendant repeated that the man who had said he was at work all night had told a lie, and he should discharge him.

Mr. Bartlett said if he had stated that the man told him he had been at work all night, that was incorrect; but the man told him that he had been at work till nine o'clock in the morning, which implied that he had been. Mr. B. made some further observations to defendant about discharging the man.

Defendant replied that he had a right to discharge any man he chose, and the contractor himself could not prevent his doing so.

Defendant was convicted and fined 5s. and expenses, the Chairman at the same time repeating to him that the Court was determined to break through the practice.

Defendant said he was sorry that such a thing had occurred; he did not do it wilfully, but thought he might, as it was not in regular service time. He did not know of the other service at Springfield.

One of the workmen named Morris was then called, and he answered to the call. He stood charged with a similar offence, but Payne said that Morris was not at work on Sunday; the summons had been intended for a man named Harris, whose name had been struck out, and Morris's inserted instead. The Court told Morris that as he had appeared that was sufficient ground for proceeding. A man named Fell was called to support the charge, but he only stated that he saw Morris on the bridge, and did not see him do any work. Defendant was therefore discharged.

Payne.—I hope gentlemen you will not be offended with me, but I've erected a place to pay the men in to keep them out of a public house: it cost me between eight and nine pounds, and something every week, and this is all I get for it. Now, next Saturday night I shall drop this, and let the men go where they please.

7. [*From the Eastern Counties' Herald.*] Protection of Railway Passengers.—On Friday evening, on the arrival at this town of the train from Selby, a young woman, a passenger in a third class carriage, made complaint at the station that, between Hessle and Hull, a passenger in the same carriage had conducted himself improperly towards her between Hessle and Hull. Mr. Locking, Secretary to the company, having heard the complaint, considered the case one which merited his interference and protection, and the investigation of the judicial authorities; he immediately ordered into custody the offending passenger—a master butcher, with a number of calves for sale, but rather in liquor. On the following morning the charge was heard at the police-court, before Messrs. Newmarch, Thompson, and Firbank, when the prisoner gave his name Thos. Spears, of Selby, butcher. The complainant gave her name Elizabeth Pitt, servant to Mr. Garbutt, Beverley-road. She stated that, several times between Hessle and Hull, the prisoner put his face into her bonnet, that she requested him to desist, and twice moved her seat to get out of his way, but that he followed both times, and that afterwards, while something was occurring, his hat went over the train, whereupon he pulled her bonnet to pieces. This statement was confirmed by her sister, Fanny Pitt, and by William Jackson, another passenger. The prisoner made no defence, except that he was fresh, that it was all a bit of nonsense, and he did not think any thing of this kind (being given into custody, &c.) would have come of it. He had lost his hat, and had to employ another person to sell his calves. A gentleman from the railway office said he appeared for Mr. Locking, who had given the man in charge, feeling it his duty to protect the passengers. The Magistrates expressed their approval of Mr. Locking's conduct, and observing that the young woman had given the defendant no encouragement, fined him, for the assault, £2, with cost, or in default to be imprisoned a fortnight. Mr. Garbutt expressed his obligations for the protection of the bench. The girl was a very steady girl, and had been in service a long time. The girl then intimated that she had received no compensation for her bonnet, which cost 1*l.* The Magistrates said that might be settled privately, but if defendant refused to make it good, they would issue a summons upon another charge for wilful damage. Defendant immediately promised to pay her 1*l.* The Magistrates ordered the money to be paid before he was released from custody. The gentleman from the railway office return thanks on behalf of Mr. Locking, to the Magistrates for their protection. The Magistrates replied they would be happy at all times to afford it.

BIRMINGHAM AND GLOUCESTER RAILWAY—EXCESS OVER ESTIMATES.

To the Editor of the Railway Times.

Sir,—The ground on which "Junius" stood has been cut from under him and he appears to have been nettled in consequence; perhaps on this part of the subject it may be enough to challenge "Junius" to quote one word of "abuse" or "invective" in the letter in which he appears to have discovered both.

The insidious attack made with apparently no other object than to disparage the direction of the Birmingham and Gloucester Railway, and to weaken the confidence of the shareholders, has dwindled down into an attempt to show, that as compared with other railways, the Birmingham and Gloucester bears the precedence over seven others in the small quantity of its earthwork: Let this be granted and to what does it lead? Certainly not to the inference that *therefore* the whole undertaking ought to absorb a capital in direct ratio with its earthwork. If he consults the ratios of cost on other railways, as compared with this one item of their works, he will find no definite coincidence between them; and even as to the fact I believe he is mistaken, although from his dogmatical mode of putting the point, it might be inferred that he took it from some authentic source. I have, however, understood in ordinary conversation, that the earthwork on the Birmingham and Gloucester Line exceeded 90,000 cubic yards per mile.

In stating that I have compared the original Parliamentary capital of the Birmingham and Gloucester Railway, with the final capital required for the other lines "Junius" makes a most palpable mis-statement; I have expressly shown that I took the same data for all, and the report of the Manchester and Leeds in your columns of the 12th instant, confronted with "Junius's" statement proves my assertion; and the result remains the same as before, viz. that the ratio of expense on the Birmingham and Gloucester Railway as compared with the original estimates, has been *singularly small.*

The remaining points of "Junius" have been already beaten down in reply, although he attempts to revive them in a different shape. By turning to the traffic returns in your columns of the 12th, he will see a more decided refutation than before.

If "Junius," instead of indulging in insinuations upon which he cannot maintain his ground, would take the fair and manly course of showing that there has been on this Railway an excess above the original capital asked for by the Directors and conceded by the proprietors, and asserting the right of the latter to full explanations as to the causes of such excess, and in reference to which they ought to consider how far the Directors who led them so blindly on are worthy of their future confidence; I would heartily agree with him, and in this view I hope our letters may alike be productive of good to the undertaking, by rousing the proprietors to due enquiry.

I am your obedient servant,

W.

15th June, 1841.

Eastern Counties' Railway.—The Cambridge-road station at Mile-End is now open, and the Devonshire-street station finally closed. The works in the neighbourhood of Chelmsford are steadily going on. The cutting on the Springfield side of the town proceeds rapidly, and the gigantic embankment is steadily striding on towards New-street, in which street the workmen have commenced the construction of the bridge. The brick-makers are very active in the Town Field, and have commenced burning a very large number of bricks. At Widford the cutting is forward, but between that point and New-street, Chelmsford, there is an immense mass of labour to be performed. The contractors are also at work at Hatfield Peverel and Colchester. The Company have commenced operation at Motts Farm and Newbridge in Lexden. —*Essex Mercury.*

RAILWAY FARES.

To the Editor of the Railway Times.

Dimidium facti qui cœpit habet.

SIR,—When I read Mr. Ellet's paper, which appeared in the *Railway Times* some time ago, on railway fares, I felt rather inclined to send you a few remarks on the subject, showing what I conceived to be the imperfections of his theory—giving him, however, full credit for the ingenuity and originality of his arguments. But on perceiving, from your notices to correspondents, that you had already received some letters on the subject, I presumed that it had fallen into more able hands, and therefore did not trespass on your columns. I now, with rather a different view, offer you a few remarks on Mr. Bernard's letter, which appeared in your last publication; for, conceiving his attack on Mr. Ellet to be full of errors and incongruities, and moreover most untenable and unjust—although I do not *by any means* "go the whole hog" with our Yankee friend—I own I feel now much more inclined to defend than to attack him. Your having already defended Mr. Ellet, would have prevented my doing so, but that I thought that some of Mr. Bernard's errors had escaped you.

Mr. Bernard certainly does not seem to be very much enamoured of algebra; on the contrary, he seems to have a positive antipathy to the very sight of an x or a y: he talks over and over again of the "elaborate calculations," "intricate," &c., &c., contained in Mr. Ellet's essay, and goes so far as even to censure the introduction of algebraic symbols at all, as an "*ad captandum* display"! Now, in fact, one of the chief merits of Mr. Ellet's paper is, his endeavouring to bring a question, apparently so unmanageable, within the province of algebra—thereby insuring (if successful) an easy and certain result. Whether he has been successful or not in this attempt, is another matter.

[If Mr. Bernard's letter was commented upon in the same *charitable* vein that styles Mr. Ellet's an "*ad captandum* display," or if it was tested by his own remarks on the subject at the commencement of his first letter, what should we be apt to say of his *numerous* Latin quotations and expressions.]*

With regard to the intricatness of his calculations, surely Mr. Ellet dips but very lightly into either algebra or the calculus; he gives us nothing higher than a quadratic equation to solve in the former; and any schoolboy, who has just read the few first pages of a work on the subject, may easily follow him in his slight use of the latter. Perhaps he has not given as many of the *steps* in his calculations as he might have done; but are we to throw him and them overboard on this account? Mr. Bernard, however, is not satisfied with attacking Mr. Ellet—he must attack the calculus itself; he tells us that, "very few engineers ever venture on the study of the calculus; and of these few by far the greater number, disgusted with the apparent want of rigorous proof, are deterred from prosecuting the inquiry, by the peculiar nature of the analysis itself, which does not afford to the mind of the beginner, that conviction so conspicuous in other branches of the mathematics." It would be absurd, Sir, in me to commence a defence of the calculus here, but I may be permitted to observe, that a person is not likely to be *disgusted* with it, until he finds it a little too *tough* for him; and that although a conclusion arrived at by means of it, does not bring to the mind the conviction that a *geometrical* demonstration does, yet that it does bring full as much as a conclusion, derived from an algebraic equation. Mr. Bernard also remarks, that "a man may do the commonest sum by algebra, and succeed admirably in puzzling himself and others too;" to this doctrine, applied in the way it is evidently meant here, I cannot fully assent, for I conceive that the solution of any question by algebra, is invariably simpler than by arithmetic, except when the question is so very simple, that both solutions coincide. That some people, however, may "succeed admirably in puzzling themselves" in algebra, I fully allow, and indeed we shall presently see a proof of it.

Mr. Bernard commences his attack by stating—"the author * * assumes that a certain amount of fare may be charged which shall tempt a greater number of the community to avail themselves of the proffered means of communication than any other amount of fare would do." Now, no one will deny this; but, nevertheless, it is not what Mr. Ellet says; the limit in this case is evidently zero, for when the fare is equal to zero, the number of passengers will be greater than in any other case; so this cannot be the desideratum Mr. Bernard seems to suppose it. The limit Mr. Ellet mentions is a totally different one—it is the greatest sum which each individual will pay rather than decline the trip he proposes to make; this is evidently different for every different individual, and therefore Mr. Ellet is perfectly right in forsaking the vain pursuit of such an *ever-varying* shadow—which, however, Mr. Bernard supposes to be the "very thing sought." So clear is Mr. Bernard on this point, that he shortly after tells us that to ascertain π, (which stands for the highest fare *any* grade of passengers *can afford* to pay), would be "to solve the problem of the most advantageous fare;" so, according to this theory of Mr. Bernard's, what Railway Directors ought to do is, to raise the fares until they drive all the passengers off the line, excepting the small number representing the highest grade π.

After forsaking the pursuit of this variable, and therefore useless limit, Mr. Ellet proceeds to try and discover what the average law is which influences all travellers on a railway, taken collectively. In censuring Mr. Ellet's method of arriving at this law, it seems to me that Mr. Bernard is mistaken in supposing that the grades or classes which Mr. Ellet mentions are the grades of *rank* in society in general: they are really only supposed grades, into which he would divide the travelling public. The labouring classes, undoubtedly, as Mr. Bernard remarks, far out-number the others; but then, they have not the same incitement to travelling; at all events, these grades are arranged according to their willingness to pay a certain fare for a trip, which willingness does not necessarily depend upon their rank, nor yet upon their money, but in a great measure upon the urgency of the cause inciting them to travel. According as this urgency varies, an individual may be one day in one grade, and the next in another. Mr. Bernard also ridicules the idea that the money which an individual is willing to spend on a trip, may be a "function of the distance." Now, we shall suppose that Mr. Bernard is in London, and has a spare pound in his pocket, and that he wishes to go to Greenwich, will he therefore consent to give his pound for this trip? I calculate not. I presume he will take very good care not to part with his money until he is sure of an equivalent, in the distance he is to be carried; and what does this amount to, but to the fact that the money an individual is willing to pay for a trip *does* depend upon the length of that trip—*upon the distance.*

It is not necessary, however, to enter into the consideration of these classes or grades, to see that this law of Mr. Ellet's is a reasonable and fair *assumption.* We know that if the fare on a railway be diminished, the number travelling will be increased, and *vice versa;* and we may surely fairly assume, for the purpose of investigation, and in default of any evidence *to the contrary*, that the increase of the one will be proportional to the diminution of the other. That Mr. Ellet has done well, Sir, in taking this course I fully agree with you, and that "so long as hypothesis is suffered to take rank only as hypothesis, there is no more powerful help to investigation existing." Mr. Ellet honestly avows that this law "cannot be *proved* to be correct;" this candid acknowledgment Mr. Bernard perverts into a denunciation by Mr. Ellet of his own assumed law!! and then, on this perversion, founds seme censorious remarks on Mr. Ellet's paper, and on himself. Such, Sir, being their source, I presume you will agree with me in considering them unworthy of further notice. I shall therefore go on to remark, that I do not at all mean to maintain this law as being perfectly correct, for I do not conceive it to be so; in fact, it seems to me probable, thas if ever the true law is discovered, it will be found to be variable, for different places, and even for different times of the year, at the same places; but if the variations are found to be slight, an *average* law may yet be discovered, *applicable in an investigation similar to Mr. Ellet's.*

We next come to what Mr. Bernard calls "two distinct propositions."

1st. "That for every increase of cost, the number of passengers will be diminished; and that the diminution of the number will be proportional to the augmentation of the cost."

This is the law already mentioned, and Mr. Bernard considers it irreconcileable with the following:—

2nd. "That it is proper to assume, that if the fare on the road between two important towns were reduced to *zero*, and the public were carried free of charge, the number of travellers would be represented by some constant quantity T, and, that for every increase of 1 cent. in the charge the number would be reduced some quantity, represented by the co-efficient t, in the equation $T - \mathfrak{C}\, h\, t$ = number of passengers."

If any body will take the trouble to read the latter over carefully, he will see at once, that the former is *included in it.* For if the increase of 1 cent, produces always a corresponding diminution t, in the number of passengers; it is self evident that the *augmentation* of the one will always be proportional to the *diminution* of the other. To guard against any mistake, Mr. Ellet has taken care to say, that it is "the *increase or decrease* of travel (*not the travel*)," which will be proportional to the diminution or augmentation of the charge; in spite of this, however, Mr. Bernard gives us a proportion which supposes the *entire number travelling* (and not the *increase or decrease* of that number) to be proportional to the alteration in the fare. This, which is manifestly incorrect, of course leads, when carried out, to an absurdity.

I shall now proceed to consider the expression—

$$\mathfrak{C}\, h = \tfrac{1}{2}\left(\frac{T}{t} + 2\,\delta\, h\right)$$

It at first does seem odd that $\frac{T}{t}$ should be independent of the distance h, as it appears to be here. That it is not however, I shall endeavour to show, by making a very slight alteration in Mr. Ellet's notation. I shall consider t to stand for the diminution of the number of passengers, corresponding to an increase in the charge of one cent. (or any fraction of a cent. or penny,) *per mile.* This will also be an improvement in simplifying Mr. Ellet's expressions (1,) (2,) and (3.) We shall now have,

The number of passengers $= \mathfrak{C}\, t$, (1)

The maximum gross profit, $c\, h = \tfrac{1}{2}\left(\frac{T\,h}{t} - \delta\, h'\right)$

and for the gross charge—

$$\mathfrak{C}\, h = \tfrac{1}{2}\left(\frac{T\,h}{t} + \delta\, h\right);$$

The expression $\frac{T\,h}{t}$ in the present case, is equal to $\frac{T}{t}$ in Mr. Ellet's formula, showing that in the latter, t is really a function of the distance. We may now get rid of h altogether by division, and then we shall have for the gross charge *per mile.*

$$\mathfrak{C} = \tfrac{1}{2}\left(\frac{T}{t} + \delta\right).$$

The above I conceive to be the most useful formula that Mr. Ellet has given us; or at all events the most promising one, for the usefulness of any of them is as yet problematical. If we suppose a tributary line, together with that part of the main line included between either terminus, and the junction with the tributary, to form one continuous railway, we shall find this formula as applicable as in the case of the main line, and thus we may do away with the necessity of entering into Mr. Ellet's

* The parts within brackets have been added in answer to Mr. Bernard's *second* letter.

Digitized by Google

further calculations. Besides, on commencing these calculations Mr. Ellet seems to have fallen into an error which runs through the whole of them. He supposes the charge to be raised "so high, that if exacted, passengers would be entirely excluded, and we should therefore have $T - \epsilon h t = o$, from which would be immediately deduced $\frac{T}{t} = \pi$, the value of the highest grade in the community." Now, if this were the value of that grade, we should have a number representing that grade travelling, whereas by hypothesis there are *no* travellers now upon the line. To get the real value of π we should put $T - \epsilon h t = y$, y representing the number of travellers derived from the grade π; this number, therefore, being an unknown quantity, renders the remainder of the calculations useless unless it can be got rid of, or be shown to be insignificant.

After deducing the value of $c h = \frac{1}{2}\left(\frac{T}{t} - \delta h\right)$ and showing that it is to be added to the actual expense of conveying the passenger, Mr. Ellet proceeds to show us how it is to be discovered, by instituting an experiment to ascertain the quantity $\frac{T}{t}$. And towards the conclusion of his letter, after some further considerations relating to the extent of allowable variation, from the most advantageous fare, (which, however, are vitiated by the supposition that $\pi = \frac{T}{t}$), he sums up by stating that "the rule which should be proposed for computing the tariff, will be drawn from the formula as modified by these considerations, and that it may be expressed in a few words—*add to the constant quantity which experiment dictates for the profit per passenger, the actual cost of his transportation*—to obtain the gross charge to be exacted for his conveyance." Part of this Mr. Bernard quotes *three* times in his letter, but makes a verbal alteration in it, which entirely changes Mr. Ellet's meaning; he puts *experience* for *experiment*: this I don't think you will consider to be showing fair play to our trans-Atlantic friend. The knowledge that we receive from experience is "thrust upon us" by that experience; but to increase our knowledge by experiment we must devise a *particular* experiment to suit our purpose. This Mr. Ellet has done in giving us the mode of ascertaining the value of $\frac{T}{t}$, and it is to this experiment he here evidently alludes. Mr. Bernard then remarks, "what the constant quantity is, or in what manner it may be approximated to, we are not told!" This, Sir, speaks for itself; I leave it with your readers.

[Mr. Bernard seems inclined to modify this statement in his last letter, for he refers to it as "his objection that the value of the constant cannot be determined from the essay without the aid of experiment." If this was all he meant by the above, I must say he expresses himself very much *in hyperbole*.]

Further on in his letter I find the following:—"It appears, then, that by this process we are to venture on the dangerous experiment of raising the fares, so as to ascertain the diminution of the number of passengers."

If this experiment be so dangerous, why is it that so many Railway Companies have raised their fares from time to time? (those that have done so, by the bye, ought to have evidence now sufficient to put this theory to the test.) But the experiment may be as well tried by lowering the fares. This, however, I believe the Companies would think still more dangerous; and certainly the present method of railway taxation is against it. From other parts of his letter Mr. Bernard seems to be *in favour* of collecting facts from experiment. May I ask him what sort of experiment *he* could try in the case, *but* that of raising or lowering the fares? Mr. Ellet probably proposes *raising* them, because he well knew the *hankering* Railway Directors generally have after such a proceeding.

But to proceed with my last quotation—"and this merely for the purpose of obtaining the value of a certain constant $\frac{T}{t}$ upon the *erroneous supposition* of the existence of a certain law, when by the same experiment the *true* law itself can be readily determined, thereby wholly obviating the necessity of the constant $\frac{T}{t}$ or of the different formulæ contained in the essay. Such are among the palpable absurdities of which even distinguished talent may occasionally be guilty."

I am inclined, Sir, to think, that the "palpable absurdities," if there be any, are on Mr. Bernard's own side here, and consist in his supposing that the determination of the true law would obviate the necessity of the constant $\frac{T}{t}$. Undoubtedly, a series of experiments would determine to the law as well as this quantity (and this is another strong reason in favour of those experiments). But if we knew the law *a priori*; how it would do away with the necessity of calculating the quantity $\frac{T}{t}$ (*or some equivalent one*) I cannot discover; or how it would at once mark out the best fare, as Mr. Bernard seems to expect. Suppose, for an instant, that this much-abused law was found to be correct, how would Mr. Bernard then fix the most advantageous fare without calculating the constant $\frac{T}{t}$. Or suppose the correct law was found to be, that the diminution of the passengers varied as the square (or any other power) of the augmentation of the charge, how, in this case, would he fix the fare, without first investigating what the constant ought to be, and then calculating its value? The law may be the same for many railways upon which the constants, and therefore the fares, are different, owing to the difference in the travel.

Mr. Bernard then goes on to remark on a statement of Mr. Ellet's, "that the loss increases as the square of the departure from the charge which corresponds with the maximum revenue," and dispatches it very shortly by saying, "But this is in reality nothing more than a property or function of the general law which, I have already shown, was assumed upon insufficient and erroneous authority, and therefore, like that assumed law, falls to the ground." I agree with Mr. Bernard here, that this statement has not sufficient foundation; I am not, however, convinced by his arguments, but consider it far from being *a function of that general law*, to be *irreconcileable with it*; that this is the case may be easily proved, but as the proof would require a little algebra, to which Mr. B. has such a decided antipathy, I shall not introduce it. I fancy Mr. Ellet himself saw that these two laws were not quite reconcileable, for he remarks, in a note, "the increase is not so rapid in the present case, but still it is very great indeed"; I am therefore sorry that he brought in this last-mentioned principle at all, or that he did not investigate this particular case, and ascertain how the loss really varied.

[In his second letter, Mr. Bernard comments further upon the assumed law and its properties giving us some calculations and tables. It appears from these, that he still labours under the error, I have shown above, of supposing, that by this law, the entire number of passengers varies inversely as the fare; for he states, that "by the hypothesis adopted in this essay, of the amount of fare be diminished one-tenth the number of passengers will be augmented one-tenth," &c. He now, however, does not carry out this proportion beyond the first addition to, and reduction from, the fare of 10s. which he commences with; but he falls into a new error, viz., that of mistaking the gross receipts for the gross profits; and hence his tables are imperfect and useless; not at all warranting this second "reductio ad absurdum," which he fancies he arrives at.

To obtain the profits, we must make a supposition with regard to the expenses of conveying each passenger; I shall therefore suppose this expense, δh, equal to 5s. From Mr. Bernard's tables we have $T = 200{,}000$. $t = 10{,}000$, and the unit of price = 1s. Hence, for $\epsilon h = 10$s. the case he supposes. I shall give his tables, adding a table of the gross profits.

Fare.	Passengers.	Gross Receipts.	Gross Profits.
s.		£.	£.
10	100,000	50,000	25,000
9	110,000	49,500	22,500
8	120,000	48,000	18,000
7	130,000	45,500	13,000
	And from 10s. upwards.		
11	90,000	49,500	27,000
12	80,000	48,000	28,000
13	70,000	45,500	28,000
14	60,000	42,000	27,000

In this case we see that the fare of maximum profit, lies between 12s. and 13s., and is therefore *greater* than 10s.

But to show more clearly what a "palpable absurdity" Mr. Bernard's idea was, that he had proved that Mr. Ellet's law would make "*every existing charge that of the maximum profit*;" I shall now suppose another case.

Let $T = 400{,}000$. $t = 30{,}000$. $\delta h = 5$s. and unit of price = 1s.

Then, calculating as before, we shall have:—

Fare.	Passengers.	Gross Receipts.	Gross Profits.
s.		£.	£.
11	70,000	38,500	21,000
10	100,000	50,000	25,000
9	130,000	58,500	26,000
8	160,000	64,000	24,000
7	190,000	66,500	19,000
6	220,000	66,000	6,000

In this case we see that the most advantageous fare is *less* than 10s. Mr. Ellet's formula,

$$\epsilon h = \frac{1}{2}\left(\frac{T}{t} + \delta h\right)$$

gives us at once its value,

$$\left(\frac{T}{t} = 1.3333 \text{ \&c.} = 13\text{s. } 4\text{d.}\right)$$

as 9s. and 2d. The gross profits for this fare are 26,041*l.*]

There are, Sir, in this letter of Mr. Bernard's many other censorious comments on Mr. Ellet's paper, but they are so utterly undeserved, and groundless, that I shall pass them by; just putting Mr. Bernard in mind of the old saying, "those that live in glass houses should not throw stones."

[I cannot help remarking here upon another misrepresentation of Mr. Bernard's. He states, that the quantity $f h$ is "introduced into the problem, to be afterwards discarded as valueless;" and that Mr. Ellet admits, that he does not know whether "it be a positive quantity, or any thing else about it." Now these statements are both without foundation, for Mr. Ellet actually states it to be a positive quantity (opposite in sign to a negative, which comes to the same thing), and that far from discarding it as valueless, "he regards it as equal to $\frac{\delta h}{3}$," (which is negative) "and consequently *neutralising it*."]

As for the rhetorical flourish with which he concludes, I fear from the little disposition he shows to practise his precepts, that it is but *Vox et præterea nihil*.

I remain, Sir, your obedient servant.

R. W. TOWNSEND, C. E.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BILL FOR THE MAKING AND MAINTAINING OF PUBLIC RAILWAYS IN IRELAND.

June 15.—Presented and read first time: to be read a second time, and printed.

NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY.

June 15.—Message from the Lords that they have agreed to the Bill without amendment.

NORTHERN AND EASTERN RAILWAY (HERTFORD AND WARE BRANCH.)

June 11.—Message from the Lords that they have agreed to the Bill with amendments.

June 12.—Lords' amendments agreed to.

SHOTTS AND WILSONTOWN RAILWAY.

June 11.—Message from the Lords that they have agreed to the Bill with amendments.

June 14.—Lords' amendments agreed to.

GREAT WESTERN RAILWAY FARES.

To the Editor of the Railway Times.

SIR,—On the occasion of the further openings of the Great Western Railway to Chippenham, and of the Cheltenham Union to Cirencester, new train bills are issued from which the following are taken:

Fares fixed in May, 1841—

93 miles to Chippenham.

1st Class..	24s.	equal to	3.09d. per mile.
2nd „ ..	17s. 6d.	„	2.25d. „
3rd „ ..	10s. 6d.	„	1.35d. „

Contrast these rates with those fixed in July, 1840—

63 miles to Farringdon.

1st Class....	14s.	equal to	2.66d. per mile.
2nd „	10s.	„	1.90d. „
3rd „	6s.	„	1.14d. „

The difference is consequently—

On 1st Class..	0.43d.	per mile, equal to	16 per cent.
2nd „ ..	0.35d.	„ „	18 „
3rd „ ..	0.21d.	„ „	18 „

or on the last 30 miles—

1st Class..	10s.	equal to	4.00d. per mile.
2nd „ ..	7s. 6d.	„	3.00d. „
3rd „ ..	4s. 6d.	„	1.80d. „

The fares to Cirencester for 95 miles are—

1st Class..	25s.	equal to	3.15d. per mile.
2nd „ ..	18s.	„	2.27d. „
3rd „ ..	11s.	„	1.38d. „

Later train bills have since been issued, including 33 miles opened on the Bristol and Exeter line from Bristol to Bridgwater, but the fares are not stated. Yours, respectfully,

F.

Bath, June 16, 1841.

THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg to suggest, as a proprietor to a large amount in the Great Western Railway, that your weekly returns of the traffic of that railway would be of much greater value if you would specify what part of the whole sum was received on the main line, and what on each of the branches—the one leading to Cirencester, the other to Bridgwater. As these two branches belong to separate Companies, and are now only worked under lease for a term of years by the Great Western, it is manifest that separate returns are useful, to enable the shareholders of each Company to judge of the value of their property.*

I observe in your last publication an extract from the *Cheltenham Journal*, where complaint is made that the outside fare from Cheltenham to London, via Cirencester, is 22s., while coaches run the road for 16s.; advice is then tendered to the Company to lower its fares. Now, in this case too, the lion's share of the fare falls (as usual) to the coach proprietors, who charge 4s. (or 3½d. per mile) for the 15 miles to Cirencester, while the Company charge but 18s. (or 2¼d. per mile) for the remaining 95 miles.

Should the coach proprietors continue this excessive charge—so injurious to the interests both of the public and the Company—I trust that the Directors of the Great Western will provide conveyances from Cheltenham to Cirencester at a reasonable fare, as at one time they proposed to do between Bath and Hoy-lane, had not the coach owners agreed to their terms.

I believe that a considerable part of the Cheltenham traffic to London still passes over the road. Last week I observed a Cheltenham coach leave Oxford without a vacant place, inside or out. If you think this letter will tend to counteract the impression produced against the Great Western Company, by your extract from the *Cheltenham Journal*, (which does not appear to view the case fairly,) I hope you will publish it.

I remain, your obedient servant,

A SUBSCRIBER.

Newbury, June 14, 1841.

*Of the propriety of such separation of results there can be no doubt; but the Returns at present supplied by the Company do not enable us to comply with our correspondent's request. We make no doubt that by and-bye, when the officers of the Company have more leisure, their Returns will be made in the manner suggested.—ED. R. T.

GREAT WESTERN RAILWAY RETURNS.

To the Editor of the Railway Times.

SIR,—I believe that it might at the present moment prove interesting to many of your readers to institute a comparison between the present receipts of the Great Western Railway and those of the London and Birmingham line previous to its final opening.

The weekly receipts of the latter concern were not, in 1838, published in your journal in detail, but I find it stated in the August report of that year, that the total receipts of the 77 miles then open, between the 9th April and the 30th June, amounted to only 41,322*l.* 11s. 9d. or 3,485*l.* per week.

The contrast between this amount and the receipts of the Great Western line for the three weeks ending the 13th instant, is, after making all due allowance for races and holidays, sufficiently remarkable; those receipts having amounted to 32,784*l.*—being about 109*l.* per mile weekly, or two-and-a-half times as much, to speak in round numbers, as the weekly receipts per mile of the London and Birmingham line in June, 1838, when it was similarly circumstanced.

An insertion of this comparison will probably gratify some of your readers, as well as oblige,

Your's, &c.

ONE OF THE SANGUINE.

London, 16th June, 1841.

GREAT WESTERN RAILWAY—TRAFFIC RETURNS.

To the Editor of the Railway Times.

SIR,—The portion of the Bristol and Exeter, as far as Bridgwater, is to be opened to-day, and I presume the returns of that traffic will in future be included with the Great Western, inasmuch as it is under lease to the latter, and of course will have to be worked with their engines and carriages. It is important that the public, and the shareholders in particular, should be correctly informed on this point, for of course the working expenses will be in proportion to the miles run; and if the gross receipts are put down as the produce of the main line only, the expenses when they come to be deducted, will be in a much higher ratio than they ought to be. I would beg leave however to suggest, through the medium of your valuable Paper, the propriety of the returns for the branch lines being kept separate from those for the main line, if it can be done without inconvenience to the Company, for it would be useful in showing whether the branches were likely to pay (the rent being known) and this would be very desirable information for the shareholders of the Bristol and Exeter and the Cheltenham lines, at a time when they are in difficulty and doubtful of the issue of these undertakings.

The time is now fast approaching when this Great Trunk line will be opened throughout its whole length; and though some people in this neighbourhood are confident it will disappoint the expectations of the shareholders, like the North Midland and the Manchester and Leeds, yet I have better hopes of it, from the different nature of the population that will make use of it, and the large traffic it must always have for a considerable distance out of London. This, in my opinion, will enable it to pay a fair dividend to the proprietors, provided it is well and economically managed; but let the shareholders look well after the Directors, and enforce upon them a little more economy in the working than has been shown in constructing the line, otherwise the fair promise which they may now think is drawingupon them, will be converted into disappointment and gloom.

I am, Sir, your obedient servant,

A CONSTANT READER.

Manchester, June 15th, 1841.

BOARD PRACTICES.

To "A Large Shareholder."

SIR,—It is useless to make such complaints as those you prefer in the last *Railway Times*. The self-election of Directors continuing, the abuses you mention, and hundreds of others—"the Directors do not feel bound to accept the lowest estimate" amongst the number—follow as regularly as effect follows cause—as fruit succeeds blossom. Shareholders in the mass not only know that they are the victims of corrupt practices, but are willing to continue so, or they would alter the constitution of Boards. That a numerous body, so intelligent as they are upon all other subjects affecting their interests, should submit, with their eyes open, to such glaring misconduct and corruption, as have been over and over again proved to exist in railway management, forms one of the most insolvable problems that ever vexed the world.

The thing to do—if you can get it done—is not to complain of Directors' conduct, but to secure the right sort of Directors; and this, whoever may gainsay it, is only to be accomplished by destroying the influence now exercised by wealth—by which every Board in the kingdom is *packed* for their own, not for the railways' benefit, and choosing your representatives from the share-lists, for *alphabetical rotation, for largest holding, and for residence near the lines.*

Do this, or bear a misfortune, which is the sure consequence of your co-partners' supineness, with grace and fortitude, by receiving without murmur, your minimum dividends.

I am, Sir, &c.

A RAILWAY SHAREHOLDER.

CHEAP AND IMPORTANT IMPROVEMENT IN RAILWAY CARRIAGES.

To the Editor of the Railway Times.

SIR,—Every person who has had frequent occasion to travel on railways during summer, when the carriage windows are usually kept open, must have felt that the two back seats nearest the doors of each carriage, are rendered excessively disagreeable in consequence of exposure to a strong wind arising from the rapidity of motion, and of having their eyes almost blinded with dust and soot. This defect could be remedied by having a slip of curved wood, or japanned tin, concave in the direction of motion, projecting about three inches outwards on each side of the window of the carriage door, and extending two inches above it. This simple remedy, which could be fitted almost without expense to existing trains, by throwing off the current of air from the carriage, would prevent any inconvenience to passengers from an open window. It is to be hoped, that there is hardly a Director of a railway in the kingdom, who would not feel desirous of immediately endeavouring so far to promote the comfort of one-third of all railway travellers.

I am, Sir, &c.

A GLASGOW CITIZEN.

PROFESSOR M'GAULEY'S INVENTION FOR PREVENTING RAILWAY ACCIDENTS—REPLY TO MR. HANCOCK.

To the Editor of the Railway Times.

SIR,—In my letter of the 15th ultimo, which you kindly inserted, I showed that I had published the principle and construction of "an apparatus for the prevention of accidents on railways," on the 2nd Nov. 1840, while Mr. Hancock's patent, as appears from the account with engravings published in the *Railway Times*, a short time ago, was dated November 26th, 1840. In your number of 29th ult., I find the following, in a letter from Mr. Hancock. "I take the liberty to refer him [Mr. M'Gauley] to a letter of Mr. Petit's, in the same number [that of May 22nd] by which he will see that the invention was patented by him [Mr. P.] *long before* the Professor made his plans public, which I presume to think will be considered a sufficient reply to his pretensions." For the benefit of those who may not happen to have the said No. of the *Railway Times* to consult, I think it right to quote from it, the only words of Mr. Petit's connected with the subject, which it contains. "* * Allow me to give a brief statement of some of the main features of my invention; in the first place

Digitized by Google

the Railway Controller, which enables the officers on the line to turn the steam off from the cylinders, and pass it through the whistle, and bring each break into action. * * P.S. The cutting off the steam from the cylinders, and passing it through the whistle, and laying on the breaks, is also made exclusively to suit the system of railways now in use, which part only of my patent is disposed to (of?) by license of (to?) Mr. W. Hancock." I confess I do not see how *this* shows that Mr. Petit patented *long before* I published.

Trusting that you will excuse this trouble,

I remain, Sir, your obedient servant,

JAMES W. M'GAULEY.

Office of Education, Dublin,
9th June, 1841.

RAILWAY EXCURSION TO CHELTENHAM.—The members and friends of the Temperance Society in Birmingham, and its neighbourhood, intend paying a visit to Cheltenham on Monday, the 28th instant, in order to be present at and take part in the proceedings of the grand Gloucestershire demonstration in favour of temperance, which is to take place in Cheltenham on that day. A special train consisting of first, second, and third class carriages, will be provided by the Directors of the Railway Company, for the use of the visitors; and as the excursion is countenanced and supported by the Committee and influential friends of the Birmingham Temperance Society, as well as by the leaders and other officers of the various Rechabite lodges in the town, a numerous and respectable party is expected to join the excursion.—*Midland Counties' Herald.*

—o—

ACCIDENT ON THE NORTH MIDLAND RAILWAY.—On Friday last, as the down train from Derby to Leeds was approaching the Belper station, it came in contact with a truck loaded with timber, the porters were shunting on to the siding, which it completely lifted up and threw across the up line. The engineman leaped off the engine to avoid the timber falling upon him, as it was thrown about in all directions; fortunately there was no one hurt, and the train proceeded after a short delay. The engine and truck were considerably damaged.—*Derby Reporter.*

—o—

LONDON AND BRIGHTON RAILWAY.—On Wednesday the first trip was made on the Brighton end of the line to Clayton tunnel, six miles from Brighton. A train of seven carriages, decorated with flags conveyed about 170 persons up the line, for the purpose of witnessing the ceremony of keying the arch of the last length of the Patcham tunnel, which was performed by Mr. Statham, the resident Engineer. In about a fortnight Clayton tunnel will be ready to admit the passage of trains, which will then be able to run within a distance of ten miles from Brighton. Only about three miles of the road will then remain unfinished, and this portion of the line is in so forward a state, that its completion will take place in about six weeks. The line is to be opened from London to Hayward's-heath, a distance of 31 miles, on the 28th instant, and the opening of the entire road will not be delayed over the month of August. The company have entered into contracts with some of the Brighton coach proprietors for the conveyance of the passengers from Hayward's-heath to Brighton, on the partial opening of the road on the 28th instant. —*Times.*

NOTICE.—SALE ALTERED.—TO RAILROAD CONTRACTORS AND OTHERS.—Messrs. JOHN FIDELE & SON are instructed to sell by auction, on Thursday the 24th of June, 1841, about 200 excellent Earth Waggons, Three Cart Horses and Harness, Five Strong Carts and Waggons with Iron Arms, a Stone Truck and other effects, on the premises at Uffington, between the Farrington Road and the Shrivenham Stations on the Great Western Railroad. The Wilts and Berks Canal runs within a few yards of the same.

Messrs Fidele and Son beg to observe to persons requiring railway waggons, they will find the above of the very best construction, having been built by Mr Cogswell, and many of them nearly new. The axle-trees are 3½ inches in diameter, and 4 feet 9½ inch gauge, and 30-inch wheels The sale will commence at Two o'Clock.

IMPORTANT TO CAPITALISTS.—To Professional Gentlemen, and others requiring eligible Country Residences in the line of the Great Western Railroad, only one hour distant from the Paddington Station.—By Mr. HAWKES, on Friday, the 2nd of July, 1841, (instead of Thursday, the 24th of June, as previously advertised,) at One o'Clock, at the Crown Inn, Reading, in lots, TEN exceedingly VALUABLE STONE-ERECTED FAMILY RESIDENCES, with Coach Houses, Stabling, and walled GARDENS, constituting a great portion of the commanding and elegant structures in Wellington Place, Eldon square, and the London-road, Borough of Reading. Also, an extremely eligible Leasehold Estate, known as "The Sanctuary," consisting of Six Substantial Stone-erected DWELLING HOUSES, desirably situate on the South side of Crown-street, the principal thoroughfare between the Bath and London Roads. Several select Plots of Freehold Building Ground, particularly adapted for the erection of a superior class of

TOWN AND VILLA RESIDENCES.

The foregoing Property is situate on a dry healthy eminence, on the southern bank of the River Thames and Kennet, and at the Eastern extremity of the Borough of Reading, presenting without interruption a most extensive breadth of highly picturesque scenery.

The Buildings, which are most conveniently arranged, and replete with accommodation, have been erected under the superintendance of able Architects, with the most substantial materials, and finished with exquisite taste, regardless of expense, and are in the occupation of highly respectable tenants.

The Title, which has been lately derived from the Crown, will be found extremely simple and inexpensive.

The Capitalists will here find an open field for secure and profitable investments.

Professional Gentlemen and others seeking the combined advantages and comforts of Town and Country, will have the opportunity of selecting Residences in one of the most eligible spots along the whole line of

THE GREAT WESTERN RAILROAD.

Printed particulars are preparing, and may be had fourteen days preceding to the sale, at the Auction Mart; and of Messrs. Moseley and Channell, solicitors, Bedford street, Covent garden, London; Star and Garter, Windsor; Red Lion, Maidenhead; Bush, Wokingham; Dolphin, Southampton; George, Basingstoke; White Lion, Bath; Bush, Bristol; of J. J. Blandy, Esq., and J. Richards, Esq., Solicitors, Friar-street; and at the Office of Mr. HAWKES, Estate Agent, Surveyor, and Auctioneer, West-street, Reading.

For Occupation or Investment.—Freehold Family Residence, with Land.—The HARTLEY COURT ESTATE, three miles from Reading (Land Tax Redeemed).—By Mr. HAWKES, at the Crown Inn, Reading, on Friday, the 2nd of July next,

AN extremely-valuable FREEHOLD ESTATE, comprising a substantially-erected and commodiously arranged FAMILY RESIDENCE, with suitable Offices and capital Farm Buildings, surrounded by ornamental Plantations and Shrubberies, a park like inclosure of rich Upland Pasture, and several exceedingly productive inclosures of Arable and Meadow Land; altogether containing One Hundred and Thirty three Acres, with extensive Common Rights.

Particulars, with lithographic plans, may be had fourteen days previous to the sale, at the Auction Mart, London; the neighbouring Inns; of Wm. Andrews, Esq., Solicitor, 15, Russell-street, and at the Office of Mr. HAWKES, Land and Timber Surveyor, Estate Agent and Auctioneer, West street, Reading.

To Wharfingers, Brewers, Distillers, Corn and Coal Merchants, Contractors, and Others.

VERY SUPERIOR CART HORSES.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Baroican, on Friday, June 25, 1841, commencing at One o'Clock precisely, about THIRTY remarkably Fine-shaped, Fresh, Young, Powerful CART HORSES, the genuine Property of Mr. J. Bedborough, of Windsor, that have been employed on the Great Western Railway, and sold in consequence of the Contract on which they have been working being completed.

☞ The above lot of fine young seasoned Draught Horses are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, having been purchased expressly for the above contract, and now in remarkable fine condition.

Colours—Bays, Blacks, Browns, Roans, and Greys.

On view and catalogues had two days previous to the sale.

A great variety of New and Second hand Carriages, of every description, always on private sale at this establishment, remarkably cheap.

TO ENGINEERS of Large Business.—To be LET a spacious WHARF and large WAREHOUSE ROOM with Residence for superintendent, and Cottages for workmen, at Rotherhithe. The wharf has extensive privileges. Or, will suited to an Engineer requiring a large space of ground, and a frontage of 235 feet next the river, with good approaches from the land. Apply to Mr. W. Woodward, 1, Furnival's Inn, between twelve and two, if by letter, pre-paid.

MANCHESTER AND LEEDS RAILWAY. OLDHAM BRANCH LINE.—EXTENSION OF TIME.—TO CONTRACTORS.—The Directors will meet at their Office, Clowes's Building's, Hunt's Bank, Manchester, on Monday, 5th July next, for the purpose of receiving Tenders for the formation of a branch line from near Mills Hill, in the township of Chadderton, to the town of Oldham, being a distance of about two miles, including all the necessary excavations and embankments, bridges, culverts, formation of roads, fences, laying of permanent way, and all other works appertaining thereto, as described in the plans and specifications, which may be seen at the Engineer's Office, Hunt's Bank, Manchester, on and after the 24th June next.

Printed forms of Tender will be supplied to Contractors on application at the Engineer's Office, which must be delivered at the Office of the Secretary, Clowes's Buildings, by 10 o'clock in the forenoon of the 5th July next, and the parties tendering will be required personally to attend at the same place at the hour of 1 o'clock in the afternoon of the same day.

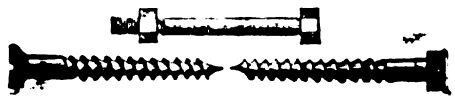
June 15, 1841.

DIVING BELL, CRANES, TIMBER, IRON, &c. &c.—To be Sold by AUCTION, upon the North Quay, at Whitehaven, on Thursday, the 1st day of July next, at noon, 1 Diving Bell, with Carriage, Air Pump, Two Crab Winches, Hose, and Four Pair of Boots. Two moveable Cranes, 2 large Standing Cranes, 2 small Standing Cranes; about 2,000 feet of Yellow Pine Timber, in Logs 30 Feet long and upwards, and a Quantity of Short Pieces Eight Tons, or thereabouts, of (common) Iron, in Bars, Two and a half Inches broad, and ⅝ths of an inch thick. A Quantity of Bolts (scrap One and a quarter inch thick, in different lengths. 120 Fathoms of Patent Chain, 1¼ inch thick; 2 Large Anchors, and 1 pair of Smith's Bellows.

For further particulars apply to Mr. Ebenezer Stiven, or to

E. H. HEYWOOD,
Clerk to the Harbour Trustees

Whitehaven, 7th June, 1841.



SPECIFICATIONS OF RECENT PATENTS. The MECHANICS' MAGAZINE, No. 933, published this day, price 3d., contains abstracts of the following recent Patents:—

Philippi's, for certain improvements in the art of printing cotton, silk, and other woven fabrics; Bathos's, for certain improvements in machinery, tools, or apparatus for planing, turning, boring or cutting metals, and other substances; Reynolds's, for certain improvements in machinery for producing stocking fabric, or framework knitting; Henshall's, for certain improvements in making, manufacturing, or producing carpets, or hearth rugs; Berry's, for certain improvements in looms for weaving; Clay and Rosenborg's, for improvements in arranging and setting up types for printing; Buchanan's, for certain improvements in wheel carriages, whether for common roads or railways; Palmer and Perkins's, for improved constructions of pistons and valves for returning and discharging liquids, gases, and steam; Bayliss's, for an improved metallic pen, to be called the Patent Flexian Pen, and improved Penholder; Molyneux's, for an improved mode of dressing flax and tow.

Also descriptions, with engravings, of Botten's patent gasmeter; Improved velocipede; On the crank rotary engines, &c.; Demonstration of Nautilus's mathematical theorem; On the preservation of life from fire, by an improved mode of house building; Mr. Adcock's spray pump; Pilbrow's condensing cylinder engine, &c.; Craig's rotary steam engine; On propelling vessels by the ejection of water; the Rock Harmonicon; Recent American patents; Dredge's suspension bridges; Asparagus paper; &c. &c.

Published at the Mechanics' Magazine, Patent, and Designs Registration Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

*** Intending Patentees, or Patentees of unspecified inventions, may have every needful information and assistance on moderate terms, by application to the office of this journal; where also may be consulted the only complete Registry extant, of patents from the earliest period, (A. D. 1617,) to the present time.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high pressure engine, metallic pistol, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

Planing machine; works by hand, will plane 5 feet by 15 inches.

A COMPANY for ESTABLISHING RAILWAYS in IRELAND, under the Guarantee of the Counties, and under the Superintendence of a Board of Control nominated by Government.

PROSPECTUS.

The construction of a general and comprehensive System of Railways in Ireland has of late years been universally regarded as a measure of vast importance to that portion of the Empire, and as calculated to produce, by the employment of the population and the creation of an extensive, expeditious and economical mode of conveyance, the greatest benefits to that country.

As a commencement of the system, it is proposed, with the approbation of Government, but subject to the sanction of Parliament, to make the Southern line in the direction indicated by the Report of the Railway Commissioners, and proposed by the Government in 1839, to Limerick, by way of Holy Cross.

The works to be executed by Commissioners to be named by Parliament in the Bill.

A Board of Control to be constituted by Government to superintend and control the proceedings of the Commissioners.

For this purpose a capital of 1,300,000*l.* is to be raised, under the direction of the Committee, on the part of the subscribers.

The capital to be raised in shares, or sums, of 1,000*l.*, 500*l.*, 200*l.*, and 100*l.* each, on debentures, to be signed after the passing of the proposed Act of Parliament, by two of the Committee, and to be countersigned by two of the Board of Control. A deposit of 10*l.* per cent. to be paid on the subscriptions being allotted; the remaining 90*l.* per cent. to be paid in nine instalments of 10*l.* each, on the 15th January, the 15th April, the 15th July, and the 15th October, 1842; and the 15th January, the 15th April, the 15th July, and the 15th October, 1843; and on the 15th January, 1844. On non-payment of any instalment, the previous instalments to be forfeited.

The Debentures to bear interest at 4 per cent. per annum, such interest to be guaranteed by Act of Parliament by a charge on the counties to be benefited by the measure, in such porportions as shall be settled by the Commissioners, and approved by the Board of Control.

The Debentures may be, after payment of all the instalments, converted, at the option of the holders into stock.

The Debenture and Stockholders to form a Corporation and to be represented by a Board of Directors, and the Committee to form the first Board.

In addition to the interest of 4 per cent. per annum the Debenture and Stockholders to be entitled to half the surplus profits, after payment of interest and all outgoings.

The other half of the surplus profits to be appropriated, from time to time, for the benefit of the counties guaranteeing the interest, in proportion to their liability to the interest.

The Commissioners to have the direction and execution of the works; the regulation of the Tolls within limits to be fixed by the Act; and the entire management of, and arrangements on the lines, when formed; subject to the control of the Board of Control; and to remit the interest, and half the suplus profits, half-yearly, to the Directors.

The Act to contain powers to enable the Commissioners to vary or modify the proposed line, with consent of the Directors, and subject to the approval of the Board of Control.

This plan having been based on the estimates of the Railway Commissioners, provision is to be made, in the event of the estimates being exceeded, and any additional capital being required, to secure the same interest and profits to the Company, as they would have had on their original capital, had no such additional capital been required

RAILWAY COMMISSIONERS.

Nominated by Government.

Sir J. F. Burgoyne, K.C.B.
Richard Griffith, Esq. F.R.S.
Col. Harry D. Jones, R.E.

Being Members of the Irish Railway Commission of 1836-38.

DIRECTORS.

I. L. Goldsmid, Esq., F.R.S.
John Abel Smith, Esq., M.P.
Mr. Alderman Thompson, M.P.

Board of Control—To consist of Noblemen and Gentlemen to be named by the Government, and appointed by the Act of Parliament.

Bankers—Messrs. Smith, Payne, and Smiths.

Standing Counsel for the Company — Francis Henry Goldsmid, Esq., Stone-buildings, Lincoln's Inn.

Solicitors — William Stephens, Bedford-row, London; M. Barrington, Son, & Co., Dublin.

*** Persons desirous of subscribing may apply by Letter to Messrs Goldsmid, Smith, and Thompson, 38, Broad Street Buildings, City.

TRINITY COLLEGE, DUBLIN.—The Board of Trinity College, Dublin, having determined on founding a SCHOOL OF CIVIL ENGINEERS in connection with the University, give Notice, that they intend to elect Two Professors, who shall Lecture, one upon the Application of Chemistry and Geology to the Art of Construction, the other upon the Practice of Engineering.

The Registrar of the University, who will give all the necessary information with regard to the salaries and duties connected with the Professorship, will receive applications from Candidates for the Professorship of Chemistry and Geology until the 2nd of July, 1841, and for the Professorship of Engineering until the 10th of June, 1842.

J. H. SINGER, Deputy Registrar.

Trinity College, June 5, 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200. for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

THE BRIGHTON RAILWAY.—The Official Map and Section of this line is now published price 3s. on a large sheet coloured; folded in a cover 4s.; on linen for the pocket 6s.; and on rollers 5s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 8, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Litts, Royal Exchange, and at the Office of the Railway Times

Chief Superintendent.—George Walter, Esq.

Bankers.

Messrs. Spooner, Atwoods, and Co., London.
Dartford: Messrs. Hills, M'Rae and Co.
Gravesend: Messrs. Hills, M'Rae and Co., London and County Bank.
Rochester: Messrs. Day and Co., London and Count Bank.

Engineers.—Colonel Landmann: Joseph Gibbs, Esq.
Surveyors.—Messrs. Smith and Barnes.
Solicitors.—Messrs. Sweet, Sutton, Ewens, and Ommanney.
Secretary.—Mr. Cresswell.

The object of this undertaking is to connect Gravesend with Stroud, Rochester, and Chatham, by means of a railway, taking the whole line of the Thames and Medway Canal, for which purpose the Committee have provisionally agreed for the purchase of the Canal and Works.

The level of the Canal is nearly the same as that of the proposed railway, which will save much expense and time in its completion.

By the arrangements made, the Act of Parliament for carrying the same into effect may be obtained forthwith, and the Canal drained and converted into a railway, and opened to the public in the course of one year from the date of the Royal Assent; leaving the docks at each end for the reception of coals, stone, lime, and merchandise.

There is at present a large transit of passengers between the populous towns of Gravesend, Stroud, Chatham, Maidstone, the city of Rochester, and the adjacent parts, averaging daily about 1,000, who now travel between those places by omnibuses, or other conveyances, at a charge varying from 1s. to 2s. each.

The average number of passengers annually landed at the piers at Gravesend, is about 850,000; and when the additional number of iron steam boats, now preparing to run from Blackwall to Gravesend, are in operation (at low fares), the amount will be greatly increased, and very many of those persons will avail themselves of the railway as a cheap and expeditious mode of transit into Kent; in addition to which there will be a very considerable income derived from the traffic in coals, stone, lime, and merchandise, which will insure an ample return to the Proprietors, besides the immediate income to be derived from the docks and ground-rents, &c. at each end of the line.

The Property of the Thames and Medway Company comprises, besides the Canal,—At Gravesend, entrance lock from the Thames, for the admission of Colliers; a Basin of considerable dimensions, in which Yachts and other Vessels are laid up during the winter; extensive Coal Yards; Timber Yards; Lime-Kiln; Dock Master's Cottage; many Cottages for Workmen; and valuable Ground Rents; besides many acres of unoccupied land; and a Cottage at every Bridge over the Canal.

At Rochester, valuable Building Ground, consisting of upwards of twenty acres of Freehold Land; Lock and large Basin, capable of containing ships of upwards of 300 tons burthen; Steam Engine and Engine House; Dock Master's House, and Cottages; Stabling, Warehouses, &c.

Applications for Shares to be made at the Company's Office, 42, Lombard-street, prepaid.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

JOSEPH BALL, Secretary.

Railway Office, Cardiff, June 23rd, 1841.

LONDON AND GREENWICH RAILWAY OFFICE.—Notice is hereby given, That the Half-yearly General Meeting of this Company, will be held at the London Tavern, Bishopsgate-street, on Friday the 16th day of July next, at 12 for 1 o'clock precisely. The Transfer Books will shut on Wednesday, the 30th of June instant, and re open on Monday, the 19th of July following.

By order of the Board,
J. Y. AKERMAN, Secretary.

London Terminus, 23rd June, 1841.

LONDON AND BRIGHTON RAILWAY COMPANY.—TO COACH PROPRIETORS AND OTHERS.—The Directors of this Company having determined to open the Railway to the Public, from London to Hayward's Heath, near Cuckfield, on Monday, the 12th July next, will attend at this office on Wednesday next, 30th instant, at 11 o'clock for the purpose of making arrangements with such Coach Masters and others, who may be disposed to run Coaches or Omnibuses to and from any of the stations on the line.

By order,
THOMAS WOOD, Secretary.

London and Brighton Railway Company's Offices, 10, Angel Court, Throgmorton-street, 24th June, 1841.

SIXTEEN PAIR OF TWO-FEET RAILROAD WHEELS, fitted on Wrought Axles, with turned bearings, Pedestals, Bolts and Nuts, &c. complete, to be disposed of at a low price. 4 feet 8½ inches gauge.

Apply by letter, post paid, to M. D. Crosbie, 45, Lower Belgrave-place, Pimlico.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price, and to these points, as constituting the best tests of value, T. Allsop has directed particular attention

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad street, City; 69, Princes-street, Leicester-square; Manufactory, Mill wall, Poplar; and also of the following Agents —

Robertson and Co., 12, Goree Piazzas Liverpool,
Mathias Dunn ..... Newcastle-upon-Tyne
Joseph Bothway ..... Plymouth.
John Thompson and Co. ..... Wigan.
J. T. Tregellas ..... Truro.
Thomas Mooney and Son ..... Dublin.
Cortes and Young ..... Belfast.
James Kibble and Co. ..... Glasgow.
James Gunn ..... Leith.
John M. Beatts, 14, Clement's-lane, High street, Dundee.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of ten months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

TO RAILWAY COMPANIES.—The Advertiser having been for a number of years engaged in the Stores of one of the principal Railways in the Kingdom, wishes for an appointment as Storekeeper; the highest Testimonials as to ability, integrity, &c. can be given.

Address L. L. care of Mr. T. Gowing, No. 1, Stucley-terrace, Camden Town.

KYANIZING TANKS FOR SALE.—To be Sold, two Wrought Iron Cylindrical Tanks, each 70 feet long and 6 feet in diameter, with a double-acting Air-pump, Pipes, &c. for exhausting the air and forcing the solution into the materials to be kyanized, with a force of 100lbs. on the square inch, together with appendages for supporting the tanks; the whole of the materials and workmanship being of the best description.

The longitudinal bearers and cross sleepers used for the Hull and Selby Railway were kyanized in these tanks; and, being peculiarly adapted for carrying out the process effectually, a favourable opportunity is presented for any person wishing to engage in the business of kyanizing timber for hire, or for any railway or other Company using large quantities of timber.

For price and other particulars apply to
GEORGE LOCKING, Secretary.

Railway Office, Hull, June 15th, 1841.

A CONSULTING CIVIL ENGINEER will be happy to assist Practical Men, Public Bodies, and Private Individuals with his advice and Mathematical Demonstrations, Plans of Construction and Reports, for Hydraulic Works, Machinery, Steam Navigation and operations in the various departments of Constructive, Mechanics and Civil Engineering. Address post paid, to D. I. Chapter Coffee House, Paternoster-row.

TO RAILWAY CONTRACTORS AND OTHERS—FOR SALE.—Two Capital Locomotive Engines, one nearly new, and quite perfect, the other in good working order, both 4 feet 8½ inches gauge; also, from 400 to 500 tons of Flange and Chair Rails, from 30lbs to 42lbs per yard; from 200 to 300 Waggons, with a great variety of other Railway Materials.

Application to be made to Mr. Bedborough, Stratton Green, near Swindon, and Wootton Bassett, Wilts.

TAFF VALE RAILWAY.—ALTERATION OF PASSENGER TRAINS.—Notice is hereby given, That on and after Thursday, the 1st day of July, the Trains will daily leave Cardiff and Merthyr, at the undermentioned hours, excepting Sundays.

From Cardiff.	From Merthyr.
6 30 a.m.	7 0 a.m.
9 0 a.m.	9 20 a.m.
1 0 p.m.	1 30 p.m.
5 0 p.m.	5 20 p.m.
Sundays.	
9 0 a.m.	9 20 a.m.
3 0 p.m.	3 20 p.m.

For further particulars of Fares, Time, and Stoppages at Stations, reference must be made to the Train Bills, which may be had at any of the Company's Stations.

The charges on Merchandize and Cattle may be known on application at any of the Stations.

Taff Vale Railway Office, Cardiff, June 17, 1841.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY COMPANY.—Notice is hereby given, That the Half-yearly General Meeting of Proprietors will be held, pursuant to Act of Parliament, on Friday, the 2nd day of July next, in the Sheriff Court Hall, Greenock.

The chair will be taken at Twelve o'clock.

ROBERT D. KER, Chairman.

The Transfer Books will be closed on the 28th instant and will remain so until after the meeting.

MARK HUISH, Secretary.

Railway Office, Greenock, 18th June, 1841.

CANTERBURY AND WHITSTABLE RAILWAY SHARES.—To be Sold by Auction, on Monday, 5th of July, 1841, at the Fountain Hotel, Canterbury, by Messrs. Whites and Goulden, 100 Shares in the Canterbury and Whitstable Railway, in 10 Lots of 10 Shares each. By order of the Executors of the late General Sir H. T. Montresor, K.C.B.

Inquire of Messrs. Hughes and Henslow, Clement's Inn, London, Messrs. Curteis and Kingsford; or Messrs. Whites and Goulden, Canterbury.

REPORT OF THE SELECT COMMITTEE OF THE HOUSE OF COMMONS ON 11TH CLAUSE OF THE RAILWAY REGULATION BILL.

MINUTES OF EVIDENCE.

Lieutenant-Colonel Sir Frederic Smith, of the Royal Engineers, called in, and examined.

1. Mr. Labouchere.—What situation do you fill in the Railway Department of the Board of Trade?—That of Inspector-General of Railways.

2. Of course you have considered the 11th clause of the Bill now before Parliament, for the better regulation of railways?—I have.

3. Do you consider that clause so framed as to be injurious to the railway proprietary?—I think not; I consider, on the contrary, it is calculated to give confidence to the public, and I could almost have imagined that the Bill had been framed in concert with the railway body, because they appear to be protected in every way in which protection could be desirable.

4. Do you think it would be possible to define the extent to which the Government interference contemplated by that clause should be limited?—I believe that would be quite impossible.

5. Have the goodness to state your reasons?—I have considered the subject for a long period, and as I thought it very likely this question might be put, I have drawn up a few memoranda on the subject, from which, with the permission of the Committee, I should wish to speak, because it contains all that I could say on the subject, even in the longest examination.

6. Have the goodness to make the statement to the Committee to which you have referred?—The question of a Government supervision of railways has been already decided by the legislature, and it now only remains to determine what powers should be given to the supervising department. It is not to be denied, that as a general rule the legislature should define the powers of the executive, but it will be impossible to define the powers which should be granted to the Railway Department of the Board of Trade, as to the course they should pursue for the prevention of accidents, until it can be defined what are all the various causes having a tendency to endanger the safety of travellers by railway; for it must be admitted that if the supervising authority is to be productive of any real benefit of the community, it must be by establishing regulations which may prevent the continuance of any system likely to produce accidents, and the adoption of such as are manifestly calculated to provide for the safety of the public. In the present state of railway knowledge, with accidents occurring first from one cause and then from another, if any positive and definitive enactment were made as to the particular cases in which the Board of Trade should, or should not, issue precautionary regulations, the effect would be that powers might be given where experience would prove them to be unnecessary, and the authority would probably be fettered where it might be required to have the widest scope. The real interests of the Railway Companies, as well as the safety of the traveller, would, in my opinion, be best preserved by vesting a discretionary power in responsible officers; officers not only responsible to the chief of an important branch of the public service, and whose office renders him the especial protector of the commerce of the country, but responsible also to the public and to Parliament. These officers, be they whom they may, must exercise the power entrusted to them with caution, so that while on the one hand they must endeavour to provide for the safety of the public, on the other hand they must strive to protect the fair interest of the Railway Companies, without relieving their Directors from any part of their responsibility. In no case of doubtful necessity should the Railway Department of the Board of Trade interfere, by issuing regulations for the guidance of all or any of the Railway Companies; the necessity of interference should be obvious, and should come home to the conviction of the parties to whom the regulations might apply; and indeed, the officers should be slow to disturb even a system which in itself would appear not altogether free from danger, provided it had stood the test of long experience without the occurrence of accidents. One advantage of the supervising authority is, that it would afford the means of concentrating a knowledge of the dangers, as well as of the security of railway travelling, and admit of suggestions being made for the benefit of those Companies where the least intelligence is displayed, derived from those where experience and talent have led to the adoption of the most perfect systems. In confirmation of this view, it may be stated, that in the generality of cases where accidents of a serious nature have happened and where the circumstances connected with those accidents have been inquired into by the officers of the Board of Trade, the suggestions which in consequence have been made, have, sooner or later, been in a great degree adopted. This might continue to be the case; but if the principle of supervision, as settled in the last session of Parliament, remain undisturbed, then it is not too much to expect that the department charge with this supervision, and to whom the public will therefore have a right in some degree to look for their security, should be empowered to enforce regulations necessary for the public safety, if the Companies concerned should resist an appeal to their judgment and feelings. The safeguard of these Companies, if it were not likely to result from a careful selection of the executive officers, is surely sufficiently established by the interval provided for in the Bill, of one month elapsing between notice of an intended regulation, and the date of its being actually issued. This proviso, and the opportunity afforded to the railway Companies of stating their reasons against the proposed regulation, superadded to the right of having those reasons brought under the cognisance of Parliament, would make the officers of the Railway Department cautious in suggesting, and the Lords of the Committee slow in enforcing, any regulation of a doubtful character. Again, the revision every six months of each regulation affords a further guarantee for the interest of the railway body. There are some points which are so essential to the safety of the railway traveller, that there can be no rational doubt as to their necessity, and yet we find that they have been, and are occasionally, disregarded: I will mention a few of the points on which it appears to me desirable the Board of Trade should have a right to issue regulations, thay seem to be so essential to the public safety; but there are a great many others which I could not enumerate; indeed, it would fill a volume to specify all.

7. Have the goodness to mention any which occur to you?—1st. The proper maintenance of the way. Parliament has already sanctioned the inspection of railways antecedently to their being opened. If that be a right principle, which can hardly be doubted, it is equally necessary that the railway should be kept in at least as good a state as that in which it is passed, and it is not impossible that in some of the poorer lines this might not be the case; certainly in the larger and longer lines so much care and attention seem to be paid, that very little supervision may be required, but in other instances that is not so. 2nd. Upholding the fences. A want of attention to the fences of one of the lines afforded an opportunity for some cattle to stray upon the railway, which caused the oversetting of the engine and the improper opening of gates has also led to the straying of sheep and other animals on the lines, which have thrown some of the carriages off the line, without, it is true, injuring the passengers. Another point is the safe construction and soundness of the carriages; this is a matter of very considerable importance to the public and to the Railway Companies. Opinions are much divided as to the superiority and relative safety of six-wheeled and four-wheeled engines, and there appear no reasons for requiring the exclusive use of either, for both have their advantages and their defects; the same reasoning will apply in some degree to the passenger carriages, for although it can hardly be doubted that six wheels give greater security to the passengers, yet so little injury has resulted from the use of four-wheeled carriages, that the policy of a change may be considered as by no means a settled point. In new lines where the stock is not provided, the question might be fairly considered, but in old lines, already supplied with four-wheeled carriages, and turn tables suited for them, it cannot be expected that a change should take place; I mention this to show that that is a point the Board of Trade ought not, in my opinion, to interfere with. The passenger, however, has a fair right to expect that the carriage, whether six or four-wheeled, shall be substantial, easy, and of a safe construction. Here I think the Board of Trade ought to interfere. The carriages should be subjected to an examination by a mechanic before each journey; that is considered necessary in stage coaches, and it is equally necessary, in my opinion, in railway carriages; this precaution will be become the more important as the stock becomes worn from age. There is another subject which is of more importance; I mean the use of breaks. On some lines these are considered of less moment than upon other lines; but the general, if not the universal opinion is, that they are necessary on all, and yet we find it not an unusal thing to dispatch trains without any break whatsoever, and we have instances of fatal results being the consequence. In adopting any regulation on this head, it must be framed with reference to the nature of the inclined planes of the lines to which the regulation is intended to apply; for instance, on the Lickey incline, near Bromsgrove, it might be considered necessary that each carriage should be provided with a break, whereas a very limited number would suffice for that part of the Great Western Railway which is now open to the public. To show how necessary the managers of the Birmingham Railway Company consider it to be that the carriages running on their line should be provided with breaks, it is understood that they prohibit carriages belonging to other Companies from coming upon the line excepting a certain proportion of them have breaks. It is known that the attention of Mr. George Stephenson was directed, for a long time, to the construction of a self-acting break to be attached to all the carriages of a train, and it is believed that Mr. Robert Stephenson has applied himself to the improvement of the break. These are high authorities as to the usefulness of this means of arresting the progress of a train, and it may be added that this subject is now under the consideration of the professional men of the South Western Railway. There is another subject which I have touched on in the reports I have had the honour to make to the President of the Board of Trade; I now allude to the buffer-springs. I know that this is a point on which, perhaps, the whole of the railway body do not go with me to the full extent, but I feel strongly the necessity of these buffers. In lines of great traffic, with short intervals between the trains, and where there is consequently the greater probability of collisions, the best means should be adopted to diminish the fatal consequences of such accidents; various modes of effecting this object, some few of which have been highly ingenious, have been suggested to the Board of Trade; but under the view taken by the Lords of the Committee, that they were not justified in interfering in matters of an experimental nature, the officers of the railway department have invariably recommended the inventors alluded to, to address themselves to the different Railway Companies, from whom they might expect encouragement, provided their plans were found to be likely to conduce to the public safety. The officers of the Board of Trade conceive that they will fulfil their duty in recommending the general use of buffer-springs to all passenger carriages.

8. Do you conceive it would be the duty of the Board of Trade absolutely to oblige all Railway Companies to adopt buffer-springs?—I think the Board of Trade should compel all Railway Companies to use buffer-springs or other means of lessening the force of collision, where there is frequent traffic.

9. Viscount Sandon—Are there many railroads on which buffer-springs are not used?—I do not recollect one in which the buffer-springs are not used for the first class passengers; they strike me as being equally necessary for the second and third; and as the second and third class passengers are more exposed than the first, I think these springs should be used to all passenger carriages.

10. Mr. Easthope—Are they not used equally for the second class passengers?—I believe not.

11. Do you know any instance in which they are not used for second class carriages?—I am unwilling to rely on memory as to the particular instances; I think on none of the railways are buffer-springs used on the third class carriages, except on the York and North Midland, and there they have recently been introduced on a suggestion of mine in consequence of an accident happening to a third class passenger; there is perhaps no line on which the first class carriages are not provided with them.

12. Lord Granville Somerset—Do you contemplate any improvements on the present buffer-springs?—I think it is very probable there will be, but I believe the Board of Trade have determined not to interfere in any experimental matter; I think that such matters should be left to the Railway Companies themselves, and when they shall have discovered anything which is preferable, if it be not found too expensive, I think they might be required to adopt it after sufficient trial.

13. All you would propose for the Board of Trade to do, is to provide that buffer-springs should be used, but that as to the description of springs, that should be left to the Companies?—Yes.

14. Have you seen a publication of Sir George Cayley?—I have.

15. There are a good many propositions there which require experience to test the value of them, are there not?—I think, in addition to Sir George Cayley's, I have had 50 different plans brought before me; I think very few out of the 50 are so good as the existing springs, and with scarcely an exception have I ventured even privately to suggest to the engineers on

Digitized by Google

lines the propriety of seeing these particular inventions, I have thought them so unsatisfactory.

16. Under the word buffer-spring, you would only include some mechanical contrivance to prevent the effect of a shock?—Yes, a buffer-spring is only good up to a certain point; the moment the springs are all completely home, if I may use the expression, the reaction comes into effect and does harm.

17. Would it be possible to confine the power of the Board of Trade as to these springs, by some words inserted in this Act of Parliament, simply to the object which you think you ought to attend to?—I do not think the Committee can well define what shall be the act of the Board of Trade in such a matter, for it must depend on experience.

18. Suppose the buffer-springs now in use, or any thing which may be called buffer-springs, were discovered not to be effectual in obviating the effect of the shock, but that a new spring were invented which was effectual; would you think it justifiable on the part of the Board of Trade that they should order all the Companies to adopt the new invention?—I do not think that if all other proper precautions were taken to prevent collisions, such a course would be necessary.

19. You do not contemplate the possibility of putting into legal form words which would enable you to enforce the use of buffer-springs, or any other mechanical contrivance, to prevent the evils of collision?—Provided no discretionary power were given to the Board of Trade, it might be necessary to specify that, and other points requiring their attention; but if discretionary power be given, I think it would be better to leave these points to the control of the railway department, as they would have no wish but to do that which was best for the public, looking at the same time to the interests of the Railway Companies.

20. Lord Stanley—Do you think it practicable to change the form of this clause in such a manner as, instead of giving, as this clause does, a general power of regulation with certain exceptions, would give the powers specifically required, and no powers except those which are given specifically in the clause?—I think that unless you could specify precisely the nature of the accidents likely to occur, or what are the causes of those accidents, that could not be done, for these causes are varying from day to day; one day they happen from one cause, and another day from another. I cannot see how any specific clause would meet the object, because by implication, whatever was omitted in the clause, the Board of Trade of course could not take cognizance of.

21. You have enumerated in the present clause the subjects on which you shall not make regulations; do you not consider it possible, instead of the exceptions, to enumerate the subjects on which you should be empowered to make regulations?—I am most decidedly of opinion that this would be impossible.

22. Mr. Labouchere—Are there any other points in connexion with this subject, on which you are desirous of making a statement?—Yes; there are a few other points with regard to the carriage of luggage; on some lines the luggage is worked quite independently of the passengers, on other lines that is not the case. When luggage is worked with passengers a much greater attention is necessary, in my opinion, to the construction of the luggage waggons; that is a point which I think the Board of Trade should have the power of looking into.

23. In what manner are you of opinion that the Board of Trade could with advantage interfere to prevent accidents in the case adverted to?—For instance, with regard to the mode in which the luggage waggons should be formed; in some instances they are enclosed by means of framework, in other instances only confined by lashing. We know from the accident on the Hull and Selby, that the lashing is a very unsafe mode of confining anything to the luggage waggon; in the case in question the casting fell off, and five or six carriages were thrown completely off the line, and five or six persons were killed.

24. That was from the imperfect manner in which the luggage was secured?—Yes.

25. Mr. Thornely—Was that luggage or a piece of iron?—A piece of iron.

26. Do you recollect the weight of the piece of iron? I do not.

27. Viscount Sandon—That piece of iron was being carried as goods?—It was; the very weight of it was considered to have rendered it more secure.

28. Lord Stanley—The piece of iron not only was not enclosed within a frame, but it projected considerably over the side of the carriage, did it not?—It did.

29. Was not it put in a slanting direction?—No; it fell in a slanting direction, but I believe it was not so placed.

30. Mr. Easthope—Is it not the case, that when passengers are passed with luggage trains, they are generally of the third class, or those conveyed at the cheapest rate?—I believe on the London and Birmingham that is the case; but on the line to which my present observations apply, the first and second class were carried with the luggage, and the luggage preceded the passengers, which was certainly dangerous unless the luggage waggons were made as secure and as strong as the passenger carriages.

31. Sir James Graham—On the Manchester and Leeds there is a mixture of first and second and third class luggage?—Yes.

32. Everything conveyed on any train is conveyed in each train?—Yes.

33. Mr. Labouchere—By luggage you mean goods, not passengers' luggage?—I mean goods.

34. Lord Granville Somerset—In those cases, would you think it equally necessary to have buffer-springs applied to the luggage carriages?—I should be glad to see them, but I believe there is an objection against them on the ground of expense; if I were acting as the Engineer of a line, I should adopt them.

35. Mr. Labouchere—You entertain a doubt whether it would be the duty of the Board of Trade to enforce such a regulation?—I do so, on this ground, that so few lines have them. I cannot conceive it possible that the intelligent men who have conducted those lines would not have adopted them if they found it necessary; if it were found on the principal lines of great importance to adopt buffer-springs with their luggage trains, I should be disposed then to recommend to the Board of Trade to carry out that principle further.

36. Lord Granville Somerset—I am assuming the mixture of the luggage trucks with the passenger carriages?—I mean that.

37. On the ground that the same necessity must exist in the one case as in the other?—It is very desirable.

38. Wherever they are mixed up with the passenger carriages, you consider it necessary?—I think it better to have all the carriages of whatever construction is considered the safest.

39. Sir James Graham—In your opinion, are mixed trains with trucks of goods in the front, or bringing up the rear, much less safe as it respects the conveyance of passengers?—I think that depends, first of all, on the construction of the waggons, and in the next place on their loading. I think if they are loaded to a very great height they are not so safe as passenger carriages running in the same lines; the wind has a greater effect upon them, and in going down heavy inclines there is a greater tendency to pitch.

40. As the traffic is conducted on the Manchester and Leeds, do you think it conducive to the safety of the passengers, or the reverse?—I have not been much on that line since it was at work, in fact only once since the whole line has been open. There seems considerable attention paid there to the safety of the passengers, but it is yet early to give a decided opinion as to its working. There appears to be a very great rush of persons on the line, to be carried, and to have their goods carried, which may give it an appearance of greater confusion than really exists.

41. Under clause 11, supposing it passed in its present shape, would the Board of Trade have a right to interfere with the practice, as it at present exists on the Manchester and Leeds, of a mixed train?—As the clause now stands, if anything positively dangerous were in practice on that line, I think the Board of Trade would have a right to protest against it, and to prevent it.

42. If the Board of Trade were to think that the conveyance of goods in the same train with passengers was dangerous to the safety of the passengers, would it, as the clause now stands, have the power of preventing the Manchester and Leeds sending mixed trains as at present?—I must give an answer in rather a qualified manner. As the clause is now framed, the President of the Board of Trade would have a right to give any order of any description, but in fact there must be a month's notice of any regulation before it can be carried into effect; and parties would have the right of protesting against it and giving their reasons; those reasons would be laid before Parliament, and I cannot conceive that a President of the Board of Trade would be found to issue such a regulation, nor any of its officers to suggest it. I grant, if there is any injury likely to result from the working, they would have the right to interfere.

43. Lord Stanley—Supposing, under the regulation you suggest, the passengers' carriages should be provided with buffer-springs, but that the luggage carriages were left unprovided with buffer-springs, would you consider yourself justified in recommending to the Board of Trade to place their restrictions on the union of the carriages so imperfectly constructed with the passengers' trains?—Decidedly, if I saw danger in the practice.

44. Sir Robert Peel—The 11th clause gives a power to the President of the Board of Trade to issue regulations for the prevention of accidents; but it is provided that the regulation shall be invalid if it prescribes anything of an experimental nature, if it interferes with the number of trains, if it interferes with the times of starting, if it interferes with the stoppage of trains, or if it interferes with the speed of travelling. Do not you think there will be likely to be a great deal of litigation and discussion as to the effect of any regulation which may be made, and that the Railway Companies will probably assert that there is an indirect interference with the speed of travelling, for instance?—I do not see, with reference to the point I have already touched upon, that that will be the case. The speed of travelling, I suppose, will be the maximum speed on the line. Though a restriction is introduced into the Bill as to the interference of the Board of Trade, that is a point on which I have rather a strong opinion; I think the regulating maximum speed on inclined planes is of much consequence.

45. Mr. Labouchere—Is not that point considerably affected by the view of the Board of Trade as to engineers' time-tables being constructed, and whether those time-tables are so far observed as that the carriages shall be worked by the Companies according to them?—Yes; but I think that would not affect the actual maximum rate of speed.

46. Of course it would not affect the actual rate of speed at any particular point; but would it not materially diminish the chance of an undue rate of speed being established on any particular railway, if the time-tables are constructed on a principle which leaves no reason for having an excessive rate of speed at any particular point?—That might be a subject of discussion between the Board of Trade and the Company.

47. Sir Robert Peel—Supposing the Board of Trade were to think 28 miles ought to be the maximum, they would have the power of prescribing that by their regulations, would they not?—That never could be the maximum, except on a very severe incline indeed.

48. But if they were of that opinion, would not they have the power of prescribing it?—No, I think not.

49. What do you understand to be the effect of the restriction against prescribing anything of an experimental nature?—That the regulations are not to require anything which has not been tried on some railway for a length of time.

50. Supposing the Board heard of a scheme which had been tried by a Railway Company in the United States, and had succeeded there, you would not consider that an experimental suggestion?—I should not recommend to the Board of Trade to try schemes coming from America; I should consider the experiments alluded to as applying to this country; and, for instance, I should not have recommended to the President of the Board of Trade to require the adoption of the engine which is now used on the Lickey incline, which came from America, although its performances appear astonishing to some engineers.

51. Supposing it applied to any part of the country, it would no longer be an experimental regulation?—Decidedly not.

52. Then the Board of Trade would have the power of applying it to all railways?—Yes; but I should think that very indiscreet. I think no Cabinet Minister, nor any officer employed by that Cabinet Minister, would think of bringing such a thing forward. It would be a great want of judgment; and I think it is rather in the judgment of the officers who may be selected for those duties, that the safety of the public and the interests of Railway Companies will be best met.

53. Supposing some proper regulations with respect to the passengers' and luggage trains were made by the Government, but that a Railway Company were to say, "this is a very good regulation in point of fact, but we could not work so many trains if that were prescribed;" this allegation, if it could be substantiated, would make the regulation invalid, as it would be an interference with the number of trains?—Decidedly.

54. Mr. Labouchere—Have you rightly construed the clause; is not its effect that the Board of Trade has no power of issuing direct regulations to interfere with the speed on the railway or the number of trains, but that it would not be a sufficient objection on the part of any Railway Company, if the Board of Trade,

Digitized by Google

in exercising its power of making regulations under this clause, insisted on conditions which might indirectly interfere with the rate of speed or the number of trains, and that the Board of Trade would still be at liberty to exercise that power, though indirectly it might interfere with the rate of speed or the number of trains?—I apprehend the intention of that clause is to prevent the Board of Trade establishing a greater number of trains than the Company desire.

55. Sir Robert Peel—Should it not be, that the Board of Trade shall not require a greater or a less number of trains, rather than "interfere with;" do not you think the words "interfere with" are of very indefinite meaning?—Perhaps it should be; the way is to take it practically; the Board of Trade are not to interfere further than may be necessary for the purpose of preserving an interval of not more than 15 minutes.

56. Mr. Easthope—If you were consulted on the operation of that part of the clause, should not you say, that if you have the power of positively prohibiting trains passing at a less distance of time than 15 minutes, you may inevitably intertere with the number of trains?—I think the clause does not bear that construction; the intention I believe is, that in no case shall the Board of Trade interfere to require a greater interval than 15 minutes; but they will not always prescribe that interval; they could not, for instance, upon the Greenwich line. To prescribe 15 minutes there would be absurd, for they run over the ground in less than 15 minutes: that which applies to the Greenwich line would not apply to the longer lines.

57. Lord Sandon—If that regulation were made it would apply to such a line as the London and Birmingham?—The Greenwich is nearly level, the London and Birmingham is not so. In proceeding from Euston-square to Tring, I should have no objection, going in a train followed by another, to have an interval of only five minutes between them; but I should be very sorry to descend from Tring with less than a 15 minutes interval.

58. You would be governed in that, not by the convenience of the public, connected with the length or shortness of the line, but the gradients, which would make an interval of the one or the other requisite?—Yes, I look to it mainly as a matter of protection to the public, not at all as a matter of convenience, which is not my duty.

59. Sir Robert Peel—Supposing it desirable for the Board of Trade to prescribe a regulation, that on a certain signal being shown there should be an absolute stoppage on the line; under that clause you could not prescribe that regulation, could you, because you could not provide for the stoppage?—I think the words stoppage of trains has a reference to particular stations, not stoppage in case of danger, perhaps it might be otherwise worded.

60. Mr. Labouchere—Is it not the case that all those limitations were introduced in order to meet the views of different Railway Companies, who appeared to consider them important as protections to their interests?—I believe that was so.

61. Lord Granville Somerset—I presume the way in which you consider this capable of being enforced is under the 12th clause, which gives a power to fine Railway Companies who do not attend to the regulations prescribed by the Board of Trade, and all fines incurred in consequence of their negligence or disobedience are to be recovered in the courts of record; then supposing the Railway Company say those regulations are not borne out by the Act of Parliament, the question would have to be submitted to a jury, who would have to say whether the Board of Trade or the Company was right?—I presume so.

62. Previous to that the Railway Company would have an opportunity of representing to the Board of Trade that they had exceeded their power, and you would have to see whether you had exceeded your power: if you thought you had not exceeded your power, then you would go on and enforce your regulations?—Yes, unless the arguments adduced by the Railway Company to whom the regulation might be addressed should prevail. We do not expect that we are infallible: we may issue regulations which on further consideration may be found unnecessary, and a month's interval is given in order that they may be considered.

63. If they were found on consideration and consultation to have exceeded the bounds prescribed by the Act of Parliament, they would of course withdraw them, as they would have no way of enforcing them?—As a matter of course I should expect they would be withdrawn.

64. Sir James Graham—Under the Act of last session there is a power given to the Board of Trade to apply to the legal tribunals to enforce a compliance with the Railway Acts in case of railways becoming dangerous, is there not?—That is not a power to which I have turned my particular attention.

65. Mr. Labouchere—Are you not of opinion, from past experience of the manner in which the powers already given to the Board of Trade have been worked practically, that what would take place would be that the Board of Trade would communicate with the Railway Companies, and advise them to adopt such and such improvements; and that in nine cases out of ten the Railway Companies would attend to those suggestions without the extreme powers required to be exercised?—Certainly, we have worked with perfect harmony. I hoped it would have continued, but there has a difference arisen on this very clause, which I regret. I cannot imagine that a clause could be drawn with greater attention to the benefit of the Railway Companies.

66. Do you know whether the power of prosecution given under Lord Seymour's Act has been acted upon?—I believe not; I have been met by all the Railway Directors and all the Railway Managers with the very best possible feelings.

67. Mr. Easthope—Can you state whether the words introduced, "nor with the stoppage of trains," were intended to refer to the places at which the trains should stop?—I imagine that to be the case.

68. Was it not intended that you should not interfere with the places at which the train should stop?—Decidedly that was the intention.

69. Sir James Graham—At this moment there is on the Great Western an electrical telegraph, is there not from the point of starting to the first station out of London?—I know that there was, I am not sure whether there still is.

70. That telegraph, it is stated, is of use to prevent trains approaching the station at moments of danger?—It might be used in that way; I am not aware whether it was ever so used.

71. Do you suppose that telegraph communication, being established on that line, to be of an experimental nature or not?—I should think it utterly impossible for the Government to force any Company to adopt a regulation of that kind.

72. If it was a practice on that line, and is conducive to the public safety, why should you say it may not be enforced?—Because I should say the public safety might be secured at a much less expense.

73. But still the Board of Trade might say, "We have the experience on the Great Western Railway of this telegraph being conducive to public safety;" would it not be in their power, as the clause is now drawn, to prescribe that regulation, relying on the practice, and not regarding it as an experiment?—I think it might tend to cramp the commerce of the country, now carried on very much by railways, and that it would be too expensive an expedient to compel the recourse to it.

74. That is a question of policy; but under the clause as it now stands would not the Board of Trade have a right to interfere?—I think they would have a right to interfere; but they must have their proceedings taken notice of by Parliament, and I do not see how any Government could support such a proceding.

75. You think a telegraph communication might be ordered on any railway?—We are now looking at the question of power, not its application; and as the clause stands, perhaps the President of the Board of Trade might have power to issue such a regulation, but one can hardly conceive the possibility of anything so absurd as his exercising it.

76. Mr. Labouchere.—Do you think it would be possible to give a discretionary power of any value to the Board of Trade, which, if exercised without common sense, might not produce the most injurious results to the Railway Companies?—It is impossible to conceive of such a regulation being issued.

77. Lord Stanley.—Is not one of the cases in which there is the greatest danger of accidents occurring on railways, the point at which one railroad runs into another?—Yes.

78. Have not several serious accidents occurred at the points of junction of different railways?—Some have; but all junctions require a great deal of caution.

79. You have expressed an opinion that where there is a junction of one railway with another, all trains should stop before they come to the junction; that they should not run in without stopping?—That is my decided opinion.

80. Would not this clause, as worded, take away that power, inasmuch as it would prevent the Board of Trade making any regulation which would interfere with the stoppage of trains; and is not that a most important regulation, in order to prevent trains running into other trains?—They should bring up as nearly as they can; I do not think it necessary that they should come to a dead stand, but that the train should be completely under the power of the engineer.

81. Referring to the accident on the London and Birmingham line, did not that happen from the train being stopped in such a situation as to cross the main line, so that the Midland train was cut in two by the Birmingham train coming up?—The accident arose from the Midland Counties' down train crossing the up-line of the London and Birmingham.

82. That must be the case in every railroad which consists of a double line, one line must cross to the other?—That is quite unavoidable.

83. Did not this accident happen after the train had come to a stop from the improper position in which it was stopped?—No; the accident did not arise from that, but from the up-train being allowed to run in upon the Midland Counties' train when in the act of crossing.

84. Was not it to remedy the inconveniences and dangers of this kind you proposed that every train should be compelled to stop before it arrives at the junction?—Yes.

85. Is not that power expressly withheld from you by this clause?—That is not the intention of the words inserted in this clause.

86. Mr. Labouchere.—Would not the difficulty suggested by the last question be avoided, by saying that by "stoppage of trains" was meant stations?—I should think so.

87. Sir Robert Peel—Supposing you thought it desirable to prescribe, that on attaining a station the speed should be materially relaxed, would not the words "the speed of travelling" meet the case?—Yes.

88. Mr. Easthope—Would not that affect the question of the time consumed upon the journey?—It is intended to apply to the average speed on the line.

89. If you were to insist on a regulation of that sort, in the hope that it might not affect the question of the time consumed in the journey, would not its recurring a number of times be likely to occasion the Railway Directors to say, you are now going to interfere with our speed of travelling?—That might be said, certainly.

90. Mr. Labouchere—Do you feel yourself competent to give a precise opinion upon the particular expressions of this clause?—No, not in a legal sense.

91. Mr. Thornely—With respect to the interval of 15 minutes; supposing the mail train, travelling of course with the greatest speed on the railway, should overtake a slower train near a sideling, so that you put the slow train aside and let the mail train pass, would you keep the slower train back 15 minutes before it passed on?—No, decidedly not; that is a matter where discretion can apply, and where legal enactment will not apply; where slow trains are following quick trains, you may have a very short interval, but where very quick trains are following slow trains, you require a longer interval.

92. Lord Granville Somerset—Under the clause of this Bill, what right would the Board of Trade have to allow the Greenwich Railway Company to run their trains within 15 minutes one of another?—They have the right; it is only that the Board of Trade cannot insist on a longer interval.

93. They have the power to give permission to run every five minutes, but cannot delay them longer than 15?—Yes, that was the intention.

94. Mr. Easthope—Your opinion with respect to intervals would be governed by the curves as well as the gradients on the railway, would it not?—As to curves, they require a slower rate of speed.

95. The curves would affect the prudence of a greater or less length of time, as well as the gradients?—To a certain degree on embankments, though not in cuttings.

96. On the Greenwich line you can see from one end to the other?—Yes, except in foggy weather; and at such times one would imagine that the Directors would run their trains less frequently. I know that at certain seasons, such as Easter and Whitsuntide, they run their trains every five minutes; by means of increased precautions, no accidents have happened; and the object of the Board of Trade would be, to see those precautions perpetuated, for the time will come when there are not the same persons working the lines who saw the necessity of the precautions which were originally adopted, and the precautions may fall into disuse, and there may be fearful accidents; if there were a central body where the regulations are known, and where, if they fall into disuse, they might be separated, there would not be the same danger.

97. Viscount Sandon—Is there ever any accident affecting life, which does not affect, to a very large extent, the property of the Company itself?—That I cannot give an opinion upon; it may be presumed to do so.

98. There is the destruction of the carriages and the engine?—In the accident which happened on the South Western at Nine Elms, there was one person killed, and many others seriously hurt, but not one of the carriages was broken, and there was very little injury to them; it was extraordinary there was so little.

99. Generally speaking, an accident which affects life affects the property of the Company, such as upsetting the engine?—The upsetting of an engine does great injury to the Company.

100. The Company have an interest at stake in avoiding collisions, in the actual amount of damage?—I apprehend they have.

101. Mr. Labouchere—Does not an accident affect the receipts of the Company for some time afterwards?—I should imagine so.

102. Mr. Easthope—Are you aware that it is a question of great cost to the Company, in reference to compensation to individuals?—I am aware it has been in some cases; I can mention a case in which it has.

103. In the case you mention of the South-Western are you aware that great compensation was given?—I am aware that there was.

104. Lord Granville Somerset—Are you aware that that was under a threat of legal proceedings?—It was under a threat of legal proceedings.

105. Did that extend to all the individuals injured, or only to the individual who was more vigorous in his proceedings against the Company?—I know only one individual who received compensation, whether the others did or not I cannot say.

106. What was the sort of injury that that individual received?—An injury to his face I believe.

107. Knocking out his teeth?—No, the breaking of his nose.

108. You do not know whether the compensation was given to a great number of those persons, there being upwards of 60 more or less injured?—I am not aware that even one more person received compensation, but I am told that others received compensation.

109. Viscount Sandon—Out of the 26 or 28 accidents recorded in your Report, how many are there which by the regulations of the Board of Trade might have been prevented?—I think under proper care and regulations a very large proportion of these would not have occurred.

110. Do you think you could prevent the servants being careless, however careful the superintendence might be?—I think the servants will be made careful by being looked after.

111. Can the Board of Trade look after the servants?—No, but I believe that where there is a general attention to the servants care may be insured, you will very soon see whether a railway is well or ill attended to, no engineer can go on a line without seeing this, in fact a common traveller can observe the difference between them.

112. You have no apprehension that by affecting to convey to a central Board the management of all the railroads in the country you shall diminish the responsibility of all the Companies?—I have no fear of this, and if the Board so entrusted Acts with proper discretion, it will never deprive the Railway Directors of their responsibility, but will furnish an inducement to their officers to be more alert; and if any one of the Railway Inspectors were employed in doing nothing else but going round and superintending the different lines, he would see the improvements making in one line, and the precautions used on that line and not used on others, and thus be able to make suggestions to the different Railway Engineers, as I have done in many instances, with perfect fairness and openness, of improvements which had been adopted on the other lines, and were working very well; and in some instances those improvements have, at my suggestion, been introduced, and I have no doubt will be in others.

113. Lord G. Somerset—Looking to those cases of accident which have occurred, are those in your opinion referable as much to bad regulations as to the inattention of the servants?—Decidedly.

114. Many of those, you think, the regulations of the Board of Trade might prevent?—Yes, certainly. There were also accidents that took place before the passing of Lord Seymour's Bill, and the Board of Trade have received accounts of those accidents. I have commenced making extracts from them, and I have gone through the evidence on half of the accidents—the account is, of person killed 63, of persons wounded 76, in addition to those lists in the Report made by the officers to the President of the Board of Trade.

115 When you say 63 persons killed, do you include the servants of the Company employed in the conduct of the trains?—Yes, without reference to those killed or injured in the construction of the works.

116. You have not taken in the case of the men killed by the bursting of an experimental boiler on the Birmingham and Gloucester Railway?—I think they are not in the list.

117. Viscount Sandon—Or the persons walking on the line?—Yes, for I think that could be prevented to a great extent.

118. Mr. Easthope—Do you consider the accidents that happened rather attributable to want of experience than to any other cause?—I am not prepared to say that, for looking to the intelligence of the Engineers connected with the lines on which they have happened, they cannot be taxed with want of experience; and, looking to the South-Western line for instance, the Engineer on that line being one of the most experienced and most active, I cannot say there is a want of experience; though a few accidents which have happened on the other lines I think may be imputed to that.

119 Viscount Sandon—Should you feel yourself entitled by this clause to increase the number of officers on the line, the number of drivers to the engine, and so on?—I have rather a strong opinion on the number of drivers on the engine; I know it has been suggested that there should be more men required on the engine than now, I do not think that would be a wise regulation, I think the engine should be left to the engineman who has charge of it and to the stoker.

120. Would you consider that that should be left to the Company, or would you desire the Board of Trade should have the power of increasing the number of officers and the establishment generally of persons working the engine or watching the road?—I think it should.

121. That is one of your objects; you think it desirable there should be a power vested in the Board of Trade, if they saw a line in their opinion insufficiently attended to as it respected servants, and they conceived the public safety was in consequence endangered, to call upon the Company to increase their number?—Yes.

122. If you thought there should be a policeman at every mile, or every half mile, for instance?—I should suppose that the establishment has always reference to the traffic and the nature of the line. If you look at the London and Birmingham, they have a very large number of police and servants; if you look at the Great Western Railway, they also have a large number; they may be necessary, but I do not say there are not other lines where they must have a smaller police, or they cannot work at all, for their funds would be exhausted by maintaining such an establishment. The establishment must be with reference not only to the length of the line, but to the work done upon it.

123. The Grand Junction had at one time policemen for every mile; should you feel entitled to say that you have taken the precaution for the public safety, and we will not allow you to diminish your establishment!—I should say—You have had for a long period a large establishment of police, the London and Birmingham also have a large police, the Great Western have a large police, can you show any reason why you are going to reduce it; they will answer—We find it expensive, and do not feel it necessary. Do you intend to have no police to watch your line?—Yes, we mean to employ the servants of our contractor, and make them constables. I should say, very probably, to the Board of Trade—This is a fair experiment for them to make, but I think they should not make that immediate change, which would alarm the public and create danger, without stating their intention to do so, and the precautions intended.

124. You would under this Bill desire to have the power of directing an increase of their establishment?—Yes. I found on examining the accident at Taylor's junction, on the York and North Midland, a great deficiency of servants at that junction, where there was a great deal of work to do; I discussed the matter with the Chairman of that Company; I suggested to him an increase of servants; on discussing it, he found it desirable, he admitted it, and servants were added.

125. Mr. Labouchere—Do you not think a case might arise of a Railway Company whose financial affairs were not in good order, reducing their establishment in such a manner as was obviously dangerous to the public safety, in that case would it not be the duty of the Board of Trade to interfere, and would it not be necessary that they should have the power of interfering?—Most decidedly.

126. Sir James Graham—As the clause is now drawn, would not the Board of Trade have the power on a short line with small traffic, to give directions as to the number of police to be kept up without any stint?—I apprehend they have the power as the clause is now drawn, to direct them to increase the number without stint, but it could be justified only on the ground of its being required for the protection of persons travelling on railways; the Board of Trade must show their reasons for it, and the Railway Companies must have their opportunity of bringing forward reasons against it, and I cannot conceive that the President of the Board of Trade would make such an order when objected to, unless it was shown to be requisite for the protection of the public.

127. Lord Granville Somerset—Must you not, under the compelling clause of this Act, bring that question before a jury if the Company would not pay the penalty without it?—That I cannot say.

128. Mr. Labouchere—Do you think it possible, if any discretion is to be given to the Board of Trade with regard to the establishments of railways, to define precisely to what degree and in what particular cases the Board of Trade should interfere?—I am decidedly of opinion that could not be done.

129. If the Board of Trade is not to have the power of interfering in extreme cases on matters of such manifest importance to safety, would it not be better not to give any discretion at all to the Board of Trade?—I think, unless such power were given, the public would be safer without the power of any interference of the President of the Board of Trade; that it would be giving a false confidence to the public, producing no practical result.

130 Mr. Easthope—Have you found that any undue desire to save expenses on railways has occasioned an omission of regulations, which might occasion accident?—I cannot say decidedly. I have been employed by the President of the Board of Trade in making certain investigations of railways where accidents have occurred; and as my attention has been directed chiefly to those accidents, I have not felt it my duty (for when I examined the railways I was not Inspector-General of Railways, but merely employed to investigate the causes of the different accidents which had occurred) to examine into the working of the lines in detail, but I am not aware that any accidents have happened from that cause.

131. Your present experience does not furnish you with any cases in which from an overstrained economy on the part of the managers of railways accidents have occurred?—I do not know that I have investigated any cases where accidents have happened from an overstrained economy, though I believe there are instances in which there has been an overstrained economy; but I would rather not give instances of that. I have made communications to the Board of Trade, but I do not feel it desirable to specify here the particular Companies not having all the strength they ought to have.

132. Sir James Graham—Have you seen an insufficient number of servants on some?—I have.

133. Mr. Easthope—Have you found any indisposition to adopt suggestions of obvious practical utility?—Obvious to whom!

134. Obvious to yourself. When you have remonstrated against any deficiency or any practice, or pointed out any deficiency, have you found any positive disinclination on the part of any Company to make the change?—I have not been in a position to propose any regulations to the Companies, except with regard to accidents.

135. Take the question as applicable to accidents; when you pointed out where anything was likely to result in accident, or any expense was required to prevent accident, have you found a disinclination on the part of Companies to undertake the expense which might be requisite?—I do not know that I can point out any case with regard to accidents; on the contrary, there was a good feeling shown. With regard to the South Western, every suggestion I made was adopted; and the same thing has occurred with the London and Birmingham.

136. Mr. Labouchere—With regard to establishments, do you not think that the Directors of any railway whose establishment was manifestly below what it ought to be, would most probably, on a suggestion from the Board of Trade, decide that the establishment should be increased; and that it is very unlikely the Board of Trade could be obliged to resort to the extreme measure of imposing penalties!—I have found in the Boards of Directors and their managers men so reasonable to deal with, that I have only felt it necessary to suggest to them what has occurred

Digitized by Google

to me. In some two or three cases they have said, "We hardly think it necessary;" but I have found only one or two cases in which I have received that answer; in many cases they have yielded to and adopted my suggestions, and I think that would always be the case.

137. May it not form a very important protection to the public that there should remain behind the power to be exercised in certain cases, where the Railway Directors will not yield to reasonable representation, though probably that power will be very seldom called into exercise?—I think it may.

138. Sir Robert Peel—The very circumstance of a public Board in direct communication with the Railway Companies, having an opportunity of observing the improvements on one, and the neglect on the other, even if they limited themselves to actual suggestions or expostulations, would probably, in your opinion, have a very beneficial effect?—I think it would be highly practical and useful; but that, in order to that, they should have the power of Direction.

139. Considering the desire of the Directors to conform to useful regulations, and the unwillingness of a public department to require what was unreasonable, do you think amicable arrangements might be generally made?—I think there would seldom be a necessity for resorting to power, but that the department should have it.

140. Lord Granville Somerset—Do not you think that the mode in which they would best carry out their regulations would be by amicable arrangements with the Directors?—I think that the enforcing the regulations might be the exception; that suggestions would, in nine cases out of ten, be quite sufficient; with the present railway engineers and managers I think there would be little difficulty to encounter.

141. Lord Stanley—Do you think, supposing a public Board to have suggested a particular regulation to a Railway Company, but which was neglected, and in consequence of that a serious accident had occurred, a jury would not be inclined to visit with very heavy penalties the non-compliance with the regulation which had led to such accident?—That is a question, as to the feeling of the jury, that I cannot answer.

142. Viscount Sandon—The feeling of the jury is generally against railways, is it not?—I do not think that will appear from the account of the verdicts; they have been very lenient in many cases, in my opinion.

143. Mr. Easthope—Have you any doubt that if it was stated to the jury that the Company had opposed any suggestion made, and it was manifest that the opposition had led to accidents, that circumstance would greatly increase the amount of penalty on the Company?—I think that would depend on the nature and value of the suggestion; it might appear that the non-attention to the suggestion had really caused the accident, though the suggestion was not worth much. If the suggestion was very valuable and very obvious, it would, I think, very likely have the effect.

144. Do you think the Railway Directors themselves would feel a great reluctance to oppose you from that feeling; how does your experience go to that point?—It does not go to that point at all; we have conducted our affairs with such perfect harmony.

145–148. Viscount Sandon—From your observation of railways, do you conceive it possible to insist on the accurate observance of any time table?—That depends very much on the nature of the line; I believe on some lines there is very great accuracy; I have requested to see the time tables, though I have no right to call for them; and looking at the state of the weather and other circumstances, and the nature of the line, there appears to have been very fair accuracy. I think if you can depend on time or on space in anything, it is in railway travelling.

149. Are there fewer cases of irregularity in railway travelling than at first existed?—Yes.

150. There is increasing regularity on the roads you have spoken of?—There is one line to which I can speak, the South Western, on which there appears to be a very great increase of regularity. I had an opportunity the other day of ascertaining that, and the punctuality was something not to be expected on any line; the extent of it was a difference of only five minutes between the time they actually arrived and the time they were expected.

151. Mr. Greene—Have you observed that in some railways they have never observed punctuality in their time of starting?—I think where they start independently of other trains, there is not much irregularity; in the Birmingham, for instance, I think seldom more than five minutes, and that is generally made up before we get to Tring.

152. Lord Granville Somerset—Do you believe that where railroads are worked in unison with other railroads, it is important that there should be some general authority to superintend the arrangements at those junctions?—Certainly; I believe I have before said so.

153. There is more danger of collision where the junctions occur than in other parts?—Yes. There is a point not touched on in the Bill, but it is one I cannot help mentioning, with regard to the working of the second class carriages. You may arrive at Birmingham at half-past three, with a second class carriage, and at that time a second class train or mixed train starts on the Grand Junction, but after that, though several second class trains come down, there is none goes on; so that a gentleman coming down with the first class train may go on, but not his servant, unless in a first class carriage.

154. Did you ever hear at the Board of Trade of a representation having been made by the Grand Junction Company to the Postmaster-General, on the subject of the speed which they were expected to preserve, and the answer given by the Postmaster-General to that representation?—No, I never heard of that.

155. There has been no communication between the Postmaster-General and the Board of Trade, to your knowledge, on that subject?—I am not aware of any, but it would not pass under my observation.

156. Mr. Labouchere—Is there any other point to which you wish to direct the attention of the Committee?—The necessity of having trains well supplied with lamps is now admitted on many of the best lines, and they are gradually introducing their use on a more extensive scale; but the inferior and shorter lines are still badly provided with them. Their necessity is only, however, relative, depending in each case on the nature and extent of the traffic, and therefore it would be difficult to frame a general rule on this head; but from the circumstances attending the fatal accident at Taylor's Junction on the York and North Midland Railway, it may be concluded that the safety of the traveller would be materially increased by having two tail lamps to the hinder carriage of every train, unless indeed the carriages were supplied with lamps upon the liberal scale adopted upon the Great Western Railway, where each is supplied with two lamps, showing a white light to the head and a red light to the tail of the train. At the suggestion of the Board of Trade, the Directors of the York and North Midland Railway, shortly after the accident at Taylor's Junction, supplied the hinder carriages of the trains with two tail lamps; they have also given buffer-springs to their second and third class carriages, and have increased the number of their porters at Taylor's Junction. There should be a proper code of signals, which should as far as possible be uniform in principle, at least they should not be on one line essentially different from what they are on another line in connection with it. On some of the Scotch lines this defect prevailed until the evil was pointed out by the Board of Trade. When the Birmingham and Gloucester trains run upon the London and Birmingham line, unless the signals be assimilated, which it is believed is not the case at present, some fearful accident may be the result; but although a perfect and general uniformity of signals would be desirable, yet that object may not be deemed so essential as to render it proper for the London and Birmingham and Great Western, who have now very different codes, to adopt the same.

Regulations are required as to the mode of proceeding when trains break down which are closely followed by other trains. The accident of the 8th of January last, attended with the loss of two lives, on the Midland Counties' Railway, proves the necessity of proper regulations being issued by every Company for the guidance of their servants under such circumstances. The mode of proceeding agreed upon between the Board of Trade and the Managers of the Midland Counties' Railway, as the proper course to be adopted on the occurrence of such accidents, has been communicated by this department to some other Companies, and has been made a part of their code of regulations. On some of the principal lines the Managers are now convinced of the necessity of having some signal more certain than the ordinary red flag or light, to give, in foggy weather, intimation to engine-drivers that they are approaching other trains or some dangerous obstruction on the line; and in consequence of this conviction, various experiments are being tried to arrive at a satisfactory system of fog signals. On the London and Birmingham Railway, for instance, the chief of the locomotive department is applying himself to the consideration of this important subject; and the superintendent of the Manchester and Leeds Railway is engaged in the same manner; and this may be the case also on other lines. In the event of any of the numerous plans now in agitation being adopted by the railways of most importance, it would be a fair exercise of discretionary power on the part of the Board of Trade, after sufficient experience of such fog signals, to call upon other Companies to which from the frequency of running trains, such regulation might fairly apply, to adopt either the signals in question or some other likely to give equal security to the public passenger.

A system of precautions should be adopted to prevent collisions at the crossing of highways or other railways on the level. The necessity of well considered general regulations on this point has been proved by the occurrence of several accidents at the crossing of highways, and an accident which happened by a Croydon train running into a Greenwich train; and indeed every day's experience on this subject shows manifestly that it demands attention.

Regulations are also necessary where junctions occur with branch lines. The accident which happened at the Rugby station, from a collision between a Birmingham up train and a Midland Counties' down train has shown the necessity of extreme caution at such points. With the admirable management which generally prevails on the London and Birmingham Railway, it might have been supposed that no fresh regulations were needed in a case of this kind; but a system has been adopted from which a much greater degree of security will result to the traveller, and the Board of Trade have felt it their duty to communicate this system to the Managers of other lines similarly situated, with a view to general adoption. The accident alluded to in this article, was in a great degree attributable to the want of proper fog signals. There is also a necessity for precautions for the public safety on lines where the permanent way is used by carriages other than those employed in the traffic. The accidents on the Lancaster and Preston Railway, of the 16th December last, and of the 2nd of the same month on the Birmingham and Derby Junction line, make out the expediency of issuing proper regulations on this head. There should be regulations also with respect to extra trains. In the great number of lines, some system prevails with respect to the precautions essential to prevent accident by the working of extra or special trains. Wherever regulations on this important point do not exist, the Board of Trade should have the power of requiring them to be established. Regulations are necessary also for the enforcement of an order to prevent engine-drivers leaving their engines when on the line. Had such a general order been issued in a clear and positive manner, the accident which occurred at the Harrow station, on the London and Birmingham, in November last, and the accident at the Whitmore station, would in all probability not have taken place.

157. Viscount Sandon—Do not the regulations you think it necessary to make at the junctions involve a loss of time at the junctions?—All junctions must cause a loss of time more or less.

158. What is the probable loss of time you think necessary when a train comes in to a tributary railway? About five minutes, I should say, would be the least at each junction.

159. Sir Harry Verney—Therefore if one railway crosses five railways on a single line, there are five times five minutes lost?—The trains ought to cross another railway very slowly: I make a distinction between the crossing and the stopping. The crossing of another line would not occupy a minute; it is a loss of speed, and in getting up the speed again, which causes the delay.

160. Lord Stanley—You have estimated a loss of five minutes at each junction, without having any reference to the circumstance of the train meeting another train there, and the possible loss of time from their not exactly meeting together?—The one might merge in another, or it might not: the re-marshalling, as it is called, takes time.

161. The five minutes loss of time at the junction arises from slacking near the point of junction, stopping, and getting on again?—Yes.

162. That is, supposing the trains not to meet any other train?—Yes.

163. Sir Harry Verney—You reckon that five minutes is lost at every stoppage?—Very little less.

164. Mr. Freshfield—Do you know the time occupied in getting from the London and Birmingham line to the Midland Counties' line, with the mail train?—No, I do not; I know there must be a certain time lost.

(To be Continued.)

RAILWAYS IN RUSSIA.

(From M. de Gerstner's Letters, *Franklin Journal.*)

UNTIL the year 1834, when I first went to Russia, the engineers there regarded railways as quite impracticable for that empire. On my application, his Majesty, the Emperor, gave me an exclusive privilege for the formation of two railway companies, the one for a railway from *St. Petersburg to Zarskoe Selo*, and the other, for one from St. Petersburg to Peterhof. I found afterwards a company for the first railway, and the charter for the same was granted on the 21st of March, 1836. Soon after the construction of the road was commenced, it was partly opened already on the 21st of September, 1836, and the whole line was put into operation on the 30th of October 1837. This railway is only 17 miles long, but forms, in its whole length out of the city of St. Petersburg, a straight line; the greatest rise is within the city, and but 10½ feet per mile. An embankment was erected the whole length of the road, which contains over one million cubic yards; this embankment was covered with a bed of stone and gravel, 14 inches high, upon which the cross ties and sleepers were laid 3 feet from each other, supporting iron rails of 65lbs. per yard, which were fastened in chairs upon every sleeper. The space between the cross ties was then filled in with broken stone or gravel, and covered with sand. The grandeur of the whole structure was in correspondence with the expected traffic, as it was estimated that 300,000 passengers each way, or 600,000 in the whole, will travel over this road in the year. But this solidity in the construction, the high price of the iron in the year 1836, and of the stones and gravel in the marshy district of St. Petersburg, as also a great many unforeseen expences, which generally take place in a new enterprise of this kind, increased the cost of construction so much, that for the road itself of 17 miles in length, with a single track, 4,000,000 of rubles were expended, which is 50,000 dollars per mile. This compromises, however, the purchase of six locomotive engines, 44 passenger cars with 1878 seats, and 19 freight cars. The Company having got permission to erect a large hotel in the park at Pawlowsky, and another at Zarskoe Selo, they expended for these two hotels, and for some other buildings, 1,000,000 of rubles; therefore, in the whole, 5,000,000 of rubles, or 1,050,000 dollars.

During the winter of 1837-1838, the Directors of the Company permitted only a few trips to be made during some days of the week; the daily regular trips between St. Petersburg and Zarskoe Selo, commenced on the 4th of April, and those to Pawlowsky, on the 22nd of May, 1838. According to the printed report, made to the stockholders at their general meeting, the results of the operations of this road for the year 1838, have been as follows, viz.:—

The number of passengers from 1st April to 31st December 1838, was	597,665
If reduced to the whole length of the road, this number is equal to	423,129
The total receipts from passengers were	161,872 dols.
Each passenger paid, therefore, at an average for 17 miles	38¼ cents.
Which gives the average charge per passenger, per mile	2¼ „

The number of trips made by the locomotives, was 3500, and the average number of passengers, per trip, 121. All the trains together performed, therefore, a distance of 59,500 miles. The current expences have been:—

For maintenance of way and buildings	23,485 dols.
Transportation account	36,810 „
General expences, cost of administration, &c.	30,340 „
Expences for amusements	14,226 „
Total	104,861 dols.

If this sum be compared with the number of miles travelled by all the trains, or 59,500, we find the expence, per mile of travel, equal to 180 cents. In Belgium this expence is only 105 cents, and the trains contain, at an average 143 passengers. In America the expence per mile of travel is only 100 cents, while the average number of passengers in a train, is 40.

The expence per mile of travel, 180 cents, divided by 121 gives 1.49, or nearly 1½ cent. as the expence per passenger, per mile, which is twice as much as on the Belgium railways.

The gross income during 9 months, was, 161,872 dollars, the net income, according to the accounts, 63,068 dollars, or 38 per cent. of the gross receipts. The stockholders received a dividend of 4 per cent. for these nine months.

The Directors mention in their report, that during the whole first year the road has been in operation, the number of passengers was 707,091, and the gross income 193,734 dollars. For the next year they estimate the income at 23,579 dollars, and declare, that there is a prospect, the net profit, will be over 40 per cent. of the gross revenue. In this case the net profit would be 92,632 dollars, and after deducting 12,947 dollars for the interest and sinking fund on the loan, there will remain 73,685 dollars as dividend for the stockholders, or nearly 10 per cent. on the capital stock of 736,850 dollars.

The whole result of the operations agree very accurately with my first estimates; the number of passengers reduced to the whole length of the road, will be 600,000 per year; and already, three years ago, I offered the Company to rent the railway, and pay the stockholders, during three years, a dividend of 10 per cent., per annum.

The experience in the management of railways during the last three years, has, however, shown that the expences are much larger than was formerly expected, and at the present time, when this experience from the railways in Europe, and a much greater one from those in the United States is before me, I must declare that it is quite impossible to defray the current expences of the Zarskoe Selo Railway as it is now managed, with 60 per cent. of the gross income. As yet, this railway is not reduced to its own resources, because the Directors proposed to make another loan of 300,000 rubles (63,158 dollars) to complete the same, and as long as money is expended at the same time, for the construction of the road and its operations, there can, even with the best will never be made a strict division of the expenditure. No accurate results concerning the expences of the operations of the Zarskoe Selo Railway, will therefore be obtained in 1839, and, as long, hereafter, as the construction account is not entirely closed.

Several months since I proposed to the Directors some arrangements and improvements, from which none but the best results can be expected. They consist, principally, in the following:—

1. To continue the railway from its present termination, to, and along, the Fontanka Canal, a few wersts, in order that passengers might be taken from different points in the city, and brought, by horsepower, to the general depot. All the large cities in the United States, as New York, Philadelphia, Baltimore, and New Orleans, are traversed by railways, which, with a peculiar construction, turn round the sharp corners of the streets, frequently with a radius of only 40 feet, and the eight-wheeled cars, of 52 feet in length, never run off the track. The advantage of continuing the railways through cities, is very great for the stockholders and the public in general, principally where the lines are short.

2. To introduce eight-wheeled passenger cars and American locomotive engines, and to apply to their purchase the reserved fund, which according to the statutes, is to be from 10 to 30 per cent. every year of the gross income, and destined for the renewal of the depreciated stock.

3. To use wood as fuel for locomotive engines. The coke hitherto used as fuel upon this road, is imported from England at a very high price. There is no coal between St. Petersburg and Moscow, and it can never be expected that the fuel for such an immense railway as that between these two cities, will be procured in the same way. My attention in America was therefore also directed to this subject; upon more than 100 railways, wood is used here as fuel, and it was to be expected that something effective had been invented to prevent the throwing out of the sparks. It was principally in the South, under the 30th degree of latitude, that I found an apparatus in use, which seems to answer perfectly in every respect. By means of this apparatus the sparks are led through a partial vacuum, and fall down to the bottom of the smoke box; there is no wire net on the top of the chimney. This apparatus has been in operation for 18 months, during which time not a single accident occurred, although cotton and other articles are daily transported in open cars. It is easy to show that by the use of wood as fuel upon the Zarskoe Selo Railway, the sum of 10,000 dollars might be saved in one year.

It is only with the introduction of the above-stated improvements that the stockholders of the Zarskoe Selo Railway may expect a dividend of 10 per cent. per annum; and, as I am now so well acquainted with the experience in America, I do not hesitate to offer them again a yearly dividend of 10 per cent. for the next three years to come, to pay besides 90,000 rubles per year, as interest and sinking fund on the loan, and to pay for the general depreciation of the locomotives and cars: an American train consisting of a locomotive, with tender, and a number of passenger-cars, to accommodate 400 passengers.

The advantage of the construction of the Zarskoe Selo Railway to the Russian empire is far greater than to the stockholders therein interested; because this railway has been used in the changeable climate of St. Petersburg, in summer and winter, without the least interruption. The trips were regularly continued during the time of the greatest frost and the severest snow storms, and everybody became convinced of the practicability and usefulness of this new kind of communication. This favourable result has produced the effect that the project for a Railway from *St. Petersburg to Moscow*, which I brought into notice, already three years ago, finds every day more and more supporters; and at present there are certainly but few individuals in Russia, and none abroad, who, with the knowledge of the intercourse existing between the two cities, are not convinced of the utility and necessity of this rail-road, The population of St. Petersburg is 470,000, that of Moscow 330,000; the population of the towns and other places on the road exceeds 200,000 souls. This railroad would therefore, in its length of 420 miles, form a line of communication of one million of inhabitants, residing on the same; and, besides, the rail-road would be travelled over by those numerous travellers, who, from all parts of the empire, pass through Moscow to St. Petersburg.

The enormous intercourse between the two cities, which is not to be met with on any other line, neither in nor out of Europe, may be best judged of from an account kept, by order of his Majesty the Emperor, of all vehicles which passed over the turnpike from the 1st January to 31st December, 1834. In that year there were counted at Tshetireruki, on the turnpike-road to Moscow, five miles from St. Petersburg—

96,291	Travelling carriages of every description, drawn by	269,799	horses
23,879	first carriages and post sledges, drawn by	62,171	„
1,133,603	freight waggons or sleighs, drawn by	1,187,402	„
Total ..	1,253,683 vehicles, drawn by	1,519,372	„

This intercourse is so great that it would justify the construction of a railway more than it was ever the case in any line of this length: it remains only to enquire what would be the cost of construction of this railway.

The Americans have constructed 3,000 miles of railways, and expended for the same, at an average, 20,000 dollars per mile. As only 35,000 passengers, and 15 tons of goods, are transported annually over these roads, they have but single tracks, and the whole management is such, that the capital of construction bears 5½ per cent. interest. The traffic upon the St. Petersburg and Moscow Railway will be at least ten times as great, and therefore a much larger capital may be invested there than in America.

Digitized by Google

Already in the year 1835, I personally made a preliminary survey of the country between St. Petersburg and Moscow, and convinced myself that, in the greatest part of the line, the country is uncommonly favourable. Since that time I have continued to collect every important information with regard to this railway; and, with the knowledge of the experience in America, I may state, without hesitation, that a railway from St. Petersburg to Moscow, with a double track, with as heavy rails as those upon the Zarskoe Selo railway, with all the necessary buildings and outfit, may be established for the sum of 125,000,000 of rubles (26¼ millions of dollars), and that I will undertake to finish the whole railway in a term of not more than six years.

It will, perhaps, be objected, that the Zarskoe Selo Railway, of 17 miles in length, with but a single track, has cost 5,000,000 of rubles, that therefore, in proportion to the length, the 420 miles to Moscow must cost 125,000,000 in which sum would be comprised, it is true, the purchase of the proportional number of 150 locomotive engines and of 1600 passenger and freight cars, but the railway could only have a single track. I have had occasion to remark already, in my former reports, that the cost of one railway cannot lead us to determine the cost of another, as the expences of construction can only be ascertained by the special estimates, but here it may also be remembered that of the whole cost of the Zarskoe Selo Railway the fifth part was expended for buildings alone, which, in proportion to the length, would give 25,000,000 rubles for the railway to Moscow. The cost of the buildings for this road, however, as they will be constructed solely to accommodate the traffic and not for amusements, will not be more than 4,000,000 rubles, and the remainder 21,000,000 are, with the present prices just sufficient for making the superstructure of the second track throughout the whole line. There only remains therefore the expence of grading for the second track to be provided for and this sum will be richly brought in by the introduction of such a construction of the railway as will conform to the present experience on the two continents.

The connection of the centre of the Russian empire with the most important commercial city in the South of Moscow with Odessa, has also been hitherto regarded as highly important. The construction of a canal is quite impossible, the construction of a turnpike, and more yet, its maintenance, would, with the entire deficiency of stone and gravel, be too expensive. Nearly all the railways in the Southern States of North America, as also those in Belgium, are constructed without stone or gravel, because the latter are as rare there as in Russia; and in every case would the maintenance of a railway between *Moscow and Odessa* be cheaper than a macadamized road. The distance between the two cities is about double that from Moscow to St. Petersburgh, and as the country is throughout very level, there is no difficulty to construct this railway with a double track and heavy rails, for 175,000,000 of rubles (or 37,000,000 of dollars), at the most both railways could easily be completed in ten years. A third railway, which is supported principally by the population of Moscow, is that from *Moscow to Kolomna*, and the River Oka. The surveys and plans for this railway were made by several engineers during three years, from 1836 to 1838, with all the necessary detail, under my superintendence, and the estimates now completed. The length of the railway to the River Oka is 66¾ miles, and plate rails of sufficient strength (manufactured in Russia) might be employed for the same. The railway would have a single track with slidings, and the arrangement be such that no inconvenience would be experienced in the operations. The passengers, and no doubt also a great quantity of goods, would be transported from the end of the railway from the River Oka to Nishney Novgorod, situated on the confluence of the Rivers Oka and Wolga, where, annually, the celebrated great fair is held for the merchants of Europe and Asia. According to my estimates made here, the railway and 40 steam-boats would cost 11,000,000 of rubles (2,315,800 of dollars,) and I offer to complete the road in two years, provided that I meet with no obstacles in directing the construction.

The way in which the above-mentioned capitals for the construction of the railways may be procured, will be easily found out, if my letters are read with attention. Sixteen millions of Americans have within ten years completed 3,000 miles of railways, at an expense of 60,000,000 of dollars; why should not Russia, whose European possessions are as laage as the United States, and populated by three times as many, or 48,000,000 of inhabitants, why should this immense empire not also expend in ten years the sum of 60,000,000 dollars for the railways between St. Petersburg, Moscow, and Odessa. In Belgium, 56,618 soldiers were carried last year, upon the railways; what a gain would not result to the Russian war department alone from the establishment of railways! With the adopted width of track of six feet, and the introduction of the American plans of construction, horses, cannon, munition, waggons, and all other objects, will be transported with the greatest facility, and it might be proved that the saving in the cost of transportation of the Russian troops and their munitions, during the late three wars with Persia, Turkey, and Poland, would have covered the whole cost of construction of the railways from St. Petersburg to Odessa; and besides, the duration of the war would have been much shortened.

Times were never more favourable for great enterprises; Europe is in the enjoyment of profound peace, money may be obtained and the lowest rate of interest, and will be easily procured for the Russian undertakings, if to their partakers advantages and guarantees are allowed, similar to those given in other parts of Europe, and in the United States of America. In such large undertakings, however, for which more than the ability of the natives is required, the question of nationality must be laid aside, and every body must be regarded as a native who has made himself notorious by the introduction of useful objects, which promote the prosperity of the nation. The Russian Government has, principally in the last four years, accomplished what may be termed enormous: it can and will, therefore, also execute that grand and national work.—*Franklin Journal for May.*

STATEMENT OF THE PERFORMANCE OF THE LOCOMOTIVE ENGINE "HICHENS AND HARRISON," BUILT BY MESSRS. BALDWIN, VAIL AND HUFTY, FOR THE PHILADELPHIA AND READING RAILWAY.

On February 9, 1841, the above engine hauled over the Philadelphia and Reading Railway, 54½ miles in length from Reading to its intersection with the Columbia Railway, a train of *one hundred and five* loaded burden cars, laden with 1,318 barrels of flour, 870 kegs, nails, and spikes, 635 bushels grain, 63 tons of blooms and bar irons, 20 cords wood, 8 casks oil, and sundry other articles of freight, amounting in all to 308½ tons of 2,240 lbs.

Weight of the 105 cars 173 tons, making a total gross weight of 481½ tons of 2,240 lbs., equal to *one million seventy-eight thousand five hundred and sixty pounds* hauled by the engine, not including her own or her tender's weight.

Cars all four-wheeled, wheels three feet diameter, lund and tallow only used in boxes. Whole length of train 1,260 feet (or 60 feet less than one-fourth of a mile.)

Running time 4 hours 54 minutes, making an average speed of 11 1/10 miles an hour.

Total quantity of fuel consumed, 2.51 cords of oak wood.

Total quantity of water evaporated, 1,804 gallons.

Oil used by engine and tender, 7 quarts, including oiling before starting; longest continuous level over which the above train was hauled, 9 1/10 miles. Her speed, with the train on this level, 10 1/10 miles per hour.

Weight of engine empty, 23,250 lbs. With water and fuel 26,710 lbs. Weight on driving wheels, with water, fuel, and two men, 14,120 lbs. Cylinders, 12½ by 16 inches stroke; driving-wheels 4 feet diameter.

The above road has no *ascending* grade from Reading towards Philadelphia, with the exception of half a mile at its lower terminus or intersection with the Columbia Railway, graded at 26½ feet per mile, on which grade the train was stopped.

The profile of the road from Reading to this point is divided into levels varying from 1,600 feet to 9 1/10 miles in length, and *descending* grades of from one and a half to 19 feet per mile, the latter being the heaviest grade on the road.

Total length of level line between above points 27 miles and 8-10ths.

Total fall from where the train was started to where it was stopped near the Columbia Railway, 214 feet.

Shortest radius of curvature on the road, 819 feet; 1,480 feet of curve struck with this radius.

The engine started the above train on a level, without any assistance, and gradually increased her speed to the average rate above rtated. She worked with great ease to herself during the whole trip; and hauled the train for the last 14 miles, 10 of which were level, over rails in very bad order, owing to a light snow storm which moistened without wetting their surface; the effects of which in diminishing the adhesion and power of the engine, practical engineers can well understand and appreciate. The above performance is believed to be unsurpassed; and the train to be the longest and heaviest ever hauled by ONE engine on any railway in Great Britain or America.

G. A. NICOLLS,
Superintendent Trans. Phila. & Reading, R. R.

Reading, Pa., Feb. 10, 1841.

SOUTH-WESTERN RAILWAY (No. 2).

June 21.—Speaker reported the Royal Assent to the Bill.

RAILWAY ENGINEER KILLED.—On Friday night last Mr. Woods, one of the engineers having the direction of an extra train from Newton to Manchester, was accidentally killed. It appears that when this train had got about 100 yards from the station at Newton some interruption was perceived, and on the firemen looking to ascertain the cause, he saw that the engineer had fallen off and the wheels had passed over his neck. No one saw him fall off, but it is supposed that he was jumping from one of the carriages to the engine and slipped. An inquest was held yesterday, and the jury returned a verdict of accidental death.—*Liverpool Standard.*

ARBROATH AND FORFAR RAILWAY COMPANY—GENERAL MEETING.

THE Annual General Meeting of this Company was held at Arbroath, within the Town-Hall, on the 14th inst. WILLIAM FULLARTON LINDSAY CARNEGIE, Esq., in the Chair.

The Committee of Management presented a Report of their proceedings, together with states of the Company's affairs, including general account of receipt and expenditure up to the 15th of April last, and traffic account, also up to that date, for the byegone year. They also laid on the table the books of the Company, balanced and docquetted, in terms of the Act.

The Report of the Committee was read by the clerk.

Provost MANN moved that the Report now read, be approved of, and printed and circulated, and that in terms thereof, a dividend of 5 per cent. on the new stock, so far as paid up,—being after the rate of 12s. 6d. per share—and a dividend of 3½ per cent. on the original stock of the Company, paid up,—being after the rate of 17s. 6d. per share—be now declared; the said dividends to be payable on the 2nd of August next. This motion was seconded by James Barclay, Esq., and carried unanimously.

JAMES GIBSON, Esq., moved that the Committee of Management for the time, or any three of them, be authorised to bind this Company, in the guarantee of repayment of the outlay in making the Brechin and Friockheim Road turnpike, to the extent of 250*l*., and to grant bond or other obligation, or to concur with others in granting bond or other obligation, to that effect. This motion was seconded by George Adam, Esq., and carried unanimously.

The meeting then proceeded to the election of three Directors in the room of Messrs. James Whitshed Hawkins, William Potter, and George Canning, going out by rotation, when Mr. Potter and Mr. Canning were duly re-elected, and again chosen Directors and members of the Committee of Management; and Sir John Ogilvy of Inverquharity, Bart., was duly elected and chosen a Director and member of the Committee of Management in room of Mr. Hawkins. The following is, therefore, the list of Committee of Management, placed in the order required by the Act, for the ensuing year, viz.:—

William Andson, David Lowson, William Fullarton Lindsay Carnegie, Thomas Carnaby, John Lowson, William Chapel, William Potter, George Canning, Sir John Ogilvy, Bart.

ROBERT GORDON, Esq., moved that the cordial thanks of the meeting be given to the Committee of Management for the past year, for their great zeal in conducting the business of the Company, and their valuable services therein. This motion was seconded by the said Alexander Smith, Esq. and carried unanimously.

On the motion of the said James Gibson, Esq., the thanks of the meeting were voted, by acclamation, to the Chairman, for his conduct in the chair.

REPORT OF THE COMMITTEE OF MANAGEMENT.

In the statements of Receipt and Expenditure which have been printed and circulated the proprietors have already in their hands a full abstract of the accounts of the Company for the past year. The Committee of Management, while they refer to that abstract, beg to express their readiness to give whatever explanations may be wished for in regard to the revenue and expenditure, or the details of the accounts; and if any further information respecting the Company's affairs, and the mode in which they have been managed, should be deemed necessary, after the reading of this Report, such information shall be communicated, as far as the Committee have it in their power to do so. The books of the Company, regularly balanced and docquetted, in terms of the Act of Parliament, are laid on the table for examination.

From the Abstract of the Accounts, as well as the balance-sheet of the books, it will be seen that the gross revenue for the year, ending on the 15th of April last, amounts to		£9,381	14 3
To which is added the surplus revenue at the former balance		1,144	18 5
Total		£10,526	12 8
The gross expenditure on the traffic, and interest of debts, feu-duties, &c. amount to		6,678	5 0
Leaving net undivided profit		£3,848	7 8

Out of this net profit there falls to be paid, in the first place, the guaranteed dividend, at the rate of five per cent. on the new stock paid up. This has been ascertained by the Treasurer, from an account made up by him, and which will be laid on the table, to amount to 628*l*. 6s. 7d. The balance, after this deduction, would be fully sufficient for the payment of a dividend, at the rate of 5 per cent. on the original stock. But the Committee are satisfied that it is for the permanent interest of the Company that there should be a considerable sum reserved for contingencies, and that, by adhering to this rule, and enlarging the dividends as the traffic and revenue increase, the character and real prosperity of the Company will be best established and maintained. They, therefore, recommend to this meeting, to declare a dividend at the rate of 3½ per cent on the original stock paid up, being 64,963*l*. 10s., and that the balance be carried to undivided profits in next year's accounts. If this recommendation be agreed to, the following will be the state of the balance, viz.:—

Surplus revenue, as above			£3,848	7 8
Deduct guaranteed dividend on new stock paid up, at 5 per cent.	£628	6 7		
Deduct dividend on original stock, at 3½ per cent.	2,263	9 2		
			2,891	15 9
Balance of surplus revenue, to be carried to undivided profits			£956	11 11

At the date of the balance, on the 15th of April, the amount of new stock subscribed for amounted to 25,837*l*. 10s. of which 21,165*l*. had been paid up, and there remained at the disposal of the Committee, unsubscribed for, 6,162*l*. 10s., or 493 shares of 12*l*. 10s. each. A part of this remainder has since been allocated to parties applying for it. The Committee considered it desirable that the new stock should be given off, as far as possible, to partners; and, until very recently, they restricted any allocation of it to others. It is now their intention to put what is still undisposed of into the market, and allocate it to the first applicants. There is reason for believing that, in this way it will, ere long, be all taken up.

The Committee have been enabled, in the course of the past year, to provide many accommodations and facilities for the better conducting of the traffic and working of the line, and they conceive the whole establishment is now on a very efficient footing. Since last annual meeting there have been erected loading banks and depots for goods at the stations at Forfar, at Auldbar road, at Leysmill, and at Collistoun—additional sidings and turn plates have been put in at various points, a great extent of additional fencing has been executed—a steam-engine and turning lathes, with other machinery, have been put up at the Arbroath station, and the workshops made more complete. The Committee have also erected a ticket office, and a building, to be let as an inn, at Auldbar-road station. This building is now about finished, and as soon as a suitable tenant offers, it will be let. The Committee expect considerable revenue to be derived from this station. It is situated near the thriving village of Letham, and on the turnpike road to Brechin by Luckyslap, and is surrounded by a populous country.

With the exception of this inn, the Company's other property, and the depots and sheds intended to be let, are fully tenanted. The depots for coals and lime at Forfar were all let in April last, on leases for three years, at a great advance of rent. The gross rental up to that time was 99*l*. 2s.; the rental under the new leases amounts to 147*l*. 10s. The Committee have also now let all the spare pieces of ground belonging to the Company on the sides of the railway, near to the harbour of Arbroath. These spots have hitherto been occupied by the traders indiscriminately, and without any payment; and differences being apt to arise as to their occupation, the Committee resolved to solve any difficulty of this kind, by exposing them to let, by public roup. They were divided into six lots, and, after competition, the whole were let at a gross rent of 24*l*. 15s. The leases are only for one year, with an option to the Company to terminate any one or more of them on a month's previous notice.

The Committee have lost no opportunity of forwarding every thing likely to promote the traffic, and several most important improvements have been made, or are in progress, which cannot fail to be highly conducive to this end. One of these is the formation of the turnpike road from Forfar to Kirriemuir. It had long been a subject of complaint that the road between these places was so bad that the natural channel of communication and trade, which ought to have run from Kirriemuir to Forfar and Arbroath was diverted to Glamis and Newtyle, and attempts had been made, from time to time, to improve the road, but with very little success. This desirable object has now been accomplished: a good turnpike road has been [illegible] must soon be the means of bringing a large portion of the Kirriemuir traffic to the railway, which formerly passed to approach it. When the measures for effecting this improvement were in progress, the Committee, besides [illegible] their number contributing towards it individually, [illegible] on the part of the Company, to convey the [illegible] road from the quarries on the line to Forfar, and to make the railway dues of such carriage a postponed debt, to be exacted when the funds of the road should be adequate to pay more than the expense of maintenance, and the interest of the money borrowed for making the road. The amount of the debt thus due to the Company by the road is 220*l*. 2s. 7d. The Committee trust their constituents will sanction this act of their management.

Another improvement, of a similar kind, is now in progress—a turnpike road between Brechin and Friockheim. From the steepness of the old road at the Hill of Burkle, and the bad state of the road in general, the means of communication between Brechin and Arbroath have been always very limited, so much so, that it was no uncommon thing for those travelling to Brechin from the coast, to go there by Montrose, or other routes little less circuitous. Favourable circumstances having occurred, and obstacles which formerly existed having been removed, the necessary arrangements were agreed to, a few months ago, for making the road turnpike; and, by a small deviation from the old line, an excellent road has now been marked out, both as regards line and levels, there being no gradient steeper in any part than 1 foot in 25 feet. The work is all contracted for, and the contractors are under obligation to finish their contracts by the 20th of August. In meeting the financial part of this undertaking, application was made to the Committee to give their aid on behalf of the Company. The Town Councils of Arbroath and Brechin subscribed their guarantee for the payment of the outlay, to the extent of 300*l*. each. The Committee of Management of the Dundee and Arbroath Railway Company agreed to guarantee 250*l*., subject to the approval of the general meeting of that Company, and your Committee did the same, under a similar condition. The whole sum required for making the road turnpike is estimated at about 2,500*l*. Of this, Lord Panmure has, with his usual public spirit, advanced, on loan, 1,000*l*.; and the subscriptions by the two towns and the two Railway Companies, and by a number of individuals engaging to guarantee the payment of the outlay, each to a certain extent, amount to nearly 3,000*l*., being much more than is required, and, consequently, diminishing the risk to the obligants. The Committee, in giving their subscription, expressly stipulated that it should be subject to the approval of their constituents. It remains, therefore, for this meeting, to determine whether such approval is to be given. It is obvious that the formation of this road, besides being a great public improvement, highly beneficial to the town of Arbroath, and its Harbour, must open up new sources of traffic to the railway. It is understood that the road, when completed, will become the route for travellers from the south northwards, and *vice versa*, and that stage coaches will be established on it—thus connecting Aberdeen on the one side, and Edinburgh on the other, with the railways.

The opening of this road, and the change of circumstances and additional traffic that must follow, will render it imperative on the Company to provide additional accommodation at their Friockheim station. The partners are aware that, owing to the disputes with the late proprietor of the ground at that station—which terminated in a serious litigation—the arrangements at Friockheim have been less perfect than at any other station, although it is one of the most important on the line. That litigation is now at an end, and the only hindrance to entering upon the consideration of the requisite accommodations is the uncertainty as to what may be required after the new turnpike to Brechin is finished. It has been suggested by Lord Panmure, the President of the Forfarshire Agricultural Association, that their shows, in place of being held at Glesterlaw, might be held at, or at any rate nearer to, Friockheim; that an inn should be erected by the Railway Company there, containing a hall suitable for the meetings of the Association, and that an annual payment might be made by the Association for their occasional use of such hall. The Committee are disposed to entertain this suggestion; but it will be for consideration whether the object may not be accomplished by feuing part of the Company's ground, and leaving it to individual capital and enterprise, to erect the necessary buildings. At all events, the Committee will not enter into any final arrangement until they see their way more clearly, and the nature and extent of the additional traffic likely to arise is better ascertained than it can be at present.

Generally speaking, the trade upon the line is progressing satisfactorily. The quantity of goods carried during the past year, as compared with the year preceding, is nearly doubled—the quantity for the year, up to the 15th of April last, being ..... 68,052 Tons.
While in the previous year, the quantity was only ..... 37,742 ,,

In passengers, also, there has been an increase, the number for the past year being 106,574½
And for the year previous 99,794

The great drawback upon the passenger traffic is the heavy duty exigible by Government. The most strenuous exertions have been made to obtain an alteration in the mode of levying this tax, and it is now all but settled that, in place of the present rate of one-eighth of a penny per mile per passenger, a duty at a rate not exceeding five per cent. on the gross revenue from passengers is to be substituted. This change would be perfectly satisfactory, and would not only benefit all the Railway Companies in Scotland, but the public, as it would remove much of the inducement that now exists to charge high fares; and it has been proved that the revenue to Government, upon the whole, would be fully as great in the one way as the other. The

Digitized by Google

state of parties in parliament has prevented the proposed measure being matured and passed, but it is confidently believed that it will take place. The Committee, in the early part of the year, applied for, and endeavoured to obtain, a renewal of the composition for this duty granted last year, but they were unsuccessful. They received notice that the full duty would be rigorously exacted. This being the case, they were reluctantly compelled to raise the fares to enable them to meet the tax, and, in place of 2s., 1s. 6d. and 1s., for the first, second, and third classes, they fixed these fares at 2s. 3d., 1s. 9d., and 1s. 3d. The rise commenced on the 15th of March last, and has been continued The Committee regretted the necessity of this step, but they saw no alternative, as most of the passengers travelled by the third class carriages, and the tax upon them amounted to nearly fourteen per cent. on their fares. In the steps taken, and the exertions used, to effect the desired change on the mode of levying the passenger tax, as well as in endeavouring to obtain a renewal of the composition, the Committee have been greatly indebted to Mr. Chalmers, M.P., who has left nothing undone to aid the Company, and forward their views; and they consider it due to him to record, on this occasion, their grateful sense of his services.

With the view of diffusing a more general knowledge than has yet existed of the extent of the traffic, and that all concerned may see it progress, the Committee have resolved to publish a statement of the traffic on the line from the opening downwards, and it is their intention to publish the returns weekly from this time forward. A tabular statement of the bye-gone returns will be produced with this Report, and copies will be circulated amongst the proprietors. In each of these copies blanks will be left for filling up the traffic returns, as they are published, and it will be in the power of any partner, by inserting these returns in his copy, as they appear, to have always before him a complete view of the traffic and its variations.

The only circumstance of an untoward nature, which the Committee have particularly to notice, is the unfortunate accident which took place near the Clocksbriggs station on the 12th of February last, the up passenger train on the morning of that day having come in violent collision with a ballast train going downwards, whereby the two engines were materially damaged, and several individuals suffered personal injury. Considering all the circumstances, it is little less than miraculous that the accident was not attended with far worse consequences. The pecuniary loss will be much less than could have been supposed. One of the engines has been almost completely repaired, and the other is now undergoing repairs in the Company's workshops. What is deeply to be lamented is the death of the engine-driver of the ballast train, who suffered severe personal injury; and although for a time he went on well, and with every prospect of recovery, he was ultimately attacked by lock-jaw, and died. The Committee made a most minute and anxious investigation into all the circumstances of this accident, and gave such orders, and adopted such measures as the case appeared to them, after full deliberation, to call for. Detailed reports of the accident, with all the proceedings that took place at the time, are in the hands of the clerk, and may be referred to if desired.

The Committee, from the investigation which this accident occasioned, came to be decidedly of opinion that strict regularity as to time in the movements of every train was of vital importance, and that, while great public convenience would be thereby afforded, nothing could tend more to guard against collisions and accidents of every kind. They have therefore ordered to be provided clocks and bells for all the stations on the line, and have issued strict injunctions—which are in no case to be departed from—that the time table, fixed and published, indicating the departure of trains at the different stations, shall be rigidly adhered to, and any breach of these injunctions will be animadverted upon and punished with the utmost severity.

The Committee, in their last annual Report, mentioned that there were only two law-suits in which the Company were involved—one of these, that with the late proprietor of Middletoun, has been already noticed as now at an end. That gentlemen, after being unsuccessful in the Sheriff Court, and before the Lord Ordinary in the Court of Session, carried the case to the Inner-House. He failed there also. The question was decidedly in favour of the Company by the whole Court, and the pursuer was found liable in all expenses. He then intimated that he was to acquiesce. The expenses incurred by the Company have been paid to them, and they are now at liberty to plan and execute the accommodations to be provided at Friockheim station, as they think proper. This the Committee consider a most important matter. The only other law-suit is the process which has been so long in dependence at the instance of Mr. Hay, of Letham, against the Company. A variety of proceedings has taken place in it since the last annual meeting, but it is still not ripe for decision. Some documents have been recovered, under a diligence which the Company's legal advisers deem of great consequence, and the Committee entertain little doubt that the issue will be in their favour when the case comes to trial.

As provided by the Act of Parliament, three of the Directors, viz., Mr. Hawkins, Mr. Potter, and Mr. Canning, retire by rotation. Of these gentlemen, Mr. Potter, and Mr. Canning, may be re-elected.

WM. JOHNSTON, Treasurer.
JOHN MACDONALD, Clerk.

Arbroath, 15th April, 1841.

RAILWAYS IN GERMANY. — The *Frankfort Journal* states that it is in contemplation to construct four different lines of railways to commence at Breslaw. The first is already commenced. It will lead from Breslau to Ohlan, and thence to Oppelu, 14 German miles. Secondly, a line from Breslau to Schweidnitz in Freiburg; the vicinity of the Silesian mountains so rich in minerals, it is considered will cause much traffic on this line. Thirdly, a line from Breslau to Frankfort on the Oder; Prince Kolowrath and the other proprietors of Lower Silesia are to have the management of this line. Fourthly, a line from Breslau through Leignitz and Gorlitz to Dresden; the merchants of Breslau are particularly interested in the completion of this line. The execution of it will, however, be attended with some difficulty.—*Morning Chronicle.*

EDINBURGH AND GLASGOW RAILWAY.

(From the *Caledonian Mercury*.)

We had much pleasure in visiting, a short time ago, some of the principal works in the line of the Edinburgh and Glasgow Railway, and particularly to observe the rapid progress which was then making in every part towards the completion of this great undertaking. Our visit going eastward commenced with the great bridge near Falkirk, for the purpose of carrying the railway across the Union Canal, at the locks near No. 16. Owing to the line of railway crossing the canal at an oblique angle, and to the necessity imposed upon the Company of crossing both the locks and a carriage-way with a single arch, the span has been extended to no less than 130 feet, which is equal to that of the celebrated bridge over the Dee burn, at Aberdeen. Not being, however, quite so elevated above the springing, the strain on the abutments is greater, and the material also, though of excellent quality, being brought from the well-known quarry of Millfield, or Kingoodie, near Dundee, is still softer than the granite, so that the work is altogether one of greater difficulty, and requiring much caution and skill, both in the design and execution. This great arch, when we saw it, was just completed, and the workmen were engaged slacking the centre, which has been since taken out, and every thing presents the appearance of strength and stability. The arch stones are five feet deep at the abutments, and three feet at the crown; and there are in the arch alone about 20,000 cubic feet of stone, or upwards of 1,500 tons, the whole of which was laid in about ten days. To all appearance, the works here will very soon be completed, and ready for the laying of the rails. The next work of importance is the Callander Tunnel, 830 yards in length, and passing under Callander Wood, at the depth of 150 feet. The whole of this was nearly completed, about 80 yards only in the length of the tunnel remaining to be executed, and upwards of 20 yards have been since finished. At the east end, the tunnel opens into a vast excavation 75 feet in depth, and when the slopes are completed round and round, it will have the appearance from the east of a great amphitheatre. To the east of the tunnel, and between it and Linlithgow, a considerable part of the permanent rails are laid down, and this all important part of the undertaking appears to be executed with every regard to strength, solidity, and accuracy. The strength of the rails is 75 pounds weight to each yard, and they are supported at every four feet mostly by substantial whin-stone blocks, two feet square, weighing five or six cwt. On the embankments the rails are supported by strong larch sleepers. Between the Tunnel and Linlithgow a considerable portion of cutting and embankment still remains to be executed; but to facilitate this, we observed a beautiful locomotive engine, made by Eddington, of Glasgow, on its way to the rails, for conveying the stuff from the cutting forward to the embankments, and this engine is now actively employed in its work.—Wherever the permanent rails are laid down, and the stuff requires to be conveyed a great distance, as in the present instance, the saving of expense, and still more, of time, in executing the work, is very material, as the engine is always capable of conveying the stuff for miles in distance as fast, or faster, than human labour is able to fill and empty the waggons, and it was calculated that, with activity and long hours work, the contractors, with this engine, would be enabled to heap up upon the embankments nearly 1500 tons of stuff daily. The next work of importance upon the line is the great viaduct over the valley of the Almond, which, from the number and regularity of the arches, and their beauty and lofty appearance amid the fine scenery around, will, indeed, be a magnificent structure. It consists of 20 arches, each 50 feet span, and the central ones rising nearly 100 feet above the valley below, with three smaller arches besides at the eastern extremity. The work, which was executing by Mr. Lorimer, was proceeding with great activity, much facilitated by the ingenious use of machinery of which he has availed himself, and the regular and perfect system by which the stones are brought successfully forward, and laid in their places on the arches. The whole of the piers were built, and twelve of the large arches on the west side thrown, besides the three smaller arches in the eastern abutment, and as they have been recently finishing at the rate of four arches per month, there is no doubt that a very short time will bring the whole to completion; and we understand that since our visit six arches more have been thrown. The great difficulty has been to procure materials for such vast masses of masonry, which require contributions from various different quarries and every available source. To the eastward of the viaduct the permanent railway is nearly all laid to Linlithgow, where some cutting is still going on. The views and scenery on this part of the line are extremely interesting, including the ancient palace and the lake, which comes slightly into view on the east of the town. The next works of importance are the vast clay and rocky excavations in the neighbourhood of Winchburgh, extending in one continued cut of four miles in length; in some parts 50 feet deep, and including the tunnel under Winchburgh ridge, itself 360 yards in length. The tunnel has been for some time completed, and the cuttings are far advanced, but there still remains much to be done in this part of the line, for which, however, the finest part of the season has now opened up. To facilitate the removal of the cuttings, and the filling up of the embankments in the valley of the Almond, on the east side as well as on the west, of the great viaduct, two locomotive engines have been employed by the eminent and spirited contractors, Messrs. Gibb and Son, with the aid of which the cuttings on each side, with the filling up of the valley of the Almond, were proceeding with extraordinary rapidity. By these engines we were informed there are conveyed, upwards of a mile, and deposited on the embankments, at least 2,500 tons of earth and rock every 24 hours—the work proceeding, as it has always done, night and day. To give some idea, however, of the extent of the embankments, we may mention that the one at the west end of the viaduct requires about 1,300 tons of material to advance it forward one yard. On one of the locomotive engines proceeding forward with its train of waggons, we were conveyed eastwards from the tunnel, and had the pleasure of witnessing what will be the effect of the trains here coming from the west, the whole of the beautiful valley of the Almond, with the Pentland Hills in front, opening suddenly to view; and, then, as we advance, the low country eastwards, as far as the city, the well known and prominent objects of which, Arthur's Seat, the Castle, and others, becoming immediately visible, the effect, on the whole, is remarkably striking. We here also obtained the first view of the great viaduct over the Almond, the most remarkable work in the whole line, and which being seen here in a very oblique angle, with its numerous arches greatly fore-shortened, presents a singular, but not less striking and pleasing appearance. This work, which forms such a striking object, as seen from the Glasgow Road, about eight miles from Edinburgh, forms in itself a vast undertaking, consisting of no fewer than 36 continuous arches, each 50 feet span, and rising from 60 to 85 feet above the surface of the valley, besides 7 arches more at the turnpike road, separated from the others by a ridge of higher ground, and a embankment. The great magnitude of this work, second almost to none, even in England, the extraordinary number of the arches, and their light and lofty appearance, and symmetry, all combine to render this a very magnificent and imposing structure, and quite an ornament to the district and scenery around it. The work under Messrs. Gibb and Son is proceeding with great rapidity, and with all the advantages from the improved machinery which they have contrived for bringing forward the materials, and laying the stones of the different arches in their places. The piers have been all long since carried up, as well as all the arches of the smaller viaduct, and of the great viaduct 27 arches were thrown, and they were going on at the rate of four arches per month, so that a very short period will be required to bring the work to a termination. We have just visited this viaduct again, and everything confirms the above anticipation, 33 out of the 36 arches are now thrown, and by the middle of this month the whole of the remaining arches will be finished, the key-stone of the last arch being proposed to be laid on the 18th, and nothing will then remain but to bring forward the superstructure of walls and parapets, already advanced to the 28th arch, and the work will be ready for the laying down of the permanent rails.

Between the valley of the Almond and the city, the country being pretty level, there are no works of any particular magnitude to retard the completion of the railway. The contracts for the line here have been taken by Mr. Evans, a highly respectable contractor from England, and who has executed with success extensive contracts on some of the great English railways. He is now pushing on the different works with great activity. The bridges across the different highways are many of them in a very forward state. The bridge over the Water of Leith, the principal work of masonry, is all but completed. The long embankment through the valley of the Water of Leith has now assumed, as seen from the road, quite a finished appearance, and the rest of the embankments and excavations are rapidly advancing, relays of men being occupied continually day and night, aided by a locomotive engine, which may now be seen near Corstorphine constantly plying along the line with its load of earth waggons.

Such is the forward state of the works on the eastern division of this railway, and we understand that on the west they are advancing with equal energy, and there are only one or two points where any particular difficulty or delay is likely to occur, particularly the Croy Rock cutting, where a mass of hard whinstone, 50 or 60 feet deep, still remains to be excavated for a very short distance. On the whole, however, when we consider the vast extent and magnitude of the works which have been executed from end to end of this line, and the short period which has elapsed since the commencement, the progress which has been made is truly remarkable, and there can now be very little reason to doubt that, in the course of three months, the whole line will be opened to the public. An hour and a half and two hours will then be the regular times of travelling between Edinburgh and Glasgow, and the expense, we believe, will not exceed from 4s. to 8s. by the different classes of carriages. These are the results to which all the operations and works above described are hastening, and when we consider the advantages which must arise to both cities, and to Scotland generally, from such new and extraordinary facilities of intercourse, and all the effects which usually follow in the train of such improvements, the opening of this railway cannot but be viewed as an event of no ordinary interest and importance.

Acceleration of the Dublin Mail.—The London evening mail was conveyed, for the first time, on Tuesday morning, on the Chester and Crew and the Birkenhead and Chester Railway, and put on board the post-office mail steamer, on the Cheshire side of the river, a few minutes after six o'clock. The train which brought the mail did not bring any passengers; a circumstance of which Lord Robert Grosvenor complained, on Friday evening, in the House of Commons, his lordship being then ignorant of the announcement from the Directors of the Grand Junction Railway Company, that, on and after to-day, passengers as well as the mails will be conveyed on the Chester and Crewe line. If the Corporation would erect on the Liverpool side of the Mersey a slip, with the same capacity as those at Birkenhead or Woodside, which run so far out that the packets can come alongside at any time of the tide, the steamers for Dublin, instead of quitting the Mersey after six, might leave it shortly after four o'clock, and in average weather reach Ireland early in the afternoon.—*Liverpool Standard*, 22nd June.

2. Toll to London and Birmingham 184*l.* 16s. 9d., to be deducted from gross receipts.

3. The receipts are exclusive of those for the mails.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83×31.)

12. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 155½ (104½×18×33.)

14. The 25*l.* 12s. 5d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

21. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50% discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 3,539*l.* 8s. 7d. are the receipts after deducting the toll to the North Midland Company, and exclusive of receipts from carriage of mails.

27. Including the traffic of the Manchester and Leeds Railway, 133*l.* 15s. 8d.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

The Sunday Travelling question.—*We purposely withhold for a week our second article—embracing the existing civil regulations for the observance of the Sunday—in order to give the champions of the total abolition scheme an extended opportunity of refuting, if they can, which we sincerely believe they cannot, the views contained in our first article on the subject religiously considered. We have challenged them to the proof of their position that Sunday travelling is a breach of the Decalogue, and have taken care that they shall not be able hereafter to plead ignorance of the challenge; but up to this moment one and all are silent. In our last we called the Company, at the general meeting of which, Sir Andrew Agnew and his brother Anti-Sunday Transitarians attended the Dundee and Forfar, but there is no such Company—we should have said the Dundee and Arbroath.*

Mr. Florentin Coste *appears from his statement to have been a very ill used gentleman, but he should appeal first to the Engineer-in-Chief, and if he fail in receiving satisfaction from him, next to the Board of Directors. If unsuccessful with both, we shall then see what we can do for him. To publish the letter he has sent us in its present shape would do him but small good, and might bring upon us perchance another attempt at a "Criminal Information" for public libel, the truth.*

Civis *will be made use of, though not perhaps in its present shape.*

Q. in the Corner *refers to a document which he has omitted to send us. Without it part of his letter would not be understood.*

Phapo—*Again greatly obliged.*

Steam *should apply at the South-Western office.*

C. T. Chester—*We must make inquiry into the correctness of his statements.*

An Old Contractor—A. F. R.—Ferrum—G. Foulger—G. —*received.*

THE RAILWAY TIMES.

SATURDAY, JUNE 26, 1841.

In the case of THE QUEEN at the instance of the Directors of the Eastern Counties' Railway against the *Railway Times*—which was a Rule Nisi for a criminal information on account of a certain alleged libel upon these Directors—the Judges of the Court of Queen's Bench have, after cause shown by us, UNANIMOUSLY DISCHARGED THE RULE.

The alleged libel consisted of an article in the *Railway Times* of the 13th February last, in which, referring to the "long-standing dispute between the Directors and this journal," and more particularly to the statements made in their different half-yearly Reports respecting the results of their carrying business, we made use of these words:—"It may be remembered that ever since this line has been partly opened to the public the Directors have in their Reports invariably pretended that they were working at a considerable profit, and that we have as invariably maintained that their representations on this head (as on but too many others) were grossly and wilfully false;" and also these—"The career of so shameless a body of impostors cannot surely be of much longer duration."

In support of the application for a criminal information affidavits were filed by the whole of the persons who were Directors or claiming to be Directors of the Company at the date of the publication complained of—twenty in number—in one and all of which the following bold and startling denial appears:—

"And these deponents say, that although the Directors did state that exclusive of charges for maintenance of way and depreciation of stock, the current expenditure for working the line was less than the receipts from the line, *yet these deponents deny that the said Directors* HAVE EVER *in any other manner in their Reports invariably, or* AT ANY TIME, *pretended that they were working the said railway at a considerable profit.*"

In other words, the Directors say, 'We do not deny that it is grossly false to pretend that we have been making "a considerable profit," but we deny that we have ever in our Reports pretended anything of the sort.'

In opposition to this denial (on oath!) it sufficed us to refer the Court *to the Reports themselves.*

The first of these Reports, of date the 28th August, 1839, contains these words:—

"A statement of traffic since the opening of the railway is annexed to this Report, but at this early period it is impossible to lay before the proprietors a detailed account of the current expenditure for working the line. Under all the disadvantages, however, of a first and partial opening, a temporary terminus inconveniently situated one mile and a quarter from High-street, Shoreditch, and an establishmont nearly extensive enough for opening the railway to Brentwood, THIS EXPENDITURE, ACCORDING TO THE BEST CALCULATION THAT CAN BE MADE, DOES NOT AMOUNT TO FIFTY PER CENT. ON THE GROSS RECEIPTS, a result which CANNOT FAIL TO BE HIGHLY SATISFACTORY TO THE SHAREHOLDERS!"

The second Report, dated 27th February, 1840, states that—

"The ordinary expenses of working the line (*not of course including, during the first year, the maintenance of way and depreciation of stock*) amount to *only* 51 *per cent. on these receipts*, notwithstanding the operation of several disadvantageous circumstances arising out of a first and very limited opening."

Here we do meet with the qualification about "charges for maintenance of way and depreciation of stock," but this is the only instance in which it occurs.

The third and last Report preceding the publication complained of, is that of 27th August, 1840, in which there are these words:

"A general financial statement, and a balance-sheet showing the receipts and disbursements of the Company for the last half year, are appended to this Report. A separate account for the traffic department is likewise annexed. Owing to the expediency of incurring considerable expenses with coaching department, the charges on the traffic appear larger than in the former statements laid before the proprietors."

And the "separate account for the traffic department," referred to as being appended, represents that, after deducting 2,420*l.* for wear and tear of engines and carriages, "there is a net balance on hand of 3,948*l.* 12s. 10d." Not one word, however, in this Report (any more than in the first), or in the accounts annexed to it, about charges for maintenance of way being excepted—not the slightest hint, that there was any further drawback remaining by which that net balance could be reduced.

The Court could not fail to see from these Reports, that they gave the directest possible contradiction, on all points, to the Directors' affidavits. They proved that we were strictly correct in saying that they had invariably pretended "that they were working the said railway at a considerable profit"—that in two out of the three instances referred to, they had laid claim to "considerable," indeed large, profits, *without any exception, qualification, or reservation whatever*—and that in the third instance, though they did except as "of course" "the charges for maintenance of way and depreciation of stock," they laid claim, nevertheless, to a residue of 49 per cent., which was far more than sufficient to cover the excepted charges, and still leave a "considerable profit."

The fact being thus incontestibly established that those representations *were* made by the Directors, which we denounced as being "grossly and wilfully false," and the falsity of them being now admitted, the only other point raised by the prosecution was simply the *animus*. Were they "*wilfully*" false or not? And were they made with an intention of *imposing* on the proprietary and the public?

The judgment of the Court on this remaining issue, is thus given in the report of the case.—"The Court was of opinion that without questioning the veracity of the deponents, *there existed grounds for doubting the accuracy of the reports*, although not enough to justify the injurious imputations which had been cast upon the Directors in reference to the subject. And upon the whole matter, the Court was of opinion that the most just and reasonable mode of disposing of the application was, that the rule for the criminal information *should be discharged* upon payment of costs, inasmuch as the Directors had already enjoyed the benefit of denying upon oath all the imputations which had been cast upon them," &c. &c.

The Court, it appears, thought that it was not made out, that the representations in question were *wilfully* false, and that though they were calculated to *impose* on the public, this did not warrant us in calling the authors of them "a body of shameless *impostors*." We bow with all becoming submission to the judgment of the Court, but we must in justice to ourselves, indicate here very briefly, the circumstances which, *betrayed us into the mistake on this head*, of which *it seems we have been guilty*. We inferred a *wilful* knowledge of the (*now*) admitted falsity of the Reports, and an intention *to impose* from four things. 1. The fact that the Directors were in possession of all the materials requisite to enable them to lay before their constituents a just and correct account of the Company's carrying business. 2. The obligation the Directors were under—as stewards bound to give a faithful account of their stewardship—to make themselves acquainted with the true state of the concern entrusted to their management. 3. The affectation of exceeding accuracy manifested in their Reports—the realised profit being in the first instance represented as amounting to 50 per cent.—in the next as reduced by 1 only—and in the last exhibited in actual pounds, shillings, and pence. 4. The repeated public warnings they received from us—that they were deceiving all concerned, by indulging in such representations, and that there was not a particle of truth in them. *Intention*, in all cases, can but be inferred from *overt acts* and *circumstances;*

Digitized by Google

and, to us, it appeared impossible to infer, from the overt acts and circumstances which we have here enumerated, anything else than a systematic intention to impose. But the Court say they were *not* "enough to justify" such an inference, and it is not for us oppose our humble judgment to theirs. We may just, however, observe that the acts and circumstances are of so simple and intelligible a character, that all the rest of the world are quite as able as the most erudite judges in the land to draw a right conclusion from them.

The Court placed considerable stress on the circumstance that "the Directors have enjoyed the benefit of denying upon oath, all the imputations which had been cast upon them," and they were further pleased to say, (according to the *Times'* report of the judgment,) that they "had very properly denied, and *in the most satisfactory manner*, the *motives* to which their conduct had been attributed." Now, in order that neither the enjoyment nor the benefit of which the Court have made the Directors so freely welcome, may miss any increase which it is in our power to contribute, (by way of humble atonement for the injury we have done them!) we shall insert here, from the affidavits of the Directors, two or three more passages which are still wanting to make up (with that already quoted) the sum of their denial upon oath:—

"These deponents verily believe that the said article hereinbefore set forth, was written, printed and published, with the intent to injure the characters of the Directors of the said Company, in the estimation of the shareholders thereof, who are a large body of persons, amounting to about one thousand one hundred and ninety in number, and in the estimation of the public generally. That these deponents, for themselves and the Directors of the said Company generally, according to the knowledge and belief of these deponents, have been always impressed with the conviction that their duties under the said Acts of Parliament were public duties, to be discharged with care, fidelity, and honour, and they have to the best of their judgment and ability discharged the same with care, fidelity, and honour, in every respect." * * * *

"And these deponents positively deny that their representations on this head (the traffic), or any other, have been grossly or *wilfully* false, or in any respect whatever untrue, or that the veracity or honesty of the said Board of Directors has ever been, or can be, *justifiably* impeached. And these deponents further say, that these deponents, and the said Directors have always been *able*, and are still *able*, to show by facts and figures that any impeachment of their *veracity* or *honesty* is unfounded and false, and that they are not guilty of any want of veracity and honesty. And these deponents further say, that they have never been guilty of any *imposture* whatever."—*Affidavit of Messrs. Bosanquet and Rathbone* (*of which all the rest are but abridged repetition*).

"Satisfactory" as these denials have been deemed by the Court—so far as "*the motives*" of the Directors are concerned, we may be permitted to observe, that they would not have been less so, had they been *consistent* with the other statements of the same parties. Now, it must not be forgotten that these motive-cleared Directors set out with positively denying that "they had ever pretended (in their Reports) that they were working the said railway at a considerable profit." What need then of denial of "*motives*," if there were no misrepresentation, from the guilt of which they desired to clear themselves? The one part of the Directors' case is glaringly inconsistent with the other. Had there been no false Reports, there would have been nothing in the case from which to exculpate themselves; but it is because the Reports were false (as the Court have substantially held), that the occasion for exculpation arises. To deny, as the Directors do, first the existence of the false reports, and then the existence of any bad motives for making such false reports, is a palpable absurdity. And if we are constrained—by the invincible force of the evidence supplied by the Reports themselves—to disbelieve what they swear with respect to their contents, why must we needs believe what they swear—with no more than the same solemnity—as to their "motives"? Of old, the rule used to be *falsum in uno, falsum in omnibus*; but it would seem as if we had fallen on times when that, like many other good and ancient rules, has ceased to be of any account.

We once thought of giving the names and addresses of the whole of these swearing Directors; but we forbear, from a conviction that they could not have been *all* aware of the gross inaccuracy of the statements contained in the affidavits to which their names are attached. The worst of which we suspect several of them is, that they subscribed affidavits prepared for them (for all the affidavits have the stamp of one mint,) without examining for themselves into the truth of their contents—trusting that those who prepared them would not ask them to swear to anything which was not strictly and substantially true. A grave indiscretion truly; yet still something a long way short of intentionally bearing false witness against a neighbour.

Now that the case is over, we are free to confess what we refrained from doing before—not choosing to say anything which might savour of the *argumentum ad misericordiam*, in a case where we knew the truth to be all on our side—that we look back with regret on the terms in which we spoke of the misrepresentations in question, and their authors. Not that we think they were undeserved, but because they were of greater *personality and severity* than was necessary for the ends of truth. We may perhaps think, that due allowance has not been meted out to us for the warmth of feeling natural to the contemplation of a continuing series of misrepresentations, calculated as well to bring discredit and ruin on a great and noble undertaking, as to make havoc of the fortunes and prospects of many innocent and confiding individuals; *facit indignatio versus*. But knowing the persons we had to deal with—knowing that eagerness to seize on an offence in point of *manner*, is always in exact proportion to the inability of inculpated parties to grapple with any awkward *matter of fact* imputed to them—well aware, *as we were*, of the weekly look-out kept for some slip in language, of which fitting use might be made to overwhelm us (if possible) by legal proceedings, which, however uncalled for, would be sure to involve us in oppressively heavy expenses—we hold ourselves by no means excused to ourselves, for giving our enemies the opportunity were "*wilfully* false"; we should have confor which they were on the watch. We did wrong in saying that their misrepresentations tented ourselves with asserting the falsehood, which was indisputable, and left our readers to judge for themselves as to the "motives." We did very wrong, too, in calling them "*shameless impostors*"—there was no occasion. And the fault in our language is proved by this, that but for the superfluous expressions we have marked in *italics*, there would never have been any attempt to file a criminal information against us, or at least never a fine imposed upon us for publishing the simple truth. There would have been then no imputation of "motives," and no pretext, therefore, left for casting upon us the expenses of both sides—not only the expenses of the applicants for the *discharged* rule, but our own expenses in *getting it discharged!* Honest indignation is not, it would appear, one of those things of which Judges can properly take cognizance. 'You may sing your song of indignation,' they seem to say, 'but if you do you must pay the piper.'

Yet these our mistakes in manner, notwithstanding—the heavy expenses cast upon us notwithstanding—we are not without some considerable consolations. We have erred, and we suffer in a good cause—that at least no one can deny. The TRUTH at all events is TRIUMPHANT, *whatever the Eastern Counties' Directors' Bill of Costs against us may be for asserting it*. We shall have no more such false Reports from these Directors; and other Railway Directors taking example from the odium which the Shoreditch worthies have brought upon themselves, by their experiments on public credulity (whether intentional or not matters little), will be careful how they fall into any similar line of conduct.

We have further the satisfaction of reflecting that nobody imputes to us, or can impute to us, that we have gone out of our way to find the fault we have done. The plaintiffs themselves bear the following unequivocal testimony to the legitimacy of our vocation; they make oath and say:

"That the *Railway Times* is a weekly paper, published every Saturday, and has an extensive circulation amongst the shareholders of the said Company, and amongst the public generally, and that the objects of the said newspaper purport to be, to give all such information regarding railways and Railway Companies, as it is desirable should be made public, and to be in the nature of a railway organ to the public generally."

We have in fine this grand sustaining consideration to fall back upon—that whether we look to the railway body, whose rights it is our special province to defend and support, or to that larger body, of which it forms a part—the public—whether we confine our view to the comparatively small circle of railway proprietors, or include within it all circles of the community—we have pursued a course which is in the interest and for the benefit of all. "When we prosecute," says Felton, one of the shrewdest and most justly-thinking of our old English authors, "a deceiver and a violator of faith, we undertake the cause of all mankind; for every one is concerned that a traitor and an impostor be banished out of the world; for he that premeditatedly cozens one, does not cozen all—*only because he cannot*."

THE question of the kind and extent of Government interference in the management of railways is by no means set at rest by the Report of the Select Committee of the House of Commons, which lately sat to consider that subject; nor does the evidence lead to any conclusion more certain than that of the Report. The Committee recommend that the Board of Trade should not "*at present*" have the discretionary power contemplated in the 11th clause of the Bill; and the evidence is so made

Digitized by Google

up of assertions, exceptions, and admissions on one side, and of objections, difficulties, and concessions on the other, that there seems to have been no strong and ascertained ground left, so far as this evidence goes, on which the Committee could have founded any more decisive recommendation.

On the part of the authorities at the Board of Trade, there is shown something of that desire for the extension of power which the possession of it always, and often honestly, begets. They think they see dangers which they can prevent, and public benefits which they can secure; but they think, also, that nothing short of power to command, will enable them to attain these objects. Yet they admit that so unripe is the general experience on the subject (their own included), that no safe and sufficient circumscription of the sought authority can be effected; they asked, therefore, at first, for unlimited power, with such checks only on its exercise, as the right of remonstrance on the part of the Companies, and periodical supervision by Parliament, might furnish. Afterwards, they consented to still further restrictions; but the Committee thought that nothing at all in the nature of absolute authority should "*at present*" be committed to them; they "prefer that the supervision of that department should be exercised in the way of suggestion rather than in that of positive regulation."

We sincerely believe that all this is well intended by the present Board of Trade and its officers. Indeed, if we could insure the continuance of Inspectors-General like Sir F. SMITH, we should not hesitate to advocate the establishment of such a central controuling power. But notwithstanding our known leaning to the extension of the powers of the Board, we are bound to remember that their powers might hereafter fall into the hands of men of a very different stamp. No public measure is soundly based upon the personal disposition or fitness of those who may happen first to have to carry it into effect. When the first impression of the importance of the trust became somewhat obliterated, not only by time, but by the increased safety of railway travelling which experience will certainly bring, the railway appointments of the Board of Trade would be apt to degenerate into sinecures profitable only to their holders. And as for Parliamentary interference—Parliament has too much to do already; besides which, every day's experience shows but too plainly, that subjects of vital practical consequence must stand on an equal footing with party objects, before there is the least prospect that Parliamentary supervision will do much for the working of any law.

The witnesses connected with railway interests present a singular diversity of opinion as to the desirableness of a central controlling power; but there is scarcely one of those who are most favourable to it, who does not state some circumstance which shows that rules, even on points apparently the most important and the most simple, can scarcely be constructed so as to be safely applicable to several railways—that in fact the rules, whatever they are, must be adapted to each railway in particular. We mention this fact not to lessen the importance of a central superintendence, but to show that that superintendence must be of a flexible and adaptive character—that it must abate something of the rigidity of law—and that its decisions must be made effective by some other device than the common and naked one of penalty.

The evidence of the Engineers and Directors who were most hostile to the existence of the power of the Board of Trade exhibits feelings which will not be wondered at by any, who have watched or felt the workings of minds long engaged in the prosecution of complicated mechanical affairs. They see harm from interference where others only see a probability of improvement: that which others esteem danger has become to them so familiar that they can see no necessity for any extraneous interference with it; matters which others blame are with them needful parts of a system which is, on the whole, the best; they anticipate a diminution of care and a division of responsibility; they are evidently vexed that their pet plans should lie at the mercy of intruders, and are sorely mortified that their competency or attention should be impugned by the alleged necessity of appointing a "Viceroy" over them, who has yet much of his experience to gather. They therefore sullenly say, "Well, if it must be so, it must; but we shall take our shoulders from under the consequences."

In the midst of this, there is on all sides much truth; but before we go on with our argument we should like parenthetically to call attention to the contrasted intellectual character of the evidence of Mr. G. STEPHENSON and that of Mr. BRUNEL. The former is strikingly characteristic of the plain energetic man, who has thought much on his favourite subject, and nobly done much for it; but who by that very extent of thought and duration of activity has acquired a fixity of ideas, far beyond which he thinks it is little likely others should go. Since then the emendations will in his judgment be too small to occasion much inconvenience, he seems very sedately prepared to agree that the system should be stereotyped nearly as it stands. Mr. BRUNEL, on the contrary, is looking forward to indefinite and continual improvement; scheme after scheme is to be evolved; speed after speed is to be attained; he is restive under any restraint to invention, and can brook no limit to change. He predicts that in six months, authoritative interference would fail and be given up in disgust, and spurning control or advice, says, verbatim, "We know very well how to look after the public safety and the putting a person over us who does not know how to look after the public safety must shackle us. We are much obliged to you for the offer to assist us, but we feel that we know how to do it; we have not only more ability to find out what is necessary than any officer you appoint can have, but I maintain that we have a greater desire to do it; and, therefore, when we feel that we can carry on the work safely and well, to put a third person over us with power to interfere is shackling us; *there is no question about it.*" Mr. Brunel would have been a strong witness in favour of Government interference, only that he desires to keep the breaking in upon established usages and practices, all to himself.

To return to our argument. Notwithstanding discordances of opinion and wide differences of feeling, we think we can see that to some extent both sides are right;—that there is need of central supervision, and in some cases of effective control—and at the same time that there is danger too, and not a little, in direct and authoritative interference. We will try whether sound principles will not conduct us to the reconciling truth.

Let a person apply at a railway station for a passage. What are the conditions of the bargain on which he pays his fare? To say nothing of those which are obvious and expressed the chief *implied* condition, distinctly understood by both parties is that of safety,—safety not absolute, for that is not in the nature of the case, but the greatest which reasonable care, diligence, and expense can procure.

Suppose now that an accident happens on the journey, the passenger has a right, not at first hand to absolute and unconditional compensation for his damage, but to know whether reasonable care, diligence, and expense were employed in providing for his safety. If they were, he must himself bear the consequences of the casualty—they are the results of a risk he knowingly encountered; if they were not, the Railway Company are justly liable to make amends for their breach of contract. In the case of fatal accidents, the same principles apply in a somewhat different form.

The right which one passenger has, just so has every other. But none of them are competent to judge on the matter and few have time for it; the Board of Trade is the appointed personification of the whole.

But then it may be said this is an inquiry to be made after the event; not an interference before. Not exactly so. We want evidence to show what was the care exercised before the event; if in similar cases the evidence is got only after the event, it is only because of its unexpectedness, and because of the impossibility of watching the ten thousand ways in which at any instant calamity may come; but here everything combines to give us the most effective and decisive evidence of the character and details of the arrangements to which the lives of millions are entrusted; and each individual of the millions has a clear right that the evidence he may need, shall be provided.

We think this indispensible view of the question, leads unavoidably to the conclusion, that the responsibility of the Companies must be left entire; the liability to legal and moral blame must not be diminished. But we do not see how this fulness of accountability is to be preserved under an extraneous power to command; they will have a right to say "we should have taken different and better measures but for your over-riding authority."

This objection, however, applies only to the existence of a right to *command*. If for this, we substitute a right to *advise*, the responsibility of the Company will be not diminished, but strengthened and ascertained. Let us take a parallel case. Suppose a coach proprietor were to send out a defective stage coach; if he had done it under the orders of the police, or even in compliance with their regulations, the consequences could not be chargeable to him; but if a friend, or, still more, a public officer, had pointed out the defect, but left him to act after the information on his own responsibility, it is certain that in case of disaster following, a jury would consider his guilt as doubly established and greatly aggravated.

Now, we think this very similar case, together with the principles previously established, point out the course to be taken. The public have a right to the fullest information as to the proceedings and arrangements of each railway. Give that frankly and honestly, and the necessity for much more will be greatly lessened. Next, the Board of Trade should have the right of suggestion, leaving it on the responsibility of each Company to adopt the suggestion or not. Then each individual aggrieved should have the right of bringing into any court, from the Coroner's to the Chancellor's, as evidence of negligence, all suggestions made by the Board and not adopted by the Company.

On other grounds too we greatly prefer this

Digitized by Google

mode of extending the powers of the Board to that which would impose a penalty for disobedience to their orders. We think that not a little harm is done—at least to the reputation of a law (which often constitutes its greatest strength) by the circumstance that the propriety of assuming power is left to the parties who are to exercise it. It is not in human nature to restrain itself within moderate and judicious limits, while so tempting an opportunity exists of effecting, apparently with ease, objects which have become favourites, from their having been long before the mind. Whatever may be our opinion of the New Poor Law in other respects, we think that much of its unpopularity may be traced to this error. By leaving the ultimate decision with the ordinary tribunals, acting under the established law, this source of danger and weakness will be avoided: and in our opinion, the power of the Board will be much greater, though less visible and direct, than if the penalty fell on the breach of their orders. The *furnishing of information*, however, we would enforce if, necessary, by penalty.

To us it is no objection that the decision ultimately rests with a jury. We like the check of common sense which this ancient institution puts on mere professional justice, and the hearty and neighbourly defence it often raises against chicanery and oppression. There can be little in these matters a jury cannot understand; certainly points which cannot be brought within the comprehension of twelve men of common sense, are not of a kind on which the safety of hundreds of lives ought to be daily risked. There is nothing here more difficult to explain or to comprehend, than in cases of patent right, or of collision of ships, or in criminal matters of poisoning.

We may here, perhaps, make a suggestion as to the power of a coroner's jury in cases which have hitherto given rise to deodands. In other matters this ancient court has acted simply as a court of inquiry; its determinations are merely initiatory. Why should it not be so with respect to deodands? Might not the verdict of the jury be the authority for an action, at the public expense, for the amount of the deodand? And should we not then have the advantage of a public and open inquiry at the earliest possible moment after the fact, without the danger attendant on decisions formed in the heat of first excitement?

We insert a letter this week from a correspondent on a matter which, so far as regards the principle—if not the amount of money—involved in it, is one of very considerable importance, although hitherto it has not attracted any share of the attention of the railway public. We allude to the "Free Ticket System." The writer of the letter asks us to state "to what extent and in what manner the privilege of Directors and other officers connected with Railway Companies, travelling on their respective lines, is permitted and regulated?" We beg to say, in answer, that we believe the system of allowing the Directors and officers of railways to travel free on their respective lines, prevails almost universally; but that we do not think that it is either *a legal or creditable* practice. Most, if not all Railway Acts contain a provision "that it shall not be lawful for the Directors to fix or order what remuneration shall be allowed them by the Company *which shall only be done by a general or special general meeting of the Company;*" and Directors who vote themselves free tickets for all times and occasions—whether travelling on the business of their Companies or not—are just as guilty of contravening this salutary provision as if they voted themselves so many purses of gold. The privilege is one manifestly open to great abuse; and judging from facts within our own knowledge (the noted Six-guinea *double* robbery for example), as well as from what one hears in general conversation on the subject, we incline to think that it has been abused to a very great extent. Directors and officers should be paid every shilling they are out of pocket when travelling on the business of their constituents; but it should be on production only of specific bills of their expenses on each occasion. In this way no abuse could possibly arise; whereas by the existing free ticket system, abuse is not only directly encouraged, but rendered almost incapable of detection. *To carry nobody free, is the only sure way to be defrauded by nobody.*

The Great Western Railway is to be opened thoughout its entire length on Wednesday next, the 30th instant.

—o—

The Dinas branch of the Taff Vale Railway communicating with the Dinas Collieries was opened last week. It proceeds up the Rhondda Valley from the main line at Newbridge, and is about 2½ miles in length. It is expected that the coal from this branch will prove a source of great revenue to the Railway Company, as the demand for Messrs. Coffin and Co.'s coal is greatly on the increase, owing to the superior quality of their coal for coking. Already the quantity of coal conveyed daily upon the railway is very considerable.

—o—

During the last Session of Parliament there were 34 petitions presented against the tax on railway passengers; 44 against the new Railways Regulation Bill, and 1 in favour of it; 1 for the better prevention of railway accidents; 3 for the extension of the railway system to Ireland; and 1 for Government assistance to form a railway communication between the metropolis and Scotland.

—o—

The last series of select public petitions, printed by order of the late House of Commons previous to its dissolution, contains the petition of the Duke of Leinster and "other noblemen, landed proprietors, bankers, merchants, and others interested in the prosperity of Ireland," praying that the House would take into their "favourable consideration the advantages likely to result to the people of Ireland from the introduction of an extended and comprehensive system of railways, under the immediate direction and control of the State;" also another petition to the same effect from "certain landed proprietors, bankers, merchants, and others," residing in Londonderry and its neighbourhood. These petitions were agreed to previous to the announcement of the modified plan of Messrs. Goldsmid, Smith, and Thompson, which is founded on a judicious combination of state control with private enterprise, and has had the rare good fortune to secure the good opinion and wishes of men of all parties; but though, therefore, they are petitions in favour of a system which may be considered as now shelved for ever, they are nevertheless valuable as indicating the prevailing views and dispositions of the landed proprietors, and the monied classes of Ireland, with regard to the advantages to be derived from a more general extension of the railway system to that country. We cannot permit ourselves to anticipate any opposition to the new plan from among the class to which these zealous petitioners belong, merely because it happens to form a condition of it, that they shall join their own shoulders to those of their English brethren to help the wheel forward. We understand that some of the largest and most influential of the Irish landowners have already expressed their hearty approbation of the condition, that payment of the 4 per cent. interest shall be secured on the county rates; and we have little doubt but their example will be universally followed.

—o—

We are sorry that the general expectation that the Brighton Railway would be opened to Hayward's-heath on Monday next, is disappointed. We know not yet how this has happened, for the contracts for coke, &c. &c., were so arranged as that the deliveries were to commence this day in readiness for the contemplated opening on Monday. Hayward's-heath is 12 miles from Brighton. We understand that this portion of the line will not now be brough into use before the general opening of the line on the 28th of July. The only remaining tunnel, that at Clayton, will be keyed in a day or two.

—o—

The remarks appended to the communication which we published last week from "Straightforward" on the rate-of-fare dispute between the Greenwich and Croydon Companies, have been complained of as having in some parts no reference to the matter immediately in hand, and as being so far, therefore, not very intelligible. We find this to be true, and that it arises partly from the circumstance of their having been published in a form (Notes) which the writer did not contemplate, and partly from an accidental misplacement of some of the letters of reference, as well as another mistake or two of the press. If the reader will refer to the last calculation in the letter, he will observe that there is an error in the addition of the *rate* of fare with the fare itself, and this error it is which renders inapplicable all that part of the paragraph beginning with the word "Mark" in note C, and ending with the word "passengers."

Having stated thus much, we have merely to add that it appears to us that the only way in which a reduction of fare can conduce to profit, must be by promoting an increase of numbers without a corresponding increase of expense. It is therefore to no purpose to urge that the Croydon Company ought to try the effect of low fares on their railway, and to add to these low fares the Greenwich toll and the Government duty, because the very addition of this toll and duty by again augmenting the price, must prevent the increase of numbers, and being charged *per passenger*, they will entail, so far, a *corresponding* increase of expense.

We conceive the point at issue to resolve itself into this, that while a toll of 3d. amounts to about 16½ per cent. of the present second-class fare of 1s. 6d. on the Croydon Railway, it would amount to 25 per cent. of a second-class fare of 1s. We do not think it at all likely that the Croydon Company will consent to pay a higher per centage upon a larger gross amount of fare, which can only be earned at the expense of carrying a larger number of passengers at that rate.

By the bye the whole argument of our correspondent "Straightforward" is in favour of *low fares*, for though he does not seem to think them good for the *Greenwich*, and will not consent on

Digitized by Google

the part of that Company to a corresponding reduction of toll, he recommends them to the *Croydon* Company. The unreasonableness of his proposition consists in this, that while a certain reduction of fare is to be made for the express purpose of increasing the traffic which is to profit *both* parties, the whole of the sacrifice and risk is to be sustained by the Croydon Company, and not any portion by the *Greenwich*, and the latter is to receive, not its *fair proportion only*, but the bulk of the profit derivable from the transaction.

—o—

We observe from the Parliamentary proceedings of the 21st instant, that copies were presented to the House of Commons of the correspondence between the Postmaster-General, &c. respecting the transmission of mails in Scotland on Sundays. It is to be regretted that no order was given for printing these papers.

—o—

Among the Bills which received the Royal Assent at the close of the Session, we observe one to authorise the formation of a Company for the introduction of Stead's patent wooden paving. The Act is remarkable, however, chiefly from the circumstance of its "*confirming* the letters patent," (a thing, we believe, hitherto unprecedented), which had become void through an omission to enrol the specification till two months after it was due. We presume this provision will not only attract the attention of patent lawyers, but will put matters on a new footing among the aspirants to the fame and profit of wood paving. To Mr. Stead, undoubtedly, belongs the merit of being the first to press the advantages of this system on the public attention.

—o—

We are glad to see that the practice of railway pleasure excursions is extending. The following accounts show that our northern and midland countrymen know how to enjoy these trips, and do not easily find out when they have had enough of them. We have, however, nothing of this kind in the metropolis. Whether it be that its modes of amusement and recreation are so numerous and varied that it is not easy to attract attention to a new one—or whether it is that appropriate parties are less readily formed in London—or, again, whether it is that the London Directories are less alive to the value of this new use of the railway system, we cannot say; but so it is—of all the numerous pleasure parties, on a large scale, for which the present merry-making season has been distinguished in the metropolis, we have not heard of one travelling by railway. We are not aware of any difficulty peculiar to London (unless, indeed, the high fares of the principal lines may be considered in that light), and we presume, therefore, that it will not in these matters be long behind its neighbours of the north.

Another Railway Visit to Derby Arboretum—On Tuesday last, a party of 250, chiefly Sunday school teachers and friends, connected with the Baptist Chapel, George-street, Nottingham, visited Derby for the purpose of taking tea at the Arboretum. They were accompanied by the Rev. James Edwards, their esteemed pastor, and many of the leading persons of his congregation. The afternoon and evening were spent in promenading the walks of that delightful spot, and one feeling seemed to pervade the whole assemblage—that of admiration of the munificence of the donor, and of the taste and skill displayed in the laying out and decoration of the grounds. It was truly delightful to see so many, chiefly young persons, enjoying themselves in so rational and agreeable a manner. In the course of the evening, Mr. Strutt and Mr. Loudon honoured the Company with their presence, and appeared highly gratified with the scene. Resolutions were passed expressive of the great admiration with which the Company regarded this splendid gift of Mr. Strutt, and gratefully acknowledging the handsome manner in which the Committee of Management had arranged for their visit and accommodation. A resolution of thanks was also passed to the Directors of the Midland Counties' Railway, for the facility they kindly afforded on this occasion. Several short and appropriate addresses were delivered by Mr. Edwards, Mr. Hawkins, Mr. Heard, Mr. Felkin, and Mr. Vickers, and the evening was closed by singing the Hallelujah Chorus, and the Company returned all much delighted with their agreeable visit.—*Derby Reporter.*

Arrangements are making by the Directors of the North Midland Railway for a treat to the mechanics and artisans of Leeds, Leicester, and Nottingham, who are, at low fares, to be enabled to visit Sheffield.—*Sheffield Patriot.*

LAW AND PRACTICE OF JOINT STOCK COMPANIES.*

One of the most remarkable features of the age is the great extension of joint stock undertakings. They are not now, as in days gone by, confined to enterprises beyond the means of individuals or involving greater risk than a single man of wealth would prudently incur. They now essay everything; from a cab to a railway—from a dairy to a colony—nothing escapes them.

This state of affairs seems to give evidence of, and to depend upon, the existence of two other facts;—one is a great accumulation of capital, which thus struggles into employment—the other is the greater extent than heretofore, to which integrity pervades the mass of the community. Without the first there would be no general inducement to resort to such modes of enterprise; without the second, the large confidence necessary to this particular modification of commercial effort, could not exist.

But however extensive the joint stock system may have become, but little attention has been paid to the principles, moral, intellectual, and commercial, on which it rests; on a right appreciation of them, however, it is obvious that the eventual stability of the system must depend.

We have read the pamphlet of Mr. Swinton Boult on this subject with considerable pleasure. His experience as the projector and Secretary of the Liverpool Fire and Life Insurance Company, entitles his opinions to great weight. The following extract on a subject applicable to all engagements of the kind, deserves great attention—as indeed does the whole book, which we cordially recommend to our readers. The author is advocating the principle that "where you must repose confidence," you should "do it with all thy might:"—

"The same principle is applicable to most other descriptions of joint stock undertaking, though, in them, inconvenience from the present practice is less perceptible—money and individual credit not being the sole elements of their trade; and, therefore, we may leave them to consider generally the course which should be pursued in framing the deed of settlement, and in providing for the due working of the machinery employed. In the execution of this task it should ever be remembered, that the parties thereto are partners and strangers; in the one character, entitled to no confidence, in the other, possessing the fullest claim; and more particularly should this sentiment prevail in determining the clauses having reference to the governing body. There you must give power; give it with no niggard's hand; betray not, at the outset, a disposition to suspect—half confidence is worse than none at all. But, at the same time, be careful clearly to define the purpose of the association, and to limit the powers conferred to the prosecution of that purpose. In your partner have implicit faith; but guard yourself from the visionary schemes of an associate stranger. Require that the Directors shall each hold a considerable stake in the concern; and prohibit the reduction of his interest, whatever it may be, during his tenure of office. In your selection of Directors, avoid the captious, the penurious, the litigious; choose men of prudence, energy, unsullied reputation, affable, and influential; let them always be re-eligible; and let a fortnight's notice be given of any one whom it may be proposed to introduce into the board. Provide, too, for the removal, by resignation or otherwise, of any Director who may become objectionable; and permit the vacancies so occurring to be filled up by the remainder. Remunerate those upon whom you impose trouble and responsibility; for though many may be willing to work without pay, it may not be for your interest to employ the volunteers. Be not too eager to gather in the harvest; prolong the time of tillage, and patiently await the ripening of the fruit; remembering that your all is embarked in the result, and that forbearance now will enhance the returns hereafter. * * *

"Require the annual publication, by the Directors, of the accounts of the Company, with a report of its state and prospects; and do not hastily destroy documents of a nature so important as these. * * * And bearing in mind that the object in view is to keep these institutions respectable, or to make them so, it would be well to impose a regulation requiring the circulation of a list of the shareholders, along with the annual report; and that a copy of the list shall be suspended in the office of the Company, wherever they have an establishment, thus anticipating the interference of the legislature, and giving to the public all the information they can want.

"There still remains to consider what number it is requisite that a Board of Directors should include; a question by no means unimportant, but not to be decided by invariable rule. In truth, it bears a strong analogy to the questions of capital and shares, and should be determined with reference to the objects pursued. When the business is of such a nature as to call for the exercise of individual influence, or to be aided by it, a numerous directory is, so far, an obvious advantage; but for all practical purposes, the more concentrated your power, the more effective will be your energy. Expansion and efficiency do not coalesce,—a large number does little work. Empower, then, your Board to delegate to a Committee of their body all or any of the authority with which you have invested them; you will thus combine the advantage of number, for purposes of consultation, with that of compression, when deliberation issues into act."

Caution to Railway Travellers.—On Monday week a person named White threw himself out of one of the second-class carriages, near Burrowash station, on the Midland Counties' Railway, whilst the train was running at the rate of 35 miles per hour, and sustained such severe injuries that little hope is entertained of his recovery. Dr. Cade, of Spondon, was fortunately near the spot at the time, and rendered every assistance. The cause of the unfortunate man throwing himself from the carriage was that he had come from Derby and wished to go to Nottingham, but upon reaching the junction at Long Eaton, he got into the London train, and upon discovering his mistake, acted in the manner stated.—*Hull Advertiser.*

PROPOSITION FOR ESTABLISHING, THROUGH THE MEDIUM OF RAILWAYS, UNIFORMITY OF TIME THROUGHOUT THE KINGDOM.

To the Editor of the Railway Times.

SIR,—It is Tillotson, I think, who classes punctuality among the minor virtues. If, in this day, one has any fault to find with this arrangement it is that a higher rank was not assigned to this excellence. A modern Italian writer, Silvio Pellico, if I remember right, praises to his countrymen, "this most punctual England," and notes the fact that everybody wears a watch.

I think with you, Sir, (it was in one of your late papers you said it,) that we do not estimate highly enough the moral effect of mechanical improvements. What was the waste of time, of thought, and of useful effort which existed before the invention of tolerably accurate time-keepers? and how great was the anxiety of some of the greatest minds of past ages to obtain a measure of the "stuff that life is made of?" One can scarcely see a lanthorn without remembering that Alfred—our truly great Alfred—tried to measure time by the burning of candles, and invented the inclosure of them within horn lamps to prevent the wind which streamed through the chinks of his walls from making them burn irregularly.

"What, Mr. Scribbler, are you after," say you, "and what has all this to do with railways?" Wait a moment, Mr. Editor. If good time-keepers diffused by moderation of price throughout the community, have done so much, as I think they have, towards the comfort of social life and the effective employment of time and thought, I hope you will excuse my enthusiasm in asking railways to help on the good work.

Besides, I think the railways themselves have an interest in the matter. Their credit and use depend on their safety, and their safety depends on—not minutes—they are as far out of question as months—but on moments, and very few of them too.

What I want, Mr. Editor, is to get uniformity of time established all over the kingdom, by means of the railways; and I think it may be done very easily by some such plan as this:—Let each mail train be provided with a good chronometer; I do not mean a mere say-so chronometer, but one of the quality with which you would trust an Indiaman at sea. At each mail station let there be a good clock, and let it be the duty of the principal guard of the train to note the correctness of the clock or the difference of time, if any, between them, and let this clock be accessible for the setting of all the public clocks in the neighbourhood.

Let there be an officer at the Post-office, whose business should be to obtain exact Greenwich time, and keep his own clock at the Post-office to it: by this central clock he would prepare the chronometers each day for delivery to the guards at night.

To provide for difference of longitude let the minute hand of each station clock be made double by the addition of a slender finger, and let this additional finger be just so much in time behind or before the principal one as to account for the longitude of the place. The guard would set the clock by the slender additional hand; the time popularly taken from the clock would be the local time, as shown by the principal finger. In all time-bills let it be noted whether Greenwich or local time is used; the practice would probably be adopted in other public matters.

Now, Mr. Editor, if there be any good reason for government regulating our yards, and pounds, and bushels, I do not see why, by the same reason, they should not regulate our time. Surely it is as bad to cheat one of time as of weight or measure—and if it be only by carelessness that I am deprived of it, I cannot imagine why I should continue to be so served any more than why I should submit to be unjustly dealt with by means of carelessly made yard bands or gallon measures. Let us have a standard time, Mr. Editor, and it will be our own fault if we are not punctual.

As to expense, the chronometers once bought would last for a generation, and the salary and repairs,—why there is many a good fellow, perfectly competent and trustworthy, would think himself blessed far beyond hope, with a salary for every thing, including repairs, that would not amount to the value of the sweepings of some offices. Do not misunderstand me, Mr. Editor—I am not proposing so to serve poverty-stricken talent; no, no! I only mean to say that while there is so much ability looking, and often in vain, for useful occupation, it is a pity some of it is not secured at a comfortable though moderate price, for the effecting so important a public improvement as *uniformity of time*.

I could say a good deal more about this matter, and who knows that if I were to write long enough, I should not grow eloquent upon it? But I am one of those who are obliged to find something else to do with time besides talking about it, and so must give over at least for this time. But I fancy, Mr. Editor, you will see importance enough in the subject to induce you to help it on by a dash of your own strong goose-quill, and in that hope,

I remain, dear Sir, your's punctually,

A TIMEIST.

RAILWAY PROSPECTS.

To the Editor of the Railway Times.

SIR,—In consequence of three or four bad harvests, the money market in England has during that number of years been kept in a constant and unnatural state either of panic or contraction, and perhaps to this circumstance alone is to be attributed the present low price of railway shares, as well as of many other things.

It appears, indeed, that the circulation of the Bank of England, is at this moment about one million and a half less than it was at the same period even of 1839.

A single good harvest, of which we have now happily some prospect, would however speedily restore the money market to its former easy condition, and railway shares would probably derive more immediate benefit from such a change, than any other description of stock.

It is no doubt owing to this diminution of the currency that Grand Junction Railway shares, which pay an annual dividend of 13 per cent., are now only worth 202*l.*—that London and Birmingham shares yielding a dividend of 8 per cent. with every prospect of a large and speedy increase, are only worth 157*l.*—that Manchester and Leeds shares are at a discount of 17 per cent., though the receipts of the line for 50 miles have been 4,543*l.* in one of the early weeks of June—and that the shares of the Great Western Company, which bids fair to rival any of these, are only worth 91*l.* in the market.

The object I have in thus addressing you, is through the medium of your journal, to endeavour to convince such parties as may have held their railway shares through good and through bad report to wait with patience the change that is expected ere long to occur in the money market. That first class railway investments are improving concerns, is abundantly proved by the fact of the Manchester and Liverpool, the Grand Junction, and the London and Birmingham Companies, having each issued either two or three sets of fractional shares to their proprietors, without having made any reduction of the dividends on the original shares.

Considering the increase of railway receipts which must result from our increasing population, and their more locomotive habits, it seems to me to be much more desirable to derive a present income from a property such as railways, than an equal amount from the public funds.

The chance of increase in the one case may surely be considered at least sufficient to counterbalance any fancied greater security in the other, and thus justify a comparison on equal terms, having respect to income, between the public funds and railway shares. Taking the present price of the 3½ per cents at 98½, it would follow according to this rule, that Grand Junction old railway shares which yield an annual dividend of 13*l.* should be worth 365*l.* 17*s.*, instead of their present price of 202*l.*—that Liverpool and Manchester old shares which yield a dividend of 10*l.*, should be worth 281*l.* 8*s.* 6*d.*—and that London and Birmingham old shares which yield 8*l.* annually, should be worth 225*l.* 3*s.* instead of their present price of 157*l.* As a proof of the increasing tendency of railway income, it will be sufficient to state that the receipts of the London and Birmingham line, were, I believe, in 1840, *at least* 2,000*l.* more per week than they had been in 1839, and that the receipts of this year, in so far as it has gone, again exceed those of 1840, by at least 1,500*l.* on the average of each corresponding week. I am compelled to write thus in round numbers, in consequence of not having immediate access to the returns, but I trust what is stated will be found sufficiently correct to illustrate what is intended. The receipts of each succeeding week of the Great Western line, increases the contrast drawn in my last letter between it and the London and Birmingham line, when open 77 miles, in 1838. The London and Birmingham receipts for eleven weeks and six days, from the 9th April to the 30th June, 1838, were at the rate of about 45*l.* per mile weekly, while those of the Great Western Company, on the average of four consecutive weeks ending the 20th instant, have been at the average rate of 111*l.* per mile for each week.

Allowing that in each of the three latter weeks 2,000*l.* might have arisen from holidays and the Ascot races, still the contrast remains peculiarly striking.

I am, Sir, yours, &c.,

ONE OF THE SANGUINE.

London, June 23, 1841.

THE FREE TICKET SYSTEM ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—Will you, or any of your numerous correspondents, have the kindness to state, for my information, and that of very many readers of the *Railway Times*, to what extent and in what manner the privilege of Directors and other officers connected with Railway Companies travelling on their respective lines, is permitted and regulated? On the first view of the question it appeared to me, that the only time when either Director or other official, should pass free of expense, was when they were engaged on the business of the Company; and subsequent reflection confirms me in that opinion. But, Sir, I have the strongest reason for believing, that the Directors of one railway at least, in which I have an interest, travel free of cost, as much, or more for their own private business or amusement, as for the Company. The railway I allude to is between 50 and 60 miles long—there are 24 Directors (I trust they will soon be reduced to one-third the number). Now, Sir, the positive loss to the Company from so many claiming exemption of payment would, in a year, amount to something considerable; whether they do anything to benefit the concern or not. But let us pass this by, and examine it on a different principle. The thing itself is unjustifiable, and contrary to the sound basis of integrity and honour. I have heard it remarked how difficult it would be to ascertain when a Director or other officer travelled on his own business or that of the Company. Sir, there might be some such difficulty with a shuffling and dishonourable Directory (and the sooner such were got rid of the better), but with upright and honourable men, no important misunderstanding could exist. It would not be that a Director, or other connected with the Company, when travelling *bona fide* for it, should not transact any private business of his own, of however unimportant a character; but that he should not have the privilege of moving about at his pleasure, whether for business or amusement, availing himself of exemption from that charge which every other shareholder of course has to meet; and which could only have been intended for

Digitized by Google

those who were travelling *de facto* for the Company, where in fact it comes to this—"If I pay my own expenses, I must charge them again to you." This is easily understood.

Again, Sir, I do not know how far the lawyers to Companies exercise a privilege of free travelling; if it extend no further than that their bill is *minus* such expenses, it is as broad as it is long (in common parlance), but if they have transit tickets which they may use as they list, then, such may be made available as readily when moving from one place to another for their own business, as for that of the Company.

I have, I assure you, but one object in view, and that is to put everything on a right principle, and thereby protect the proprietary from any degree of plunder, arising from mismanagement, or a nefarious and dishonourable practice. I am anxious to understand what is the usual arrangement in such cases. Do not, I pray you, imagine that I wish to remunerate any person whose services are valuable to a Company in a sparing and niggard way; far otherwise. Parsimony is frequently anything but economy: but lavish expenditure, and uncalled-for privileges, are necessarily injurious to those who, as a body, have the most at stake, and somehow or other, the least controul over the management, viz., the shareholders. When we know what is the practice in such matters, on the best regulated lines, then will it be competent to offer his opinion to the policy or impolicy, the justice or injustice, of any particular mode of proceeding.

I am, Sir, an occasional correspondent, and habitual reader of the *Railway Times*.

G.

RAILWAY TO SCOTLAND—PROSPECTS OF THE COMMISSIONERS' LINE.

To the Editor of the Railway Times.

SIR,—I beg, with your permission, to follow up the judicious observations on this subject, which proceeded from your own pen in last week's *Railway Times*. You are perfectly correct in stating that there is a powerful interest among the landowners on the west coast in favour of the line from Lancaster *via* Carlisle, and that the large landed proprietors you have named on the east coast are "strongly opposed" to a railway on that side the country. I believe that Sir Frederic Smith was pretty well conversant with these facts at the time he drew up the able Report on the respective merits of these opposing lines; and although that gentleman could not recognise such circumstances as elements of calculation *pro* and *con*, the knowledge of them could not but have weight in his mind—who is so laudably desirous of extending the benefits of railway communication.

Among the noblemen and gentlemen who have already shown an interest in the line from Lancaster, and who *are interested* in a pecuniary point of view, are Lord Lowther, Alderman Thompson, Sir James Graham, Mr. Loch, M.P. (on behalf of the Duke of Devonshire), and T. Green, Esq., M.P. The line recommended by the Government Commissioners passes through the lands of Lord Lonsdale and Alderman Thompson, for almost half of the distance between Lancaster and Penrith, or nearly one-third of the entire distance from Lancaster to Carlisle!

On the other hand, so strong is the opposition of the Duke of Buccleugh to the eastern line, that the noble Duke absolutely forbade the surveyors going upon his grounds to make the preliminary surveys.

These are facts, as you may find on inquiry, and it will now appear that the greatest amount of wealth and influence is to be found in support of the western route. The promoters of this line wish to make no undue boasting—a work of such magnitude as the one in question is not to be carried by vaunting, or by disparaging a rival interest. The "Glasgow Citizen"* to whom you refer, has chosen to fix upon a monstrously absurd estimate of the cost of the line from Lancaster to Carlisle, which proves his entire ignorance of the country, and the survey upon which the Commissioners' Reports is founded. We deemed it best to let that pass, as "the idle wind we regard not." Such sophistry and calculations off the book, are really not worth notice, by a party whose cause is SAFE. We are quite confident of our ability to carry the western line; but we are determined to mature our scheme before it is brought out. We are not to be goaded into the "worst speed" by a jealous opposition. I am quite sure you will be gratified with the power we can put forth, when the time shall have arrived for action: and with the principles of economy that will characterise this enterprise. If I mistake not, the "UNITED KINGDOM RAILWAY" will form the beginning of a new era in the construction of railways, as regards cost of works and management.

Yours, truly,

N.

Kendall, June 22, 1841.

* It requires small powers of divination to discover that "A Glasgow Citizen," and "A Citizen of Edinburgh," are two gentlemen in one. [A mistake. We know the contrary to be the case.—ED. R. T.].

NORTH MIDLAND RAILWAY—ECONOMY OF ITS WORKING.

To the Editor of the Railway Times.

SIR,—One source of profit, that shareholders of railways in general must now look to, is *a reduction in the expenses of working them*; and on this head the North Midland has just set an example worthy of general imitation throughout the kingdom, and one that will be looked upon by its shareholders as the first effectual step towards a realization of their hitherto sanguine, but disappointed expectations of large dividends. You are probably aware, Mr. Editor, but the public, I am inclined to think, are not, that *a Committee of Investigation* has been sitting for a month past to inquire into every source of expenditure on the line, that may bear a judicious reduction. Wisely have the Directors set the best of all possible examples, not only by reducing their number of 21 to 13, but also by reducing their salaries from 100*l.* to 50*l.* a year, beginning thus at the right end. They then reduced the salaries of all the officers of the establishment, that were above 100*l.*, to the tune of 10 per cent., and some useless offices of considerable emolument, have been altogether swept away: these reductions, which I have from the very best authority, when fully carried into effect, will produce a saving of 14,000*l.* a year, which will form a prominent and pleasing feature in the next half-yearly Report, and give great satisfaction to the shareholders. The maintenance of way has also been let on a lease of 7 years, at a lower rate than on any other line in the kingdom, and this is an important item in the expense of working the line.

The traffic on the North Midland Railway has hitherto not equalled the expectations of its promoters nor those of the public in general, but it must not be forgotten that since it was opened, now all but 12 months ago, a period of greater depression in trade in this district, has hardly ever been experienced, so that the resources of the traffic from trade alone, have had no fair opportunity of being developed, *and its immense mineral resources have yet been scarcely touched.* Under all these circumstances the shareholders should have little, or no cause of desponding, but on the other hand, they ought to look forward with confidence to this line "*ultimately*" exceeding what its own friends, in their sanguine moments, have anticipated it would do.

It is rather strange to see the price of the North Midland shares so low as 68*l.* at this time of the year, when, in the first week of January last, and the middle of April, they stood at 81*l.* to 83*l.*; it is partly to be accounted for, certainly, by *the extreme general depression* that pervades the market for *shares*, but as the resources of the line are *fairly beginning* to show themselves, evinced, in some degree by the traffic now amounting to 4,675*l.* 4,140*l.* and 4,139*l.* for the last three consecutive weeks, I cannot help thinking that at the present reduced price of shares they are highly tempting as an investment to capitalists.

In giving you these particulars of the North Midland Railway, I may be trespassing on your columns more than you may think necessary, but the excellent example set by the Directors of it, to all other railways, to reduce their expenditure all in their power, must serve as my apology, and with a hope that you will give immediate insertion to this communication.

I remain, Sir, your obedient servant,

A LOOKER-ON.

Leeds, June 22, 1841.

CHELTENHAM COACH FARES TO THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—With your kind permission I will make a few remarks upon your Newbury correspondent's letter of the 14th instant, regarding the coach fares from Cheltenham to Cirencester, which are, indeed, exorbitantly high, viz., 6s. 6d. inside, 4s. outside.

It is not, however, the coach proprietors who are to blame, but the Great Western Company, who, to the injury of the shareholders, and disadvantage of the public, have confined the coaching business to two monopolists in Cheltenham, and positively refuse accepting terms from other parties. However, I have placed two coaches (the *Anti-Monopolists*) in opposition, and have reduced the fares to 4s. 6d. inside, and 2s. 6d. outside. The Company very politely allow me to take passengers *to* the trains, but refuse my coaches entering the station-yard on the arrival of the down trains; and so determined are they to encourage the monopoly, that on Tuesday last, on the arrival of one train, the glut of passengers was so great that the admitted coaches could not convey all who wished to proceed to Cheltenham, and though my coach was in attendance *at the gates*, I was not permitted to take the overplus, and those who had foolishly paid their fare through *to Cheltenham*, were compelled to wait until the next train arrived. If you will permit me I will here give the public a little advice, "Never pay your fare *through*, be it on the Great Western or any other line of railway, where *part* of the journey is performed by coach." I hope your correspondent will perceive where the cause of blame for high fares exists, and presuming him to be a shareholder, I trust he will, at the next general meeting, raise a cry against the monopoly sanctioned by the Company.

I am, Sir, your obedient servant,

J. B. FLEISCHMANN.

George Hotel, Cheltenham, June 19, 1841.

[We presume this admits of some explanation, and we hope a satisfactory one. The Company must of course have the power of regulating according to their own pleasure, the plying of coaches "within their own gates;" but it is nevertheless their duty not to exercise their controlling power in such a way as to enhance to passengers the expense of the coaching to and from Cheltenham.—ED. R. T.]

FRENCH RAILWAYS.

To the Editor of the Railway Times.

SIR,—In the *Railway Times* of the 5th instant, are some extracts "from the letters of the Chevalier de Gestner, on the railway system in Austria, France, and Holland." I have not the honour of being known to, or of knowing, the author of the letters, nor am I cognizant of the date at which they were originally given to the public.* It is probable, however, that most of your readers would identify the statements and opinions therein expressed with the *present* time, whereas it is evident to those who know any thing of some of the objects which form the subject matter of the letters, that "they belong to the past." It cannot, or it ought not, to be considered as an imputation on the honesty of a writer, if his predictions are not veri-

* The letters were written in 1839, and in German; but the extracts we have at different times published have been taken from English translations of them, which have only recently appeared in the *Hyperion Journal*.—ED. R. T.

Digitized by Google

fied by after facts, albeit it is often useful and sometimes necessary to see how far those who venture to predict, are right both with respect to the assumptions made and the grounds thereof.

M. Gestner has not been fortunate in that part of his letter where, in speaking of railways in France, he says, "the French railways pay like the diligences (stages), ten per cent. of the gross income as a tax to the state; the expenses of managing these roads will therefore not amount to less than two-thirds of the gross income, and the Paris and St. Germain Railway will hardly yield an interest of 4 per cent., if the traffic does not materially increase.

"These are the causes why the railways projected in the spring of 1838, from Paris to Havre, from Paris to Orleans, and from Strasburg to Basle, for which the concessions were given by the Chambers, find so little support from the public in France, that these projects will, it is likely, be entirely abandoned."

Inverting the order in which these predictions and statements stand, I beg to inform your readers, that the Strasburg and Basle Railway is partially opened, and the remainder of the line will be completed in a short time—that the Paris and Orleans Railway is already open from Paris to Corbeil, and the rest of the line (which is of easy construction) is being proceeded with—that the line from Paris to Havre is not only subscribed for between Paris and Rouen, but that the works for one half its length are contracted for by English contractors of first rate ability, capital, and character, and the whole affair of construction is by law placed under the superintendance of Mr. Locke. The remainder of the works will be contracted for as fast as the plans can be got ready.

I entirely agree with M. Gestner in deprecating the great cost of railways, and its mischievous influence on the dividends of those railways already constructed, as well as its preventive influence as to other and very useful projected lines. Of the Strasburg and Basle line, I know little, either as to cost or revenue. The original cost per mile will not be great, however, either upon the Paris and Orleans line, or upon the Paris and Rouen. Even with the acknowledged great cost of the St. Germain Railway, it now pays its shareholders 6½ per cent. per annum; its income is daily increasing, and will be considerably augmented by the addition of the Paris and Rouen traffic, which latter Company are spared the enormous cost of a separate entrance into Paris by adopting 5 or 6 miles of the St. Germain Railway.

The 20 miles of the Paris and Orleans line which is open, has cost 14,500,000 francs, or 580,000*l.*; but this includes the cost of a most spacious station at Paris, and an establishment of workshops and other buildings which have been constructed with reference to the entire length of the line rather than the one-fourth part of it already opened. It also includes the cost of locomotive engines and carriages. The promoters of this line fully expect a return profit of 8 to 10 per cent.

My present information does not lead me to the same conclusions as Mons. Gestner, as to the cost of managing and working railways in France, and the relative per centage of that cost to the total receipts. Mons. Gestner is evidently misinformed as to the amount of taxation—the French railways do *not* "pay 10 per cent. on the gross receipts as a tax to the State." There is included in the law which authorises the construction of every railway a tariff of the charges to be made to the public, and this charge is divided into two heads, viz., *toll* and *charge for conveyance*; by far the larger half being denominated "toll," whereas the tax of 10 per cent. is levied only on the "charge for conveyance." But the principal reason why the cost of working French railways, as compared with their gross receipts, is not so large as apprehended by Mons. Gestner, is, the *number of passengers* which are carried by each train. I have not by me, at the moment I am writing, the accounts of the Paris and St. Germain Railway, having sent them to a gentleman in England, to whom the railway world, and the English public in general, are much indebted, for his application of an acute mind and large capital to the promotion of railways, both in England and France; but I recollect enough of them to be assured myself, and to assure your readers, that the total cost per mile of conveying passengers in France, is less than in England. It doubtless mainly arises from the cause I have before stated, viz., the greater number of passengers per train. I have before me now the usual weekly statement of the number of passengers carried on the Paris and Orleans line, during the week ending on the 3rd of this month. The total number is 22,298—the average number per train is 176. If I recollect rightly, the average number on the Liverpool and Manchester line is, or was, about 60.

I have troubled you with these observations, not for the purpose of any advocacy of French railways in general, or of that with which I am identified in particular (the Paris and Rouen), but in order to put you and your readers in possession of facts and the results of experience on a matter which may be interesting. There is still much to be learned on the subject of railways—much to be amended in all stages of such undertakings, from the embryo scheme to the positive working. The iniquitous system of legislation in reference to the obtainment of Acts of Parliament in England—the cost it inflicts upon an undertaking, which by the very first paragraph of an Act of Parliament is declared to be a work of *public usefulness*—the obstructions which emanate from private interests, sometimes occasioned by honest but mistaken apprehensions of damage, but much more frequently by cupidity—all require reform. The system here is different, but it has its faults too. It has long been my belief that there is hardly any system of doing any thing, however bad it may be, but something might be learned from it, wherewith to amend that which, taken as a whole, is more perfect; and I have sometimes thought of troubling you with a comparative statement of the advantages and disadvantages of the system of legislation, &c., on railways in England and France, believing you would deem such a paper worth publishing; at present I incline to think that my own country would not benefit by the comparison.

I am, Sir, your most obedient servant,
WILLIAM REED.

Paris, June 16th. 1841.

[We need scarcely say, that we shall be most happy to receive "the comparative statement," which our old and much esteemed correspondent states he has it in contemplation to draw up.—Ed. R. T.]

RAILWAY FARES.

To the Editor of the Railway Times.

Sir,—I am sorry to have so soon again to trespass on your valuable columns; the more so as it is to correct an error in my own letter on Railway Fares, to which you were kind enough to give a place in your last paper.

In one of the latter paragraphs I stated, that it might be easily proved by a little algebra, that Mr. Ellet's statement of the loss increasing as the square of the departure from the best charge, was not reconcileable with his assumed law. I founded this statement on a conclusion arrived at by means of a short algebraic calculation; and being hurried at the time, and finding that the conclusion agreed with Mr. Ellet's note on the subject, (which states the increase to be "not so rapid in the present case, but still to be very great indeed,") I unfortunately took it for granted that the calculation was right, and neglected to look more closely into it, as I confess I ought to have done, before making such a statement. The consequence was, that after my letter was dispatched to you, I found that I had made a slight error, which altered the case entirely, and that the loss does really vary *exactly* as the square of the deviation from the best fare, when computed according to Mr. Ellet's assumed law.

I shall now proceed to show that this is the case, adhering to Mr. Ellet's notation; t only being altered as in my last letter.

We have, therefore, the best fare, $\mathfrak{C} = \frac{1}{2}\left(\frac{T}{t} + \delta\right)$ for this fare, the number of passengers is equal to $T - \mathfrak{C}\,t$, $= \frac{T - \delta\,t}{2}$. Multiplying this latter by the profit per passenger c, $= \frac{1}{2}\left(\frac{T}{t} - \delta\right) = \frac{T - \delta\,t}{2\,t}$ we shall have $\left(\frac{T - \delta\,t}{4\,t}\right)^2$ representing the entire profits per mile.

I shall now suppose that the quantity a has been added to the fare; in this case then $\mathfrak{C} = \frac{1}{2}\left(\frac{T}{t} + \delta\right) + a$, and the number of passengers $= T - \mathfrak{C}\,t = \frac{T - \delta\,t}{2} - a\,t = \frac{(T - \delta\,t) - 2\,a\,t}{2}$. Multiplying this by the profit per passenger, which in this case is equal to $\frac{1}{2}$

$$\left(\frac{T}{t} - \delta\right) + a = \frac{(T - \delta\,t) + 2\,a\,t}{2\,t},$$

we have the entire profits (per mile) equal to $\frac{(T - \delta\,t)^2 - 4\,a^2\,t^2}{4\,t}$. Subtracting this from the profits in the former case, we at once get the loss, equal to $\frac{4\,a^2\,t^2}{4\,t} = a^2\,t$. This being the loss per mile, the entire loss will be $\frac{a^2\,t\,h}{}$. Whence it appears, not only that the loss varies as the square of the deviation from the most advantageous fare; but that it is equal to that square multiplied by the quantity t, and by the distance h.

I have therefore, Sir, to apologise to Mr. Bernard for supposing that he was mistaken in his statement, that the supposed variation of the loss according to the square of the departure from the best charge, was "nothing more than a property or function of the general law" which Mr. Ellet assumed. At the same time, I must still consider him mistaken if he supposes that Mr. Ellet brought forward this variation, as proved by his general law, Mr. Ellet having only given it as an extract, from his essay on the laws of trade. If then, Sir, we shall find, in this essay, that it has been proved, from correct data, will it not be a strong confirmation of the correctness of Mr. Ellet's assumed law? for we have now seen that it can also be proved from that law. I must also still consider, although I fully allow the correctness of Mr. Bernard's statement, that he made that statement totally in the dark, as to whether it was correct or not; for in his second letter we find him endeavouring to prove by Mr. Ellet's *general law*, that the fact of the above-mentioned variation, was "erroneous and absurd."

I had intended, Sir, to offer you a few observations on the very ingenious geometrical construction given by Mr. Eustace in your last, to exhibit the variation of the fares and profits under Mr. Ellet's law. I have not, however, now time to do so, nor do I wish to trespass on your pages any more at present.

I therefore remain, Sir, your obedient servant,
R. W. TOWNSEND.

BIRMINGHAM AND GLOUCESTER RAILWAY—EXCESS OVER ESTIMATES.

To the Editor of the Railway Times.

Sir,—The letter of "W.," dated on the 15th instant, is so far from being an answer to my detailed and definite statements, that I should feel perfect confidence in leaving the case, without another word, to those of your readers who would take the trouble to reperuse his and my previous letters.

But as I have had the good fortune to teach him somewhat of the tone usual to persons who would address the public through the medium of the press, it is only an act of kindness to remove or to expose the moral *strabismus*, or obliquity of vision under which he yet labours.

To my detailed answer to each paragraph of his former letter, "W." with great prudence attempts no reply. He wisely drops his discovery of the

Digitized by Google

" error of *only* 100,000*l.*," of unrivalled engineering difficulties, and of 10 per cent. excess, and to his courteous and conclusive observations as to the ground being cut from under me, my insidious attacks, my dogmatical mode, and my beaten down points (which I leave to pass for their full value), he only adds the two somewhat singular statements, that he has not used abuse or invective, and that in my remark on his table, I have made " a palpable mis-statement." I cannot either omit to notice the very unworthy shuffle about the earthwork; my table, as " W." must know, was only adduced in answer to his statement of unrivalled engineering difficulties.

What may be " W.'s" definition or notion of abuse, I am not aware. I believe that our opinions on this subject vary according to the circle in which we move, and I apprehend that language which would be considered most polite at Billingsgate, would create somewhat of a sensation at St. Stephen's. I call such language abusive as you, Sir, have called absurd—that " Junius does well to screen his own ignorance or shamelessness under a false signature,"—that he " shows his own ignorance, or is liable to the charge of deception,"—that he " makes out garbled accounts,"—and that " he has not the honesty to add,"—a statement that he has shown to be very absurd. The running charge, moreover, of insinuation and of absence of any good object which pervades both of " W.'s" letters, is at once most uncourteous and most unfounded, and yet there is " no abuse—Ha!"

" W." has asserted that I have made a most palpable mis-statement. I think this is like his former discovery of an imaginary blunder of *only* 100,000*l.* What is this palpable mis-statement? The little bit of special pleading about the Manchester and Leeds line does not apply to my remark, as that Company's demand for 400,000*l.* additional was made subsequently to the publication of his table, and of my answer. 1,266,666*l.* is the total capital authorised to be raised by the *first* Birmingham and Gloucester Act. The sums set opposite to the other railways are the " total amounts authorised to be raised by shares or loans." Your own columns confirm this statement. The remark that I made as to the inconclusiveness of this table, even if it had been correct, is very wisely left unanswered.

I will only add that a public writer who depends for his information upon, and adduces as his authority data more valuable than " ordinary conversation" or anonymous gentlemen " well known in the railway world," cannot be expected to condescend to answer such a remark as that his statements have " dwindled into an attempt to show" a fact that he adduces incidentally, in reference to a particular position assumed in opposition to his views. That I fail to maintain my ground it is easy to say, but that proof is difficult " W." tacitly admits by wisely avoiding the attempt. Let him learn that some things escape censure only when they escape observation, and that an injudicious defence is far more injurious and far more invidious than an open and manly attack.

I am, Sir, your obedient servant,

JUNIUS.

June 24, 1841.

THE NORTHERN AND EASTERN RAILWAY COMPANY AND THEIR CONTRACTORS.

To the Editor of the Railway Times.

SIR,—In the proceedings of the special general meeting of the Northern and Eastern Railway Company, as reported in the *Railway Times*, of last week, the following passages occur:—

" A SHAREHOLDER—How does the road progress? Where are we now?

" The CHAIRMAN Wm. Crawshay, Esq.—Why, we have had a dispute with our contractors—responsible and respectable men—but still *we considered they had behaved improperly, and the result would have been, not delay in the opening of the line had we not decisively resisted our claims of the power we possessed of entering upon the stock, &c. of the contractors, and putting the work to be completed into other hands. We have, by the able management of our Solicitors, been carried through the business perfectly safe and correct as to the law, which now our contractors, I believe, are satisfied of*; and I doubt not, it will soon be satisfactorily arranged. From all we are able to judge by, I believe there is no doubt that at all events in the first week of August—perhaps sooner—we shall open to Harlow: and in September to four miles further.

" A PROPRIETOR—I believe the contractors professed to raise some difficulty about land?

" The CHAIRMAN—*You may rely upon it, Sir, they were wrong, and the Directors right.*

" The PROPRIETOR—I have not the least doubt of it: the best proof of it is, that the contractors now employed are going on all right."

Now, Sir, as differences have, unhappily, arisen between the Company and other contractors on this line besides ourselves, to prevent misapprehension we think it but fair to state, that WE are the contractors here alluded to, and that we have been most reluctantly compelled to resort to a Court, in appeal from the acts of the Company, after every effort on our part to come to an amicable or an equitable adjustment of the matters in dispute between us had been treated with contumelious and cruel disregard.

When we aver, as we now do, that without conceding our right to a considerable extension of time for the completion of our works, under the provisions of our contract, by reason of the delays and interruptions we experienced, by the mode and the time in which we obtained possession of the land, by legal proceedings and by other acts of the Company, we offered to meet the wishes of the Directors, and to complete the works on our contract, as far as was required, within the same time they proposed to allow to another contractor (whose prices are higher than ours), and under increased and cumulative penalties, in case of our failing to do so; when we make it known that we offered (without prejudice to our rights, if not accepted), to refer the whole matter to the absolute decision of the Company's late Engineer-in-Chief, Mr. Robert Stephenson, we feel assured we shall be exonerated from blame in the eyes of the shareholders, and of all who know the high personal character and professional reputation of that gentleman.

Thus much in exculpation of our character, and in explanation of our motives for the conciliatory course we have pursued. We know our rights, and are prepared to defend them, since no other alternative is left to us.

Here, for the present, we stop. We leave the worthy Chairman in the full enjoyment of the satisfaction and self-gratulation he derives from his reliance upon "*the able Management*" of the Company's Solicitors, and from his conviction that himself and his colleagues are right, and the contractors wrong.

When the proper time shall arrive, and when all the facts and circumstances connected with the *Broxbourne* contract, both before and since it was let to us, shall have been laid bare, we shall be quite content to leave the public, and the shareholders in this Company, as more immediately interested, to judge between us and the gentlemen to whom they have committed the administration of the affairs of the Company.

When this time shall arrive, we shall be much surprised if we do not show a course of proceeding on the part of the Executive of this Company of headlong haste and reckless precipitance; of a cold and heartless disregard for the character, the credit, and the hard-earned property of their contractors, which, from a considerate regard for the convenience of the Company has been allowed to remain and accumulate to a large amount in the hands of the Directors—a course of proceeding not only wholly unwarranted and unsustained by justice, but unsupported even by the terms and provisions of the Company's own contract, arbitrary and oppressive as that form of contract is.

We are, Sir, your obedient servants,

JAMES & GEORGE THORNTON.

Mead End, near Harlow, June 23, 1841.

The woods on the Alleghany mountains, between Philadelphia and Pittsburg, caught fire lately, from sparks of a locomotive. Several thousand acres were burned, and a few houses; but happily no lives were lost.

LONDON AND GREENWICH RAILWAY.

To the Editor of the Railway Times.

SIR,—So much has been said in your excellent journal from time to time tending to enlighten the Greenwich Directors and bring them over from their evil ways, that I all but despair of doing any good by writing this letter. Yet " truth is great and will prevail," and although I have no hope at all from the present Board of Directors, I cannot believe that the shareholders—especially the old shareholders—will long continue in their present deplorable state of apathy, and suffer their property to be so grossly mismanaged as it is universally allowed to be at present under the withering influence of the present Board.

I have very carefully attended to all that has appeared in your pages relating to this railway, and I must honestly confess that the impression always made upon mind has been, that the management was wrong—without wishing to say a harsh word—scarcely honest. I do not now (thank God) speak as a proprietor; their policy caused me to sell my shares, but still I do feel for my old fellow-sufferers, and I also feel for the public, who are inconvenienced by the pertinacity of the Greenwich Board insisting upon a toll which a vast majority of the lower orders cannot afford to pay.

And see what is going on at the present moment—the Brighton is on the very eve of opening. The fares to the different stations are at this moment under consideration at the Board, if not already decided upon. Does any one doubt but that they will encourage New Cross station as much as possible, and consequently avoid the Greenwich line, seeing that every passenger they take over it is at a considerable loss. To suppose anything else would be foolish. Now, it is clearly the interest of the Greenwich to go hand in hand with these their powerful and good customers, in order to encourage them to carry every passenger to London Bridge station; and providing they were to do so, I feel confident the Croydon, Brighton, and Dover Companies would second their views.

Some time since the Greenwich Directors were blessed (query cursed) with a champion which was the very child and image of this notorious Board, " Veritas;" but I have " miss'd him on the accustom'd hill." Perhaps he is altogether engrossed with admiration of the Great Western; or he may be making experiments on attraction and repulsion for the purpose of ascertaining that the Greenwich viaduct when completed will be the great natural magnet, and that the cockneys at 4½d. per head will like

> "The obedient steel with living instinct move
> And veer for ever to the pole they love."

Alas! for " Veritas," and through him the old Greenwich Railway shareholders, who are in evil plight. Seriously, however; for to many it is a serious affair. " Veritas" may be defunct, and as I never thought him very well when living, he may be dead, and in debt; and this is one main reason for troubling you with this letter to inquire whether he died insolvent or not; for I have never seen his answer to a very sensible note which was addressed to him from Liverpool last year, and which appeared in the *Railway Times*, page 1112—1840, written by " Common Sense."

Should " Veritas" be no more, I should feel much obliged if the Greenwich Directors, who, I suppose, are his executors, or some of the preference shareholders, would answer the following note.

I am, Mr. Editor, yours sincerely,

COUSIN TO COMMON SENSE.

June 24, 1841.

COPY NOTE.

" Will your calculating correspondent, 'Veritas,' favour an equally sincere but less cute admirer of the principle, that the cost of a railway should regulate the tolls, with an answer to the following question?

" Admitted—That a Railway Company is entitled to such a toll as will give them a fair return for their outlay, say 5 per cent.

" Admitted—That a given Railway Company are entitled upon that principle to a tollage of 20,000*l.* per annum, being 5 per cent. on their outlay.

" Question—Which to such Company would be the pre-

Digitized by Google

per application of the *principle*—a *large* individual toll, which would produce a small aggregate return; or a *small* individual toll which would produce a large aggregate return; or in other words which would be the nearest approximation to the principle of cost;

"A two-penny toll per passenger, which would produce yearly a receipt of £6,000
"Three-penny 4,000
"Or, four-penny half-penny..... 2,000

"COMMON SENSE.

"Liverpool, December 21, 1840."

THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The complete opening of the Great Western being at hand, and conflicting opinions being rife, it may, perhaps, be of interest to your readers to be made acquainted with some *facts* connected with this undertaking, facts which could not previously have been ascertained, and but few of which have been elicited by the unreasoning partisans on each side.

First as to cost. This most important item may *now* be set down as 7¼ millions, including everything under the head of capital required for the full development of its resources to the end of 1842, or 18 months from its final completion. This will be denied by the whole host of officials and sanguine shareholders, but it is *true*.

Next as to the expenses of working the line. Assuming that the line will be debited with the whole expenses of the staff and locomotives, less the amount of rent for power, and the salaries chargeable to the Bridgwater and Cirencester lines upon the principle and at the rate charged by the North Union to its two extension lines, (the only fair, intelligible, and honest course,) the total expense, if frankly stated, will not *be less* than 250,000*l.* per annum, or somewhat more than 2,000*l.* per mile per annum.

Lastly, as to the traffic. The line having been so long opened to Steventon, the portion of the line of the greatest value, leaves but little traffic doubtful—and it may be stated with great approach to accuracy, at an average of 10,000 pounds to guineas per week, for the first two years, from the period of its completion.

In proof of the first view, I refer to the line from Corsham to Bristol, about 21·2 miles, which has cost and will yet cost, exclusive of its proportion of locomotive power, 2,000,000*l.*; to the first four miles from London more than 500,000*l.*, exclusive of the present sheds, which are unworthy of the name of a station, and to the cost of reconstructing that portion of the line supported in the first instance on perpendicular pillars. These items with cost for plant, amount to a moiety of the sum named though applying to little more than one-fifth of the line.

The expenses attending the locomotive department will be found to exceed my estimate when the details of current expenditure come fully before the public, *disconnected from capital account*. The traffic, although exposed to some variations from causes not foreseen, and which cannot therefore be accurately ascertained, will be found to approach the amount stated on the average of the first two years. The amount will be considerable from June to September, and small from November to March, the average of the first four months being stated "by One of the Sanguine," at 14,000*l.*, and the average of the latter period at not less than 6,000*l.*, which gives an average of 10,000*l.* for the two seasons.

It has been matter of surprise and regret that the traffic returns do not specify the amount produced by the Great Western, Bristol and Exeter, and the Cheltenham, respectively. This is quite unworthy of a great public Company. Cunning contrivance equally with "vaulting ambition doth oft o'erleap itself," and by seeking concealment in such matters, gives rise to doubt and distrust, which are positively injurious. Thus, in the last returns, the receipts for the week ending the 21st instant, are given at 12,400*l.* for the Great Western line, without any indication that this includes not only the weekly receipts on the Cheltenham, opened for three weeks, but also on the Bristol and Exeter line opened on the 14th instant, the receipts on which last line alone are not much less than 1,200*l.*, and are by some stated as high as 1,500*l.* for the past week. This practice, so unworthy a great Company, deceives no one; rather it tends, and will tend, to magnify beyond their proper amount the amounts thus excluded, and thus to depreciate the value of the shares.

It now only remains to notice one point connected with the approaching opening of the line, by the completion of the line from Chippenham to Bath, a distance of about 13 miles. Over the whole of this distance, nothing is to be seen but the greatest *hurry* and confusion—the proper work of a week being sought to be accomplished in a day. Let any one visit this line, inspect for himself, and see if it be fit, with the slightest regard to the safety of the great number of passengers likely to pass over this line at the present season of elections, that it should be opened. If the Government Inspector does his duty, he will require that the line shall be tried, not only with heavy weights, but also repeatedly and for several days, before it is opened and tried at the risk of the public.

It is not fit that a line on which the speed averages 35 to 40 miles, should thus be opened whilst quite green and fresh, to be tried and proved at the risk of life and limb to numbers, because many heavy shareholders are urgent, for purposes of their own, to have the line open *under any circumstances*, this month; still less is it to be endured that this line shall be hurried—precipitated—as it were into actual work before it is fit for use, because functionaries connected with the undertaking (are said to) have heavy bets dependant upon its being opened at a certain time.

Let the Directors recollect that though their gauge is favourable to the attainment of greater speed it by no means possesses immunity from accidents or mischance, that an accident from any cause when travelling at 40 miles an hour, though not 50 per cent. greater in velocity would be attended with tenfold more frightful results than a similar occurrence on the Birmingham, and that any accident at that rate of speed will damage them and the property which they administer to an extent greater than any gain obtained by opening this short space a year in advance.

I call the attention of the more cautious amongst the Directors to the mischance of the *Mazeppa*, no later than last Saturday, upon that part of the road recently opened beyond Wootton Bassett, arising from the faulty, because hasty construction of the works, a mischance which was only not a fatal casualty from its having occurred a few yards beyond the starting point, but which will not be without its use if it acts as a warning.

I implore these Directors as men, as fathers of families, and both as morally, and I hope *legally* responsible, to beware. One fatal accident and it will be too late.

I am, Sir, your obedient servant,

IGNOTUS.

ACCIDENT ON THE GREENWICH RAILWAY.

ON Wednesday evening an inquest, adjourned from Friday preceding, was resumed before Mr. Payne at Guy's Hospital, to enquire into the circumstances attending the death of James Duldefield, a labourer, aged 32, who was killed under the following circumstances:—

From the evidence taken on the first meeting of the jury, it appeared that the deceased was employed as a labourer on the railway, and was engaged in erecting a temporary paling at the junction of the Greenwich Railway with the Croydon, at Blue Anchor-lane. Whilst so employed on Friday, the 28th of May, the half-past 2 o'clock train from Greenwich came up, and on getting near the spot where deceased was at work, the engine past over a post which was lying across the rail. The shock was so sudden that the engine was detached from the train, and passed on some distance. The tender was slewed round, and it was a miracle that the whole train was not upset. The breaksman of the train was thrown off, and had his leg broken, and the deceased was so frightened that he jumped or fell over the wall into a garden, and so injured his spine as to cause his death on Wednesday last. There being no direct evidence how the post came on the line, or what blame attached to the man who had to keep the line clear, the inquiry was adjourned.

On the jury reassembling last evening, the following additional evidence was given:—

Andrew Sheen deposed, that on the day the accident happened he was at work on the new line close to where the deceased fell. He did not see him fall, but saw him lying in the garden among the lettuces. He was about three feet from the railway, and his (witness's) attention was called to the deceased being there by the people shouting. On going up to him, he complained of his back being injured.

Francis Farquharson, foreman to Mr. Jackson, the contractor, said that he was standing on the top of the new works when the steam carriage came off the line. He saw the deceased, who was about six feet from him, engaged in putting up the temporary railing. He then saw the tender slew round on to the new works, and missed the deceased at the moment. On looking over the parapet wall, he saw him lying in the garden, just underneath where he saw him standing.

By the Coroner—I was in greater danger than the deceased, and I only moved on one side. It was the hinder part of the carriage that slewed round; the other part remained on the old works. The carriage did not strike the deceased, and I think he intended to get over the parapet wall, but fell.

John Barrett said, that he was carpenter to the railway, and on the day the accident happened he sent by the different trains boards and posts to be left at several parts of the line, to be used as the temporary fence whilst the wall was down. He gave them to the breaksman, and ordered him to leave them on the other side of the Blue Anchor Road, and to drop them there. He sent three lots in this way, and the third lot consisting of three posts, was that which caused the accident. A man of the name of Foster was the watchman, and it was his duty to see the line clear. He had asked him how it happened, and his reply was that he did not know how it was that he did not see the post.

Ezekiel Pancrast said he left the posts at the Blue Anchor Road. There was no one on the north side of the rail when he came up; but, seeing some men at work on the south side, he called out to them and then threw the posts from the back of the train. He did notice Foster when he threw them off, but left, as he thought, men picking them up. This was the half past 2 o'clock train, and when the engine only of the quarter to 3 o'clock train came in he heard of the accident. There was plenty of time to have cleared the rail, as another train did not pass till a quarter of an hour.

John Walker the engine driver, said, that he saw Foster on the north side when the accident happened. He saw the post lying on the rail before he reached it, and called out to the breaksman to hold on. He only saw one piece of wood. It was the duty of Foster to keep the line clear, as he was walking backward and forward for that purpose. The post was between four and five feet long, and was only lying on one of the rails.

The Coroner summed up, and

The jury returned a verdict of "Accidental death," at the same time requesting the coroner to severely admonish Foster for his carelessness.

This the Coroner did, and remarked that everything had been done by the Company to forward the inquiry.

[What has been done to Foster? We have not noticed his appearance before any of the Police Courts, surely it is not intended to let him off with the severe admonition only.—ED. R. T.]

RAILWAY ADJUDICATIONS.

THE QUEEN v. THE PROPRIETORS AND PUBLISHER OF THE RAILWAY TIMES.

(From the *Times*.)

Court of Queen's Bench, June 19.—This was a rule which had been obtained upon the application of the Directors of the Eastern Counties' Railway Company, calling upon the defendants to show cause why a criminal information should not be filed against them for a libel which had been published concerning the applicants. Cause was then shown against the rule at the close of the term, and now

Lord DENMAN delivered the judgment of the Court. The libel complained of had charged the Directors with having, in their official reports, made wilful misrepresentations concerning the prosperity of the Company, for the purpose of deceiving the shareholders and the public. It was a well-known rule in this Court, that whoever came to request its interposition for the protection of his character in an extraordinary manner, was obliged to deny in the most full and explicit manner the imputation of which he complained. In the present instance, the Directors, who were persons of great respectability, had very properly denied, and in the most satisfactory manner, the motives to which their conduct had been attributed. With regard, however, to the reports which they had drawn up, and to the other proceedings which were alluded to in the libel, the Court was of opinion without questioning the veracity of the deponents in reference to that point, that there existed grounds for doubting the accuracy of the Reports, although not enough to justify the injurious imputations which had been cast upon the Directors in reference to the subject. Upon the whole matter the Court was of opinion that the most just and reasonable mode of disposing of the application was, that the rule for the criminal information should be discharged upon payment of costs, inasmuch as the Directors had already enjoyed the benefit of denying upon oath all the imputations which had been cast upon them, and may still, if they should think proper, have recourse to the remedies which were open to them according to the ordinary course of law.

THE QUEEN v. THE DIRECTORS OF THE MANCHESTER AND LEEDS RAILWAY COMPANY—JUDGMENT.

Court of Queen's Bench, June 14.—Lord DENMAN delivered judgment in this case. This was an application for a mandamus to command the defendants to make a road the whole breadth of that which they had taken away. The road had been 42 feet wide, 36 feet for the carriage-way and 6 feet for the roadway. The Act under which the road was originally made did not require that the road should be wide, but it had been so made and had so continued till the defendants had appropriated it. The defendants had since made the road across which their railway travelled, but it was some feet narrower than the original road. Still the jury, upon the issue joined on the trial of the return to the mandamus, had found that the road had been re-formed in a proper manner, and was more convenient than at its original width of 42 feet. The prosecutors, however, insisted that, as the Railway Act, which gave the Directors the power to cut the road, required them to restore it as before, and made no allowance on the question of greater or less convenience, the old road ought to be restored to its original condition, and a peremptory mandamus ought to go to compel its restoration to a former state. The Court was of opinion that the words of the Act left no option, and therefore directed that the rule for a peremptory mandamus should be absolute.

RAILWAY ELECTION TACTICS.—The following general order, with reference to the approaching elections, was ordered to be issued by the Directors of the Midland Counties' at their Board Meeting, last week:—The Directors wish it to be distinctly understood, that at the approaching general election every officer and servant of this Company who is entitled to vote, is at perfect liberty to do so according to his discretion. And the Directors further intimate to the officers of the Company, that any interference with the men under their control, in endeavouring to induce them to vote for any particular candidate, will subject them to the severe displeasure of the Board.

GLASGOW, PAISLEY, KILMARNOCK, and AYR RAILWAY.—SUMMER ARRANGEMENTS and REDUCTION OF FARES.—The Public are respectfully informed, that on and after Monday, the 14th June, the Mid-day Passenger Trains will leave Glasgow at half-past one, and Ayr at 2 afternoon in place of half-past two and three, as formerly; the half-past twelve o'clock Luggage Trains from each end will be discontinued, and Passengers will be conveyed at a considerable reduction of Fares. The arrangements will now be as under, viz.:—

TRAINS START

From Glasgow.	From Ayr.
At *Half-past 7 morning.	At *8 Morning.
*Half-past 10 forenoon.	*11 Forenoon.
Half-past 1 afternoon.	2 Afternoon.
*Half-past 4 ,,	*5 ,,
Half-past 6 ,,	7 Evening.

FARES BETWEEN GLASGOW AND

	1st Class.	2d Class.	3d Class.
Paisley (see Joint Line Advertisement)			
Johnstone	1s. 6d.	1s. 0d.	0s. 8d.
Lochwinnoch	2s. 6d.	1s. 8d.	1s. 2d.
Beith	2s. 9d.	2s. 0d.	1s. 3d.
Kilbirnie	3s. 0d.	2s. 2d.	1s. 6d.
Dairy	3s. 6d.	2s. 3d.	1s. 8d.
Kilwinning	4s. 0d.	2s. 6d.	2s. 0d.
Irvine	4s. 6d.	3s. 0d.	2s. 2d.
Troon	5s. 0d.	3s. 6d.	2s. 6d.
Moukton & Prestwick	5s. 6d.	3s. 9d.	2s. 9d.
Ayr	6s. 0d.	4s. 0d.	3s. 0d.

The Trains which leave Glasgow at half-past 7, half-past 1, and half past 6; and Ayr, at 8, 2, and 7, will have first, second, and third-class carriages.

The Trains which leave Glasgow at half-past 10 and half-past 4, and Ayr at 11 and 5, will have three classes of carriages between Glasgow and Johnstone, but only first and second between Johnstone and Ayr.

The Trains only which leave Glasgow at half-past 10 and half past 4, and Ayr at 8 and 5, will call at Monkton.

Those only which leave Glasgow at half-past 7, and Ayr at 2, will call at Prestwick.

Those only which leave Glasgow at half-past 1, and Ayr at 2, will call at Kilbirnie.

Those which leave Glasgow at half past 1, and Ayr at 2, will take Goods going the whole distance; and any quantity not less than 2 tons, to or from any of the road stations.

A Luggage Train will leave Glasgow on Tuesdays, Thursdays, and Saturdays, at half-past 7 morning, and Ayr on Mondays, Wednesdays, and Fridays, at 8 morning, carrying goods in any quantities to or from any Station.

Coach Parcels will be conveyed by all the Trains.

The Trains marked thus (*) have each Ardrossan carriages; but Passengers can be conveyed to or from that place with any of the other Trains by changing their carriages at Kilwinning.

On Wednesdays and Fridays an extra Train will leave Glasgow for Ardrossan, at a quarter-past 3 afternoon, with the Passengers for the FIRE KING Steam-packet.

RESIDENCE AND SHOOTING, SUSSEX.—TO BE LET, with immediate possession, for a term of three years, an excellent GENTLEMAN'S RESIDENCE, called Balcombe House, partly furnished, with suitable garden, green-house, and offices; also the sporting over the surrounding estate, comprising near two thousand acres of land. The estate is situated on the Brighton road, and the residence is within half a mile of an intended, and partly constructed station on the Brighton Railway which is about to open beyond this point. It is distant from London 32 miles, and 18 from Brighton. The situation is dry and healthy, and the scenery exceedingly beautiful. The angling in the lake on the estate will be included in the letting. Grass land may be had, if required, and the residence may be had without the sporting.—For further particulars apply to Messrs. Clutton, Hartswood, Reigate, and at No. 8, Parliament-street, Westminster.

L c & OO STEEL.

MESSRS. JOS. SYKES and SONS, the Sole Contractors for and only importers of, these descriptions of STEEL IRON, being determined to adopt every practicable expedient to protect the fair trader in and consumer of these several marks, HEREBY GIVE THIS PUBLIC NOTICE, that, from the 31st March, 1845, no iron of the above marks has been, or will be, delivered by them, without the additional mark of [SYKES] being impressed thereon; such last-mentioned mark having been adopted by Messrs. Jos. Sykes and Sons for the further Protection of themselves and the public; and all persons who shall impress such mark upon any bar iron, either with or without the additional mark of [SYKES] will be proceeded against.—Hull, May 11.

GREAT AND IMPORTANT SALE of Valuable, Young, Seasoned CART HORSES.—To Brewers, Distillers, Factors, Corn and Coal Merchants, Contractors and Wharfingers, also the Nobility and Gentry.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, July 2, 1841, commencing at One o'Clock precisely, THIRTY fine-shaped, active, powerful, seasoned Cart Horses, being a portion of the old established London and Manchester Carriers,

This valuable and acknowledged superior Stock is sold in consequence of the London and Birmingham Railway; they are about 15 hands 3 inches high, remarkable for their symmetry, power, and activity, mostly young and sound, and really as fine a lot of Cart Horses as ever were submitted to public sale.

Colours—Bays, Greys, Roans and Chesnuts.

Comprising some very handsome match teams.

Fifteen firm, short legged, active, useful HORSES, the property of a Contractor, and sold in consequence of having completed his undertaking with the London and Birmingham Railway Company.

On view, and Catalogues had Two days before the sale.

A great variety of New and Secondhand Carriages, of every description, always on Private Sale at this Establishment, remarkably cheap.

VERY SUPERIOR CART HORSES, TWO CAPITAL HACKS, HARNESS, &c.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, July 2, 1841, commencing at One o'Clock precisely, about Twenty-five remarkably fine-shaped, fresh, young, powerful Cart Horses, being the last portion of the well-known, valuable stock that have been employed on the Box Tunnel, Great Western Railway, and sold in consequence of that stupendous work being now completed.

Colours—Bays, Blacks, Browns, Roans, and Greys.

Also an excellent, fast, fine shaped, Bay Chaise Horse, an elegant Chesnut Mare, that rides and goes well in single Harness—a really splendid goer, and remarkably fast.

The above lot of young seasoned valuable Cart Horses are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, having been purchased at great expense for the above contract, and are now in remarkable fine condition.

On view and catalogues had two days previous to the Sale.

A great variety of New and Second-hand Carriages, of every description, always on private sale, at this establishment, remarkably cheap.

For Occupation or Investment.—Freehold Family Residence, with Land.—The HARTLEY COURT ESTATE, three miles from Reading (Land Tax Redeemed).—By Mr. HAWKES, at the Crown Inn, Reading, on Friday, the 2nd of July next,

AN extremely-valuable FREEHOLD ESTATE, comprising a substantially-erected and commodiously arranged FAMILY RESIDENCE, with suitable Offices and capital Farm Buildings, surrounded by ornamental Plantations and Shrubberies, a park-like Inclosure of rich Upland Pasture, and several exceedingly productive Inclosures of Arable and Meadow Land; altogether containing One Hundred and Thirty-three Acres, with extensive Common Rights.

Particulars, with lithographic plans, may be had fourteen days previous to the sale, at the Auction Mart, London; the neighbouring Inns; of Wm. Andrews, Esq., Solicitor, 15, Russell-street, and at the Office of Mr. HAWKES, Land and Timber Surveyor, Estate Agent and Auctioneer, Weast-street, Reading.

SPECIFICATIONS OF RECENT PATENTS.

The MECHANICS' MAGAZINE, No. 933, published this day, price 3d, contains copious abstracts of the following recent Patents:—

Pierce's, for improvements in the preparation of wool, both in the raw and manufactured state, by means of which the quality will be considerably improved; Davies's, for an improved mode of applying heat to certain steam boilers; D'Olszowski's, for a new and improved level for ascertaining the horizon and the several degrees of inclination; Mabley's, for certain improvements in producing surfaces to be used for printing, embossing or impressing. Also description, with engravings, of Salt's perpendicular lift for raising vessels from a lower to a higher level; Parks's pocket indispensable; Thoughts on steam carriages; Steam navigation—The River Thames steamers; Gas manufacture—Setting retort in coke ovens, &c.; New theory of magnetism; Principles of bridge building; New theory of the universe; New decimal money; Recent American patents; List of designs registered between the 27th May, and June 21st; List of English patents granted in June; Spontaneous combustion; Worms in flower pots; Noble firemen; Fatality of theatres; British Museum; Hammer cloths, &c., &c., &c.

Part 222, with Title, Index, &c., to complete Vol. 34, will be ready by the 1st July.

Published at the Mechanics' Magazine, Patent, and Designs Registration Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

*** Intending Patentees, or Patentees of unspecified inventions, may have every needful information and assistance on moderate terms, by application to the office of this journal; where also may be consulted the only complete Registry extant, of patents from the earliest period, (A. D. 1617,) to the present time.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company.

IMPORTANT TO CAPITALISTS.—To Professional Gentlemen, and others requiring eligible Country Residences in the line of the Great Western Railroad, only one hour distant from the Paddington Station.—By Mr. HAWKES, on Friday, the 2nd of July, 1841, (instead of Thursday, the 24th of June, as previously advertised,) at One o'Clock, at the Crown Inn, Reading, in lots, TEN exceedingly VALUABLE STONE-ERECTED FAMILY RESIDENCES, with Coach Houses, Stabling, and walled GARDENS, constituting a great portion of the commanding and elegant structures in Wellington Place, Eldon square, and the London-road, Borough of Reading. Also, an extremely eligible Leasehold Estate, known as "The Sanctuary," consisting of Six Substantial Stone-erected DWELLING HOUSES, desirably situate on the South side of Crown-street, the principal thoroughfare between the Bath and London Roads. Several select Plots of Freehold Building Ground, particularly adapted for the erection of a superior class of

TOWN AND VILLA RESIDENCES.

The foregoing Property is situate on a dry healthy eminence, on the southern bank of the River Thames and Kennet, and at the Eastern extremity of the Borough of Reading, presenting without interruption a most extensive breadth of highly picturesque scenery.

The Buildings, which are most conveniently arranged, and replete with accommodation, have been erected under the superintendance of able Architects, with the most substantial materials, and finished with exquisite taste, regardless of expense, and are in the occupation of highly respectable tenants.

The Title, which has been lately derived from the Crown, will be found extremely simple and inexpensive.

The Capitalists will here find an open field for secure and profitable investments.

Professional Gentlemen and others seeking the combined advantages and comforts of Town and Country, will have the opportunity of selecting Residences in one of the most eligible spots along the whole line of

THE GREAT WESTERN RAILROAD.

Printed particulars are preparing, and may be had fourteen days preceding to the sale, at the Auction Mart; and of Messrs. Moseley and Channell, solicitors, Bedford-street, Covent garden, London; Star and Garter, Windsor; Red Lion, Maidenhead; Bush, Wokingham; Dolphin, Southampton; George, Basingstoke; White Lion, Bath; Bush, Bristol; of J. J. Blandy, Esq., and J. Richards, Esq., Solicitors, Friar-street; and at the Office of Mr. HAWKES, Estate Agent, Surveyor, and Auctioneer, West-street, Reading.

TO THE CONTRACTORS' FOR PUBLIC WORKS.—Harbour of St. Helier, Isle of Jersey.—TENDERS for the execution of the Works for the Improvement and Enlargement of the Harbour of St. Helier, Isle of Jersey, according to the design of Messrs. Walker and Burges, Civil Engineers, will be received on or before the 10th day of August next, at the Office of Frances Godfray, Esq., Greffier of the Royal Court of that Island, No. 16, Hill Street, St. Helier, where the plans, conditions, and specifications of the proposed works may, after the 24th instant, be seen daily, and other information obtained from 10 in the morning till 5 in the afternoon.

MANCHESTER AND LEEDS RAILWAY. OLDHAM BRANCH LINE.—**EXTENSION OF TIME.**—TO CONTRACTORS.—The Directors will meet at their Office, Clowes's Building's, Hunt's Bank, Manchester, on Monday, 5th July next, for the purpose of receiving Tenders for the formation of a branch line from near Mills Hill, in the township of Chadderton, to the town of Oldham, being a distance of about two miles, including all the necessary excavations and embankments, bridges, culverts, formation of roads, fences, laying of permanent way, and all other works appertaining thereto, as described in the plans and specifications, which may be seen at the Engineer's Office, Hunt's Bank, Manchester, on and after the 24th June next.

Printed forms of Tender will be supplied to Contractors on application at the Engineer's Office, which must be delivered at the Office of the Secretary, Clowes's Buildings, by 10 o'clock in the forenoon of the 5th July next, and the parties tendering will be required personally to attend at the same place at the hour of 1 o'clock in the afternoon of the same day.

June 15, 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.—TENDER FOR LOANS ON DEBENTURES.—The Directors of this Company are ready to receive Tenders of Loans of Money on Debentures to be issued under the provisions in the Act of Parliament, and secured on their undertaking, in sums of not less than £200 for terms of four, six, or ten years, on interest at the rate of five per cent. per annum, payable half yearly.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's-street, Bank, London, or Cirencester. A limited sum only is required.

By order of the Board of Directors,
A. MERRICK, Secretary.

Cirencester, 5th May, 1841.

There is a net revenue of £17,000 per annum, payable half yearly, from the Great Western Railway Company, for the use of the line from Swindon to Cirencester, applicable to the payment of the interest on the debentures issued by this Company.

TO GAS COMPANIES.—A Person aged 30, who has been for several years practically engaged in the Gas Manufacture, has erected and superintended Gas Works, both at home and abroad, and is now Manager of a considerable Gas establishment in an English country town, is desirous of removal to a similar situation in any of the larger towns, as Liverpool, Manchester, Bristol, Bath, &c. Satisfactory testimonials and references. Apply by letter, addressed to P. B., care of Mr. Robertson, *Mechanics' Magazine* Office, 166, Fleet-street.

NORTH KENT RAILWAY.—LINE FROM GRAVESEND TO ROCHESTER. Office, 42, Lombard Street.

CAPITAL, £300,000. In 15,000 SHARES, of £20. each.
DEPOSIT, £2 10s. per Share.

Provisional Committee.

John Humphery, Esq. Ald. M. P.	George Carter, Esq.
John Edward Puddick, Esq.	Miles Brathwaite, Esq.
Aldborough B. Henniker, Esq.	George F. Britten, Esq.

Chief Superintendent.—George Walter, Esq.

Bankers.

Messrs. Spooner, Atwoods, and Co., London.
Dartford: Messrs. Hills, M'Rae and Co.
Gravesend: Messrs. Hills, M'Rae and Co., London and County Bank.
Rochester: Messrs. Day and Co, London and Count Bank.

Engineers.—Colonel Landmann: Joseph Gibbs, Esq
Surveyors.—Messrs. Smith and Barnes.
Solicitors.—Messrs. Sweet, Sutton, Ewens, and Ommanney.

The object of this undertaking is to connect Gravesend with Stroud, Rochester, and Chatham, by means of a railway, taking the whole line of the Thames and Medway Canal, for which purpose the Committee have provisionally agreed for the purchase of the Canal and Works.

The level of the Canal is nearly the same as that of the proposed railway, which will save much expense and time in its completion.

By the arrangements made, the Act of Parliament for carrying the same into effect may be obtained forthwith, and the Canal drained and converted into a railway, and opened to the public in the course of one year from the date of the Royal Assent; leaving the docks at each end for the reception of coals, stone, lime, and merchandise.

There is at present a large transit of passengers between the populous towns of Gravesend, Stroud, Chatham, Maidstone, the city of Rochester, and the adjacent parts, averaging daily about 1,000, who now travel between those places by omnibuses, or other conveyances, at a charge varying from 1s. to 2s. each.

The average number of passengers annually landed at the piers at Gravesend, is about 850,000; and when the additional number of iron steam boats, now preparing to run from Blackwall to Gravesend, are in operation (at low fares), the amount will be greatly increased, and very many of those persons will avail themselves of the railway as a cheap and expeditious mode of transit into Kent; in addition to which there will be a very considerable income derived from the traffic in coals, stone, lime, and merchandise, which will insure an ample return to the Proprietors, besides the immediate income to be derived from the docks and ground-rents, &c. at each end of the line.

The Property of the Thames and Medway Company comprises, besides the Canal,—At Gravesend, entrance lock from the Thames, for the admission of Colliers; a Basin of considerable dimensions, in which Yachts and other Vessels are laid up during the winter; extensive Coal Yards; Timber Yards; Lime-Kiln; Dock Master's Cottage; many Cottages for Workmen; and valuable Ground Rents; besides many acres of unoccupied land; and a Cottage at every Bridge over the Canal.

At Rochester, valuable Building Ground, consisting of upwards of twenty acres of Freehold Land; Lock and large Basin, capable of containing ships of upwards of 300 tons burthen; Steam Engine and Engine House; Dock Master's House, and Cottages; Stabling, Warehouses, &c.

Applications for Shares to be made at the Company's Office, 42, Lombard-street, prepaid.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Irish Railways, with Atlas and Railway Sections, complete 2 2

R. S. WILKES, 16 & 17, Craven-street, Strand.

ROYAL SANTIAGO MINING COMPANY.—Notice is hereby given, That the GENERAL ANNUAL MEETING of the Shareholders will be held at the Office of the Company, on Wednesday, the 14th July next, at 1 o'Clock precisely, when the Directors will make their Report and declare a Dividend.

At this meeting one Director, Mr. Alderman Thompson, and one Auditor, Mr. Alderman Copeland, go out by lot but are re eligible.

A General Meeting will be then fixed for the Election of a Director and Auditor.

36, Broad-street Buildings, June 28, 1841.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 31, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES, about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad-street, City; 69, Princes-street, Leicester-square; Manufactory, Millwall, Poplar; and also of the following Agents —

Robertson and Co., 12, Goree Piazzas ..... Liverpool,
Mathias Dunn ..... Newcastle-upon-Tyne
Joseph Rothway ..... Plymouth.
John Thompson and Co. ..... Wigan.
J. T. Tregellas ..... Truro.
Thomas Mooney and Son ..... Dublin.
Coates and Young ..... Belfast.
James Kebble and Co. ..... Glasgow.
James Gunn ..... Leith.
John M. Beatts, 14, Clement's-lane, High street, Dundee.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of ten months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

RAILWAY INFLUENCE.—A DOUCEUR from Five to Ten Pounds will be given to any Gentleman that will procure the Advertiser a PERMANENT SITUATION on any of the Lines.

Can produce respectable reference for intelligence, activity and moral conduct.

Address A. B. C., 36, New-street, New Cut, Lambeth.

TAFF VALE RAILWAY.—ALTERATION OF PASSENGER TRAINS.—Notice is hereby given, That on and after Thursday, the 1st day of July, the Trains will daily leave Cardiff and Merthyr, at the undermentioned hours, excepting Sundays.

From Cardiff.	From Merthyr.
6 30 a.m.	7 5 a.m.
9 0 a.m.	9 20 a.m.
1 0 p.m.	1 35 p.m.
5 0 p.m.	5 20 p.m.
Sundays.	
9 0 a.m.	9 20 a.m.
5 0 p.m.	5 20 p.m.

For further particulars of Fares, Time, and Stoppages at Stations, reference must be made to the Train Bills, which may be had at any of the Company's Stations.

The charges on Merchandize and Cattle may be known on application at any of the Stations.

Taff Vale Railway Office, Cardiff, June 17, 1841.

GENUINE and IMPORTANT SALE of WAGGON and VAN HORSES, WAGGONS, VANS, and HARNESS.—To be Sold by Auction, by Mr. DIXON, on the Premises, the George Yard, Aldermanbury, on TUESDAY, July 13, 1841, commencing at Eleven for Twelve o'Clock precisely, the genuine, entire, and valuable Stock of Mr. Stanbury, in consequence of his retiring from business, comprising about Forty-four known good, seasoned Horses, 20 of which have been working the Portsmouth Vans, 14 the Portsmouth Waggons, and 10 the Brighton Royal Blue Vans.

Also, 2 excellent 9-inch Waggons; one 6 inch Waggon; 16 Sets of Waggon Harness, and 5 Sets of Van Harness; sundry Jacks, Ladders, Tarpaulings, Ropes, Stable Utensils, &c.

On view in their work until one day before the Sale, when they may be seen as above, and catalogues had, or of the Auctioneer, at his Repository, Barbican.

ONE HUNDRED BATH AND BRISTOL COACH HORSES, HARNESS, CLOTHS, HEADSTALLS, &c.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, July 9, 1841, commencing at Eleven o'clock, precisely, on account of the vast number and value of the Lots. The genuine property of Mr. W. Lane, of the Lion Coach Office, Bath, Fifty well-bred, fine-shaped, fast, powerful Horses, 10 sets of 4 horse Harness, 50 Cloths, and 50 Headstalls, that have been working the White Hart and Regulator Bath and Bristol fast day and night coaches; also, 50 truly superior well known extraordinary fast Horses, with the harness, &c. the genuine property of Mr. Charles Reilly, of the York Club House, Bath, that have been working the Emerald and York House, celebrated Fast Coaches, positively for unreserved Sale, in consequence of the opening of the Great Western Railway throughout.

Colours—Bays, Browns, Greys, Blacks, Roans, and Chesnuts.

The above valuable stocks of seasoned horses are worthy the attention of the Nobility, Gentry, Job and Postmasters, Commercial Travellers, &c., as they are from 15 hands 1 inch to 15 hands 3 inches high, remarkably fine shaped, beautiful steppers, with figure, fashion, power, and breeding rarely equalled in coachmasters' stocks, and are just taken from the above work, without exchange or addition. Among them are several elegant Tilbury Horses, some well-known good Hunters, and truly beautiful Phaeton Horses, as well as a number of useful, powerful fast Horses, calculated for Omnibus, Coach, and Cab Masters, public Companies, &c.

On view and catalogues had two days before the Sale.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—The Directors are ready to receive Tenders for the erection of Seven Wooden Sheds.

Plans and Specifications may be seen at the Company's Offices, 15, Piccadilly, Manchester.

No Tender will be received after the 13th instant.

By Order,
JOHN PLATFORD, Secretary.

July 1, 1841.

REPORT OF THE SELECT COMMITTEE OF THE HOUSE OF COMMONS ON 11TH CLAUSE OF THE RAILWAY REGULATION BILL.

MINUTES OF EVIDENCE.

(*Continued from page 670*).

Henry Booth, Esq. called in, and examined.

165. Chairman—What situation do you hold in connexion with railways?—I am treasurer and general manager of the Liverpool and Manchester Railway.

166. Has your attention been called to the eleventh clause of the Bill before Parliament?—It has.

167. With regard to the discretionary powers taken by the Board of Trade in this clause, applicable to all railways, what is the particular power as to which, on the part of the railways, you object; to what application of their powers do you object?—The Railway Companies feel considerable alarm at the large, general, and undefined powers it is proposed to give to the Board of Trade by that clause, and they wish for an opportunity to state their reasons for that alarm; and, first, their grounds are by no means narrow or partial, they do not object to any particular Board or officers to carry into effect the intentions of the Board, but their objections are broad and general; they contend, and I think they will be able to show, that no central authority or Board is competent, in the present state of knowledge as referable to railways, to take on itself the issuing of regulations as to so important a matter as that which affects the general traffic of the kingdom, and more especially the safety of passengers.

168. Mr. Labouchere—Does your objection apply to any discretionary power whatever being given to the Board of Trade, as to issuing regulations to prevent accidents?—We think it better that there should be a Board of supervision for the collection of facts, we think there has not been experience enough yet; the time has hardly come for drawing conclusions from the facts.

169. You object altogether to the discretionary powers given to the Board of Trade?—We think they are hardly competent for that office.

170. You say that an opinion has been expressed by the railway interest generally, on what grounds do you make that assertion?—Only from my communication with Railway Companies; I did not mean to go so far as to say it had been expressed by all.

171. Do you know what Railway Companies have expressed that opinion?—I think the Great Western, the Liverpool and Manchester, the Grand Junction, the North Union, and the Eastern Counties', are of that opinion.

172. Have they expressed it?—I hardly know by what means it has been expressed: I gather their opinions, either directly or indirectly, by communicating with the parties; I do not wish to put myself forward as representing them; if I have used an inaccurate expression I shall be glad to correct it.

173. Lord G. Somerset—Was there not a conference with a good many of the Railway Companies at Birmingham on the 19th of January last?—Yes.

174. Were you present?—I was.

175. What Companies were represented at that conference?—I forget; there were a score of the principal Companies.

176. The impression you wish to convey to the Committee arises from what passed then?—No.

177. It has nothing to do with it?—No.

178. Lord Stanley—Was this point raised at this conference?—No, I do not think it was.

179. Was the question raised at that conference whether the Board of Trade ought to act as a Board of supervision, and not of regulation?—No, it was not.

180. Chairman—That meeting was on the 19th of January?—Yes.

181. That was previously to the Bill being brought into Parliament?—Yes.

182. Mr. Thornely—Was not the object of that meeting that the Railway Companies might confer as to the best means of carrying on the railways for the safety of the public, and for the benefit of the Railway Companies themselves?—Certainly. There was a great deal of excitement in the public mind, and the Boards of one or two Companies thought it useful towards giving confidence to the public, and to show that they were practically alive to the importance of doing everything they could for the safety of the public; and that if they met all together for mutual discussion, they would arrive at better ideas for the regulation of railroads than each individual Company could of itself.

183. Have you a copy of the resolutions agreed to at that meeting, which [illegible]?—I have not.

184. Mr. Labouchere—Have you seen the clause proposed, on the part of some of the Railway Companies, to be substituted for the eleventh clause of the Bill before the House?—I have.

185. Do you concur in the propriety of substituting that clause for the one before the House?—So far as to agree that that is the better of the two.

186. Still you would object probably to the degree of discretionary power which is given by that clause to the Board of Trade to interfere for the prevention of accidents on railways?—I think it a wiser course to let there be a Board of supervision for the collection of facts and information, and for grounding on them specific regulations.

187. Upon what principle do you conceive that a distinction is made in the clause prepared on the part of some of the Railway Companies for giving powers to the Board of Trade, and those that would be conferred by the clause which has been inserted in the Bill of Government; on what principle does the distinction go?—The clause proposed by the Railway Companies is more limited in its application; it differs in one or two particular points as to how far the discretion is to be limited.

188. Those points as to which a discretionary power is to be conferred according to the clause proposed on the part of some of the Railway Companies, refer to regulations as to lights and flags to be used in general by the railway guards, policemen, and switchmen?—Yes.

189. Do you not think it quite as possible, if the Board of Trade were to exercise those powers thus conferred, rashly and indiscreetly, that they would do the greatest injury to the railways under the powers to be conferred by the altered clause as under the clause standing in the Bill?—I think they would do considerable injury, but less injury by the Companies' clause than by the more general and vague clause as it stands in the Bill.

190. Do you think it expedient, for instance, that the Board of Trade, if any discretionary power is to be given to them for the prevention of accidents, should have no power of issuing regulations as to buffer-springs or other modes of preventing collisions?—I think there may be specific regulations, if they are thought desirable, which may be put forth now, and decided on after discussion; for instance, as to buffer-springs; if they are put into the Bill we shall know what is intended.

191. As to the mechanical examination of all the passengers' carriages before each journey, do you think that a point as to which it would or would not be expedient to give a power to the Board of Trade to issue regulations, if any discretionary power at all were conceded?—I think that is desirable, it is a desirable regulation to have, but it is what we do.

192. Lord Stanley—The question asked of you was, whether, with regard to the examination of the machinery of carriages before each journey, you thought it desirable that the Board of Trade should have the power of issuing regulations to the Company; what is your opinion as to that?—I should have no objection to the power of the Board going to that extent, if it were specified in the Bill that that was one of the points to which it was to be limited.

193. Mr. Labouchere—As to upholding fences, do you think that that is a point as to which the Board of Trade should possess a power?—It is very important, and I see no objection to its being put in the Bill.

194. As to the sufficient maintenance of the permanent way, is that a point as to which the Board of Trade ought to have power?—I am not aware of any instance having occurred where such a power was necessary.
